It is a measure of our present involvement in world affairs that the number of American citizens representing our public and private interests abroad has multiplied to more than a million and a half. Of this total, more than two-thirds are members or employees of our Armed Forces and their dependents. The rest are civilians and their families. Aside from students and teachers studying abroad, American civilians actually working overseas number roughly 100,000, divided about equally between businessmen, missionaries, and Government employees.

Even though their backgrounds and working assignments may be widely separated, these oversea Americans share a common responsibility: The very fact that they reside in another country, where they participate in the daily lives and culture of its people, inevitably means that our country and our people are judged by their individual competence and conduct.

It is an exacting—and, at times—a burdensome responsibility. If these oversea Americans are to help project a positive image of America to other peoples, as in fact, they must—they should possess far more than purely technical or professional skills. They should have a knowledge of local languages and an informed respect for local customs. They should be able to participate without ostentation in the daily life of the country to which they are assigned. They should know its history, institutions, and national goals, for only if they understand other peoples' traditions and aspirations can they help to bring about reciprocal understanding of the United States and the American people.

It is important that our citizens overseas keep constantly abreast of international developments, since their service abroad involves them personally in international affairs. It is equally important that they have some knowledge of Communist theory and tactics, because they are in the forefront of the epochal competition between communism and freedom.

Above all, I hold that no American is qualified to represent the United States abroad unless he has a basic knowledge of his own country's history, culture, and institutions, as well as an informed understanding of our national goals and aspirations. I cannot stress too strongly the fact that an American working abroad is the United States. His assignment carries with it an obligation he cannot escape. Indeed, it is an obligation that foreigners will not permit him to escape. Our position of international leadership and the consequences which our actions can have upon other peoples far across the globe, raise compelling questions about our domestic affairs, our international policies, and particularly about our national purposes. Other peoples are eager for accurate and informative answers. If our citizens overseas are incapable of answering their questions and explaining our policies and goals, they serve us poorly.

Moreover, our oversea citizens must be on the alert to counter the propaganda of Communists and their unwitting dupes, who are ready, willing, and sometimes able, to distort the true image of our country.

Despite the effective work of our U.S. Information Agency, and the widespread impact of our news services, our motion pictures, books, magazines, nothing can substitute for person-to-person contact and discussion. Such person-to-person dealings are especially important in newly developing lands, where channels of communication are limited, and where there is a residue of resentment against former colonial powers which often rubs off on us because of our close ties with Western Europe.

The pride and sensitivity of the newly emerging peoples makes it incumbent upon us to remember that in providing them with military, technical, or financial assistance on a government-to-government basis—or, for that matter, in bringing them the benefits of American business and other private undertakings—the manner in which our help is extended is equally important as the aid itself. In assisting the developing peoples, we must never attempt to impose 20th century institutions upon an oxcart economy. We cannot export our way of life intact. We can only help to adapt some of its most useful features to meet differing foreign needs in conformity with local customs and traditions.

Historian Arnold Toynbee has properly called technical and financial assistance "the greatest idea in foreign policy to emerge from the 20th century." Clumsily or unwisely given, however, it can be useless—or worse. Mindful of this, we in Government are constantly striving to improve our foreign aid programs and to recruit and retain the best qualified people to operate them. Despite occasional errors which are inevitable in a new endeavor, any honest, overall appraisal of our efforts in this radically new approach to foreign relations would clearly demonstrate that they are highly effective. Credit for their effectiveness rightfully belongs to the hard working, dedicated Americans who are out in the backlands and in the rice paddies helping less fortunate peoples to realize their mounting expectations for a better life.

The need in our foreign-aid programs for people with talent and the sort of sensitive awareness that leads to friendly understanding and appreciation of alien cultures underscores the need for outstanding people in all of our international activities, public and private. The task of representing the United States abroad in today's highly technological world presents both private citizens and those in Government with challenges that mount in complexity with each day that passes.

Our representatives are confronted with problems ranging from atomic energy to sales of surplus American farm products, from educational exchange to the intricacies of currency stabilization, from immigration policies to nationalist sentiment as it affects

private investment. They are directing huge construction projects, healing the sick, and introducing modern manufacturing and marketing methods.

In truth, it is difficult to think of any problem—be it political, economic, scientific, cultural, educational, or spiritual—that does not carry with it heavy responsibilities for the men and women who represent us overseas.

Educational institutions such as Williams have a vital role to play in preparing present and future generations for overseas assignments—whether on Government service, or with private business and agencies. Special training is particularly necessary in languages, area knowledge, international politics, and in American history and institutions. Some special schools and courses already exist. But many more are needed.

Fortunately, the need for intensive training is being more and more recognized in Washington. For example, the Department of State now operates a Foreign Service Institute where specialized facilities are available for the indoctrination of new foreign service officers going overseas, and for further training of all officers at later stages in their careers. Both the International Cooperation Administration and the U.S. Information Agency also conduct special training programs. In addition, our Government agencies make good use of the highly specialized courses of study which have recently become available at many of our leading universities.

Private American business and other groups are also recognizing the need to prepare their representatives for work abroad. Many of them run their own company or institutional programs. Others send their people to our universities. Recently, leading executives of U.S. companies doing business overseas established the Business Council for International Understanding, which has the active cooperation of the Department of State and the USIA. This program fills two closely related needs: First, to send overseas individuals who are better prepared to make a success of their assignments for their companies; and, second, to build goodwill for the United States. Although it has been in operation for less than a year, this program holds out great promise—for the private sector of our economy is the very antithesis of the State enterprise that is central to Communist doctrine. It is perforce the very best advertisement of freedom at work.

Now, I should like to say a special word to today's graduates about government as a career:

Our efforts to strengthen and unify the free world, our attempts to increase communication with the Communist world, depend in large measure upon the apparatus of American diplomacy. The effectiveness of our diplomacy depends, in turn, upon the people who wage it. Over the years, we have been fortunate in attracting to foreign service men and women who measure up to their exacting responsibilities admirably. You can well be proud of your fellow citizens who represent you abroad. But our increasing international obligations call for more and more of our most outstanding young citizens to make Government a career.

They are especially needed for service in the newly developing lands, where political leaders are also intellectual leaders. These leaders are almost always highly educated and cultured individuals. They respect the qualities of America's arts and literature, as well as our scientific and economic achievements. They have high regard for the quality of excellence in every field. Hence, the enduring leadership which the United States must provide can only be rooted in enduring excellence. This is a quality which we must increasingly export through our oversea representatives. We can best do this by recruiting young men and women for foreign service who exemplify our finest cultural, intellectual, and spiritual heritage.

Make no mistake: It is outstanding talent that we are seeking. The service of our country demands nothing less. I am hopeful that some of the most talented among you will consider Government service as a career. You will not become wealthy. You will probably never make the headlines. You may experience hardship overseas—even danger. But you will find warm satisfaction in carrying the human spirit of the American people to those with whom we wish to live in peace and prosperity as members of the world community. Your greatest reward will come from the knowledge that you are, in some way, large or small, contributing as an individual to the security and well-being of your fellow citizens and of freedom-loving peoples everywhere.

Thank you.

Mill Hands Keep Unions in Two Votes

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1960

Mr. ULLMAN. Mr. Speaker, I want to insert at this point in the RECORD a brief news item from the Baker Democrat-Herald of May 12. Then I want to comment on some of the implications of this story:

MILL HANDS KEEP UNION IN TWO VOTES

Employes of the Salmon River Lumber Co. at Riggins, Idaho, voted 44–3 Wednesday in an employer-sponsored election to retain their union.

Local 2649 at Riggins is an affiliate of the Blue Mountain District Council of Lumber and Sawmill Workers with headquarters in Baker.

A similar move to oust the union failed at Elgin April 19 when 48 employees of Western Stud Mills, Inc., voted by a margin of 2–1 to remain unionized.

Russ Chandler, secretary of the Blue Mountain District Council, said the employers are misusing the intent of the Taft-Hartley Act by taking advantage of the current National Labor Relations Board policy of "allowing an employer-sponsored election without requiring proof that the employer's claim is justified."

He said that an NLRB report quoted in a trade magazine May 6 showed that the board received the highest number of election petitions in March of this year since August, 1946.

"The present NLRB policy in regard to employer petitions is inviting a completely unwarranted expense of tax money," Chandler said.

Mr. Speaker, it should be noted that in both of these employer-sponsored elections, the vote in favor of the union was so lopsided as to indicate clearly that the employer had no legitimate reason to expect the union to lose the election. Rather, it would cause one to wonder whether it was called to harass the union and involve it in an election campaign as a nuisance tactic and a means of draining its resources. It should also be pointed out that these elections are supervised by the National Labor Relations Board and so constitute a cost to the taxpayers. In other words, the Government is financing elections which are possibly aimed at nothing more than harassing the recognized representatives of the employees of these firms.

This brings me, Mr. Speaker, to another aspect of this problem. Certification elections may be sought either by individual employees, by a labor organization claiming to represent those employees, or by an employer as a challenge to the union's claim of representing its employees. When an individual employee or a labor organization files a petition for a certification election, a "substantial showing of interest" must be presented. The NLRB has ruled that this means proof that at least 30 percent of the members of the bargaining unit support the petition. When an employer, on the other hand, petitions for a certification election, no such "substantial showing of interest" is required.

This seems to me to be highly inequitable and it seems to me further that it is precisely this loophole in the NLRB procedures which permits employers to utilize a Government-supervised election as nothing more than a means of harassing a union. Why should not an employer be required, as a union or an individual employee is, to furnish some evidence, beyond his own contention, that there is at least a substantial portion of the bargaining unit which favors a new certification election? If this were the case, it seems clear to me that at least one, if not both of the elections mentioned in the news story would not have been held. The union would not have been forced to expend its resources in a new certification campaign which can only increase enmity between labor and management rather than further the cause of industrial peace, and the Federal Government would not have been forced to spend the money required to send its representatives to the plant and supervise the holding of these unnecessary elections.

Further indirect evidence that increasing use is perhaps being made of these employer-called certification elections is also furnished by data from the National Labor Relations Board on filing of election petitions. In fiscal year 1955, there were 545 petitions filed by employers. By fiscal 1957, the number had risen to 654 and in the most recent fiscal year 1959, there were 847 employer filings. Not only have these been increasing in number, but also as a share of total filings.

I am furnishing the National Labor Relations Board with a copy of my statement today, Mr. Speaker, and I am asking them to inform me as to what justification there is for this apparently discriminatory aspect of their procedures. I am asking them also to advise me if appropriate legislation would be required to correct this inequity, since I feel that, unless this difference in the handling of petitions for certification elections can be shown to have adequate justification, serious consideration should be given to eliminating it and placing all such petitions on the same footing.

Sound Debt Management

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1960

Mr. WESTLAND. Mr. Speaker, last week the gentleman from Texas [Mr. PATMAN] took note of the recent Treasury offering to exchange up to $5½ billion of new 4-year notes and 8-year bonds for outstanding securities maturing on November 15, 1961. The gentleman views this offering as a giveaway, inasmuch as the existing bonds are earning interest at 2½ percent, whereas the new notes and bonds will earn rates of 3¾ percent and 3⅞ percent, respectively.

The gentleman's predilection for perpetually low interest rates, which could only lead to disastrous inflation, are well known to us, and need not be repeated at this time. It is important that the record be set straight, however, and that the current Treasury operation be judged for exactly what it is—a sound and imaginative debt management transaction that will ease the task of the next administration and benefit the American people.

The facts are these. On November 15, 1961, $11.2 billion of 2½-percent bonds come due, of which almost $11 billion are held by public investors. This huge amount is the largest publicly held maturity now outstanding. The easiest course for Secretary of the Treasury Anderson to take would be to do nothing, but simply ignore the problem that will confront the Treasury in November 1961.

If the size of this maturity is not in some way reduced, the pressure on the Government securities market in November 1961 could be almost unbearable. As anyone even vaguely familiar with the market mechanism knows, $11 billion of securities is simply too much to refinance efficiently at one time. Any attempt to do so would shoot interest rates upward and could greatly disrupt the market. This could do serious damage to the cause of sound Government finance. It would not be responsible for Secretary Anderson to ignore this problem.

The gentleman from Texas implies that it is foolish to offer securities with higher interest rates for outstanding bonds with lower rates. He attempts to compare the situation with an individual who might voluntarily refinance a home mortgage or an automobile loan at a higher rate. But I am sure that all of us would agree that such an action, rather than being improvident, would be quite appropriate if the individual were confronted, as is the Treasury, with a huge amount of debt coming due all at once. Such an individual would be wise to arrange for refinancing some of the debt well in advance, even if he had to pay a little more in interest to do so. Moreover, there is no assurance at all that the Treasury will be be paying more interest for this necessary debt extension than if it waited until November 1961 to meet the problem. In fact, the necessary rate of interest to refinance $11 billion of securities at one time could be very high indeed.

There is another important reason for the Treasury offering. The refusal of the Congress to remove the 4½-percent interest rate ceiling has forced the Treasury to sit by while the outstanding marketable debt has grown shorter and shorter in maturity. Today, almost 80 percent matures within 5 years. This progressive shortening of the debt cannot be viewed with complacency; it is highly dangerous. It forces the Treasury to come into the market more frequently and for larger amounts, and it complicates the problems of avoiding inflation, because the shorter a security gets, the more like money it is.

Thus, the current offering is a sensible and well-designed attempt to stretch out some of this ever-shortening debt. The Treasury is offering a coupon rate of 3⅞ percent on the new 8-year bond. It is willing, as stated many times, to sell a reasonable amount of such bonds, and would have done so in the past year, but the 4½-percent ceiling has prevented such action.

The record should also be set straight on the net interest cost of this operation. The gentleman from Texas maintains that the extra interest payable between June 23, 1960, and November 15, 1961, to those holders who elect to exchange will come to $130 million on the whole $5.5 billion. The gentleman's arithmetic confuses me, because I come up with an additional cost, for that period alone, of about $99 million. But this is not the significant figure, if we agree, as we should, that some debt extension at this time is imperative, lest our huge public debt grows ever shorter in maturity. The true net cost, then, must be judged in terms of what it would cost the Treasury today to obtain the debt extension beyond November 1961 represented by the new 4-year notes and 8-year bonds. Assuming market conditions in November 1961 are as they are today, such securities would have to carry interest rates no less than 4½ percent and 4⅛ percent, respectively. On this basis, the net cost to the Treasury of achieving this valuable debt extension is less than $25 million, a modest amount indeed in view of the good that will be achieved.

Finally, note should be made of the reference of the gentleman from Texas to this offering as a "big giveaway." If such were the case, we would expect current holders of the 2½-percent bonds to be clamoring to exchange for the new securities. But the New York Times noted the other morning—June 9—that, as the books opened yesterday, "dealers in Government securities continued to sense that the Treasury invitation would meet largely with indifference." This is hardly a picture of a gigantic giveaway.

Mr. Speaker, the man who occupies the position of Secretary of the Treasury in November 1961, regardless of party, will owe a large debt of gratitude to Secretary of the Treasury Anderson for his courage and imagination in making this current offering. Rather than criticizing this action, the Members of this body should rise up with a resounding vote of thanks.

Jacob H. Cohen Child Guidance Clinic

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1960

Mr. KEOGH. Mr. Speaker, on Sunday, June 5, 1960, there was dedicated at the Pride of Judea Building in Brooklyn, N.Y., the Jacob H. Cohen Child Guidance Clinic. In attendance were charitable-minded members of the community such as Mrs. Max Blumberg, City Council President Abe Stark, Senator Simon J. Liebowitz, Judge Sidney Squire, Hon. Nathan W. Math, Isidor Leviton, Morris Kirsch, Surrogate Maximilian Moss, and many others.

Jacob H. Cohen has dedicated approximately 50 years of his life in the service of the Pride of Judea which will long remain as a monument to him and his associates. On that occasion, the group was addressed by the Comptroller of the State of New York, Hon. Arthur Levitt, and under leave to extend my remarks, I am pleased to include that address which follows:

ADDRESS BY COMPTROLLER ARTHUR LEVITT AT DEDICATION OF THE JACOB H. COHEN CHILD GUIDANCE CLINIC, PRIDE OF JUDEA CHILDREN'S SERVICES, BROOKLYN, N.Y., JUNE 5, 1960

I am pleased and honored to be present today for the dedication of this child guidance center.

Children and youth constitute the most precious asset of any nation. Our greatest obligation as citizens is to develop this asset to its fullest potentialities. Our highest ideal is that of a society in which every child may receive all the encouragement and guidance he needs to grow into happy, creative, responsible maturity.

Working toward this ideal has never been easy, and is not easy now.

Schools, recreational facilities, health facilities, and psychiatric counseling services frequently are inadequate. That most distressing form of crime, juvenile delinquency, has increased, indicating a progressive alienation of the younger generation from the community in general.

Here in New York our children find their environment especially unsettling. Our people are mobile, often hundreds or thousands of miles away from their hometowns, cut off from close relatives and family tradition. As New Yorkers, we have come to take for granted and take pride in the fact that most sections of the city bear little resemblance to themselves as they were only a decade ago. But to a child constant shifts in his surroundings—new people, new places, new rules of behavior, or perhaps no rules of behavior—can lead to insecurity.

It is encouraging, however, that in the current situation so many of our children do grow up to be all that we could hope.

It is encouraging, too, that today, perhaps as never before, our dedicated social scientists stand on the frontier of new discoveries in the field of delinquency prevention. Experiments begun within the past few years have proved successful. Indications are that

we are developing tools to enable us to make a real start toward the prevention of juvenile delinquency.

Let me cite a few of the recent programs that have received widespread publicity—as I am not a professional in this field, I may well be unaware of discoveries not widely reported.

As New Yorkers, we can be proud of the national attention recently given to our "600" school system and encouraged that the small classes, especially trained teachers and careful guidance work lavished on these "600" pupils—perhaps the most emotionally disturbed in our school system—have succeeded in reaching so surprisingly many of the children once considered unreachable.

We can be proud, too, of the successes of our New York City Youth Board in its efforts to channel the energies of street gangs into constructive, socially acceptable outlets—to prove to these boys that a reputation for holding the best dance or fielding the best basketball team can give satisfaction far greater than can a "rep" for toughness.

We can be encouraged, further, to read of the remarkable accuracy with which Prof. and Mrs. Sheldon Glueck, Harvard professors, have learned to predict potential delinquency in children as young as 4, 5, or 6 years old. If methods such as the Gluecks' are now experimenting with can enable us to find and help seriously troubled children long before they come into actual conflict with the law, we will have moved far toward learning how to prevent juvenile delinquency. And as with any other illness, one preventive is worth a thousand cures.

Finally, we can be encouraged by the remarkable successes which modern, well-staffed child guidance centers have been able to score with seriously disturbed children who have been referred to them for help.

One indication of what can be done comes from the New York City Bureau of Child Guidance, a board of education agency.

The board has undertaken several pilot projects in selected schools designed to study and diagnose cases of maladjusted children in the schools and to recommend treatment and instruction for them. Under this program, a team consisting of a psychologist, a social worker and a consulting psychiatrist, with a supervisor, concentrates on one school alone—many, many times the amount of attention that could be given one school under ordinary staffing procedures. The remarkable successes scored by these pilot projects have proved dramatically how much could be done to prevent trouble and to help emotionally disturbed children to adjust to society.

However, the fact remains that our public agencies are not able to deal with the ever-growing numbers of disturbed children turning to them for help.

Private citizens are desperately needed to step in and bridge the growing gap between public capacities and the needs of our children.

We in the pride of Judea have already acted to meet the challenges presented us, as citizens, by the technical discoveries of our social scientists. In opening your new child guidance center, we have taken action to give the children in your community the benefits of up-to-date psychiatric and psychological counselling. We are working to ensure that for the children around you, at least, the findings of recent pilot projects shall not be theoretical alone.

I can only offer my fervent prayer that your example will be emulated in other communities, that everywhere men will accept as you have their responsibility to move forward toward the society of our dreams—the society in which every child shall be given an opportunity to develop all that is best in him.

Thank you.

Massachusetts 1960 Convention of Veterans of World War I

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include part of my remarks as guest speaker at the department of Massachusetts 1960 convention held on June 11, 1960, at Springfield, Mass.:

Greetings, the Veterans of World War I, of the U.S.A., is less than 2 years old.

Even though the average age of our membership is in the sixties, we believe that our greatest period of growth is just ahead of us. In fact, there will be a few of our comrades left to remind the Nation of our service, and to our ideals, in the year 2000.

To those who say that our organization exists for one purpose only, I say that during the next 10 to 20 years we shall develop a fullbodied program to strengthen our national heritage, and to protect our freedom.

In line with this, we have taken steps toward the creation of a memorial to the veterans of World War I.

It is likely that it will be built in the vicinity of Washington, D.C., near the site of a famous Civil War battlefield. Its proximity to Arlington National Cemetery and other heroic shrines will emphasize the courage which unites all who have fought in defense of our liberties, through the generations.

This is a good beginning.

World War I had its special goals, that gave a new vision to our national purpose.

Under the farseeing leadership of President Wilson, we were in step with the future. Although the cause for which we fought and bled was betrayed by politics at home, and by conspiracies abroad, we know that we did not sacrifice in vain. The enemy of 1917–18 is the friend of today—and one of the allied powers of those days, seized by the new tyranny of communism—has become the oppressor that would conquer the world.

In this age of swift communications, and of missiles that leap across the oceans, the need becomes more imperative for a world organization to eliminate warfare. And when that time comes, the world can look back to Woodrow Wilson and to the men who fought to make the world safe for freedom.

Before we achieve that goal we shall have to overcome many dangers, and to learn new techniques for turning back the Communist challenge to our survival.

Around the clock, communism is waging war against us with economic and political, and psychological weapons.

And because of this invisible but unrelating strategy, many of our people find it hard to comprehend that we are presently engaged in a war where we could suffer defeat and slavery without a shot being fired.

The zigs and zags of Communist policy are directed against the minds of the free world in order to confuse, disarm, and demoralize us for the Communist takeover.

We were shocked and dismayed when Khrushchev sabotaged the summit conference and insulted the President of the United States.

But we should have been prepared for any eventuality, including that one, and should have been ready with measures to counteract it.

Our great weakness is the belief that the Communists will respond to reason, when we should know by this time that they will exploit every sign of weakness or indecision on our part.

In the field of psychological warfare we sometimes help them without realizing it.

When Khrushchev wrecked the summit conference it was news—sensational news—but we did not have to play it up to the extent that we did. I noticed on one day that a highly respectable New York newspaper carried six separate stories on its front page, each one of them containing the name of Khrushchev in its headlines. This overemphasis gave to the Communist dictator the recognition and the prestige that he does not deserve. In other words, he scored a propaganda victory, and this newspaper helped him to exploit it—by featuring him in six front-page stories.

This is but one example of how the Communists play upon your gullibility, and use us to further their own ends.

For several years I have been disturbed by our preoccupation with the defense. This is a negative frame of mind, that gives every advantage to the Communists. It betrays fear of initiative, and fear of mounting the counter-offensive to win the minds of men.

The Communists spend on brainwashing, $2 a year for every person in the free world. While we spend only 2 cents for each person within the Communist orbit in an effort to reach them with the truth.

To expose the lies of Communist propaganda which so often hyponotize innocent people and then to advance the missionary work of freedom, we must enlarge and intensify our program not only to help the underdeveloped countries, but to nourish and strengthen the underdeveloped minds, in the West as well as in the East.

Remember how the Communists promoted the so-called Stockholm peace petition a few years ago and induced millions of well-meaning people in the free world to sign it? Under the cloak of the word "peace" which appeals to most of humanity, they sought to lull the free world into a sense of false security. Fortunately, more realistic minds saw through this clever maneuver, and were not fooled by it.

Although myself and a few other Congressmen vigorously protested against the invitation of the White House to have Khrushchev visit the United States, we opened the doors of our hospitality to him.

Many Americans deluded themselves with the hope that he would be impressed and softened by the evidence of our material prosperity. But in one of his tantrums at Los Angeles he threatened to "bury us," if we failed to appease him by concessions that would mean surrender on the installment plan.

Soviet diplomacy is not diplomacy in the accepted meaning of that term. It is a principal weapon among the many used by Soviet propaganda. "Every form of exchange between Communist and other countries, whether diplomatic, cultural, commercial or technical, is conceived and worked out with propaganda in mind." According to Suzanne Labin who wrote "The Unrelenting War," a study of the strategy and techniques of Communist propaganda and infiltration.

"All members of Soviet missions abroad are trained primarily to charm and hoodwink high political or financial circles in the countries they are to undermine."

J. Edgar Hoover, Director of the FBI, aptly described the Communists as "masters of deceit."

But, in spite of these warnings, too many Americans are apathetic toward the danger.

The Congress is forcing the administration to strengthen our retaliatory power in order to discourage and prevent a massive surprise attack upon the free world.

But this is not enough.

Our one, dangerous, unprotected front is psychological, political.

On the battlefield of "the war of minds" it is folly to sit back and wait. We must advance toward definite goals and with firm purpose.

Earlier in my remarks, I mentioned the need of a well-rounded and positive program for the Veterans of World War I, of the U.S.A.

As we are the older veterans, we must assume the responsibility of leadership in order to make our country strong and to keep it vigilant.

But we also have needs of our own, and those needs have been neglected by the Federal Government. Our self-respect requires that we battle to overcome the benefits deficit that has discriminated against the veterans of 1917–18.

We shall attain equality with our fellow veterans of other wars only when we finally succeed in winning a service pension for all honorably discharged veterans of World War I.

The Baltic Peoples and Their Tragic Fate in 1940

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1960

Mr. MULTER. Mr. Speaker, the modern history of the Estonians, Latvians, and Lithuanians has been fraught with much tragedy relieved by occasional triumph. Centuries before World War I they had lost their independence and lived under foreign regimes.

The end of that war ushered in a new era for these peoples. All three regained and proclaimed their independence in 1919, established their own democratic governments. These governments were duly recognized by other countries and they became members of the world community of nations.

During the period of freedom which they enjoyed during the interwar years, they rebuilt their war-ravaged countries, and were perfectly content with their lot. Unfortunately, however, in the larger world of international politics and diplomacy they were not masters of their fate.

With the rise of totalitarian governments both in Germany and in Russia the Baltic peoples found themselves in a very precarious position. They succeeded in maintaining their independence until the outbreak of the last war, and then brute Soviet force became the arbiter of their fate.

As the friends of these peoples in the West became involved in the war, the Soviet Union felt free to deal with the Baltic peoples as its dictator wished—to occupy and annex these countries and enslave their inhabitants. This was done not only in a high-handed manner but by resorting to barbaric methods.

By early June 1940 these countries were occupied by the Red army and at about the middle of the month the Soviet authorities in these countries rounded up all those suspected of opposing communism, numbering hundreds of thousands, and exiled them to the distant corners of the Soviet Union. From that day to this, 20 years after that tragic event, we still do not exactly know the fate of these helpless and unfortunate people who were arrested, herded into freight cars and destined to incarceration, servitude, and even death in desolate parts of the Soviet Union.

Today it is possible that some of these people, who survived the terrible years in exile, have returned to their homeland, but it is more probable that most of them have died in exile and misery, far away from their beloved homeland.

In observing the 20th anniversary of that tragic event, the Soviet deportations of men, women, and children by the hundreds of thousands in 1940 from the Baltic States, we pray for the souls of these brave but helpless people.

Address by Secretary of State Christian A. Herter at University of Pittsburgh

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1960

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including the full text of the excellent speech by the Honorable Christian A. Herter, Secretary of State, at the annual graduation exercises at the University of Pittsburgh.

With the mutual security appropriation bill about to come before the House, I feel this excellent address should be called to the attention of my colleagues in the Congress and to the American people.

The address follows:

THE UNIVERSITY AND THE WORLD COMMUNITY

(Address by the Honorable Christian A. Herter, Secretary of State, University of Pittsburgh, Pittsburgh, Pa., Wednesday, June 8, 1960)

It is a privilege to be with you today, and a pleasure to share in this ancient ritual. The gowns and hoods we wear remind us of the antiquity of the university tradition, and the legacy of faith as well as knowledge on which it draws. We are made aware of the significance of the life of this university to the city, the State, and the Nation. You are part of that "republic of learning" which knows no frontiers, and which in our times is perhaps more vital than ever before in history if the barriers which separate peoples are to be broken down and man is to measure up to the potentialities and opportunities of our unparalleled era.

OUR CHANGING WORLD

We now live, together with all peoples, in a relatively small world, the dimensions of which are further rapidly shrinking. This fact has already completely revolutionized the relations between man and man, between different societies, nations, and continents. Our world is a neighborhood. Science has wrought wonders which tend to create the physical, the technical basis for a world community. The material foundation of such a community lies ready to our hands; it exists in rudimentary form.

We are, all of us, confronted today by new and challenging frontiers, not between men and nations but frontiers surrounding us all, as individuals, beckoning us on to new endeavors and concerted efforts. You of the community of learning bear a special responsibility, that our common cultural heritage be preserved and made pertinent and applicable to the great tasks that challenge us on many fronts. For we are truly engaged in a contest of which the stakes and the outcome are the fate of our culture and our civilization.

Let us be clear in our minds about what has been happening. Many of us here can recall the days when most of our world seemed far away from us, rather unreal in fact. Our people, in town and country, were preoccupied with local and personal—or at the most, national—affairs. Europe and Asia were far away. So was Latin America. Africa was a great unknown. Newspapers recorded little of world events, usually only at a time of disaster or war.

Now these times are gone beyond recall. We would not call them back if we could. We live in a new and utterly different kind of world.

It is a startling thought that it now has become possible, for the first time in history, for all peoples of the world to live together. The so-called backward peoples can now begin to enjoy the benefits of our modern civilization. The techniques are available whereby all members of the human race can be well fed and clothed and housed. We seem on the verge of conquest of the abysmal poverty and disease and misery that have long been the lot of most of mankind. The basic and central reality is the essentially political fact, that all nations now must live together and that a community of interests must come into existence.

OPEN AND CLOSED SOCIETIES

This poses one of the great issues of our times, the conflict between the concepts of open and closed societies. In America we have aspired to an open society, and have sought increasingly to realize it in our world relationships. In such a society there is an absence of needless and artificial barriers, and a cross-fertilization and free competition of ideas. This is a fundamental aspect of our tradition and heritage, of our national style. In general this concept is shared and exemplified in the other countries of the free world, where there is freedom of communication, of expression, of travel, and of initiative.

The other concept, that of a closed society, still prevails in many parts of the world, even though it is gradually being modified by the influx and pressure of modern forces and ideas. In such societies men must live largely separate and secluded from their fellow men elsewhere, bound by tradition and often superstition, subservient to governments and institutions over which they have little control. Their thoughts are patterned after the concepts and ideologies imposed upon them from above.

It will be difficult to resolve the central political problem of our times so long as closed societies of repressed and unfree peoples exist. This is particularly true when all peoples are being pulled more and more into the course of world history. Hermit nations are an anachronism. There is no room for unfree nations, whether subjected to the tyranny of human despots, or to the tyranny of false and outworn systems and ideas. Our world can never become a true community so long as a part of its peoples remain shut off from the main currents of history.

One reason why a closed society is a danger to our world community is that it harbors secrecy; it cherishes estangement from and hostility toward the outside world. In states so dominated concealment becomes a fetish. Such states instill fears of other

nations in their peoples. Excessive secrecy is regarded as a great military asset, the equivalent of so many divisions or missiles.

I believe it is this same fetish of secrecy that obstructs progress toward arms control. The Soviets profess to want disarmament, but their obsession with secrecy has made them unwilling to accept the type of inspection arrangements which are absolutely indispensable to any safe and acceptable system of controlled disarmament.

It is even more true now than when it was stated by President Eisenhower before the United Nations General Assembly in 1958, that "the nature of today's weapons, the nature of modern communications, and the widening circle of new nations make it plain that we must, in the end, be a world community of open societies. * * * The concept of the open society is the ultimate key to a system of arms control we all can trust."

RELATIONS WITH THE U.S.S.R.

The important thing is to face our tasks of the future in a constructive frame of mind. Mutual recriminations about past actions are futile. Nor is it helpful to try to define our policy toward the Soviet Union as either hard or soft nor to depict the international conflict in colors of black and white. Our posture should be calm, resolute and vigilant, at the same time that we explore every available opportunity to move our relationships on to a more hopeful plane of increased understanding and mutual cooperation.

INTERNATIONAL EXCHANGE PROGRAMS

Returning to our main political problem, that of creating the reality of a world of peoples living together, and through their relationships building the foundations of a true world community, I would refer to the special significance in this connection of our exchange program. This process of exchange was well called by the late Secretary Dulles "a curative and creative force in world affairs." It fosters human contacts, serving as a catalytic agent, strengthening bonds between friends, diminishing the gulf between antagonists. These contacts are of almost every conceivable kind—social, business, labor, cultural, educational, scientific, athletic, diplomatic, even political.

Much of this program relates to what might be called cultural and educational exchanges in the literal sense. It involves mainly students and scholars. It plants many seeds of intellectual growth which are bound to ripen and bear fruit, to the benefit of both countries concerned.

Closely related to this is the exchange of specialists in various fields of useful endeavor—agricultural, industrial, technical, military, athletic. Artists and entertainers communicate not merely their talents but increased understanding of and respect for the genius of the nation they represent.

All this is to the good. But I would especially emphasize that this program is and should be, to a large extent, political in the best sense. The leader exchange program is designed to fill this need. This is so because it brings about the mutual interchange of persons who are, or are destined to be, leaders and persons of distinction in their respective countries. These are people of prominence or promise in political, governmental, business, and labor activities. Each year this program brings to our shores key personalities of other nations. We exhibit to them America as it is; not a glamorized picture fixed up by propagandists, nor yet the sordid version so often propagated abroad by certain of our realistic school of writers.

You are all aware of the special progress we have made in recent years in what are called East-West exchanges, or more properly, exchanges between the West and the Soviet bloc. You know that these have been at many levels and of diverse types.

ROLE OF THE UNIVERSITIES

Surely no institutions are better fitted than our universities to advance these purposes. Their role in the advancement of scientific knowledge is too obvious to require elaboration. Let me stress, however, their role in our progress toward a world of open societies as the basis of world community and in contributing to the exchange of ideas among peoples out of which eventually may emerge a sense of community and a consensus about those things on which the very survival of our civilization depends.

THE UNIVERSITY OF PITTSBURGH

The University of Pittsburgh has caught the vision of this new horizon. We in the Department of State fully appreciate what you have done in various ways.

You have a long record of active interest and participation in the international exchange idea. By creating the Office of Cultural and Educational Exchange, you have added a new dimension to the intellectual life of the university. In fact, Pittsburgh has shown an increasing awareness of our Nation's responsibility to assist other peoples and to learn from other cultures, and has made this the basis of its programs to a degree found in very few American universities.

You have made great advances in affiliation with foreign universities, in the number of foreign students and faculty members, in new and varied programs of study in international affairs, and in the growing number of Pittsburgh faculty members and students who study abroad.

Moreover, your university has not confined its interest to the campus, but has enlisted the support of the entire community through the Pittsburgh Council for International Visitors. The modern city of Pittsburgh is rich with the history and contributions of many nationalities, and is a striking example to the world of the benefits born of mutual cooperation and friendly exchange.

You have organized the Intercollegiate Regional Council for International Educational Exchange, together with affiliated colleges and universities in a five-State area, thus pooling the great intellectual and cultural resources of the region for exchange activities.

In addition, your chancellor has contributed greatly to the success of the exchange of leaders program through the Governmental Affairs Institute.

These outstanding achievements of the University of Pittsburgh deserve the highest commendation. I bring to you from the Department of State my warmest congratulations and appreciation.

What you have accomplished moves me to make certain comments and suggestions.

First, I should like to repeat and emphasize what I have indicated throughout my address; namely, that a cultural exchange program in the broadest sense is of vital importance in our whole foreign policy in the swiftly changing and dynamic world in which we live. Whatever the importance we attach to political, economic, and military programs, we must always remember that what touches men's minds and influences their thinking is, perhaps, the most determining factor of all in shaping historic events and the course of civilization.

Second, I would suggest that our higher institutions of learning, so far as possible, attach primary importance to the educational exchange program, in their planning, and in their budgeting and staffing, for it is an integral part of their responsibilities and activities.

Third, I would appeal to industrial, labor, and private organizations generally to make systematic efforts to contribute to such an exchange program within the range of their special interests and capacities.

Fourth, I believe, that the Federal Government should give increasing emphasis to the exchange program as one of the essential components of a sound foreign policy.

CONCLUSION

Let me conclude by pointing to our long-term goals as a Nation. Aware as we must continue to be of the Communist threat, and with all our precautions to deal with it, we must never be so preoccupied with the Soviet challenge as to forget our own constructive purposes. We have our vision of the future. We must press forward toward the new horizon. The values of our culture are not ours alone. They are a heritage which we must seek to conserve and pass on to coming generations.

A new world is dawning—a world, we trust, swept by the winds of freedom; in which freedom's message and rewards may be shared by the newly emerging nations; in which a true world community will come into being resting on the rule of law and not of force.

The cause of civilization is not the selfish interest of any one nation. The universities are uniquely fitted, intellectually and philosophically, to interpret this new world to us and to our friends in other lands. It is the common task of all of us—educators and scholars, scientists and religious leaders, businessmen, labor leaders, and all those groups which make up our free and open society—to find ways, together with the Government, to work with people in other countries so that we may all move forward together, building better societies and strengthening gradually the foundations of a true world community.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

Appendix

The Fullness of Life

EXTENSION OF REMARKS

OF

HON. LEVERETT SALTONSTALL

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Wednesday, June 15, 1960

Mr. SALTONSTALL. Mr. President, last Sunday the senior Senator from Hawaii [Mr. FONG] was awarded an honorary doctor of laws degree by Tufts University, in recognition of his notable achievements as lawyer, businessman, and legislator. I wish to take this opportunity to extend my heartiest congratulations to my distinguished colleague on being selected for this honor.

I also wish to commend Tufts University for strengthening the ties that bind Hawaii to New England. It is not well enough known that from 1820 to 1835 groups of Congregational missionaries from New England journeyed to Hawaii, where they settled permanently, teaching Christianity and contributing to the development and stability of Hawaii in education, government, and social responsibility.

In his address to Tufts graduates at the 104th commencement exercises, Senator FONG paid tribute to those New England missionaries who helped to create in the Pacific, "out of diverse tongues and cultures," a homogeneous American community. He urged college men and women to serve "in the noblest tradition of America as 20th century missionaries sowing the seed of neighborly love and freedom in other lands, bringing hope of a better life to a needy world, and laboring in the vineyard for peace on earth, good will to men."

Mr. President, I ask unanimous consent that the entire text of this stirring address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE FULLNESS OF LIFE

(Address by U.S. Senator HIRAM L. FONG at Tufts University commencement exercises, Medford, Mass., June 12, 1960)

President Wessell, distinguished guests, members of the faculty, candidates for degrees, students, ladies, and gentlemen, I am very happy to be here with you on this joyous occasion of your 104th commencement. I am grateful and thankful for the honorary doctor of laws degree you are bestowing upon me. To be associated with you as an honorary alumnus of Tufts University with its 107 years of glorious history is for me a high privilege and a great honor.

Having been advised that I will receive from you a diploma, without attending classes, study, examinations, and anxiety leaves me with a mixed feeling of guilt, delinquency, and immorality, especially when I know how hard you have worked for your diploma and how hard I worked as a Harvard Law School student. Your bestowing upon me this honor will continue what has been for me a happy and most rewarding association with New England.

Since early childhood, long before I attended Harvard, New England has been a part of me, for the influence of New England has been felt in my native Hawaii for 140 years. From 1820 to 1835, 12 groups of Christian Congregational missionaries left their homes in New England by sailing ships to bring the Christian Gospel to Hawaii. Their voyages by way of the Cape of Good Hope covered a distance of over 12,000 miles and took 5½ months to complete. Their journeys were fraught with much seasickness and hardship. The contributions of these sturdy New England missionaries you sent us have been enduring and many. They and their descendants have contributed greatly to our development and stability and their Puritan philosophy has deeply influenced our outlook and life.

Through their influence, the Hawaiian language was reduced to writing, the Bible was translated, and schools were established. Through their influence, the first written constitution was approved in 1840, creating a supreme court and a representative body of legislators elected by the people.

Through their influence, prohibition was placed on immorality, gambling, drunkenness, theft, and violation of the Sabbath. These prohibitions were strongly resisted by the sailing men. They demonstrated on several occasions against these Christian influences by armed riots, not against the natives, but against the missionaries and on one occasion they fired several cannon shots into the home of one of them.

Architecturally, too, New England has left its visible mark on Hawaii. Even today, it is not unusual to see a Cape Cod cottage on any one of the seven inhabited islands.

New England's influences on me have been quite personal. Besides being a graduate of the Harvard Law School, I am a graduate of the public school system which the Congregational missionaries helped to inaugurate. My name of Hiram is taken from the Reverend Hiram Bingham, leader of the first group of missionaries. By now you have surmised my religion is Congregational.

So, it is indeed a distinct honor and a great privilege for me to be speaking here today in New England, for to me it is in a sense in more ways than one, like returning home.

To me, it is opportune and seemly for you at this commencement occasion, to pause and thank with gratitude this school, its faculty, its benefactors, and all those who have contributed to its facilities to enable you to receive the learning and the knowledge you now possess.

It is opportune and seemly for you also to pause here and pay homage to parents, family, and friends who have labored and sacrificed for you to receive this day your degrees.

Today, you are, as college graduates and as men and women, the possessors of a great fortune. You are the inheritors of the accumulation over centuries of man's vast wealth of knowledge and culture, the beneficiaries of the civilizations which have preceded you.

The rights and privileges of freedom of speech, press, worship, and assembly and all of the freedoms and rights that your forefathers shed blood and died for—are yours full-blown, not by sufferance or whim, but by long-established law.

Educationally comprising the upper 5 percent of our population, you, as college graduates will have a decided advantage in potential earning power and in regularity of employment over noncollege workers. The job outlook this June for college graduates is excellent, with starting salaries higher by some 4 to 8 percent over a year ago. Long-range prospects are likewise auspicious. It is anticipated that within a few years if we do not have new methods and new machinery, there will be a shortage of manpower to produce the goods and services needed to sustain the American standard of living. Your talents will be in greater demand than ever.

The startling and provocative economic indicators of the next 15 years show that we will be a Nation of 240 million people, 60 million more than today, with a labor force of about 95 million producing goods and services totaling $900 billion.

Translated into other tangibles, these vital statistics mean that we will build millions of dwelling units, thousands of miles of roads, and many, many bridges, dams, and flood control projects. We will need some 77,000 more doctors, 34,000 more dentists, and a third of a million more nurses than we have today.

To educate 15 million more children, we will need 600,000 new schoolrooms in public schools alone and 500,000 additional teachers. We will have to triple the capacity of our present colleges and universities.

We will need a greater output of foodstuffs and of most basic raw materials, nearly three times our present production of electric power, and double the supply of our fresh water.

Not only are there jobs for everyone, but there is also a wide choice of careers. A few years ago, there were no electronics industries, no atomic energy projects, no missiles or rockets or space vehicles. New vocations created in the past 10 or 15 years run the full spectrum of man's pursuits and offer careers undreamed of only a few decades ago.

Sitting here today, as graduates, you are on the threshold of a very interesting, fascinating, and rewarding era, witnessing what promises to be the birth of a new golden age.

All around you life's pace has quickened. From sails to steamboats and from pushcarts to motor vehicles embraced thousands of years. Today, speed and power change within decades or less. In the first six decades of this century in America, changes have been greater than in all the thousands of years of mankind's history. It was only 18 years ago in 1942 that Enrico Fermi discovered the principle of atomic chain reaction that launched us into the atomic age. Scarcely had this era dawned when 15 years later in 1957, we found ourselves in the space age with the first sputnik.

Fifteen years from now, supersonic airplanes will bring Paris within 2 hours from New York and Geneva about 3 hours from Los Angeles. Space travel will approach reality. In 1961 we hope to launch our first man into space with safe return; about 1970, to transport an American astronaut to the moon; and perhaps by 1975, to other places.

Life's expectancy now has approached the seventies and will be longer once we conquer cancer and diseases of the circulatory system as we soon may do. Social security, unemployment compensation, and promised old-age health insurance have materially lessened the anxieties of unemployment and old age.

With minimal efforts, 5 days of work and 2 days of leisure per week, you can expect to meet the material needs of yourself and your family, home, food, car, vacation, and the upbringing and education of your children. Never before in the history of mankind have college graduates been more richly endowed than you nor more likely to succeed.

By now our 5-day workweek is typical of our contemporary American life, but, as educated men and women from whose ranks will be chosen many of our future leaders, you ought to be willing to devote to whatever you may choose to do longer hours and greater dedication. These extra efforts on your part, accompanied by further technological progress which we expect, will help to increase our Nation's productivity resulting in more leisure time for future generations.

Men of wisdom and learning throughout the ages have cautioned that the use of leisure time wholly for fun, pleasure, and comfort renders life narrow and empty. Gratifying only material wants does not satisfy the soul. Lasting satisfaction contributing to the fullness of life comes from cultivating in one's heart a spirit of charity and service toward all men and from devoting a portion of one's life to benefit mankind. Look to the lives of our great moral teachers, Jesus Christ, Buddha, Confucius, Mohammed, and others.

Therefore each of you ought to ponder how, with your particular talents and in your particular circumstances, you can serve family, friends, community, Nation, and mankind.

As long as millions of people in the world still suffer from the ravages of disease, from malnutrition, from undernourishment, and illiteracy, you, as favored men and women, owe a duty to extend a helping hand to those less fortunate than yourself. More than 90 percent of the world is less fortunate than you.

Last October and November, I made a 45-day tour of 14 countries of the Far East. The trip was most enlightening—it was fascinating—and yet somewhat disturbing. The Far East is a fantastic area. Here is situated more than one-half of the entire world's population—the new throbbing core of our continuing global struggle for peace. It is vast beyond our imagination. It is diverse to the extremes of ultramodern and utter primitive. We know it too little; we understand it far less.

With rare exception, I found mass poverty, illiteracy, economic and political instability, inadequate capital and technical know-how.

Prospects for improving the well-being of fellow men such as I found in the Far East fundamentally rest upon a world at peace, for war would further impoverish them. Indeed, the well-being of all of us likewise depends upon a world at peace. Each of you, therefore, has an abiding stake in preserving world peace.

Of paramount necessity to the preservation of peace are substantive actions to nourish, to clothe, to shelter, to heal, and to educate those in want. Men released from the grinding struggle for mere existence are more likely to possess the will to be free and to join other free men determined to strengthen the deterrent to war. Thus as we raise the standard of living of the less fortunate so will the prospects of peace be raised.

Similarly essential to lasting peace with justice are the easing of international tensions, the devising of enforcible bans on nuclear weapons tests, and the accepting of valid steps leading to disarmament.

In every conceivable way consistent with our national honor you should explore the possibilities not only of avoiding war but also of diminishing the threat of war.

Simultaneously as you work for peace maintain a watchful eye on your Government, insist on honesty and integrity in public and private matters, give loyalty and respect to government and keep on being a student.

By cultivating in your heart the spirit of charity and by contributing generously of your time and effort in the service of mankind to alleviate suffering, want, and disease, you will do your share for the molding of a peaceful, homogeneous world community, although diverse in nationality and culture but firmly unified with the love of freedom and liberty.

Thus, in some measure, you will be treading in the worthy footsteps of your illustrious forebears, those hardy, self-sacrificing New England missionaries who journeyed 5½ months—one-half way around the world, by sailing ships, to bring to Hawaii the concept of universal love, brotherhood of man, and fatherhood of God and who helped so substantially to create in the middle of the Pacific, out of diverse tongues and cultures, a happy, homogeneous American community living in understanding, amity, and concord.

You, as college men and women and as the elite of our country, even without leaving home, will be serving in the noblest tradition of America as 20th century missionaries sowing the seed of neighborly love and freedom in other lands, bringing hope of a better life to a needy world, and laboring in the vineyard for peace on earth, good will to men. A life thus spent will indeed be a full life.

Central Mortgage Reserve Facility

EXTENSION OF REMARKS

OF

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1960

Mr. WOLF. Mr. Speaker, an excellent editorial is included in the July issue of the American Builder magazine on the question of housing for Americans. This forthright editorial of Joseph B. Mason, editor of the American Builder, analyzes simply many of the difficult problems facing the building industry today. Its central theme concerns the need for a central mortgage reserve facility. It further supports S. 3541 and H.R. 12603, introduced by the great friend of those in need of adequate housing, Congressman ALBERT RAINS.

I commend this editorial to the membership of this body:

TO CONGRESS AND THE PLATFORM WRITERS OF THE DEMOCRATIC AND REPUBLICAN PARTIES: A MESSAGE ON HOUSING AMERICANS

(By Joseph B. Mason)

THE UNHAPPY POSITION OF HOUSING IN POLITICS TODAY

Not since FHA was founded 26 years ago has there been such a need and opportunity for a giant step forward in housing. Our population is expanding, our economy booming, our youngsters and our oldsters seeking better homes in unprecedented numbers. Yet housing is caught in the middle of a political debate involving inflation, monetary controls, fixed interest rates and other problems that can and should be resolved.

This 82-year-old publication has fought for many sound building causes, including the establishment of FHA. We believe now is the time for a united move to secure sound, long-range housing legislation. The major objective should be an improved central mortgage reserve facility to stabilize home financing and encourage increased long-term investment—particularly by pension and retirement funds.

WHY BUILDERS DO NOT WANT INFLATION OR HANDOUTS

More than 200,000 builders, large and small, put up the Nation's houses. Like farmers, they are individually small businessmen. But collectively they count up to a gigantic industry. They know that faith in the future is vital both to the buyer of homes and the investor in home mortgages.

Builders do not want inflation, or handouts, or giveaways. A sound national monetary approach to homebuilding finance makes none of these necessary. Bills S. 3541 and H.R. 12216 now before Congress point the way to better housing by establishing a Central Mortgage Reserve facility.

THE UNFAIR AND DESTRUCTIVE EFFECT OF TIGHT MONEY

The history of housing shows many periods when tight money has pinched the lifeblood of building. The results have always been painful—not only to builders, but to workers, to the public, and to the economy. The cause is a piling up of financing and credit demands in an expanding era. The unfortunate and unfair result is a drying up in the supply of long-term mortgage money for homebuilding. Homes are the first to suffer—and low-cost houses the worst hit.

THE COST OF TIGHT MONEY IN LOST HOMES AND JOBS

When mortgage funds for homes dry up, builders lay off workers, stop buying lumber, cement, appliances. In several recent years the Nation has lost from 200,000 to 300,000 houses this way. It will do so in 1960, and again in 1961—unless Congress takes action.

In terms of jobs, this means millions of man-hours lost in factories, forests, and local communities. And the sharp peaks and valleys of production caused by a money shortage are costly to builders, who must plan far ahead. They increase the cost of houses—an added burden.

THE EVILS OF HIGH DISCOUNTS AND SECOND MORTGAGES

A particularly evil result of "tight money" and of uneconomic fixed interest rates is the paying of discounts to obtain mortgage loans. Builders are caught in a trap. To get a loan they must pay from 2 or 3 percent up to as much as 10 percent of the face amount of the mortgage. On a $15,000 house the discount cost may run from $500 to $1,000—an unconscionable and usurious addition to the cost of the house.

Another widespread practice resulting from our present ineffective money system is the skyrocketing use of second mortgages. These are costly to the buyer, dangerous to the builder, and a threat to the economy if a depression occurs.

OUR STASTICAL CONFUSION—HOW DEFINE HOUSING NEED?

The building industry is woefully lacking in statistics, and to complicate matters, the Census is now revising our long-standing series on starts to include farm and seasonal housing. But however defined, the need for better homes in this country today far exceeds present production.

Our goal should be 2 million units a year. We need to take care of a population "explosion" of 34 million in the sixties. We need to replace 250,000 houses demolished each year by highway construction, fire, and other causes. We need to start replacing some of our 30 million obsolete dwellings over 40 years old. We should pay special attention to lower-priced housing, which has suffered most from recent monetary policies. And we need more housing for the elderly.

THE CHANGING PATTERN OF U.S. SAVING AND BUYING

Vast sums of money are held today by pension, trust, and investment funds. In fact, the character of U.S. savings has altered radically, with a sharp effect on housing finance. People save less, buy more on down payments. To build more houses, the industry must attract new sources of money—especially the large union and corporate pension funds. An effective Central Mortgage Reserve facility would make such a flow of new funds to home financing feasible and desirable.

WHAT A CENTRAL MORTGAGE RESERVE WOULD DO FOR HOUSING

A system such as outlined in bills S. 3541 and H.R. 12216 would stabilize and expand the mortgage credit structure. It would bring in vast sums of pension and trust-fund investments, and make mortgage investments generally more fluid. The bill is nonpartisan and has the support of builders, mortgage bankers, real estate men. Its principals were approved by HHFA. It permits the Federal National Mortgage Association to sell its securities at a new ratio of 15 times its capital, and to make loans on the security of FHA and VA loans. It also sets up a system of private, federally chartered mortgage investment firms supervised by FNMA. These little "Fannie Maes" would be authorized to sell long- or short-term debentures, backed by insured mortgages. Such debentures would be attractive to pension funds and other investment capital.

OPPORTUNITY GREATEST SINCE THE FOUNDING OF FHA

As this editorial is written (June 8), it is felt Congress may not have time to act on a long-term measure of this importance. The values will hold just as strong next year. Another measure (title III of H.R. 12153) would also create a secondary market for conventional mortgages within the Federal Home Loan Bank system. This too should be enacted into law promptly.

These measures, backed by a vigorous national policy of leadership, could make America truly the best housed nation in the world. We recommend such a program to the Congress and to the platform writers of both parties.

Award of Honorary Degree to Senator Jordan

EXTENSION OF REMARKS
OF
HON. SAM J. ERVIN, JR.
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 15, 1960

Mr. ERVIN. Mr. President, at its recent commencement, Elon College, which has woven much strength of mind and spirit into the warp and woof of our land, conferred the honorary degree of doctor of laws upon my colleague, B. EVERETT JORDAN. I ask unanimous consent that the citation accompanying the award of the degree be printed in the Appendix of the RECORD.

There being no objection, the citation was ordered to be printed in the RECORD, as follows:

BENJAMIN EVERETT JORDAN

Born in the State of North Carolina, the son of a Methodist minister; educated in the public schools of his native State and at Trinity College. In 1927 he organized the Sellers Manufacturing Co. and has held many positions of responsibility in business and industry.

Always interested in the welfare of his community and his fellow man, he has served as a member of the North Carolina Medical Care Commission, the North Carolina Peace Officers Benefit and Retirement Commission; as a director of the Alamance County Chapter of the Red Cross, the Alamance County Tuberculosis Association, and the Cherokee Council of the Boy Scouts of America; he is currently serving as chairman of the board of trustees of the Alamance County Hospital and as a member of the board of trustees of Duke University and Elon College.

For many years he has been an outstanding political leader having served as State chairman of the Democratic Party in North Carolina and as national committeeman from his State. In April 1958 he was appointed to the U.S. Senate by Governor Luther Hodges. In November of that year he was elected to fill the remainder of the unexpired term of the late Senator W. Kerr Scott. On May 28, 1960, he received an overwhelming vote of confidence from the members of his party as he won renomination for a full 6-year term in the U.S. Senate. During his tenure as the junior Senator from North Carolina he has earned the reputation of being diligent, conscientious, hard working, representative of his State.

Successful businessman, civic and political leader, dedicated public servant—Mr. President, it is my honor to present the Honorable BENJAMIN EVERETT JORDAN, candidate for the honorary degree of doctor of laws.

Address by Gov. LeRoy Collins, of Florida, at National Interfaith Award Luncheon, Washington, D.C., June 8, 1960

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1960

Mr. BRADEMAS. Mr. Speaker, it is my great honor to serve as honorary vice chairman of the Washington, D.C., Interfaith Committee, which on June 8 observed its Fourth Annual Interfaith Day.

The committee, composed of representatives of the Shriners, Knights of Columbus, B'nai B'rith, and Order of Ahepa, fosters the ideals of brotherhood and good human relations and raises funds for the charitable activities of the four sponsoring organizations.

Highlight of the day's observances was a luncheon meeting at which the committee presented its 1960 awards to the following persons: Gov. LeRoy Collins, of Florida, national interfaith award; Robert E. McLaughlin, Chairman of the Board of Commissioners, District of Columbia, District of Columbia interfaith award; Paddy Chayefsky, author-playwright, national interfaith celebrity award; and Jack Twyman, Cincinnati professional basketball player, national interfaith sports award.

The humanitarian contributions of each of these outstanding Americans were as different and as personal as their fine acceptance speeches.

Each of these men in the pursuit of his profession—in a State government, in a local council, at a writing table, and on a basketball floor—symbolizes the responsibility of the individual, whatever his calling, to his fellow men.

Mr. Speaker, I should like to call particular attention to the eloquent speech made on the acceptance of the national interfaith award by the Honorable LeRoy Collins, the distinguished and courageous Governor of Florida.

Governor Collins' speech follows:

REMARKS BY GOV. LEROY COLLINS, AT NATIONAL INTERFAITH AWARD LUNCHEON, WASHINGTON, D.C.

I am deeply grateful for the very meaningful award you have just presented to me. Without intending to appear modest, I seriously question that I deserve it. If my public record reflects tolerance and understanding, I regard this as no more than conduct in line with my public duty. A public official's prime impulse should be one of obligation to every citizen he serves. If he feels that any citizen is outside his range of responsibility, he is unfit to hold the office entrusted to him.

Respect for the right of other men to have different beliefs is essential to the preservation of our democratic society. It is a principle embedded in our National Constitution, and it must find expression in the lives of our people.

This respect for the right of others to believe, is not of course, the same thing as being indifferent to what other men believe.

I do not share the all too common belief that it does not matter what a man believes, as long as he believes in something.

What one believes about God and man and the world in which he lives has an important bearing on his behavior as a private individual and as a citizen.

RELIGIOUS BELIEFS ARE TOO IMPORTANT TO BE STRAITJACKETED

Religious tolerance should be cultivated not because a man's religious beliefs are unimportant, but because his religious beliefs are too important to be straitjacketed by the power of public authority or the subtler forces of group conformity.

What a man believes may be highly destructure to his own well-being and to the tranquillity of society. But it is far more destructive to the human personality to seek to coerce beliefs and far more dangerous to the vitality of society to obstruct progress toward truth through dissent, dispute and discovery.

The tolerance that makes a contribution to a healthy society arises not from indifferences to belief but from reverence for human individuality, and from the desire to understand those who are different from ourselves.

THE DESTRUCTIVE WORK OF PREJUDICE

I do not pretend to any specialized knowledge of the psychology of prejudice and intolerance. But I have known them in myself, and I have seen their destructive work in our society.

I read recently that perhaps 10 percent of Americans are virtually free of prejudice. But I rather doubt that there is one among us today who has never felt—or who has entirely eliminated from his life—the emotional rejection of persons on the basis of preconceived notions.

I am not sure that this deep-seated feeling can be eliminated entirely in the makeup of any man. Sometimes I am even inclined

to feel that a little prejudice—if it is consciously recognized—may be to the good as an energizing agent. The struggle to overcome in ourselves what we deplore when we see it in its grosser forms in others should strengthen us for the big battles against prejudice and intolerance in our society. Also it makes us more understanding and less self-righteous in our dealings with our fellow men.

THE ANTIDOTE TO PREJUDICE IS PEOPLE

I am convinced, in any case, that the antidote to prejudice is people—people learning about people who are different from themselves—learning about them as individuals, learning that they have common hopes and fears, common concerns and aspirations, and learning that the people we have classified under a single label are as different from one another as those we have long identified as our own kind differ among themselves.

In the language of international relations, we need more people-to-people contacts within our own communities.

Standing apart from one another we cannot achieve understanding. The unknown then becomes something we wish to avoid. Thus separation breeds prejudice, and prejudice obstructs the channels of communication and this heightens the spiritual separation.

We are beginning to realize, I think, that peoples of the whole world must get along together notwithstanding drastically different social, political, and economic orders, if we are not to cease to exist in mutual desolation. We must also realize that we will have to learn to live more harmoniously and more constructively with people of different creeds and colors if we are to avoid spiritual desolation in the communities of our own land.

THE GREAT AMERICAN GOAL IS FREEDOM

The great American goal is freedom—both at home and throughout the world. We cannot be free if our minds and hearts are enslaved by prejudice.

I recall seeing a little report in a paper a few months back about a rather strange happening in a southern town. A county was building a new jail. One of the workers on the project on the day it was completed was arrested for drunkenness and disorderly conduct and became the first prisoner of the jail he had built.

When we allow prejudice to enter our lives we build the jails in which we are then imprisoned. We cut off communications. We can no longer be free.

AMERICANS ARE LINKED TOGETHER

Some time ago, there was a very allegorical type of movie in which a white man and a colored man chained together, escaped from prison. During their escape, they fell into a deep pit together. There was only one way out and that was for the one to stand on the shoulders of the other. Since the Negro was the stronger, the white man stood on his shoulders and climbed over the edge of the pit. Since they were chained together, the white man had no alternative but to pull the colored man out of the pit after him.

Americans are linked together by bonds stronger than chains. We are dependent upon one another for mutual progress and ultimately for survival. We are all the children of God and the brothers of all mankind.

In that simple commitment with open hearts and willing minds we can move forward.

Mail Transportation Problems

EXTENSION OF REMARKS
OF
HON. FRANK CHURCH
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Wednesday, June 15, 1960

Mr. CHURCH. Mr. President, the State which I represent embraces more than 83,000 square miles of jumbled mountains and great plains. Since the day when the pony express riders first carried messages to and from the early day mining camps, this vast and rugged terrain has presented problems of mail distribution. Recently, the Post Office Department inaugurated its new nationwide integrated postal service plan in Washington, which affects Idaho. The results so far are questionable in Idaho.

Recently, because of an editorial he had written on the subject, I wrote Mr. Louis A. Boas, editor of the Daily Idahoan, at Moscow, for his impressions as to how the new system is functioning in his area. Mr. Boas is a well-known and outstanding citizen and newspaperman of my State. Because he writes interestingly and well, and is acutely familiar with the problems which have been generated by the changeover, I ask unanimous consent to have his answering letter printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE NEWS-REVIEW
PUBLISHING CO., INC.,
Moscow, Idaho, May 9, 1960.

Senator FRANK CHURCH,
Senate Office Building,
Washington, D.C.

MY DEAR SENATOR: I appreciate your letter of May 3 asking my views on postal service in answer to the Department's explanation of its recently inaugurated "metro" system of highway transportation of mail.

I have been unable to note, during the 6 weeks this new system has been in use, any improvement nor have I noted any deterioration of service. But adoption of the new system has resulted in the elimination of one Seattle-to-Spokane passenger train, and institution of the previous "hypo" truck service now supplanted by the "metro" resulted in the discontinuance of passenger trains serving Moscow, Lewiston, and other Union Pacific points. I am not persuaded this is progress, particularly in view of the fact that trains historically have been more reliable during periods of bad weather than trucks, either large or small. The "hypo" service several times was delayed badly by heavy snows during the years of its use. At the same time Spokane many times is fogged in and planes never land there; but the trains did operate.

For example, I have for many years received mats of wirephotos out of San Francisco, via airmail. I receive them now exactly as I received them 12 years ago—the second day. Twelve years ago they were airmailed out of San Francisco on a plane leaving about 5:30 p.m., relayed to train at Portland, thence to Moscow via Union Pacific. Today planes travel at twice the speed, Moscow is served by West Coast Airlines out of both Portland and Spokane—but I receive my package of mats the second day out of San Francisco. Periodically I complain to the Post Office Department. An inspector in Seattle promises action, the local office crew keeps a record of this package receipt, tracers are put on—and that's all I ever hear about it.

Meantime the hours at our post office have been drastically shortened. The windows open at 9 a.m. and close at 4:30 p.m. where they used to open at 8 and close at 5. Saturdays they close at noon and some windows are not open at all Saturdays.

I appreciate, of course, the advantages of the 40-hour week and shortened workdays, only in the newspaper business we don't have it. I can judge my times to still do business at the post office before 4:30 p.m. I can accommodate earlier mailings of important messages to make the "metro" truck. I can suffer airmail from San Francisco that reaches me the second day it is mailed. But I cannot accept the statement that postal service has been improvd. It has not been. It may be cheaper but the territory has suffered vital transportation reversals. I repeat: If they continue "improving" the mail services we may, eventually, get to where we were 20 years ago.

Sincerely,

LOUIS A. BOAS,
Editor, Daily Idahonian.

Hugh T. Bennett, Sr., in 54th Year as Member of the Gibson County Court

EXTENSION OF REMARKS
OF
HON. ROBERT A. EVERETT
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1960

Mr. EVERETT. Mr. Speaker, there appeared in the Commerical Appeal of Memphis, Tenn., an outstanding newspaper of the Nation, on Sunday, June 12, an article written by Joe Freeland, an excellent reporter at Jackson, Tenn., about a prominent citizen, Mr. Hugh Bennett of Fruitland, Tenn., which is in the Eighth Congressional District that I have the honor to represent.

Mr. Bennett's record in public life is so outstanding that I wanted to call it to the attention of the membership of this Congress. The article follows:

LONGTIME MAGISTRATE WILL NOT RUN IN AUGUST

(By Joe Freeland)

JACKSON, TENN., June 11.—A West Tennessean believed to have been a magistrate longer than any other person in the State said this week that he will not be a candidate for reelection in August.

He's genial, personable Hugh T. Bennett, Sr., of Fruitland, now in his 54th year as a member of the Gibson County court.

"I am strong in my belief that 54 years is long enough for any man to serve on his county court," Mr. Bennett said in announcing that he won't seek reelection.

Few—if any—West Tennesseans have been accorded as many political honors as has Mr. Bennett, who is a handsome, distinguished-looking man, with Chesterfieldian manners.

When he was elected to the first of his nine 6-year terms, he was the youngest member

of the Gibson County court. He continued to be the youngest member of that body for 12 years.

Mr. Bennett ventured a bit further into the field of politics when he was elected direct representative from Gibson County to the State legislature, but did not seek reelection after serving one term (1909) in the lower house.

He was named to the county Democratic executive committee and served as the committee's secretary from 1910 until 1924.

SERVED ON DRAFT BOARD

It was during Ham Patterson's tenure as Governor that Mr. Bennett was elected assistant clerk of the State senate and served his first term during the 1915 general assembly. He continued to serve as the senate's clerk in the 1917, 1919, and 1921 sessions.

Since Mr. Bennett was clerk of the senate in 1916, he also served as clerk of the high court of impeachment which impeached the late Circuit Judge Jesse Edington and the late Attorney General Newton Estes, both of Memphis.

While serving as chairman of the Gibson County Draft Board during World War I, Mr. Bennett was elected without opposition to two terms (1923 and 1925) in the State senate.

In 1930, he was appointed examiner for the inheritance tax division of the State department of finance and taxation. His territory included all of west Tennessee outside Shelby County, and he held that post until his retirement in 1951.

Mr. Bennett has not been content to wash his hands of things political in his post-retirement years. Besides holding down his magisterial post, he is now in his third 2-year term as an eighth district member of the State Democratic executive committee and in his second term as west Tennessee chairman of the committee.

HIGHEST HONOR

Also, Mr. Bennett entered a five-man race and was elected one of Gibson County's two delegates to the 1953 State constitutional convention. It was during that session that Tennessee's constitution was amended for the first time since 1870, and Mr. Bennett said he considers being chosen a delegate to the convention the highest political honor ever accorded him.

Aspirants to political offices would doubtlessly like to know his formula for being elected without opposition. Seldom has he had opposition for the office magistrate, and he was elected State senator three times without an opponent.

Once—in 1924—his name was on the ballot in Gibson County three times without an opponent: for the offices of State senator, magistrate, and county Democratic committeeman. He withdrew as a candidate for committeeman, saying, "Three times is just too much for one man's name to appear on the same ballot."

Citizen in a Democracy—Double Responsibility

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 15, 1960

Mr. HUMPHREY. Mr. President, I want to extend my congratulations to my good friend and our distinguished colleague, the junior Senator from Minnesota [Mr. McCARTHY] who received an honorary doctor of laws degree from St. Thomas College in St. Paul, Minn., on June 3. Senator McCARTHY is the former head of the sociology department at that fine college.

At the commencement ceremony, the Senator discussed the responsibility of the college graduate as a citizen in our democratic society and in his usual penetrating fashion set forth both the individual and social responsibilities of each citizen. He called the serious problem of our times "not the absence of goals, but the weakening of the traditional institutions by which good men learn to choose their goals and also to develop the will to stand by them," and warned against "the disturbing reliance upon mass appeal—to sell rather than inform and to substitute emotional persuasion for reasoned acceptance."

Mr. President, I ask unanimous consent that a news story from the Catholic Bulletin, weekly newspaper of the Catholic Archdiocese of St. Paul, Minn., reporting Senator McCARTHY's address be printed at this point in my remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

GRADS ASKED TO HEED DOUBLE RESPONSIBILITY—McCARTHY HONORED

The college graduate of today must enter into society with a double sense of responsibility, Senator EUGENE McCARTHY, Democrat, Minnesota, declared at the St. Thomas College commencement June 3.

The Senator, former St. Thomas sociology department head, was honored with an honorary doctor of laws degree during the ceremonies for 164 new graduates in O'Shaughnessy Stadium.

McCARTHY said the graduate must first "accept his individual responsibility as an educated person—and in the case of those of you graduating here today, your individual responsibility as an educated Christian.

"No matter how bad the times nor how great the temptations, the individual is a free person, capable of integrity in his personal life and capable of making the hard decisions on the side of the good and true."

The second responsibility is to society, he said. "For the Christian, social responsibility is raised to the supernatural level and becomes the law of love of neighbor."

The college graduate today "cannot ignore the risks involved in a democratic society or withdraw from the marketplace where conflicting goals are offered," the Senator warned.

Democracy does not make life simpler, but rather complicates it, he said.

"The essence of democracy is to establish conditions under which the individual choice and decision, the fullness of personality can be achieved.

"The test of democracy is to win the voluntary acceptance by a majority of the true and the good, to achieve a consensus of ends that are good through means that are good."

The Senator contrasted democracy with the totalitarian state which imposes national planning and goals on the people.

"The essence of totalitarianism is the control of the whole man. The frightening thing about modern totalitarian states has not been so much the economic control which they have imposed, but rather the domination of the intellectual, moral and spiritual life of the people."

The inner formation of the individual, he said, is beyond the power of the state in a free society and has been the traditional work of the family, church, and school.

He said that "the serious problem of our times is not the absence of goals, but the weakening of these traditional institutions by which good men learn to choose their goals and also to develop the will to stand by them."

He told the students that in a world of attractive distractions, they have a greater need of self-discipline, of dedication to mastery of fact and formula, to the reading and reflection without which no man can be liberally educated."

He also warned his listeners against the disturbing reliance upon mass appeal—to sell rather than inform and to substitute emotional persuasion for reasoned acceptance."

In society, he said falsification is condemned, yet the practice is to some extent indulgently accepted.

"To the degree that we compromise the morality of means," he said, "or substitute the lesser means for the disciplined one, the end is diminished, and the person is that much less a whole man."

Dairying In Alaska

EXTENSION OF REMARKS

OF

HON. RALPH J. RIVERS

OF ALASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1960

Mr. RIVERS of Alaska. Mr. Speaker, in a release from the University of Alaska on May 27, 1960, the foresight displayed by the President and the Congress in 1935 with regard to Alaska is very well demonstrated.

I speak of the Matanuska Valley colonization project begun in May of 1935 to stimulate growth in Alaska, to demonstrate the agricultural potentialities of Alaska, and to give people from stricken agricultural areas in certain States a chance to start life anew. Hardships were encountered, and many of the first settlers gave up, but those with the necessary vigor and stamina made good as did others who later joined their ranks. The scope of their success in the beautiful Matanuska Valley is documented in the mentioned release with regard to dairying, and I assure you that comparable success has been attained in truck gardening. The release follows:

ALASKA DAIRY INDUSTRY GROWS IN VOLUME AND EFFICIENCY

June is National Dairy Month throughout the Nation. This is an appropriate time to recognize and pay tribute to one of the newest and the most rapidly growing food industries in the State—the local dairy industry.

Between 1950 and 1960 Alaska dairymen increased fresh milk production from 3 million to over 7 million quarts a year. Most of this increase occurred in the rail-belt area where some 600 to 800 people earn a living from the production and distribution of "nature's most complete food." This local industry requires the equal to a $6 million investment. About two-thirds of this is invested in dairy farms and the remainder in processing the delivery facilities.

A comparison of the farm and retail prices of fresh grade A milk produced in Alaska reveals an interesting situation favoring the local industry. Since 1951 the retail price increased from 19 cents to 23 cents a quart in Seattle. In Anchorage it has remained

at 40 cents a quart for the past 10 years. In fact you can now buy a half-gallon carton for 79 cents. In Fairbanks a quart of fresh milk costs less now than 5 years ago. During the same period the wage scales for most trades have more than doubled. This means than an hour's wages will now buy more local fresh milk than 10 years ago. A recent survey of Anchorage households indicate they drink only about 80 percent as much as the average for other States.

During this period of wage-price increases the dairy plants and retailers have also held the line on prices. Through greater efficiency they have been able to pass on a greater proportion of the consumers' milk dollar to the farmer. In addition they have also been able to improve plants, stores, and services while selling a more attractively packaged product of better quality.

It takes a lot of hard work and confidence in the future of Alaska to develop a commercial dairy farm. A considerable investment in effort, time, experience and money is necessary. Normally from 10 to 15 years is required to develop a homestead into a commercial dairy with the equivalent of a $50,000 to $75,000 investment.

Dairying continues to develop more rapidly in the Matanuska-Anchorage area (see table below). This reflects the greater availability of development capital, marketing facilities and size of market as well as more agricultural experience in the area. In the Fairbanks vicinity the Tanana Valley has a greater area for development. Here, farming is likely to increase at a more rapid rate during the next few years.

Area	Farm sales of milk		Percent increase
	1949	1959	
Matanuska Valley	$479,000	$1,438,169	200
Tanana Valley	68,000	175,414	158
All others	117,000	157,493	35
Alaska total	664,000	1,771,076	182

Leisurely Motoring in New Jersey

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Wednesday, June 15, 1960

Mr. WILLIAMS of New Jersey. Mr. President, many motorists are accustomed to high speed travel through New Jersey. Our highways, turnpikes, and parkways have made it convenient for drivers to reach our shore, our major connections with highways of neighboring States, and other destinations.

Mr. George Cable Wright of the New York Times, in the issue of June 12, has written a story giving good arguments for a more leisurely look at the Garden State. He has given details on the sights to be seen within very short distance from our busy cities. His story should be of help to anyone who wants to know New Jersey better.

Mr. President, I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW JERSEY BYWAYS FOR LEISURELY MOTORING

(By George Cable Wright)

TRENTON.—The New York City motorist who enjoys a day-long drive through scenic and historic country should find both stimulating and relaxing a tour of the byways and less-publicized points of interest in New Jersey.

The autoist's first stop, after crossing the George Washington Bridge, could be the Steuben House in River Edge. This structure, now a State museum, contains an interesting collection of relics. The house was a gift of the United States to Gen. Baron von Steuben for his services as a great military leader in the Revolutionary War.

From River Edge, the motorist can continue east and then north, via New Bridge Road and Washington Avenue, to Tappan, N.Y., just across the State line. This route is lined with typical examples of Dutch Colonial architecture. At Tappan, he can visit the prison and site of the execution of Maj. John Andre, adjutant general of the British Army, who was hanged as a spy in connection with Benedict Arnold's plot to betray the Continental fortress at West Point to the British.

A picturesque, tree-lined asphalt road leads from Tappan west to State Route 17. The motorist then should turn north on that artery to Suffern and Sloatsburg, N.Y., and then west to Ringwood Manor State Park, N.J. Here, he can visit a 78-room manor house that once was occupied by Peter Cooper, industrialist and philanthropist, and is now a State museum.

IN WASHINGTON'S FOOTSTEPS

From there, State Route 511, a wooded, backroad, leads south past Wanaque Reservoir to Pompton Lakes. Here, the motorist should turn left onto State Route 23 and left again at Mountain View to Preakness Valley Park. This is the site of Dey Mansion, which was George Washington's headquarters on several occasions during the Revolution. Returning to Route 23, the autoist can turn left to U.S. 46. This will lead him back to the George Washington Bridge.

Another interesting tour may be begun by taking U.S. 22 to Union, then State Route 82 to Springfield and State Route 24 to Morristown. One of the most famous of all of Washington's headquarters is situated in Morristown, as well as a museum displaying many valuable documents and relics of the Colonial period. U.S. 22 can be reached via the Newark Airport Interchange of the New Jersey Turnpike.

At the top of the hill near the Morris County Courthouse, also in Morristown, Fort Nonsense, an earthworks of Revolutionary War days, has been reconstructed. The Jockey Hollow section of Morristown National Park, where Washington's troops encamped, also is worth viewing.

Typical soldiers', officers' and hospital huts have been reconstructed in the hollow and may be explored by the visitor. The Tempe Wicke House, in which Mrs. Wicke is reputed to have hid her horse to prevent its seizure for army use, also is open to the public.

From Morristown, the tourist can take U.S. 202 to U.S. 46 and the George Washington Bridge.

The motorist with a full day to spare should find interesting that part of U.S. 22 between Mountainside and North Plainfield. It has been planted with flowering dogwood trees and named Blue Star Drive in honor of those who served in the Armed Forces in World War II. Cedar Brook Park in Plainfield has a garden abundant with trees, flowers and shrubs found in Shakespeare's plays.

CROSSING THE DELAWARE

Continuing west on U.S. 22, the motorist can stop at Wallace House in Somerville. This is a historic shrine of the Revolutionary War period. From there, he should proceed south on U.S. 206 to State Route 518 and then turn right again and travel through the colorful Sourland Mountains. This leads to Skillman, Blawenburg, Hopewell, and State Route 69 and, eventually, to the road to Washington Crossing on the Delaware River.

The communities on both the New Jersey and Pennsylvania sides of the river are called by that name, for it was here that General Washington made his historic crossing on Christmas night, 1776. On each river bank is a beautiful park with picnic facilities.

Also on the Pennsylvania side of the Delaware River is a new national museum that exhibits the famous if inaccurate painting by the German artist Emanuel Leutze (1816–68) of the historic crossing.

On the Jersey shore in the 200-year-old McKonkey Ferry House, originally operated as a tavern by the ferry man and restored to its original appearance.

A few miles farther south on the river road the tourist will see a modern bridge that spans the river but has no access roads. The explanation: the Delaware River Toll Bridge Commission erected the span as a replacement for one badly damaged in the 1955 flood, but the highway departments of the two States have not got around to completing the necessary road connections.

Still farther south at Trenton, points of major interest include the Old Barracks, the Trent House, the Trenton Battle Monument and the 163-year-old State House. The Trent House was the home of the founder of this city and is now open as a museum. The barracks were built in 1758 during the French and Indian Wars and were occupied by Hessian troops when Washington made his surprise attack. The monument has an elevator and stands in the spot where the battle actually took place.

From Trenton, the motorist should proceed on U.S. 206 to Lawrenceville and Princeton. On entering Princeton, he will observe Morven, built by Richard Stockton, a signer of the Declaration of Independence, and now the State's executive mansion. It is open to visitors on Tuesdays between 2 and 4 p.m.

PRINCETON NEARBY

Nearby is the extensive campus of Princeton University with its imposing Gothic structures and Nassau Hall, where the Continental Congress met in 1783.

From here, the motorist should continue along Nassau Street, past Carnegie Lake to Kingston and then to Rocky Hill, where he can view the Berrien House, in which Washington wrote his farewell address to the Army. State Route 27 leads from Rocky Hill to New Brunswick, where the motorist can connect with either U.S. 1 or the turnpike for his return home.

One of the most scenic tour in the State is that from Morristown to High Point at the northwest tip of New Jersey. From Morristown, the motorist should proceed via Mount Freedom, State Route 10, Landing, Lake Hopatcong (which he should circle counterclockwise), Woodport, Lake Lackawanna, and U.S. 206. He then should follow U.S. 206 north to Newton, take an equally colorful secondary road to Swartswood Lake and State Park and then continue north to Branchville and Stokes State Forest.

FLOWERS ABOUND

Here, the motorist should be sure to visit Tillman Ravine, a beautiful gorge at the south end of the forest, and then continue to Wallpack Center. A side trip to Buttermilk Falls, 2 miles south of Wallpack Center, is recommended if time permits.

From here, the motorist should head north through Flatbrook Valley to High Point, 1,804 feet above sea level. A most satisfying return trip leads along State Route 23 through Sussex, Franklin, Stockholm, and

Newfoundland. The rugged wooded hills in this area are dotted with wild flowers of every color imaginable, and the route is lined with large dairy farms and sizable herds of beef and dairy cattle.

Why I Want To Go to College

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1960

Mr. HOLTZMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I have the honor of including herein an essay written by a young high school student in my district, which won for her first place in the national Thom McAn Leadership Awards program.

The young lady is Jo Ann Molomut of 32–15 157th Street, Flushing, Long Island, N.Y., who is due to graduate from Flushing High School later this month. Her prize winning essay brings her a college scholarship and a week's all expense tour of Washington, D.C., and New York City.

Jo Ann has been interested in scientific research since early childhood, spent much of her time in her father's laboratory (her father is a biologist engaged in cancer research), and plans to continue her studies in this field in college.

She is an outstanding student—a credit to American youth, and her desire to enter this highly technical field is most commendable.

The essay, entitled "Why I Want To Go to College," follows:

WHY I WANT TO GO TO COLLEGE

(By Jo Ann Molomut, Flushing High School, Flushing, N.Y.)

As far back as I can remember I have spent most of my weekends at my father's laboratory. At first I just ran around underfoot and played with the animals. Later, as I grew up, I became more and more interested in the research going on around me. I spent hours watching the scientists at work. From these observations, and with some instruction, I learned many laboratory procedures.

During the summer of 1957 a fellow student and I did some research at the laboratory in the field of cancer. Although our experiment had been carried on before and therefore was not new, it was new and exciting to us. We learned how an experiment takes shape and how to follow through to a conclusion. It also became apparent to us that one experiment leads to dozens of others so that research is really a continuously growing thing, feeding on imagination and foresight and producing knowledge. In November of 1957 we demonstrated our work on a board of education television program, "Biology One."

This past summer I continued to work in science by doing research work at Cornell University. The program was one of those sponsored by the National Science Foundation for high school students. My work was in the field of nematology. This research was doubly interesting because it was so very different from anything I had ever done before.

Now I am just beginning a new project. One of the teachers in my school is starting some research in high temperature chemistry and he has asked another senior and myself to assist him. The work will be done after school during this coming term and we are scheduled to begin the preliminary preparations in a few days. Not only will this work broaden my knowledge of chemistry, but it will give me a chance to increase my experience in the many phases of scientific research.

Because I am so interested in science and have done some practical laboratory work, I would like to go to college in order to study the theory behind these procedures and to learn new procedures. I do not, however, believe in too much specialization, especially in undergraduate work, because in our highly complicated society one needs a broad education. Because I love learning, I have enjoyed my high school courses immensely. I would like to continue to study such subjects as mathematics, social studies, English and languages, and to begin to explore new fields such as psychology and comparative religion. I know that college will be a great opportunity to broaden my horizons, both in the classroom and outside of it.

The Blitz That Failed

EXTENSION OF REMARKS
OF
HON. JOSEPH S. CLARK
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Wednesday, June 15, 1960

Mr. CLARK. Mr. President, I ask unanimous consent that there be printed in the Appendix to the RECORD an editorial which appeared in the Nation on June 4, 1960, entitled "The Blitz That Failed."

Foreign policy is much too important and much too serious to be debated for purely political advantage. This was the attitude of Senators CARROLL, KENNEDY, SYMINGTON, MORSE, MONRONEY, and MUSKIE, and the editorial compliments their position. As Senator CARROLL pointed out in his speech that day, there can be no political advantage to either party if there is no advantage to the country.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE BLITZ THAT FAILED

The strategy of the early Monday morning surprise attack on Democratic critics of the administration's handling of the summit conference was clear enough. Catch the opposition off guard by a swift attack, without notice, in full force and—by the savagery of the attack—seize the initiative, keep the opposition off balance, and (with good luck) spike their guns. It was the classic, "rule book" counteroffensive formula. Senator DIRKSEN led off with a soft-on-communism tirade directed against Adlai Stevenson for his "crowbar and sledge hammer" speech in Chicago. But the dirty work was left for Senator HUGH SCOTT, who suggested that Mr. Stevenson and Senator KENNEDY should "relieve themselves of the curse of the suspicion of appeasement," and who called both men "turnquotes"—a phrase which, in the excitement of the early morning assault, registered with many sleepy Senators as "turncoats."

But the blitz failed. Recovering from their rather stunned initial reaction, the Democrats quickly rallied and, with hastily summoned reserves, proceeded to give Senators DIRKSEN and SCOTT a brutal drubbing. Few issues of the CONGRESSIONAL RECORD this season make more lively reading than volume 106, No. 93, devoted to the Monday, May 23, debate. Senators CARROLL, SYMINGTON, MORSE, MONRONEY, MUSKIE and—once he had been notified of Senator SCOTT's sneak attack and rushed to the Senate floor—Senator KENNEDY, made mincemeat of what Senator CARROLL accurately characterized as "a raw, partisan, political piece of chicanery." In the end, Senator DIRKSEN sought to mollify his Democratic critics by expressing undying "love" for them as friends and colleagues. "His opening speech," he said, "was just plain politics, spelled with a capital 'P.'" But the Democrats wouldn't buy it. "The response," said Senator KENNEDY, "was grudging and evasive; there was nothing amusing about an indirect charge of disloyalty." Senator SCOTT, to his credit, was more manly than DIRKSEN; he apologized. Bruised and battered, neither DIRKSEN nor SCOTT will be anxious to return to the "apostles of appeasement" theme soon. As Senator MONRONEY pointed out, the Monday morning blitz was all too reminiscent of "another Senator who once waved papers and shouted, 'I hold in my hand.' We are tired of that sort of procedure. Mr. President, Americans are tired of the attacks which are strictly for the purpose of diversion, in an attempt to light another fire, to try to direct attention somewhere else."

The lively debate suggests strongly that Senator MONRONEY may be right—that in the Senate at least, the ghost of the late Senator Joe McCarthy has finally been exorcised.

Nineteen Hundred and Sixty Osmers Questionnaire

EXTENSION OF REMARKS
OF
HON. FRANK C. OSMERS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1960

Mr. OSMERS. Mr. Speaker, those at home and abroad who think the Paris summit fiasco has divided the American people had better take a look at how voters in my district reacted to Khrushchev's abuse of our President.

On May 2, I mailed out 46,000 questionnaires to typical voters in my district. Just about half of the more than 9,800 replies which have been received to date came in before the ill-fated Paris meeting. Only 52 percent of my constituents replying prior to the Paris blowup favored the overall record of the Eisenhower administration, 34 percent were opposed to it with 14 percent undecided. Immediately after the vicious attack by Khrushchev on our President the percentage of those favoring the administration jumped to the almost unbelievable high of 82 percent, with only 11 percent in opposition, and 7 percent undecided. If Moscow is laboring under the impression that our people are divided by the U–2 incident and subsequent events, these answers from a good cross section of our people will set the record straight. Once again we have

proof that, despite our many partisan differences over domestic issues, Americans close ranks when facing up to foreign threats. The final percentages on the record of the Eisenhower administration were 59 percent in favor, 30 percent opposed, and 11 percent undecided.

The replies to another one of my questions prove that Castro is in serious trouble with the American people. Only 9 percent of those answering were opposed to cutting Cuban sugar imports if Castro continues his anti-U.S. campaign, with a resounding 77 percent favoring such cuts.

It is interesting to note that a Federal program of health care for older citizens had better than 7 to 1 support among my constituents, 85 percent voting in favor and only 12 percent in opposition. On this question only 3 percent were undecided. A voluntary plan for such health care was favored by 56 percent while 44 percent thought a compulsory one best.

Mr. Speaker, I am sure the Members will be interested in the replies to other questions, too: Seventy-eight percent favor the United Nations as the best means of maintaining world peace; 80 percent want Congress to pass a strong law to curb radio and TV payola and fakery, and 60 percent favor legal action to end Southern lunch counter sit-downs by requiring stores to treat all customers equally.

More than half, 53 percent oppose the present foreign aid program.

A strong majority want Federal help and tax relief for commuter railroads. An increase in the present Federal minimum wage from $1 to $1.25 per hour was favored by 63 percent with only 34 percent opposed to the increase. On this question 3 percent had not made up their minds.

On two of the three questions relating to education, the poll showed an almost even division of opinion on two of the questions. Those favoring education benefits for peacetime GIs led by a 46-percent to 44-percent margin over those opposed, while 10 percent gave no opinion; 39 percent opposed eliminating loyalty oaths and non-Communist affidavits by Federal scholarship students; 36 percent want them retained; 25 percent were undecided. On the third education question, voters favored Federal aid to education by 2 to 1, 59 percent to 29 percent, 12 percent expressing no opinion. Of those favoring Federal aid to education, 69 percent want the aid used for school construction, 14 percent for teachers' pay, while 17 percent thought all purposes should receive help.

This is the 6th year that I have conducted this broad poll, and the number of replies is the highest ever received. As in previous years, Mr. Speaker, hundreds of letters and comments on the questionnaire subjects, and others, have given me a wonderful insight into public opinion on the issues of the day at the grassroots in my district.

For the first time, a presidential poll was included this year at the request of many constituents. As soon as the results have been tabulated, they will be made public.

The mailing list used consists of two categories: First, 85 percent are registered voters taken at random from voting lists in the 39 municipalities in the Ninth Congressional District. Second, 15 percent are leaders and professional people in the district, such as doctors, dentists, clergymen, lawyers, labor leaders, club women, businessmen, bankers, retailers, public officials, accountants, engineers, architects, and so forth.

Mr. Speaker, under unanimous consent I include the 12 questions and the answers in percentages immediately following these remarks in the CONGRESSIONAL RECORD:

[Percent]

Do you favor—	Yes	No	Undecided
1. The overall record of the Eisenhower administration?	59	30	11
2. The United Nations as the best means of maintaining world peace?	78	12	10
3. Cutting Cuban sugar imports if Castro continues anti-U.S. campaign?	77	9	14
4. Our foreign aid program at present levels	39	53	8
If no, more economic aid? 27 percent; less economic? 24 percent; more military aid? 3 percent; less military: 38 percent. No aid at all? 8 percent.			
5. A Federal program of health care for older citizens?	85	12	3
If yes, compulsory plan? 44 percent; or voluntary plan? 56 percent.			
6. A strong Federal law to curb payola and fakery on radio and TV?	80	15	5
7. Eliminating present loyalty oath and non-Communist affidavit requirements for students receiving Federal scholarships?	36	39	25
8. Legal action to prevent southern lunch counter sitdowns by requiring stores to treat all customers equally?	60	25	15
9. Increasing Federal minimum wage from $1 to $1.25 per hour?	63	34	3
If no, minimum of? 67 percent $1.15; no increase? 33 percent.			
10. Providing Federal help and tax relief for commuter railroads?	58	35	7
11. Granting peacetime GI's, with at least 2 years' active duty, education benefits similar to those given wartime GI's?	46	44	10
12. Federal aid to education?	59	29	12
If yes, for construction? 69 percent; teachers' pay? 14 percent; all purposes? 17 percent.			

Wider Use for Social Security

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, June 15, 1960

Mr. WILLIAMS of New Jersey. Mr. President, those who favor the extension of social security coverage to provide medical care for the aging received several good supporting arguments June 13, from an editorial in the New York Times. The editorial quotes an insurance company memorandum which sums up many of the reasons for the social security principle.

Mr. President, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WIDER USE FOR SOCIAL SECURITY

A convincing case for using the Federal Social Security System to finance health insurance for older people has been made by Nationwide Insurance. It is persuasive not only because of the arguments used but also because of its source.

Nationwide has had a unique experience in giving the public protection. Founded by a small group of Ohio farmers in 1926 as a cooperative automobile insurance concern with a capital of $10,000, it has become one of the largest insurance operations in the country. With assets of more than $350 million it gives many kinds of coverage in 20 States through more than 3 million outstanding policies.

The directors of Nationwide have stated in a formal resolution that the health costs of older people are not being met by insurance, that those over 65 haven't either the income or the assets to cover those expenses, that Nationwide favors the use of the social security principle to help meet their needs and, more specifically, that it will support "appropriate legislation" to provide basic health insurance to those eligible for Federal social security benefits.

A memorandum ably summarizes the statistical and historical evidence for the stand Nationwide has taken. It emphasizes a point which seems to be generally overlooked in the current discussions. It claims that, far from damaging the interest of private insurance companies, the companies "would have a broader, sounder market for voluntary insurance among our older people by building on the basic provisions of social insurance legislation."

The Nationwide memorandum also points out that before the establishment of the Social Security System in 1935 the medical societies and many insurance companies opposed the program for most of the same reasons they now oppose the social insurance approach to health care for the aged. But the three decades of experience since then have shown that the minimum social security pensions "have made possible a widespread development of private plans in recent years." We hope that the interests now opposing this extension of the Social Security System will prove to be as wrong as they were in 1935.

Honors for Congressman Canfield

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1960

Mr. PHILBIN. Mr. Speaker, like every other Member of the House, I was gratified to learn of the recent great distinction accorded my dear, esteemed, and distinguished friend, the amiable and

beloved gentleman from New Jersey, Congressman GORDON CANFIELD, upon whom the famous Paterson State College recently conferred the honorary degree of doctor of letters.

GORDON CANFIELD is most respected, admired, and loved by all of his colleagues and ranks with the greatest Americans who have served in this distinguished body.

The citation conferring the degree appropriately commented upon the high quality of the service to Nation, State, district, and constituents which this great Congressman has rendered during his long career in the Congress of the United States.

I take genuine pleasure in congratulating Congressman CANFIELD and his family upon this significant honor and remarkable citation.

If there are more amiable, loyal, and unselfish qualities to be found in the human being, I am at a complete loss to know where to find them, because in my opinion, GORDON CANFIELD exemplifies the highest type of Americanism, the finest attributes of humaneness, the most unselfish and self-effacing kind of public service, and the truest brand of friendship.

He is indeed a man of honor, distinction, and high achievement, and this Congress may well be proud of the richly deserved honors that have come to him, and the fine tributes that have been paid to his illustrious career, ability, and spirit of dedication.

Tribute to Justice Levi S. Udall

EXTENSION OF REMARKS

OF

HON. CARL HAYDEN

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 15, 1960

Mr. HAYDEN. Mr. President, 3 months ago I had occasion to make a few remarks about Arizona Supreme Court Justice Levi S. Udall, who earlier in the year had received recognition for his outstanding public service, through the award of an honorary degree of doctor of laws from the University of Arizona. It was, therefore, with great sadness and a sense of personal loss that on May 30, I learned from his son, Stuart, of the sudden death of his father the afternoon before.

We became friends over 40 years ago, a friendship that was accompanied by admiration as I observed the growth of his ability as a lawyer and the soundness of his reasoning in his decisions during his service as a county judge and as a member of the Supreme Court of Arizona.

He was born when Arizona was a territory, and his service was rendered when his wisdom was needed to transform Arizona into a great State. No one could have performed in a better way his 29 years of service on the bench. From his achievements the people of Arizona will gather strength to face the many problems that lie before them.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD several editorials paying tribute to the late Justice Udall, that appeared in Arizona newspapers.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Tucson (Ariz.) Daily Star, June 1, 1960]

THE PASSING OF A PATRIARCH

In a civilization where often the emphasis on the home is obscured, or families tend to become matriarchal, it is worth comment when a real patriarch passes. Justice Levi S. Udall, of the Arizona Supreme Court, was one. He was a patriarch, with a growingly prominent family, a decade and a half ago. The years have done nothing except add legend and luster to his name.

His sons, including Congressman STEWART UDALL, and Attorneys Morris and D. B. Udall, all of Tucson, must have given Levi Udall much satisfaction, as a source of pride. This is equally true of his daughters, Elma, who was the only Arizona woman in the Red Cross contingent in the Persian Gulf Command during World War II; and Mrs. Eugene Turley and Mrs. Warren Whiting, who have families of their own.

Definitions of a full and rich life vary. However, according to a standard that has been recognized for at least 7,000 years, Justice Udall lived a full and a rich life, leaving progeny to carry on his name. He was an influential and a respected figure on the legal and political scene. He reared a family and he helped judge his people. Arizona will miss him.

[From the Yuma (Ariz.) Daily Sun, June 3, 1960]

A GREAT ARIZONIAN PASSES

Arizona yesterday laid to rest one of her most distinguished citizens, Justice Levi S. Udall, of the Arizona Supreme Court. Few men in this State have been so widely mourned, so universally respected.

For Levi S. Udall lived a life that exemplified the virtues so many of us profess and so few of us practice. In a world that rewards arrogance and ostentatiousness, he preferred humility and self-effacement. In an era of cynicism and hypocrisy, he enjoyed the luxury of integrity.

His achievements in the field of law, from a humble beginning to the State's most honored judicial seat, are in themselves remarkable. But the exemplary life he led and his steadfast devotion to public service, religion, and family set him far above his fellow man. His passing is a great loss to the entire State. His place will not soon be filled nor his role ever matched.

[From the Flagstaff, Ariz., Daily Sun, June 1, 1960]

A SHOCK FOR ARIZONA

Justice Levi Stewart Udall's death came as a shock to Arizonians. Only 69, he appeared to be in excellent health and had been carrying a full workload in the supreme court.

Judge Udall was a native of St. Johns. After being elected to the State's highest bench he moved to Phoenix—but northern Arizona was always his home.

Levi Udall had many sterling qualities: a fine, upstanding man of the highest integrity, a church leader, able and wise attorney and judge, a kindly and friendly person, a good father.

He loved Arizona and was an authority on its history. While activated by the highest principles, he was also an able politician in the best sense.

Judge Udall made friends easily because he was friendly. People loved him because he loved people.

He spent his life in serving his church, his profession, his family, his friends, and never lost the common touch.

Judge Udall had some of the practical, wise kindliness of Lincoln.

The people of Arizona have lost a great and good friend and public servant.

[From the Phoenix Gazette, June 1, 1960]

UDALL'S RECORD WILL LIVE ON

Some men are mourned at death by hosts of friends. Others in their passing leave an empty place in the lives of thousands who never met them. Arizona feels both reactions to the death of Levi Stewart Udall.

There is little anyone can say to ease the ache for the many who have lost a loved one and a friend. Grief is a lonely thing which only time can placate, and only memory can turn into something precious. But for friends and strangers alike, Justice Udall left more of himself behind than most men do.

It is for the members of his church to attest how strongly and wisely his leadership was exerted there. Those who served with him in civic effort will tell how well he wrought for community and State. But his work which most nearly touched every life, whether of friend or stranger, was in the law. It was there that he came as close as man can to gaining earthly immortality; many of the decisions that were his, or in which he had a strong hand as a justice of the Arizona Supreme Court, will continue as a living influence for justice for generations to come.

Justice Udall's passion for the law extended from the details of administration—he was one of the first to espouse a presiding judge system for Maricopa County—to the broad and vastly important sweep of philosophy. He believed in the written law and the processes of the law as mankind's safeguard against tyranny by dictators, be they individuals or groups. He believed the social, economic, and legalistic fads of the moment have no place in the unswerving continuity of justice.

Lawyers and courts for many years to come will be seeking guideposts in opinions written by Justice Udall. They will find guideposts to liberty under the law. This is the measure of Justice Udall's worth: that his record will inspire others to make freedom more secure.

[From the Phoenix (Ariz.) Republic, June 1, 1960]

A GREAT ARIZONIAN

The three great passions of Levi Udall's life were the law, the church, and the family—not necessarily in that order.

For 16 years he served on the Apache County superior court, and for 14 years on the Arizona Supreme Court. He was always courteous on the bench, but there was an air of authority about him that lent dignity to his judicial temperament. Arizona has long been fortunate in the caliber of its supreme court justices, but Levi Udall's name stands out on a roster that included such distinguished jurists as Turner, Porter, Stillman, Lockwood, Doan, Kent, and Windes, to mention some of those no longer on the court.

Son of a Mormon bishop, Judge Udall served as president of the St. Johns stake in northern Arizona. He played a leading part in the local affairs of the Church of Jesus Christ of Latter-day Saints, and was a scholar among a hierarchy devoted to scholarship.

On the death of his father, Levi Udall became patriarch of the Udall clan. The Udalls have held more high political offices in Arizona than any other family. In addition to a supreme court justice, the Udalls have given

Arizona three superior court judges, a Congressman, half a dozen county attorneys, and a flock of municipal officials. Last year Levi and his sister, Pearl, collaborated on a biography of their father, David King Udall, which will stand as a monument to the Udall family for years to come. It is a fine story of a pioneer Mormon who helped make the Arizona desert bloom.

Levi Udall died Sunday, at the age of 69. It is a mark of the man that the last event of his life was a simple family picnic. His greatness lay in his love of family, and in his devotion to religious principles as well as the intellectual prowess that he applied to the law.

Homes for Senior Citizens

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, June 15, 1960

Mr. WILLIAMS of New Jersey. Mr. President, municipal officials, builders, and others throughout the Nation are demonstrating imagination and initiative in providing new forms of housing for our retired elderly citizens.

They are experimenting and making talk become action. We will need much more of this effort as the size of our aging and aged population grows steadily over the next few years and decades.

R. O. Beckman, in an informative column called "The Vintage Years" which appeared in the Newark Evening News of June 6, described some of these housing efforts.

Mr. President, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE VINTAGE YEARS—HOMES FOR SENIOR CITIZENS—NATION AWAKENING TO NEED FOR REASONABLE HOUSING

(By R. O. Beckman)

Better housing for our retired elders, to enable them to live in greater comfort and self-respect, at a cost they can afford, is slowly shaping up across the Nation. Construction and rehabilitation take time but the progress is heartening. Bold, imaginative effort is being shown at the local level.

Of first importance to persons on marginal incomes is the expansion in public housing projects in larger cities, built by local housing authorities with Federal assistance. These provide small apartments renting from $20 up, a certain number of which are set aside for older persons of low income. New projects are underway in Newark, Cleveland, San Antonio, and Miami.

A second important trend stimulated by last year's amendment to the Federal Housing Act is the growth in plans for retirement homes and villages, many including health care, by nonprofit organizations. These mostly serve persons of the middle-income group and often require an initial downpayment for membership. Detroit and several California cities provide examples of going enterprises. Portland, Oreg., now has a $2,500,000 retirement apartment. Toledo is completing a retirement city for 2,000 oldsters adjoining a hospital. Oklahoma City, Evanston, Del., and cities in North Carolina and Iowa plan senior homes. One of the most ambitious projects, a profitmaking enterprise, is a $6 million apartment-hotel for retirees in St. Petersburg, Fla.

Construction activity is most noticeable in larger cities but small ones are also at work. In South Dakota, for example, the Hospital and Home Association has built homes in Spearfish, Lake Preston, Deadwood, and Huron. These provide accommodations for from 60 to 150 residents with complete medical care when it is needed. A charge of $135 a month is made for room and board with $50 added for nursing care.

Combined hospital-nursing home projects are being developed in a number of Rocky Mountain towns. New nursing homes are projected in many cities but few of them have found it possible to utilize the new FHA insurance program because of the difficulty of finding mortgage buyers at the low interest rate authorized.

Retirement hotels are growing in number but have not always proved successful; they provide rental quarters for retirees at reasonable rates. Since they cannot afford to provide health care, they do not provide a lifetime solution to the housing problem of many older persons. Older hotels converted for retired persons do not adopt themselves for the care of convalescent cases. The Milner hotel chain recently abandoned its effort to turn its establishments into retirement hotels.

The latest group to enter the hotel field is Senior Citizens Hotels, with headquarters in Sapulpa, Okla. Headed by C. L. Little, it now operates 28 hotels in smaller cities, mainly in the Midwest. Community kitchens are available for persons wishing to prepare light meals in preference to using the hotel dining room.

One Hundred and Twenty-fourth Anniversary of the Admission of Arkansas Into the Union

EXTENSION OF REMARKS
OF
HON. DALE ALFORD
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1960

Mr. ALFORD. Mr. Speaker, today marks the 124th anniversary of the admission of Arkansas into the Union. On June 15, 1836, Arkansas became the 25th State. It is fitting indeed that we should pause and recognize this anniversary, for Arkansas has indeed been hailed as one of the outstanding States of this country.

Rich in heritage, Arkansas was first visited by the early European explorers in 1541 when Hernando de Soto crossed the Mississippi River and entered the Arkansas country. This early expedition occurred appoximately a half century after America was first visited by Columbus.

Other explorers who followed de Soto were Jacques Marquette and Louis Joliet. Then on April 9, 1682, Robert Caveleir, Sieur de la Salle claimed all the land drained by the Mississippi River for France. Henri de Tonti established Arkansas Post in 1686 and this became the oldest permanent white settlement west of the Mississippi. De Tonti has often been called the Father of Arkansas.

After Arkansas was admitted to the Union 124 years ago today, the State government was housed in the Old State House which now stands as one of the outstanding examples of Old South antebellum architecture. In the Old State House one finds one of the finest existing State museums, with a record of the various roles played by Arkansas in the history of America.

Arkansas today is rapidly gaining stature in many fields—industry, agriculture, education, recreation, and so forth. The State's official nickname, "The Land of Opportunity," was adopted in 1953 in recognition of the vast potential in Arkansas and the citizens of Arkansas have not been disappointed in this selection, as evidenced by a rapid and steady economic growth.

Arkansas rivers and springs provide one of the State's major resources. The primary rivers of the State are the Mississippi, St. Francis, White, Arkansas, Red, and Ouachita Rivers and their tributaries. All of these offer ample surface water for industrial and recreational use.

The variety of Arkansas' minerals is almost unlimited. The State is blessed with rich deposits of bauxite, coal, chalk, manganese, natural gas, petroleum, clay, gypsum, glass sand, novaculite, nepheline, and syenite. These minerals are now being produced on a commercial scale and several others are awaiting development. Arkansas is the only State in the Union with a diamond mine.

There are numerous other resources with which Arkansas is more than amply endowed and I think that most of us readily realize that Arkansas stands as a true land of opportunity in America. Arkansas looks to the future full of confidence and optimism, and I am most proud to call this anniversary to the attention of this great body.

The Eye of the Hurricane

EXTENSION OF REMARKS
OF
HON. EDMUND S. MUSKIE
OF MAINE
IN THE SENATE OF THE UNITED STATES
Wednesday, June 15, 1960

Mr. MUSKIE. Mr. President, on last Sunday, June 12, 1960, it was my privilege to attend the commencement exercises of the University of Buffalo at Buffalo, N.Y. The highlight of the occasion was a thoughtful and scholarly address entitled "The Eye of the Hurricane," delivered by the distinguished chancellor of the university, C. C. Furnas.

The challenge which he laid down for the benefit of the graduating students in the following words is one which is properly directed to all Americans:

It is still to be proven in this complex world that the sanctity of the individual can still be maintained, that enough of the members of a democratic society will voluntarily do the things that have to be done to prevent defeat by an arbitrary dictatorship.

I ask unanimous consent that the text of Chancellor Furnas' address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE EYE OF THE HURRICANE

(Commencement address by C. C. Furnas, Chancellor, University of Buffalo, June 12, 1960)

Members of the graduating class of 1960, it happened that, on the afternoon of September 21, 1938, I was supervising some test activities of a group of engineering students at an industrial plant on a point of land that protrudes into the harbor of New Haven, Conn. For 2 days there had been a deluge of what can only be described in the trite phrase—torrential rains. On this particular afternoon the barometer dropped with extreme rapidity and the wind as well as the rain increased in a rather terrifying fashion. We were in the midst of a severe hurricane which was quite unexpected because it had been predicted that morning that the storm would veer out to sea.

I will not attempt to describe this particular hurricane or my own reactions. Such descriptions have been very well handled in some classic literature of the past. I will merely summarize by saying that it was quite an afternoon. I remember it well.

After some 3 hours of howling wind and drenching rain, a dramatic change occurred. The wind and rain stopped completely. Rays of sunshine came through the broken clouds and a strange quietness prevailed. People emerged from the various buildings, looking puzzled and a bit unbelieving, and even began picking up the scattered debris and putting things in order. We were in the eye of the hurricane—that peculiar phenomenon which is the hole in a meteorological doughnut—aerodynamically explainable, but still very strange—where seemingly nothing unusual is happening and the world seems to be standing still.

This placid interlude lasted for perhaps half an hour. Then from an entirely different quarter than before, the wind and rain started again as suddenly as they had previously stopped. The calm had been a delusion. Before the night was over, some six hundred people lost their lives in New England because of the storm and the physical damage amounted to hundreds of millions of dollars. This particular hurricane was rated as one of the major natural disasters of history.

Why should I mention such an unpleasant event at commencement time? I think it is fairly obvious that I am searching for an analogy. I am suggesting that America, as it proceeds into the latter half of the 20th century, is resting in the eye of a sociological hurricane and that a substantial proportion of the citizens assume that the storm is over.

You know the tempestuous history of the first half of this century, from reading if not from experience—two world wars of unprecedented magnitude and destructiveness, a Communist revolution, the development of the atomic bomb and man-made satellites, the technological revolution which is changing the old patterns of life throughout the world. This is not to imply that all of the events have been destructive. But we must admit that they have been violent. These have constituted the first half of the storm.

In the 6 years since the end of the Korean war we as a Nation have had a tendency to settle into an era of complacent calm. Will the present pattern continue, or will the second half of the hurricane suddenly strike us from another quarter with destructive force?

Better to define this thought, I will call on the recent words of Mr. George F. Kennan, a man who has been an important gadfly in American diplomatic circles for quite a few years.

"If you ask me—as a historian, let us say—whether a country in the state this country is in today: with no highly developed sense of national purpose, with the overwhelming accent of life on personal comfort and amusement, with a dearth of public services and a surfeit of privately sold gadgetry * * * with an educational system where quality has been extensively sacrificed to quantity and with insufficient social discipline even to keep its major industries functioning without grievous interruptions—if you ask me whether such a country has, over the long run, good chances of competing with a purposeful, serious, and disciplined society such as that of the Soviet Union, I must say that the answer is 'no'." [1]

Is Kennan merely a modern Jeremiah unjustifiably spreading gloom and doom over the land? There is considerable evidence from history to support his pessimism.

An American father took his 12-year-old son on a tour of the historical landmarks of Europe. They stood on the edge of the dramatic ruins of the ancient Roman Forum. Very puzzled, the boy asked the question of the ages: "What happened?" The father replied, "The roof fell in." That was about as succinct and significant an analysis as historians have been able to give to date.

It was not Rome alone that went through the ropes. Relative to the environments of their times ancient China, Babylon, Egypt, and Greece were just as powerful, proud, progressive, and dynamic as Rome—or as modern America. Yet they all fell to the forces of decadence and decay and outside conquerers.

Though there are no major wars at this time, there is ample evidence of a world in conflict. Recall a few recent headlines: "Suez Crisis," "Lebanon Crisis," "Vice President Stoned in South America," "Race Riots in South Africa," "Revolution in Cuba," "Nikita Scuttles Summit Conference."

In a vague way we feel that these are all elements of the cold war in which we are continuously engaged and that our adversary in this conflict is communism.

It is popular to state that this is a battle for men's minds—the conflict between the individualistic, free-enterprise approach to living of the Western World versus the regimented, state-controlled dictatorship of the communistic world. Let no one underrate the seriousness of this or the impact on every individual in America. The posture of communism has recently been stated as follows: [2] It has "a general conviction that the State comes before the individual, that unbridled free enterprise based on the exploitation of multitudes by private and irresponsible individuals is a bad thing and vulgar into the bargain, that the Western peoples * * * are heading for economic catastrophe * * * and that it is the duty and the glory of the Soviet Union to hasten with all means in its power the collapse of the Western system and the consolidation of her own."

If one merely mixes the great failures of history with the current headlines and pronouncements, he admittedly can concoct an unpalatable and indigestible stew, leading to mental dyspepsia and indigestion and to fatalistic resignation. But you who are now looking brightly to the future need not automatically accept the verdicts of the past. Despite the contentions of many people, history does not necessarily repeat itself. It need not, if important new factors enter into the formulas and the actions. Have there been any significant changes since the ebb and flow of ancient civilizations? In the vernacular of this day: So what's new?

There is much that is new—and truly significant, too. Best known and most obvious has been the fantastic increase in the scientific knowledge of the physical world and the subsequent development of technology. For the first time in all of history we can dare to hope realistically that the means will soon be available to provide not only the bare essentials but also the reasonable amenities for a decent standard of living for all human beings on the surface of the earth. This is really new, and it makes it possible to conquer one of the basic enemies of civilization—poverty. A host of economic and social problems are still to be solved but at long last the possibility of elimination of hunger, chaos, and despair is almost at hand.

In ancient Greece there were said to be almost three slaves for every freeman. It was thought that this was a necessary sociological pattern to take care of the grubby routines of living so a handful could enjoy the good life. Today machines and automatic processes are our slaves. This has removed one of the major sources of conflict and weakness of the past.

For Americans today, the average span of life is over twice what it was for the ancient Romans. Further, because of good nutrition and medical advances, our health and vitality are much greater during our living days. Pestilence and major epidemics have practically disappeared.

Need I remind you of the revolution in communication and transportation of the past century? The physical means are at hand for practically instantaneous communication of thoughts and information to anyone, anywhere in the world. This has not yet brought about an era of universal understanding but it has helped, and the real impact is yet to come. The speedy transport of goods is no longer stopped by lack of facilities; political and economic barriers, yes—physical barriers, no.

Though the physical sciences have thus far outstripped the social sciences, there have also been very important sociological advances. In that half of the world which lives in an industrial civilization, at least some degree of universal education is the rule. Mass illiteracy in these parts is rapidly becoming a thing of the past. Almost everyone recognizes that a modicum of knowledge is the first essential of a peaceful and stable world.

Despite their brutality and destructiveness, the explosive, noisy, and chauvinistic adventures of Hitler, Mussolini, and the Japanese were only minor valleys which temporarily distorted the upward course of history. There is a general recognition of the common interest of the community of nations as evidenced by the existence of the United Nations. Ineffective as it may be at times, this organization represents a major sociological phenomenon that could not have even been attempted a century ago.

Even the existence of the hydrogen bomb has its beneficial side. All major nations are now honestly striving to avoid an all-out war because of the alternate prospect of mass destruction. This stalemate of mutual terror does form the basis for the prevention of World War III, if we can maintain the necessary military balance for another generation or so, while peaceful methods of solving world problems are being devised.

Finally, except in periods of military strife, the Golden Rule has had more application on the international scale than ever before. This has been particularly true of America. We have been, by all odds, the most generous nation of all time. Directly and indirectly, our medical and educational missionaries have bettered the lot of many millions of foreign people. The Belgian relief program, under the superb leadership of Her-

[1] Speech by George F. Kennan to the Woman's National Democratic Club, Washington Post, Oct. 23, 1959.

[2] Cranshaw, Edward, "Khrushchev's Russia"—Penguin Books, 1959.

bert Hoover in World War I, was a great monument to American generosity. The Marshall plan of recent years was not a selfish program. It was a generous plan for helping others to help themselves. In recent years we have poured many billions of dollars (though not always wisely) into helping people of other lands. Some of the nations of Western Europe are also carrying on similar programs. We give voluminous aid to the unfortunate—from the starving Armenians of earlier days, to the thousands of Hungarian freedom fighters in recent years.

Despite these advances the population of the world is now segmented into three approximately equal and conflicting parts, the democratic world, the Communist world, and the uncommitted peoples with about a billion people in each camp. Just as the independent voter often decides the results of a major election, the fate of Western civilization, including America, will depend to a major degree upon whether these uncommitted peoples, within the next 50 years, turn primarily toward democracy or toward dictatorial communism. It will probably continue to be a hectic and nebulous struggle but a critical one. Never has the bare anatomy of the future been laid out so clearly.

History is embellished with accounts of the rise and fall of tyrants and dictators, with interim periods of governments which operated to some degree with the consent of the governed. There is some evidence that the voice of the people is beginning to make itself felt in present-day Russia. It is possible, though by no means certain, that the latter half of the 20th century will mark the time when the roots of democracy became deep enough eventually to be universal and permanent.

Because of the quirks of modern circumstance the outcome will depend primarily on the economic, political, moral, and military strength of America. It will be determined largely by the example and the leadership furnished, in large and in small degree, by the present graduates of our colleges and universities. This is where you come in. Whether you choose it or not, you will be involved in dramatic world events.

Our country obviously has some great strengths. It also has some pronounced weaknesses. As I see it, our problem of ultimate strength revolves around a contest between statesmanship and gamesmanship. Some definitions are called for. I will give my own, which will serve the present purpose.

Statesmanship is not the sole prerogative of Presidents, Ambassadors, and Secretaries of State. It is actually a quality which can be exercised by every democratic citizen. Essentially it means voluntarily thinking and acting for the welfare of the group, rather than merely for the individual. When the early pioneer voluntarily helped his newly arrived neighbor to hack a home out of the wilderness and plant his first crops, he exhibited statesmanship. When the mother voluntarily labors endlessly for the parent-teachers association, or even the Cub Scouts, she is being statesmanlike. Sometimes wisdom is forthcoming from such activities—sometimes not. But this attitude of statesmanship is the first and most important requirement.

Gamesmanship is a new word in our language, imported from across the Atlantic. It was coined by Mr. Stephen Potter who penned the minor classic "The Theory and Practice of Gamesmanship or the Art of Winning Games Without Actually Cheating."[1] Superficially, it is British Punch-like humor at its best. In my opinion, however, it is really a biting satire of Western civilization, worthy of Jonathan Swift. It essentially lays bare the prevalent attitude on both sides of the Atlantic of "How can I get mine and who cares about what happens to others?" It involves the search for the "ploy" which is the equivalent of the Hollywood gimmick. It is the very opposite of statesmanship.

I am suggesting that the attitude of the majority of the thousands of college graduates each year can be shifted substantially away from gamesmanship and toward statesmanship. This may well be the significant factor in combating the destructive forces of the second half of the hurricane. This is not something which can be left to the so-called national leaders. It is everyone's task, and particularly yours. Statesmanship does not need to be nourished on great flurries of national crisis. It can be a part of day-to-day affairs.

Though there is only a small chance that any one of you will become President of the United States, many of you will occupy positions of importance in many fields. Some will be influential in labor, directly or indirectly. Will you have the statesmanship to give objective consideration to the inflationary impact of forcing wage rates ever higher without regard to consequences? Some of you will be involved in politics. Will you attempt to exercise judgment and wisdom in approaching the major issues of your constituency, or will your vision be limited merely to the next election? Even defeat at the polls is often a long-time gain for the public. Almost by definition, democracy depends upon the existence and effectiveness of the loyal opposition—the continuing honest battle between the ins and the outs. Will you be statesman enough to accept being an out if that seems to be the best course to take? Or, will you confine yourself to the subtle tricks of political gamesmanship?

Many of you will acquire real stature in the professions. You will probably abide by the appropriate code of ethics but will you go beyond this? Will your activities be confined to getting more and higher fees or will you also pursue opportunities for public service? Many will be called for uncompensated duties for your city, State, and Nation. Will you respond? If you should be asked to serve in an uncomfortable post in some distant and backward land, will you automatically say no?

As you rise to positions of importance will you remember that it is the business of business equitably to provide goods and services at a profit and not merely to make a profit?

As you are able, will you support with work and finances those institutions which serve in the public interest and which can function in a democracy only through voluntary support—churches, welfare agencies, universities?

Are you really interested and informed about the world and the people around you? If so, will you maintain that interest? What magazines and books do you read? Diversion is essential to human life—but is all your reading confined to froth and amusement, or is there some substance there? Or, am I being presumptuous in asking if you read at all?

All of you, and I mean all, will have the privilege of voting. Wise voting in itself is an act of statesmanship. The cynic on the sideline contends that it is a useless business because everything is rigged before hand and there really is no choice. This is not true. There is always at least some increment of choice, and progress is only made in small steps. Are you and will you be informed on the important issues? Do you know your political leaders and where they stand? Do you know in which congressional district you reside? Incidentally, who is your Congressman?

The summation of your public attitudes and actions can constitute the firm foundations for the necessary statesmanship of a significant segment of society. You may be justified in being dissatisfied with the world but you have no excuse for saying you can do nothing about it—as long as we have a democracy.

Twenty-four centuries ago Pericles spoke his famous funeral oration. Athens did not survive as an autonomous city-state, but some of the thoughts and words of the Golden Age are as great and timeless as ever. Here are a few, brief excerpts from Pericles' immortal address, in which he commemorated the first Athenian soldiers who fell in the first campaign between Athens and Sparta, but in which he also extolled the virtues of Athens for which they had died.

"Our citizens attend to both public and private duties, and do not allow absorption in their own various affairs to interfere with their knowledge of the city's. We differ from other states in regarding the man who holds aloof from public life not as quiet but as useless.

"We secure our friends by not accepting favors but by doing them. We are alone among mankind in doing men benefits, not on calculations of self-interest, but in the fearless confidence of freedom.

"Fix your eyes on the greatness of Athens as you have it before you day by day, fall in love with her, and when you feel her great, remember that this greatness was won by men with courage, with knowledge of their duty."

Every year there are many hundreds of commencement addresses, well embroidered with trite expressions and cliches, exhorting the younger generation to clean up the mess which the older one left behind. Possibly 20 years from now one of you will be standing here doing the same thing. It is probably essential, repeatedly to remind the members of the graduating classes that the future does depend on them. That is the essence of democracy. It is still to be proven in this complex world that the sanctity of the individual can still be maintained, that enough of the members of a democratic society will voluntarily do the things that have to be done to prevent defeat by an arbitrary dictatorship. In that demonstration and that proof lie the future and the greatness of your country. You can be party to that greatness.

For the next 50 years your thoughts, knowledge and acts will be important in shaping the course of human events. You will be subjected to many sociologically destructive forces as we come out of the eye of the hurricane. I know you can do well. I will not be here to learn the final results, but I have confidence that your final record will be one which you can well view with pride and deep satisfaction.

Federal Employees' Pay Increase Legislation

EXTENSION OF REMARKS

OF

HON. EDWIN B. DOOLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1960

Mr. DOOLEY. Mr. Speaker, I manifested my support of the Federal employees' pay increase legislation by signing the discharge petition some time ago. While I do not favor the discharge petition method of operation in the Con-

gress, I think the situation was urgent enough in this case to warrant this procedure.

My interest in the legislation was motivated largely by reason of the fact that the postal workers in my area, at all levels, are receiving inadequate compensation for the job they do, particularly in the light of today's high cost of living and the depreciated value of the dollar.

The postal workers are among the most loyal of our Government employees. They perform arduous and trying tasks with great patience and skill. They are devoted to their jobs and to the Government which they serve. It is incumbent upon that Government, our Government, to see to it that they are properly compensated so that their families can live in reasonable comfort and not have to be harassed by the vexations of penury.

I know of cases where postal workers are working at two jobs in order to keep their households together, feed their families, and educate their children.

Fine men though they are, they are limited in their opportunities for financial growth because of the peculiar nature of their field of activity. The postal workers' one source of relief is in the hands of the Congress.

I am delighted that the motion to recommit was overwhelmingly defeated by a vote of 324 to 94 and that the motion to pass the measure finally was carried by such a convincing margin.

I would have voted for a 9-percent increase, but the Post Office committee thought more equitable to reduce the amount to 7½ percent across the board.

Not only postal workers but all Federal employees will benefit by this measure if it becomes a law, and my feeling is that that is as it should be. Federal workers should be compensated at a rate comparable to that in private industry.

Invocation by Rev. Robert J. McEwen at Navy Research and Development Clinic

EXTENSION OF REMARKS
OF
HON. LEVERETT SALTONSTALL
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Wednesday, June 15, 1960

Mr. SALTONSTALL. Mr. President, last Friday in Boston the Reverend Robert J. McEwen, S.J., delivered a most thoughtful invocation at a Naval Research and Development Clinic, where Navy scientists discussed national defense matters with top businessmen and engineers from Massachusetts and New England.

Father McEwen is chairman of the Department of Economics at Boston College at Chestnut Hill, Mass. He has become one of the outstanding spiritual leaders in our Commonwealth, and his constant concern for the public interest is an inspiration to all of us in public service in Massachusetts.

Since his invocation provides a fine standard of guidance for our overall purpose and our everyday way of life, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the invocation was ordered to be printed in the RECORD, as follows:

INVOCATION BY REV. ROBERT J. MCEWEN, S.J., CHAIRMAN, DEPARTMENT OF ECONOMICS, BOSTON COLLEGE, CHESTNUT HILL, MASS., AT NAVY RESEARCH AND DEVELOPMENT CLINIC, JUNE 10, 1960, JOHN HANCOCK HALL, 200 BERKELEY STREET, BOSTON, MASS.

Almighty God, the Father and Creator of us all, we ask Thy blessing on this gathering of eduators, sientists, business leaders and national defense administrators. Bless their joint efforts and deliberations, concerned with the physical defense of our native land and of the religious and spiritual values to which we, as a free people, are sincerely dedicated. Inspire us all with the confidence that such values constitute our proudest boast and the most worthy object of our national protection. Such conviction will preserve a true order in our society, even while we bend every effort to master and harness the latest developments of science in the defense of our national welfare.

We pray also that You strengthen our hearts and wills against any temptation to use the occasion of national defense activity as an excuse for unjustified or unwarranted private profiteering at the expense of the common treasury. We cannot hope to preserve our heritage of spiritual and moral greatness and heroic dedication if we resort to means that are personally and nationally reprehensible. Protect this great city and this great country from political and business leaders who would disgrace their noble professions and scandalize ordinary citizens by giving merely lipservice to the simple principles of honesty, truth, service, and dedication which have in the past strengthened our society against all assaults. Support instead all those who, in the words of our President, enter public service as intelligent, educated, selfless persons dedicated to raising the political standards of the body politic, and bless their efforts with Thy divine inspiration and guidance. Amen.

Drinking Charged to Seven on Airliner

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article which appeared in the New York Times for June 8, 1960:

DRINKING CHARGED TO SEVEN ON AIRLINER

WASHINGTON, June 6.—The Federal Aviation Agency announced Monday that it had started action against seven men accused of violating its new rule against drinking from private liquor supplies aboard airliners.

The Agency said this was the first violation of the regulation since it went into effect last March.

The incident occurred aboard an Eastern Air Lines scheduled flight from New York to Montreal May 20.

The Agency said in a news release that the drinking passengers had "turned the passenger cabin into a littered shambles."

"The incident also brought threats from the airline captain of an emergency landing," the release said, adding that the airline neither served nor carried liquor on the flight involved.

FAA said that it had notified the seven persons that under the Federal Aviation Act they were subject to civil penalties not to exceed $1,000. It gave them 10 days in which to file oral or written comments.

Six of the seven gave the following addresses: Dan Hansey, 31 Terrace Place, Brooklyn; Henry Raad, George Fattell, and George Gibney, Clifton, N.J.; George Byrouty and George Massoud, Paterson, N.J.

John Raad, the seventh man arrested, was not arraigned in Montreal and his street address was not available.

Official Map and Guide for New Jersey

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, June 15, 1960

Mr. WILLIAMS of New Jersey. Mr. President, New Jersey citizens often extol the scenic splendor of their home State, but often they find it difficult to describe exactly how to direct their friends to the scenery or destination they describe. The New Jersey State Highway Department, however, wants to make it easy to do so.

For the first time since 1955, the department has revised its official map and guide. It is a folding map, convenient and useful. Mr. President, it is a map that will be of great service to motorists throughout the Nation, and it is available to anyone who requests a copy. A new release from the highway department describes it in some detail. I ask unanimous consent to have this release printed in the Appendix of the RECORD.

There being no objection, the release was ordered to be printed in the RECORD, as follows:

TRENTON, June 14.—The 1960 edition of the New Jersey State Highway Department's official map and guide will be ready for free distribution within a week, Commissioner Dwight R. G. Palmer announced today.

The new map, first to be issued by the department since 1955, will be available to anyone requesting a copy. Postcards only should be mailed to Post Office Box 555, Elizabeth, N.J., with printed or typed address of the party making the request. Requests should not be sent to the highway department.

According to a highway department spokesman, advance requests already received will be honored without the need for further action on the part of the requesters.

The official map and guide again employs the booklet design rather than the single sheet; this type of map was used as a convenience to the motoring public since it is more convenient to use in a car. In addition, the design permits use of a larger scale, especially valuable in metropolitan areas where large numbers of roads and streets are shown.

The front cover of the new map and guide pinpoints two of the State's most important vacation areas in brilliant color photos—the New Jersey seashore and the mountain areas of the northern part of the State.

On the inside front cover is a photograph of Morven, the Governor's official residence,

in Princeton, and a message of welcome from Gov. Robert B. Meyner.

Opposite the Governor's message is a single page map of the State divided into the five longitudinal sections. Each of these sections is shown separately in larger scale on the following pages.

With each of the five map sections there is a list of important recreation facilities and historic sites found in that section. Color photos of many of these vacation retreats are scattered throughout the booklet.

Of special interest to motorists are a number of photographs showing the highway department's new safety construction features. These include creeper lanes, center barrier, jughandles, overpasses, and outside white lines. Text explaining the purpose and results of these safety items accompany each photo.

Highways and streets in the State's two principal metropolitan areas, Camden and North Jersey, are so numerous and close together that the department has included large scale maps for easy reading. These large scale metropolitan maps are especially valuable for their complete picture of the approaches to the Hudson and Delaware River crossings.

The last page of the booklet is a special fold-out with a complete index to cities and towns on one side and economic and marketing advantages of the State on the other. This survey outlines New Jersey's potential and existing status in industry, commerce, and transportation.

The back cover presents a tableau of State highway signs. Of the 70,000 signs found along State highways most types are shown. These include informational signs such as route markers, and regulatory ones, such as speed limits.

Another Historic Landmark Will Soon Be Gone

EXTENSION OF REMARKS
OF
HON. WILLARD S. CURTIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1960

Mr. CURTIN. Mr. Speaker, my district is the home of many historic sites from Revolutionary and pre-Revolutionary days. One of the localities rich in such history is the Borough of Morrisville in Bucks County, which was the home of Robert Morris, for whom the town is named. An interesting article on one of the structures erected by Robert Morris appeared in the Levittown Times, of Levittown, Pa., in its issue of June 13, 1960. Under leave to extend my remarks in the Appendix, I desire to include the aforesaid article, which is as follows:

(By Tom Werner)

One of Morrisville's larger buildings, an uninhabited, rambling structure standing diagonally across Chambers Street from Borough Hall is usually identified by passing citizens as "the old rubber works."

The two-story building, which seems to lean into the wind, has plainly seen better days and seen those days some time ago. The oddity is how long ago those better days were, and how few persons know about them.

The two-story building was Robert Morris' stable, fashioned after the Royal Family Stables in England. The colonial financier, signer of the Declaration of Independence and U.S. Senator, had the stable built, probably before the Revolutionary War. It was an extravagant way to house horseflesh and may have been a contributory cause to Morris' eventual fate—3 years in debtor's prison.

TREMENDOUS STABLE

The structure wasn't much as a rubber works, but as a stable it must have been tremendous. As a home for his horses, Morris built the place to scale with his sumptous estate, which at the time included most of what is now the incorporated Borough of Morrisville. It was a leg-wearing 2,500 acres or so in size.

Although they are now walled up, there were two arch doors at each end of the structure large enough for horse and carriage—any size. When the doors were open at each end, the place served as a sort of throughway for the horsey set in the area.

The second floor served as quarters for Morris' carriagekeepers.

The building is 123 feet long and 25 feet wide. There were 36 feet of stalls on each side of a center carriage space of 51 feet.

DECLARATION SIGNER

After Morris departed from the scene, the estate went from owner to owner, including Declaration of Independence signer George Clymer and Thomas Fitzsimmons.

Eventually, the estate was taken over by Gen. Jean Moreau, one of Napoleon's cohorts who fell out of the "little corporal's" favor and wound up in the Colonies, independent by that time.

History has it that General Moreau stayed up most of one bitterly cold Christmas Eve hurling wood into the fireplace in order to make it warm enough for the rare flowers he raised and coveted so dearly. As the night wore on, and General Moreau wore out, he tolddied to bed.

A BIT TOO WARM

As it turned out, the general made it a bit too warm and the mansion burned down. Moreau made it outside before he shared the fate of his precious flowers.

Through the 19th century the estate crumbled, but the stables held up just fine.

When the Pennsylvania Railroad came rumbling through, the stable was used as a machine shop. Then it was turned into an oilcloth factory. Then a dish factory. Finally, the Vulcanized Rubber Co., now the Vulcanized Rubber and Plastics Co., moved in.

After the rubber firm moved out, people moved in. Even the people left after a while, and now it's only an old building—its past luxurious glories obscured by the utilitarian uses to which the building was forced.

Reuben B. Robertson, Jr.

EXTENSION OF REMARKS
OF
HON. SAM J. ERVIN, JR.
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 15, 1960

Mr. ERVIN. Mr. President, a recent issue of Dixie Business carries an editorial by Col. Hubert F. Lee, entitled, "The Late Reuben B. Robertson, Jr.," which depicts with great accuracy a basic characteristic of the late Deputy Secretary of Defense. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

Monument: Reuben B. Robertson, Jr., is dead and if you want to see his monument, look about you.

Monuments of good memories living in human hearts, including my own.

I was proud when he was picked for Deputy Secretary of Defense and proud when he was elected president of the Champion Paper & Fibre Co., stepping in the footsteps of his wonderful father. And all the important positions he was asked to fill.

For every time I read about him, my mind's eye turns back to a summer in North Carolina and the young executive who took time out to proudly conduct me over the Canton plant and let me have lunch in the new cafeteria.

How proud he was of the men who ran the machines and did the many jobs in the different buildings.

I still have volume XVI No. 5, June 1933 copy of the Log:

Published by "the Champion Family" as a symbol of the cooperation and good fellowship existing at the plant of the Champion Fibre Co., Canton, N.C.

I remember how proud Reuben, Jr., was of the big new paper machine and its auxiliary equipment. It was the wonder of the paper industry.

The paper machine was the biggest and most up-to-date book paper machine in the world at that time, and no wonder Reuben was proud of it.

My eyes popped out in amazement as we watched the giant wonder, traveling at a terrific speed to make roll after roll of the world's finest paper.

A quarter century later, Reuben, Jr., wrote me to come up for the commissioning of No. 20 machine, May 1, 1959.

No. 20 machine is the world's best fine papermaking machine, a Champion just as the one I saw years ago.

The years had seen Rueben, Jr., become one of the truly great leaders of America, yet he had the same consideration for others that had so impressed me the first time we met.

Reuben, Jr., said in one of his talks—

"It is not our machines, our buildings, our money or our materials that make the difference between success and failure, it is the people in our company that determine how successful we are. We can have the most modern and perfect machines that can be made—but they will do no better than the folks who run those machines."

Every man on the Champion team knew he was sincere.

I watched the way the men at Canton greeted him. And the way they eyed him after he had moved along.

I thought I could see them thinking "I had a part in teaching the paper business to him."

They gave him the loyalty and devotion they gave his father, who had in 1907 come to the mountains and had stayed to see the company become the world's finest enterprise.

In all the places that Reuben, Jr., has been—look about you.

The Great Debate

EXTENSION OF REMARKS
OF
HON. CLEM MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1960

Mr. CLEM MILLER. Mr. Speaker, I recommend to the attention of the House this speech by Palmer Hoyt, editor of the

Denver Post, as delivered before the Eureka (Calif.), Rotary Club, and reported by the Humboldt Standard of June 6, 1960. I am particularly interested in Mr. Hoyt's remarks on this occasion, because they are almost exactly parallel to speeches I have been recently making in the First Congressional District of California. In light of Mr. Hoyt's well-known sympathy with President Eisenhower, it is particularly gratifying to note his emphasis on the need for dissent, for analysis of the U–2 incident and the lessons it affords to us if we shall give debate full play. It places the national budget in the proper perspective of national survival; and national survival in adequate defense and needs for education.

The speech follows:

FULL TEXT OF ROTARY CLUB SPEECH BY PALMER HOYT

THE GREAT DEBATE

"Where there is no vision, the people perish." Proverbs.

"I want to talk to you about the great debate. For many months, I myself, and my newspaper, the Denver Post, have been promoting the idea of the great debate. We do so under the theory that the crisis we now face is the greatest in our history. We think it calls for the greatest debate in our history.

"The great debate is getting underway. Newspapers, magazines, radio, and television stations are using the term and using in increasingly. Most of you are aware of the elaborate treatment at least one phase of the great debate is currently getting in Life magazine.

"What is the great debate about?

"It is and should be about many things.

"A. It is about survival, not just staying alive as individuals, but survival of our country with the opportunity for it to grow and develop into an even greater nation than it is now.

"B. It is about the important issues without which talk of survival would be meaningless.

"Let's look at these issues.

"First is the basic and somewhat stilted idea that we must equal or excel Russia in all things.

"Before we do this, we are going to have to face some hard facts.

"These hard facts include this, that in this fight for survival, we often have been second best.

"Recently Walter Lippmann wrote a column which, in my judgment is one of the great utterances of history.

"In this column, Mr. Lippmann, a man not given to loose talk, referred to the President's recurrent emphasis on consumer goods as evidence of national strength.

"Lippmann said:

"'There is no doubt that this country is still much richer than the Soviet Union. It may be, although no one knows, not any weaker than the Soviet Union.

"But we have fallen behind and are not holding our own in terms of national power, in overall military capacity, in the competition to pioneer in outer space, in the comparative rate of economic growth, and in education, which is the life giving principle of national power.

"While it may be that the days of our primacy, which were brief, are ending, what must not be allowed to end is our parity with the greatest powers.

"For on it depend many of the dearest hopes of mankind.

"Nobody can say as yet when the Nation will become aroused to the realization that national duty must take precedence over private indulgence, that it is not possible to preserve our society by private affluence and public complacency.

"The voices that will serve this country and indeed save it, will be those of stern men demanding hard things.

"They may not as yet do well in the Gallup polls. But they will be listened to sooner or later."

In this age of the bomb, it is important for us to remember that if we are to compete successfully with dictatorship, we must strengthen democracy; and one of the ways to do that is through discussion, frank and free.

It is well, too, to remember that this country, this America, was founded on the New England town meeting; on the conflicting voices of citizens ever engaged in search for the truths so necessary to bulwark freedom and insure its necessary growth.

"The history of our country is written in the great debates: as to the form of government we were to have; as to whether the Union would or could endure; as to whether we would enter wars to fight for human freedom.

"And now the greatest of all the great debates is being joined.

This debate is more important than the Great Debate in Athens in which the Greek philosophers urged the Athenians to add the social system of Sparta to the culture of Athens; it is more vital than the discussions of slavery that preceded the Civil War; more significant than the words that were spoken in the world before World War II or the Korean incident; for the very fact of freedom now may be at stake and possibly the very existence of the human race itself.

"Because today, at long last, man has the power to destroy himself—and completely. It is doubtful that any living thing on earth could survive all-out nuclear warfare.

"The best insurance against the nuclear war is the strength of America, a Nation that believes in peace and goodwill, and is committed to live and to let live.

"Only a strong America can save the world from destruction, and only a strong America can prevent its falling under the rule and domination of imperial communism. Make no mistake: the choice is as simple as that.

"And so what is this great debate upon which we now enter?

"It is whether affluence and prosperity alone equal strength.

"It is whether America, having lost primacy among nations, can afford not to maintain parity.

"It is whether we can afford not to match Russia in space exploration, in education, and missiles.

"It is whether our leaders are right or wrong when they say we have nothing to worry about.

"It is whether or not America indeed has lost her way.

"We hear a lot of talk these days about the need to avoid criticism. Some say criticism undermines national unity. Of course national unity is important. But the best way to unite a free people is to give them the facts and have them rally, as they will, behind a course they know to be right.

"Other persons go so far as to equate criticism with selling out to the Communists. For example, recently there was a political cartoon in the Chicago Tribune showing Khrushchev, Mao Tse-tung and Adlai Stevenson grouped together pointing the accusing finger at President Eisenhower.

"As a representative of the press, I am ashamed of this sort of thing. I am a longtime supporter of President Eisenhower, but I think Stevenson, whatever else he may be, for or against, was quite right this time when he said the administration, through its mishandling of the U–2 incident, handed the disagreeable Mr. Khrushchev a crowbar and a pickax to wreck the summit. When this incident was disclosed on the eve of the conference, first we said no. Then we said yes. Then we said we would keep on with the flights over Russia because they were essential. Then we said we wouldn't do it any more. As far as the summit meeting is concerned, maybe the fact that it was broken up was for the best. I don't know. But that's not the only point involved. The way we handled ourselves over this unhappy incident had some very bad long-range results.

"We put ourselves in the spot where we openly advocated violation of international law; whereas in the past we were in the fortunate position of being always on the side of morality. We helped to undercut worldwide respect for our veracity. And we revealed a shocking lack of coordination among those who were supposed to be making our overall strategy.

"This is the most bothersome of all the side effects of the incident. Even now, the administration still hasn't got its stories straight. In his recent television address, President Eisenhower said we made a conscious decision to continue the U–2 flights over Russia just before the summit. But a couple of days later, Secretary of State Herter told the Fulbright committee that there had been no review of the U–2 program in the weeks before the summit, and therefore, no conscious decision one way or another, about stopping the flights or not stopping the flights.

"The other day an Australian editor was in my office. He called the U–2 incident an unfortunate one for the West, but he seemed much more concerned about another problem in U.S. foreign policy.

"'Why is it,' he asked, 'that no one here seems to be talking about Red China?'

"I replied that I thought it was much too involved a subject to throw into the present controversy, that it would only complicate matters.

"'This he deplored. 'What is the worst news you could print in your paper?' he asked, and then said, 'I'll tell you in headline form, "Red China has the bomb."'

"We gain nothing by keeping ourselves from all contact with these people. Sooner or later we are going to have to face up to the problem of recognizing Red China. When we do, it may well be painful for us. But it might be less painful to recognize her now than to act as if Red China doesn't exist.

"Certainly we can do no less in this period of great debate than to talk about it. So far the only prominent political leader who has made such a speech to my knowledge is Governor Meyner of New Jersey.

"And yet, it is one of many issues that make up the debate. This is one of the important thoughts I want to leave with you. That there is so much to discuss, so much that the people should know about. That is why I hope that the 1960 election is not to be decided on the misleading issue of peace and prosperity. America cannot afford it.

"The central question the American people must decide is whether we, as a Nation, are willing to do what is necessary to survive. Candidates who dwell only on the present state of peace and our private affluence do the people a disservice by covering up the harsh realities.

"I believe the people will rise to the challenge. The people voted scared in 1932, and I believe they will vote scared again in 1960. They'll vote to compete with the Russians, because they will come to realize they have to compete. They'll come to realize they have to win, and, given the chance, they will win.

"To do so they are going to have to step in and convince their leaders that they are prepared to do whatever is necessary to defend themselves adequately. And nowadays adequate defense involves coordinated efforts in arms, missiles, space and foreign relations.

"It also involves the need for a greater national effort in education, for this is the source of the people who will bear the burden of the competition in the years to come.

"All this means we are going to have to operate from the base of a strong economy. Our economy is going to have to be the one that, in the broadest sense of the term, will give us both guns and butter.

"I have no doubt that we can maintain our free enterprise economy intact and still compete successfully with the Soviet Union. The best evidence is how much we have been able to do already. In the face of an effort to meet worldwide responsibilities we would never have dreamed of a generation ago, we have still done well ourselves. This must really confuse the Russians, who, we may surmise, expected our economy to collapse from the strain of meeting our military and other cold war obligations. It must send them frequently back to their Marxian texts in despair to discover where their theories went wrong.

"Our experience ought to give us self-confidence that we need not fear to do the things we must do. We should ask ourselves first what we must do, and then what it will cost, rather than the other way around. If we have to ask ourselves first whether we can afford to survive, we won't survive.

"Let me say here, parenthetically, that my confidence in our fiscal strength implies that we will find a way to do without the luxury of wholesale wasting of our tax dollars on such things as duplication of organization and effort.

"Senator STUART SYMINGTON, Representative FRANK KOWALSKI and other like-minded men in the Congress have estimated that we could save some $10 billion a year through a proper reorganization of the Pentagon and the armed services. If this figure is anywhere near accurate, we had better get busy and do something about it.

"In addition to making and keeping ourselves strong physically and economically, we are going to have to operate from a position of moral strength as well.

"We are going to have to see to it that we make the Constitution and the Bill of Rights living documents. We can't let our colored people remain second-rate citizens and still maintain our moral character in a world that is three-fourths nonwhite.

"I said a few moments ago that I believe the American people will rise to the challenge. They will if they are led by men of vision. In the book Proverbs, the Bible reminds us that 'Where there is no vision, the people perish.'

"Let us pray for that vision we need so badly, so our people will not perish from the earth, but will instead continue as the bulwark of freedom and the hope of the oppressed."

Milk Sanitation Legislation

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 15, 1960

Mr. HUMPHREY. Mr. President, a difference of opinion between the State of New York and the city of New York regarding an outdated, unnecessary milk sanitation regulation has underlined the need for Federal legislation in this field.

An act prohibiting State or local health agencies from requiring the dating of milk containers was passed by the New York State Legislature and signed into law by the Governor. Modern methods of sanitation and distribution have made such a requirement obsolete. Now the New York City Council is attempting to reenact this requirement on a local basis.

If S. 988, the Milk Sanitation Act sponsored by myself, the junior Senator from Minnesota [Mr. MCCARTHY], and the Senators from Wisconsin [Mr. WILEY and Mr. PROXMIRE] were enacted, local health regulations that act as barriers to trade, such as the one in dispute, could not prevent the free movement of milk meeting the high sanitation standards of the U.S. Public Health Service.

An editorial appearing in a recent issue of the St. Paul Pioneer Press ably summarizes the issues in the New York legal tangle and proposes the solution.

I ask unanimous consent that this editorial be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the St. Paul Pioneer Press, June 2, 1960]

NEW MILK LAW TANGLE

In New York, the weirdest of city-State conflicts has produced a new reason why Congress is so strongly impelled to set dairying free from the maze of contradictory State and local sanitary regulations that are hamstringing interstate commerce in milk. Establishing uniform Federal sanitary regulations for milk, as already is being done for meat and poultry, would do the job.

The New York State Legislature passed and Governor Rockefeller signed an act prohibiting State or local health agencies from requiring the "dating" of milk. Such requirements mean that each bottle or carton must be stamped with the date of pasteurization.

No doubt at one time justified on health grounds, this requirement now has been made obsolete and senseless by modern methods of sanitation and distribution. These methods enable milk to retain its high quality, flavor and freshness for far longer periods than formerly was the case. They make dating a needless expense to the farmers and consumers who profit from or pay for milk and cream that are consumed by the public.

But of course the requirement does create a certain number of jobs in dating and handling and hauling outdated milk. And, in the eyes of New York City Council, these advantages were deemed to outweigh all the glaring disadvantages of dating. So the council by a vote of 20 to 1 has reenacted or voted to reenact the dating requirement which was specifically outlawed by the Legislature of the State of New York.

The absurd legal tangle that results seems to cry aloud for enactment by Congress of the Lester Johnson bill whose uniform Federal sanitary code on interstate milk shipments would sweep aside all such conflicting and contradictory local regulations. Representative JOHNSON, Senator HUMPHREY and other members of both political parties who are supporting the bill could properly call this situation to the attention of Congress as a conclusive argument in behalf of their measure.

When New York City tries to repeal New York State milk law, it seems high time for the Federal Government to step in with national requirements for free trade in wholesome dairy products.

Red Leaders Cannot Explain

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1960

Mr. CUNNINGHAM. Mr. Speaker, I include as part of my remarks a column by Ed Koterba, well-known Washington correspondent. This column deals with what the Russians are telling other parts of the world but have not admitted to their own people, namely, that they detected over 100 U.S. flights over Russia in a 3-year period.

I can understand why the Russians are not telling their people this, since the military leaders in the Kremlin would be hard pressed to explain to their people why the Red army and air force cannot stop the penetration of these planes to the heart of the Russian Empire. The column which appeared in yesterday's edition of the Washington Daily News follows:

The broadcast, from Radio Moscow, was an extraordinary one. It was beamed to Austria in the German language. The theme: United States spying inside the Soviet.

"Dear listeners," the commentator started, "we now invite you to visit a unique museum on a quiet Moscow street. It is the museum of Soviet border forces."

The Red radio man then set down an amazing admission as he purportedly toured the museum. He told how our spies had penetrated the Soviet borders—in ways other than the now-exposed U-2 flights.

"U.S. spies," he said "have not only landed by sea, but their agents have dropped from the clouds."

The broadcast, and subsequent programs, disclosed that in one 3-year period, from 1953 to 1956, the Soviet Union detected 113 penetrations of Russia.

"Flying either above the clouds or at great heights," the man said, "American aircraft violated our state frontiers and dropped agents." He added sardonically: "The agents were rendered harmless."

"Before him in the museum," the narrator said, "were tools of intrigue stripped from the captured U.S. agents." He reeled off a bizarre list:

Automatic guns in the guise of fountain pens, walking sticks, and umbrellas. Cigarette cases and lighters containing poison. Miniature radio transmitters. Equipment for writing secret messages.

From agents who landed by sea, he said, were taken items now displayed that included "glass vials of strong poison designed for large-scale operations."

If our spy network is of such large proportions, as the broadcast intimated, this would be enough to send a million chills up the spines of the Soviet people. But, from information I have, the program was not beamed to listeners inside the Soviet Union.

It is not known how much of this hysterical stuff is true, since the Central Intelligence Agency here won't even confirm the time of day. However, the Moscow narrator dropped this spicy hunk of hot information:

"Scientific laboratories—whole enterprises in the United States—are working in the service of the bandit-espionage technology."

He said we're devising such fascinating gadgets as radio interception sets that can be hidden in neckties, the hair, or in the frames of spectacles.

Most fantastic of all, the Communist said the United States has designed an atomic bomb that can be carried by one man.

Mostly, Moscow broadcasts are filled with lies. This is one time I fervently hope they were telling the truth. It would prove at least one thing: The taxpayers of America are getting their money's worth out of the Central Intelligence Agency.

Federal Aid Programs

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, June 15, 1960

Mr. WILLIAMS of New Jersey. Mr. President, we hear many offhand criticisms of Federal aid programs. Usually such criticisms are made with little understanding of the ways in which well-planned programs can help local officials do local jobs better than they could without such help. There need be no dictation from Washington if the legislators do their work well when they prepare legislation for a Federal program.

An editorial in the April 23 issue of the Jersey Journal gives some very valuable commentary on this matter.

Mr. President, I ask that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FEDERAL-STATE TEAM

The President's Joint Federal-State Action Committee has disbanded after 3 years because Congress has established a permanent advisory commission in the same area. Although the presidential committee cannot be credited with any great achievements, there are some useful observations in its final report.

Two of these observations are of particular note. The committee advised that problems should never be allowed to become so big that Federal emergency programs offered the only solution. Before that happens, it was implied, authorities should push hard to do something at the State level, perhaps with Federal aid.

The committee did not, however, go along with the notion that Federal aid is always to be shunned. Asking for State alertness to responsibility, it was noted, is not the same as demanding "a negative view of Federal participation in the emerging problems and needs."

The distinction is wise. As the Nation grows in size and complexity, new problems are bound to arise and old ones are bound to become more important. States should do what they can to meet needs, but when Federal help is indicated as the best means of solving a problem, that should be welcomed. Ideally, Federal and State governments should work as a team dedicated to the public interest.

Address by Right Reverend Monsignor Edward E. Swanstrom Before American Committee on Italian Migration

EXTENSION OF REMARKS
OF
HON. ROBERT N. GIAIMO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1960

Mr. GIAIMO. Mr. Speaker, on May 16, 1960, I had the pleasure of attending the second annual dinner of the American Committee on Italian Migration in Cheshire, Conn. During the course of the evening, it was my privilege to listen to an address by the Right Reverend Monsignor Edward E. Swanstrom, and I insert this address in the RECORD at this point:

I am very happy to come here to this very beautiful little suburb of New Haven this evening to address this grand dinner of the Connecticut Branch of the American Committee on Italian Migration. When Judge Toscano and Mr. Sidoli invited me some weeks age, at the urging I am sure of my dear friend, Father Caesar Donanzan, I accepted their invitation without any hesitancy.

For more than 15 years now, I have had the privilege to be associated with the indefatigable Judge Juvenal Marchisio, your national leader, in his organization efforts to focus attention upon and to bring assistance to the people of Italy who even at this late date have not fully recovered from the dire effects of the last great World War. Many of you here this evening were closely associated with us in the vast program of relief and assistance that was carried on by American relief for Italy in the years immediately following the war.

It is no surprise to me and I am sure it is not to Judge Marchisio to see you good people of Connecticut so actively participating in this latest effort to attack another of Italy's most basic problems—the emigration of its surplus thousands through the work of this magnificent American Committee on Italian Migration.

I know for me, personally, it has been one of the greatest privileges of my life to be associated in such important efforts with such wonderful people.

As you probably understand from the position I hold as Director of the Foreign Relief Programs of the American Bishops, my journeyings during the past 15 years have taken me to all quarters of the globe. I have made at least three complete trips around the globe, crossing two times by way of the Pacific through the countries of the Far East, down through Asia and on through the Middle East to Europe and back across the Atlantic. On the other occasion I went the other way around. I couldn't begin to tell you how many countries of Europe I visited time and time again and my wanderings have also taken me to most of the countries of South America and Africa.

For us in America, the world still presents a face of some calm and orderliness. Our lives have not been caught up in the incessant upheavals that have afflicted so many human beings whose fate it was to be thrust over frontiers as refugees or to be part of post-colonial areas, battling their way into freedom and struggling for some semblance of stability.

Life in America is in sharp contrast to all the unrest, the homelessness, the hunger, and the anguish that I have witnessed all over the world in the past several years. I had occasion to see some of it again only a few weeks ago when I travelled through some of the countries of South America and last fall, when I spent a great deal of time in North Africa and in various countries that make up southeastern Europe—places like Spain, Portugal and Italy, where you still find a great deal of poverty despite all the recovery that has taken place in Europe since the end of the war.

When I return from a trip I am often asked my impression of need abroad and whether there is still a necessity for American Catholics to engage in oversea aid. Well, I can tell you immediately that despite all the economic recovery that has taken place in most countries throughout the world since the end of the war, there is still an unbelievable amount of dire poverty.

While I was in Italy last fall, we spent about 4 days traveling from one little Italian city to another in a helicopter. It gave me an opportunity to cover a large part of southern Italy. I can tell you that despite all the American foreign aid and our own help that has gone into Italy since the end of the war, there are still thousands of people who live in extreme poverty because of the lack of sufficient employment and the out-and-out inability of the economy of Italy to support its millions of inhabitants.

However, one of the strongest impressions that I carried away from that trip was a visit to a displaced persons camp in the town of Bari on the Adriatic Coast. This DP camp is located in an old damp monastery known as Santa Chiara. Into its dilapidated rooms were crowded some 500 Yugoslav families. They were gradually being evacuated to make room for hundreds of Italians who were being returned from Tunisia.

The Yugoslav refugees had fled from a regime which many people want to call democratic but which subjects people to so many pressures that they would prefer to become exiles, rather than endure it. The poor Italians were returning to Italy because they were literally starving in the economic desert that is Tunisia today, where one out of every three families is on public relief and for which these poor Italians could not qualify because of their Italian background.

Santa Chiara is one of the many ancient buildings of Europe that has sheltered in the past 15 years several generations of helpless and dispossessed people. As I walked through the dark halls of Santa Chiara, I thought of the prayers and the blasted hopes of these generations, who are the victims of the violence and upheavals of our time. It is no exaggeration to say that the help you have enabled us to bring to them is often the only source of hope to these people at this critical time of their lives.

It was against this background that I suggested to Judge Marchisio some weeks ago that it would be a good idea for him to visit the Italians who are suffering such hardships in Tunisia today and to visit the camps in which they were being placed upon their return to Italy. I had seen their plight with my own eyes and my heart was filled with sadness when I thought of what life in these horrible refugee camps might mean to them for the next several years. Perhaps by portraying their situation rather graphically we might be able to interest the Congress of the United States in permitting at least a limited number of them to find their way to hope and freedom in our own dear country.

How well Judge Marchisio accomplished that mission many of you know. If you have an opportunity to read his report which is

being circulated these days, I would advise you to do so.

He found out that in Tunisia itself there are still 51,702 Italian nationals who are living in complete destitution. There are already in Italy 35,196 refugees, more than half of whom are living in the refugee camps whose precarious conditions I have already described. Not all of them came of course from Tunisia. Many are from Venezia Giulia or from the Communist zone of Trieste. How anyone can expect to absorb the 50,000 or more who are still in Tunisia, I for one, cannot possibly understand.

Have you ever had the good fortune or it might be better to say the unhappiness to see one of these refugees arrive in a camp? He comes with little more than the clothes on his back, perhaps a few precious possessions in a small bag, a handful of consular papers and what little of human self-respect he has managed to preserve through all his recent years of suffering.

This being World Refugee Year some of us were urging Congress to enact another emergency immigration bill to permit a few more refugees to come to the United States as part of our recognition of that year. Together, the judge and I, armed with his very graphic report, appeared before a committee of Congress with a plea to have some of these Italians from Tunisia included in such a refugee bill. Did we succeed? To put it very bluntly, this particular committee, which happened to be a subcommittee of the House Judiciary Committee on Immigration, paid no attention to us.

As a matter of fact this subcommittee, which is under the chairmanship of Congressman WALTER, wasn't any more receptive to the plea of ourselves and representatives of a number of other large agencies—Protestant, Jewish and nonsectarian as well as Catholic that little groups of refugees from other parts of the world be allowed to come here also.

The committee finally passed a resolution, drawn up by Mr. WALTER himself, that will give entry to a limited number of refugees who happen to be fortunate enough to be under the mandate of the High Commission for Refugees. That resolution is under consideration in the Senate right now, but none of us are sanguine enough to even hope that the bill which will probably finally pass both Houses will include any permission for Italians from Tunisia or anywhere else.

It is rather a sad situation. But it will always be so until enough voices have been raised around the United States demanding a change in our basic immigration policy. As you well know under our sacrosanct national origins quota system only a limited number of persons from certain countries can come over each year.

It is true that in the years since the war America has been providing a home and a sanctuary for thousands of people who were displaced by the war but always under emergency legislation and in the beginning they were only permitted to enter through a mortgage placed on the regular quotas of their country of origin.

Thanks to your tremendous interest and help—and that of people like yourselves all over the United States, we were able to convince Congress that a fairly substantial number of Italians should also be permitted to enter on this emergency basis over and above the regular quota. It should amount to about 120,000 in all—not a bad record—but never lose sight of the fact that it was all done on an emergency basis.

But it will take many years of hard work on the part of yourselves and all of us if we are ever to achieve the hopes and dreams of all enlisted under the banner of the American Committee on Italian Migration of a fair and just immigration policy in the United States.

You have to always bear in mind the fact that the pages of our American immigration history do not always make the most pleasant reading. They are sometimes filled with accounts of prejudice and discrimination, mistreatment and exploitation, restriction and isolation, of racism and nativism. Fear and distrust of the stranger has not been the least of our sins. The American of today, no less than the descendant of the early colonists, seldom takes an idealistic view of immigration. Over the past 175 years, all of us have been too prone to forget that the only native American was the American Indian. Although our land was peopled by the oppressed, we need to be urged that it is a duty and a privilege to offer a home to others who are oppressed.

Even during those days when immigration was at its height here in the United States, the Italian, the Pole, the German, the Irishman, and other nationalities who came to this country in such great numbers received at best a grudging welcome. And all during those years there were forces at work that would destroy entirely, if they could, the melting pot that in God's providence had been forged on these shores. It did not matter that the immigrant came with his tradition, his culture—his faith—all of which he desired not to be melted away, but to be woven into a mosaic, rich and colorful, of Old World custom adapted to the New World.

An American immigration policy that would permit the entry of, say, 250,000 people a year, would be reasonable. The admission of the immigrants could be based upon our needs, their need for asylum, their relationship to others already in the country and finally their economic needs. It seems that such a system of selection could be established that would be a realistic substitute for the national origins quota system, which is so heavily weighted in favor of those who have no need or desire to come to the United States.

We are all aware that our beloved America, with its expanding industry, its farm problem where so many young people are deserting the farms for the cities, still can use and is in need of additional manpower. We know that countries like Italy have more people than their economies possibly can maintain. Some countries have the products of their factories, their mines and their farms to export, the better to maintain their own people. Italy is relatively poor in natural resources, but she is prepared to give up the most precious of her possessions—her cherished sons and daughters.

At this crucial moment in the world's history, it is very important for every man and woman to have a very broad concern—to have, what I might call, an international point of view—of the problems of the church and of her children. We cannot help but do this, if we will but contrast the tremendous vitality and strength of the church in our own United States with what we find in other countries.

By your interest and support of an organization like the American Committee on Italian Migration you are demonstrating that you have this broad point of view. God bless you for it.

In our own way each one of us can bring about a new understanding, a new sympathy, a new love for the immigrant who wishes to find a home in our midst.

The Educational Effort in New Jersey

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Wednesday, June 15, 1960

Mr. WILLIAMS of New Jersey. Mr. President, the National Education Association recently offered a survey which indicated that New Jersey ranks fourth among States in average teacher pay and third for the amount spent for the education of children. While we citizens of New Jersey are proud of our educational efforts, we are nevertheless aware of the fact that 73 percent of the amount spent for schools in our State comes from local government.

An editorial in the Bergen Evening Record, Hackensack, N.J., of June 8, points out that the local government property tax may well be approaching the point of no return. It also suggests that a new source must be found if growing needs are to be met.

Mr. President, the editorial suggests to me, and probably to many others who favor Federal assistance to education, that Federal funds should be put to work to help State and local governments to meet the demands which now are borne so heavily by the homeowner.

Mr. President, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW IT'S SPENT ISN'T THE WHOLE OF THE PROBLEM

The New Jersey Education Association has tapped 10 of its more energetic members to enlist new recruits among the teachers of Bergen County. The New Jersey Education Association, as almost everyone knows, is the teachers' organization which carries the ball for legislation and on some often delicate occasions for teachers involved in controversy with school boards. It appears it might have use for its recruiting team and other ambassadors sooner than it thinks. There could be abroad, as the result of a National Education Association report, a misconception about New Jersey's status as an education leader.

The National Education Association has just told us that New Jersey ranks fourth in average teacher pay, behind only California, New York, and Alaska. It is also among the first 10 States in the amount of money spent for the education of each pupil, $497, which puts New Jersey in third place.

Among the New Jersey Education Association's basic objectives is an increase in State aid for schools. Some persons reading the above statistics might form a hasty conclusion that New Jersey does pretty well both by teacher and by pupil. That's true enough. How it gets done is another matter, and it would be advisable to read the whole report, perhaps even the fine print.

A closer study of the statistics shows that New Jersey is 38th among the States in parceling out State aid. Of the money spent on education in New Jersey, 73 percent comes from local government. The State and the Federal Government contribute the rest, but the share local government bears is the seventh highest in the Nation.

Therein lies New Jersey's problem. It is not that our teachers are underpaid—if $5,740 a year average is good—or that our children are denied opportunity for learning. But we are rapidly approaching the point of no return in local taxation if we have not already reached it. What the New Jersey Education Association points out is that real estate taxes cannot supply much more than they are now doing. Some new source must be found if growing needs are to be met. We are doing splendidly at the minute. The point the educators raise—and it is a perfectly valid one—is how long we can do as well on the same old shaky basis.

Mass Deportation of Baltic Peoples

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1960

Mr. KOWALSKI. Mr. Speaker, it is fitting that Americans should be concerned not only about our own freedom but about the freedom of those who have lost it. To those who love liberty there are no accounts more revolting than the tragic deportations of peoples to Siberia by the autocratic czars and dictatorial communism of the Soviet Union. This month those Americans who still remember are commemorating the sorrowful mass deportations of hundreds of thousands of Lithuanians, Latvians, and Estonians to Siberia where thousands upon thousands perished under the Communist yoke.

I take great pleasure, Mr. Speaker, in bringing to the attention of my colleagues a letter from the Lithuanian-American community of Stamford, Conn. These fine Americans express their gratitude to the Government of the United States for its unyielding stand against the Soviet Union. They urge our Government to reject the claims of the Soviet Union to the Baltic lands and request the United States to expose these illegal territorial seizures as an international crime.

May I urge my colleagues to read this letter:

LITHUANIAN COMMUNITY OF STAMFORD,
June 10, 1960.

Hon. FRANK KOWALSKI,
Congressman at large,
Meriden, Conn.

DEAR SIR: Resolution unanimous adopted at the meeting of Americans of Lithuanian descent of the city of Stamford, Conn., sponsored by Lithuanian community of Stamford and held June 4, 1960, in the 51 Lindale Street, Stamford, to commemorate the sorrowful 19th anniversary of the beginning of mass deportations of Lithuanians to Siberia:

"Whereas the three Baltic States—Lithuania, Latvia, and Estonia—in 1940 against their will have been forcibly incorporated into Soviet Union, and as a result of that incorporation several hundred thousands of Lithuanians, Latvians, and Estonians have been deported and perished in the wilderness of Siberia; and

"Whereas the illegal occupation of the Baltic States by the Soviet Union as well as oppression of the Baltic peoples continue under the present rulers of Kremlin; and

"Whereas the fate of Lithuania and of the other subjugated Eastern European countries depends mostly on the success of the foreign policy of the United States and its allies: Therefore be it

"*Resolved*, That this gathering of Lithuanian-Americans of the city of Stamford expresses its gratitude to the Government of the United States for its policy of nonrecognition of the incorporation of Lithuania and other two Baltic States into Soviet Union, and for its unyielding stand against Soviet intimidations and threats as it was recently demonstrated at the meeting in Paris; be it further

"*Resolved*, That this gathering calls upon the Government of the United States not to enter any agreement with Soviet Union which would directly or indirectly lead to the recognition of status quo in Eastern Europe; be it further

"*Resolved*, That this meeting asks the Government of the United States to expose to the world opinion the crimes of the Kremlin rulers by publicly charging them with breaking of numerous international treaties, enslaving of their neighbors and exiling of millions of innocent people to Siberia; and be it finally

"*Resolved*, That this meeting urges the Government of United States to raise the question of the illegal seizure of the Baltic States by the Soviet Union at the nearest session of the United Nations and to demand that this international crime would be rectified."

Very truly yours,
JOSEPH VALIUSAITIS,
Chairman.
NIKODEMAS CEREKAS,
Secretary.

Conversion of Saline Water

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Wednesday, June 15, 1960

Mr. WILLIAMS of New Jersey. Mr. President, the Senate Subcommittee on Reclamation and Irrigation held hearings last week on a bill to increase the program conducted by the Office of Saline Water in the Department of the Interior. Among the witnesses was Carrol M. Shanks, president of the Prudential Life Insurance Co. He told of the potential importance of the saline water program to his home State, New Jersey. He also gave, I believe, many compelling arguments on the national need for the program.

Mr. President, a news article in the June 9 issue of the Newark Star Ledger gave some excerpts from Mr. Shanks' testimony. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THERE MAY BE MANY A DRY MOUTH IN NEXT 10 YEARS

WASHINGTON.—In 10 years Jerseyans may have dry mouths unless sea water is converted for drinking. Carrol M. Shanks, president of Prudential Insurance Co., told a Senate Interior Committee hearing yesterday.

Shanks said converted water from the sea is the only choice open for the State's burgeoning population and water demands.

Two reservoirs with a total capacity of 66 billion gallons authorized at a 1958 referendum will provide only stopgap relief from a critical water shortage, Shanks said.

Referring to the 1958 shortage that hit Jersey, Shanks said:

"In some areas we will be right back in the same critical water shortage within the foreseeable future—certainly within the next decade."

Shanks was among several witnesses from various States urging Congress to authorize a stepped-up search for a cheap way of converting sea water for irrigation and human consumption.

The hearing committee is examining a bill which would provide up to $20 million for expansion of the Interior Department's program of saline water conversion.

Shanks, who served as chairman of a citizens' group for the reservoir referendum in 1958, told the committee:

"In Jersey the rain goes mainly down the drain, and this seems to be the general situation because the problems of storage are difficult and expensive to solve."

Shanks said costs of converted sea water and storage of surface water are about the same. The State's new reservoirs will supply water at about 18 cents per thousand gallons wholesale. Conversion plants would handle sea water for about 22 cents per thousand gallons.

Senator WILLIAMS, who also supports the bill, said Atlantic City and Cape May are among 13 eastern cities being considered as sites for an experimental plant.

"The municipality finally selected as the site," he said, "would test a freezing process which would convert sea water to fresh at a rate of 100,000 to 500,000 gallons a day."

Mr. Jozsef Kovago

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1960

Mr. CANFIELD. Mr. Speaker, I had the privilege and pleasure of meeting Mr. Jozsef Kovago when he came to my district to speak under the auspices of Crusade for Freedom last month. Twice the freely elected mayor of Budapest, Mr. Kovago deeply impressed me and all those who were privileged to see and hear him.

I understand that this longtime fighter for democracy, who now resides in Wilmington, Del., will address the Federation of Women's Clubs tomorrow in the Sheraton Park Hotel here.

From my experience at Camp Kilmer in 1957 when the Hungarian refugees came to our shores, I know and will never forget the suffering they endured and the depth of their dedication to democracy. Mr. Kovago was a leader of these people. Last year he wrote a moving book about his struggles called "You Are All Alone."

That book recounts the story of Hungary from 1950 through the noble revolution of 1956, and it is at the same time the personal biography of Mr. Kovago. For more than 6 years this patriot suffered the agonies of imprisonment by the Communists—and he did not break. Released just before the outbreak of the revolution, he again placed himself in danger by working for the establishment of a multiparty system. On November 1, 1956, he was elected mayor of Budapest—the second time he had held the office—and 4 days later Soviet tanks rolled into Budapest and the revolution was crushed. With his wife and daughter, Mr. Kovago escaped to Austria.

In the years that have followed Mr. Kovago has become a leading spokesman for Hungary's case. He has told an eloquent story of his shackled, freedom-loving country in his book, in the United States and Europe, and before the United Nations.

Lessons for Marketing Men in Lung Cancer Statistics

EXTENSION OF REMARKS
OF
HON. JOHN C. WATTS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1960

Mr. WATTS. Mr. Speaker, under leave to extend my remarks, I wish to bring to the attention of the House an article by Mr. E. B. Weiss, a recognized marketing specialist, with respect to the importance of digging into statistics rather than accepting them at face value.

Mr. Weiss' article becomes of particular significance to all of us because of the pertinency of his subject matter to the welfare of our people. All of us, I know, are familiar with the recent cancer scare attributable to cigarette smoking because some statistical evidence had indicated its prominence as a causative factor in lung cancer. Of course, from the statistical standpoint the arguments pro and con can go on forever—as the old adage has it: "There are statistics, then there are more statistics, and then there are facts."

Mr. Weiss is a recognized authority in his particular field and has made many outstanding contributions in the merchandise marketing field.

I urge each member to closely scrutinize the article because I feel it most enlightening and a source of substantial alleviation with respect to the lack of conclusiveness of statistical data tending to prove a biological problem. As Mr. Weiss so emphatically points out: "Cancer is a biological problem—not a statistical problem," and points to the quotation from a great scientist to the effect that "If biologists permit statisticians to become the arbiter of biological questions—scientific disaster is inevitable."

I feel certain that all of us will find Mr. Weiss' article most interesting:

[From Advertising Age, May 30, 1960]

ON THE MERCHANDISING FRONT—LESSONS FOR MARKETING MEN IN LUNG CANCER STATISTICS

(By E. B. Weiss)

No business subject has ever been put through a statistical mill to the same degree as the relationship (if any) between cigarette smoking and lung cancer.

Now I make no pretense of knowing which side is right. I have absolutely no opinion on the subject; I'm not entitled to any.

But the statistical torrent on this subject has provided the world of marketing with a classic example of how (1) statistics can sometimes mislead and (2) how easily they can be misinterpreted.

In order to make these two points, I am being entirely one-sided—on the side of those who see no connection between lung cancer and cigarette smoking. But I do this solely to give the world of marketing a revealing illustration of the vital importance of digging deeply into statistics rather than accepting them at face value.

I therefore present in this column only the points made by eminent scientists and by eminent statisticians who are more than merely dubious that any kind of link, including the statistical, has been forged between cigarette smoking and lung cancer. (I present these observations in no particular order—and extremely abbreviated from the original documents.)

1. Why is it that deaths from all other sites of cancer (other than lung cancer) are higher for cigarette smokers than for nonsmokers? Does smoking cause bone cancer?

2. Why is it that deaths from all other causes (other than coronary and cancer) are higher for cigarette smokers? Does smoking cause deaths from meningitis?

3. Could it be that heavy cigarette smoking and the tendency to cancer are both expressions of a more fundamental cause of illness of a constitutional or hormonal nature?

4. Presumably cigarette smoking also causes cancer of the larynx. But cancer of the larynx has not increased significantly. Why not? The larynx is a gateway to the lungs.

5. Do people with different occupations have different smoking habits? If so, may differing death rates represent job differences rather than smoking differences?

6. Is it possible that the cigarette smoker may differ physically and socially from the nonsmoker? No study to date has investigated physical, social, or occupational factors. Maybe differences in these factors could account for differences in the death rate rather than smoking habits.

7. Many who would have died between 18 and 50 are now saved by modern medical science. Could this mean that a high percentage of these survivors are physically weak and thus more prone to lung cancer from all causes? (Ditto for infants who formerly died in the first year of life and who, under nature's law of survival of the fittest, were not destined to reach maturity.)

8. When mathematical adjustments are made both for growth in population and aging of the population—total cancer deaths between 1930 and 1953 showed a definite relative decrease. Yet, during this period, medical ability to detect cancer, and medical tendency to think in terms of cancer, had increased enormously.

9. A relationship of cancer, in all its aspects, to stress, to emotion, to anxieties is known to exist. Asthma is considered today to be essentially of emotional origin—and asthma is a lung ailment. The various allergies, some of which involve the lungs, are known to be essentially of emotional origin. How does all this relate to lung cancer? Could the equation be: more stress—equals more asthma—equals more lung cancer?

10. If there is a statistical increase in lung cancer, what percentage of it is traceable to more accurate diagnosis?

11. It is a well-recognized medical fact that increased publicity of a disease often produces a rise in the number of cases reported. This results both from the fantastic ability of the human to develop the symptoms of a well-publicized ailment, and from the unconscious tendency of the doctor to look for symptoms of a well-publicized ailment and to diagnose symptoms as indicating that same much publicized ailment.

12. The difference in the lung cancer rate between men and women has widened over the last 30 years—it was about 2½ times greater for men in 1930 and is now about 4½ times. Yet it was during these very years that women took up smoking by the millions.

13. Lung cancer rates are about the same in the United States, Denmark, and Switzerland. Yet the per capita consumption of cigarettes in Denmark and Switzerland is about half the rate in the United States. The English and the Welsh smoke only 70 percent of our per capita cigarette rate, but their lung cancer mortality is more than twice as great. Per capita consumption of cigarettes in New York State and in Idaho is about the same, yet the lung cancer rate in New York is four times greater than in Idaho. Smoking habits in Charlotte, N.C., are little different from those of other comparable communities; yet Charlotte has a lung cancer mortality ratio that is about one-third the national average and less than one-fourth that of some heavily industrialized areas.

14. The lungs are exposed to external environment more than any other organ. They function in a sea of known cancer-producing substances. How can air pollution be separated from cigarette smoking as a cancer causative?

15. Why is it that millions of very heavy cigarette smokers do not develop lung cancer? (Only a tiny percentage does.)

16. The death rate from all of the five major categories of causes of death is smallest among nonsmokers. Why all the emphasis on lung cancer—particularly since the death rate from all forms of cancer is high among heavy smokers? Why not point the finger at smoking as the basic cause of the five major mortality causes?

17. As for mouse-painting experiments, a man would have to smoke at least 100,000 cigaretes daily to get an equivalent exposure to his lungs. Moreover, when these mice were painted with half the dose, they did not get skin cancer—which suggests, theoretically, that man could smoke 50,000 cigarettes daily without danger of lung cancer from smoking. Certainly the one deduction must lead to the other.

18. Tobacco was once considered to be the principal offender as a causative agency in cancer of the mouth (cigars and chewing tobacco were presumably the offenders). Today, it is known that cancer of the mouth is attended by a severe nutritional deficiency and the tobacco theory has been almost totally discarded.

19. Completion of a medical course does not always eradicate unscientific concepts regarding the requirements of valid evidence. Medical doctors are no more skilled in interpreting statistics than are marketing executives—probably less so.

20. Since the vast majority of heavy smokers do not get lung cancer, isn't it possible that the tiny minority of heavy smokers who do get lung cancer may have physiological, psychological, and emotional characteristics that predispose them toward this—and other ailments? And may not the heavy smoking be an indication of the existence of these characteristics—not the cause of them?

21. There has been a growing body of evidence in the past decade or more to indicate that multiple factors are operative in setting the stage for a considerable variety of cancers in man. There is a rather small group of human cancers in which only a single environmental agent is apparent as a predisposing cause of any significance; more commonly there are two or more separate factors (frequently of entirely different nature) which combine to increase the likelihood of cancer developing in the individual. Why blame cigarettes?

22. Up until the 1930's, medical textbooks referred to a certain form of cirrhosis of the liver as being alcoholic cirrhosis. This was proved by the fact that 9 out of 10 individuals with this type of liver disease had been excessive users of alcohol over long periods of years. Now it is known that this form of cirrhosis of the liver does not have anything to do with excessive alcohol consumption but is due to a nutritional deficiency. (So stoke up on those martinis.)

23. A distinct correlation could be shown between beer drinking and rates of lung cancer. That may be no sillier than the presumed correlation between cigarette smoking and lung cancer.

24. The tabulation of individuals presumably dying of lung cancer is based on death

certificates—without post mortem verification in the vast majority of cases. Death certificate identification of the cause of death is in error to the tune of perhaps 30 percent. And death certificate identification of the cause of death has its fads. Doctors are in no way immune from the current trend of thinking.

25. Seventh Day Adventists, who do not smoke, were found to have a low lung cancer rate. But—they constitute a small, special sample, which is poor statistical procedure. They also eat less fish and meat, drink less coffee and whisky. They drink more milk. They differ in other characteristics from the general population, including perhaps more freedom from stress because of their religious beliefs.

26. Cancer is a biological problem—not a statistical problem. Said a great scientist: "If biologists permit statisticians to become the arbiter of biological questions—scientific disaster is inevitable."

27. It has been found that cigarette smokers have more ulcers, divorce more often, change jobs more frequently. Amazing what the weed will do—isn't it?

28. It is obvious that many of the deaths in the earlier decades of this century, which actually were due to lung cancer, were recorded in vital statistics as due to pneumonia, influenza, tuberculosis, etc. Said one scientist: "If one will accept that this error of past decades was as little as 5 percent, this adjustment would show that there has been no real increase in lung cancer during this century."

29. And, to wrap this up, I quote Dr. Joseph Berkson, head of the section of Biometry and Medical Statistics of the Mayo Clinic, who said: "It is my personal opinion, and I know as much about it as anyone else, that smoking does not cause cancer of the lung."

Dr. Harry S. N. Greene, chairman of the Department of Pathology, Yale University School of Medicine, agrees. He challenges the whole theory that smoking causes lung cancer. "The case against tobacco is derived mostly from statistical associations and some experimental work with animals," Dr. Greene wrote: "The mere fact of a coincident increase or decrease in the frequency of given happenings does not necessarily mean that one is casually related to the other."

I still do not pretend to know whether or not there is a relationship between cigarette smoking and lung cancer—but I do hope that this one-sided exposition of the case will persuade marketing men to examine statistics more analytically and also more intuitively.

So, when you see a neat table of statistics which presumably makes out an air-tight case for a marketing procedure, get your eyebrows up.

Old Saying, Reworded

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a thought-provoking editorial which appeared in the Chelsea Record, Chelsea, Mass., on June 8, 1960:

OLD SAYING, REWORDED

"Millions for defense but not 1 cent for tribute," said Representative Robert Goodloe Harper in 1798. And little did he know that by 1960 it would be billions for defense, with a good hunk of it going down the rathole.

The Wall Street Journay recently carried a long list of the ridiculous places our money goes after the military spenders get their hands on it. It would be funny if it weren't so expensive—and so frightening.

The newspaper quotes a top Government official as saying that installing a few standard good management practices in the Defense Department would save $2 to $3 billion a year, and produce a better defense effort besides.

There has never been any secret about the waste involved in military spending. Most people have simply looked upon it as inevitable, which it is not. At a time when the country is going deeper and deeper into debt to keep up its gigantic Defense Establishment, military waste comes close to sabotage or treason.

"Billions for defense," we say, "but not 1 cent for waste."

The Pacific Boom

EXTENSION OF REMARKS

OF

HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Wednesday, June 15, 1960

Mr. MAGNUSON. Mr. President, when President Warren S. Titus, of Orient and Pacific Lines, was invited to address the Los Angeles Advertising Club this spring, he decided to give the club's membership and the entire Nation some facts to remember.

Preparation of the address took much research because President Titus, also a director of the Pacific Area Travel Association, knew there was an important story to tell.

Growth of Pacific trade and tourism was phenomenal. It would be even greater, President Titus knew.

Because he has blended the Pacific accomplishment with the Pacific promise so well, I ask unanimous consent that the address made by President Titus be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE FUTURE OF SEA TRAVEL

(Address by Warren S. Titus, president, Orient & Pacific Lines Agency, Inc., and a director, the Pacific Area Travel Association, before the Los Angeles Advertising Club, Statler Hilton Hotel, Los Angeles, Calif., April 5, 1960)

A NEW CONCEPT OF SEA TRAVEL

Since time immemorial man has been on the move. In the beginning his movements were motivated to a large degree by such things as war, pestilence, and persecution.

This movement occurred despite overwhelming odds. Fear, superstition, and primitive transportation facilities made it nearly impossible for man to move from place to place at will.

Today millions of people are moving over the face of the globe with an ease never known in the history of mankind.

These people are motivated by the need for knowledge, or by the spirit of adventure. While some travel for special needs such as business, others do so simply to escape the humdrum of a drab life and search for sheer fun and romance.

Until the early thirties intercontinental travel was of necessity by sea and vessels of those days were operated accordingly. The emphasis was on transportation pure and simple, and only the wealthy could afford to live at sea in the manner they were accustomed to in their homes.

With the advent of air travel an entire new era of transportation was opened, which in turn had a tremendous impact on sea travel.

No longer were steamship operators required to gear their facilities to the simple act of transporting people from point A to point B.

Those who wanted to get there in a hustling hurry could travel by air and still can and do. But the steamship became more than means of transportation. It became an extension of the traveler's home. It became a resort hotel as well.

Today steamship operators find themselves in the position of providing transportation, of course, but much more—a vacation afloat.

THE FUTURE OF SEA TRAVEL

We sea carriers have complete confidence in the future of ocean travel.

As an indication of the measure of confidence our company, Orient & Pacific Lines, has in sea travel, we are translating our confidence into investment.

Next year we will add two new superliners to our fleet of seven modern passenger ships already operating between the North American west coast and the Orient and Australia.

These liners are presently being built in the United Kingdom by the Peninsular and Oriental Steam Navigation Co. and Orient Line which together operate Orient & Pacific Lines as a joint service. They are the largest ships to be built there since the *Queen Elizabeth*.

Our colleagues at Matson Lines, in the oceanic division which services Australia, tell me they have 17 percent more reservations on their books for the first 6 months of this year than last year.

Matson's confidence in the development of the Pacific is seen in its two beautiful liners *Mariposa* and *Monterey* which were put in the line's South Pacific service 3½ years ago.

In addition Matson has the *Lurline* and the *Matsonia*—well known and extremely popular with the visitors to Hawaii.

American President Lines has the *President Cleveland*, the *President Wilson*, and the *President Hoover*, and is currently negotiating for a fourth vessel to be added to the line's Pacific fleet. (I am sure that you have all read of APL's proposed new superliner the *President Washington*.)

Our confidence in the continuing popularity of sea travel is shared by shipping companies around the world. More than 30 major vessels are either presently under construction or awaiting funds or are on the drafting boards.

In spite of the fact that we are in the steamship business, I must bring up the jets.

They are shrinking the Pacific amazingly and bringing trips across the ocean within the reach of million of persons who would have never had the time for such a trip.

The traveler has never had it so good. The jets provide not only speed of themselves but a perfect complement to the wonderful leisure of sea travel.

We steamship people welcome the jets. Both sea and air have their place in the travel picture of the Pacific—in fact of the world.

Fly one way, sail the other has become a commonplace byword in the travel agency business.

I am indebted to Bill Meeske of Matson Lines for a little story that illustrates perfectly one's point of view on jet travel.

A middle aged couple called on their local travel agent who extolled the wonders of jet

flying. After suffering in silence for some time the wife, fixing the agent with a beady eye, said:

"We've waited 25 years to make this trip, and we're certainly not interested in getting there in any 6½ hours."

To put it another way, there is plenty of room for both the speed of the jet and the leisure fun and comfort of a modern passenger liner.

THE PACIFIC BOOM

We have a tremendous confidence in the future of the Pacific area. Here on the West coast we are not only living on the edge of the greatest ocean on our planet, but we are also living on the threshold of a tremendous area development.

The Pacific is booming.

A few years ago that sentence would have referred solely to the boom of high explosives as our men and our Pacific fleets battled out the Pacific end of World War II. And a little later it would have referred to the greatest boom our earth had ever known—the boom of the atomic devices set off in remote areas of the Pacific.

But today no area of the Pacific is remote and the boom I speak of is the kind we associate with the business pages of our newspapers—economic boom—trade with the countries which border the Pacific, foreign investment and the enormous boom in oversea travelers which has taken place since the war.

Newsweek magazine has called the Pacific the world's greatest potential market. And back in 1950 author James Michener, one of the greatest Pacific travelers since Captain Cook said, "I can foresee the day when the passage of goods and people and ideas across the Pacific will be of greater importance to America than the similar exchange across the Atlantic."

We are entering the Age of the Pacific.

Less than 200 years ago Captain Cook was the first traveler to discover the Pacific. Today travelers are discovering the Pacific at the rate of more than a million per year, of whom 400,000 are Americans.

Pleasure travel to the Pacific has increased 136 percent within the past 5 years—twice Europe's rate of tourist growth.

According to figures released by the Pacific Area Travel Association there was a 27-percent increase in Pacific visitors in 1959 over 1958 and a 35-percent increase in visitor expenditures in the 22 countries, states, and islands that make up the membership of that association.

In fact the growth of travel in the Pacific has been so great that some problems have developed as a result. The development of hotel facilities is a prime project for Pacific developers. At present there are 10,000 new hotel rooms under construction or on the drawing boards with an estimated 18,000 more required by 1965. Fortunately various interests are hard at work now to meet this situation.

The Pacific is exerting an ever-growing fascination for Americans. We are influenced here at home by such things as architecture, interior decoration, food, and fashions of the various Pacific countries. Here on the west coast especially we are fond of decorating with Japanese shoji screens. Hong Kong brocade coats for the ladies have enjoyed a vogue, and I don't have to describe to you the many influences of the Hawaiian Islands.

I notice that in our group here today are quite a few of my friends in the travel agency business. It is not difficult or necessary to point out ways and means for them to take advantage of the age of the Pacific.

Sunset magazine tells us that the Far West is the biggest source of visitors to the entire Pacific area. Passport figures show this also.

Not only are all Pacific carriers, both sea and air, actively promoting the Pacific area, but the Pacific Area Travel Association, has been carrying out an aggressive campaign inviting the traveler to turn his eyes westward.

I recently attended the annual Pacific Area Travel Conference, held this year in Christchurch, New Zealand, where that association voted a new advertising budget continuing a campaign begun a year and a half ago. With the ad campaign there will be one of the strongest and most effective merchandising programs ever to have been used in the travel industry.

Here is an excellent opportunity for the travel agent to tie in with his own allied, Pacific, promotional plans.

Much of this interest in the Pacific can be traced back to the end of the war when thousands of GI's returned home from there.

After the war, too, GI's were stationed in Japan, one of the loveliest countries in the world. Many others were exposed to Australia, New Zealand, the Philippines, many of the Pacific islands, and that fabulous city, Hong Kong.

The GI's of the 1940's and 1950's are family men now and a large percentage of them, when they think of traveling, wax a little nostalgic and think of the Pacific.

When most of us think of travelers, the image which springs to mind is one of carefree holiday makers enjoying a vacation trip—cameras slung over their shoulders and money in their pockets.

But we tend to overlook the fact that international travel brings manifold benefits. Not the least of these benefits is a mingling of national cultures, with the ordinary people of one country associating on a friendly basis with those of another. This is communications on a person-to-person basis, of which transportation becomes the catalyst.

The traveler is on a holiday, certainly. But wherever he goes his mind is busy absorbing impressions of his fellow man at work and at play.

His camera records impressions of people and places which reach a wide audience among his friends at home.

Even his money buys much more than transport and accommodations. In return for it he also gains indelible memories of friendships made in foreign countries of pleasant experiences and the knowledge that basically, men everywhere are much the same. I am compelled to add that this is particularly true when one travels by ship.

In this way each traveler plays his part in developing international understandings. When the individual communications contribution is magnified to the scale of the entire travel industry, a great benefit is gained.

Vacationers have also made their contribution to foreign trade and in business travel to the Pacific. Many a traveler has visited a Pacific country and come away convinced of a business opportunity he could develop.

(Incidentally, the *Himalaya*, which docked this morning in Long Beach is equipped with radio-telephone service for the busy executive who can call from the privacy of his cabin anywhere in the world.)

NEED FOR A NEW CONCEPT OF TOURISM

So far I have been directing my remarks regarding Pacific travel along a single route—from East to West across the Pacific. But travel goes two ways.

And what is the travel picture along this two-way street?

Well, in 1959, U.S. expenditure for foreign travel totaled $2.3 billion.

That same year travelers who came to the United States spent only $825 million.

The difference represents a large portion of our adverse foreign trade balance of $4 billion.

Americans spent $165 million in the Pacific while visitors from the Pacific spent less than $30 million here.

Senator WARREN MAGNUSON, a strong exponent of travel to the United States, called attention recently to the fact that this travel dollar gap, unlike the other elements in our total trade picture, becomes consistently worse every year.

In 1949 it amounted to $360 million, by 1953 it had jumped to $447 million, and by 1958 it had climbed to $886 million.

It appears obvious that while there has been enormous success in encouraging Americans to travel abroad, we are lagging to a great measure in encouraging visitors to this country.

Our entire Nation has a stake in the attraction of visitors to the United States but in a city such as Los Angeles—a gateway city of the Pacific—the stake is dramatically emphasized.

Visitor expenditures have a tremendous economic impact as evidenced by the extreme competition between countries for the traveler.

One authority estimates that the travel dollar has an economic value 3.2 times the initial expenditure. It is apparent that the carriers and travel agents are not the only beneficiaries of travel spending.

Hawaii has done an interesting study of what happens to part of the visitor's dollar in Hawaii and has come up with the following breakdown:

	Percent
Lodging	25.4
Clothing	10.1
Gifts and souvenirs	10.7
Food	32.0
Beverages	6.8
Domestic transportation (that is, air, rail, and auto)	7.5
Personal care (drugs, cosmetics, etc.)	3.5
Photography	2.0

I will not enumerate the balance, but this will give you an idea of how the dollar spreads through the community. In addition Hawaii found that out of visitor expenditures, of $100 million, $18 million found its way into the State tax coffers.

Incidentally, Hawaii, our 50th State, with a population of only 650,000, spends approximately $1 million annually to attract visitors. As a result, the travel industry surpassed pineapple growing in 1959 to become Hawaii's second largest industry, next to sugar.

In addition to travel spending, the passenger ships that come into the twin harbors of Los Angeles and Long Beach pour millions of dollars into the economy of southern California each year, as do the airliners, that land at southern California airports.

I suggested a little earlier in my remarks that the American traveler wherever he goes, absorbs impressions of his fellow man at work and play. Each American visitor plays his part in the development of international understandings.

This, too, works both ways. Our international neighbors who visit here are viewing Americans on their home ground. There is nothing like seeing for one's self. Every visitor to our country is able to see for himself what we Americans are like.

In order to correct this imbalance in our trade picture in which travel figures so prominently we must sell America.

How can we do this?

FIVE PROPOSALS

Well, I would like to propose to you today five ways in which we can aid in encouraging visitors to come to the United States.

First. The international carriers, both sea and air, must recognize the problem and through the use of our oversea offices and agents actively promote tourism to this country.

To date the emphasis has been to sell the world to America. We now have to sell America to the world.

(I might note here that recently I read in the Travel Gazette, that in London, Trans World Airlines opened what amounts to the first U.S.A. tourist information office that has ever existed. It is a private enterprise venture in selling America. TWA is certainly to be commended for this important step.)

Second. The U.S. Government must take a continuing and aggressive interest in the developing of U.S. tourism through the establishment of a governmental tourist bureau with money and power.

Last year President Eisenhower proclaimed 1960 Visit the U.S.A. Year. All over the Nation citizens' committees are active in the promotion of the United States as a travel destination. But Visit the U.S.A. Year is only one promotional effort in the overall problem of attracting visitors to our Nation.

Many other positive steps have been proposed to encourage the oversea visitor.

For example, Senator MAGNUSON, Chairman of the U.S. Senate's Interstate and Foreign Commerce Committee, has introduced a bill in Congress which if passed will establish an office of International Travel and Tourism with a travel advisory board composed of 12 nongovernmental members.

I understand the bill also established a budget of $5 million and the office would be charged with the responsibility of encouraging travel to this country.

It has also been reported that Senator JAVITS of New York has a similar bill prepared for introduction. The bill is designed to promote the foreign policy of the United States by facilitating and encouraging travel by citizens of friendly foreign countries to and within the United States, and by citizens of the United States to such countries.

Third. Is the facilitation of travel through relaxation of Government restrictions, such as visa requirements, tax clearance, foreign exchange controls and customs barriers. We have our share of these restrictions and while there have been recent improvements, there is still much to be done.

Fourth. I mentioned earlier the tremendous economic benefits gateway cities such as Los Angeles derive from visitors, but I feel that along with these benefits goes responsibility—responsibility to see that the visitors to America have a good first and last impression of our country and our people. This can be accomplished in a number of ways, not the least of which are courtesy and the maintaining of a high standard of business conduct in those areas most directly exposed to visitors.

Fifth and last. We must carry out an active educational program in this country so that the Americans we send abroad will be ambassadors of good will. If our oversea neighbors are favorably impressed with the American visitor abroad they will be encouraged to come to the United States and visit him on his home ground.

This of course, is something that is up to all of us as individuals. The U.S. Passport Agency has a fine booklet advising travelers abroad in their relations with people of other countries. But greater effort should be put into educating our people to be good ambassadors abroad. This can be accomplished by the joint effort of the Government, our schools, the travel industry, and civic minded groups.

THE CHALLENGE

Herein is the challenge to you in the communications industry. No group is better equipped to perform this.

First, discover the Pacific. The potential to all of us is tremendous.

Second, aid in rectifying this imbalance of tourism between the United States and our oversea neighbors by making visitors to the United States welcome and by showing our neighbors a proper and friendly face when abroad. Your participation in this important progam will not only contibute to the economic well-being of the United States but will also bring you the satisfaction of contributing to the improvement of international relations.

Dixon on Trujillo's Downfall

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1960

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column by George Dixon which appeared in the Washington Post today. His story has a familiar ring to those who have followed the decline and fall of dictatorships:

VISIT TO TRUJILLO'S POLICE STATE
(By George Dixon)

Former handholders and patticake-players with Generalissimo Rafael Trujillo are now returning from the Dominican Republic with confidential assurances that the arrogant old despot can't last another 60 days. Having observed the workings of his unconscionable tyranny down there I wonder what's taking so long.

My informants tell me Trujillo knows his days are numbered and has taken the precautions customary with dictators who see the handwriting on the wall. They say he has gotten millions out of the country and has only to get himself out safely too to become another exile in looted luxury.

My informants also tell me that they are sure his escape plans call for seeking haven in the United States. His pitch for sanctuary will be that he was a bulwark against communism. About the only thing Trujillo has been a bulwark against is human decency.

If you have never been to the Dominican Republic you can't imagine the kind of police state it is. I went down there a couple of years ago with a young woman named Ymelda and found the people so conditioned to accepting everything without question they didn't even question her name, which the peoples of the free world find incredible.

Before we were allowed to land in Ciudad Trujillo, a burly young fellow boarded the plane. He introduced himself as Jose Carbonel. "Call me 'Joe'," he added overheartily. He said he was from the Dominican Tourist Bureau.

"If he's a tourist guide I'm crazy," whispered Ymelda, who may be unpronounceable but not crazy. "He's got cop written all over him."

"Joe" Carbonel said the Tourist Bureau had reserved a room for us at the Jaragua. He said he'd take us there. I said we'd like to look at the town first. He said we'd go to the hotel.

We went to the hotel. We told Carbonel we had known Trujillo's daughter, Flor when she was Minister Counselor at the Dominican Embassy in Washington and asked what had become of her. He ignored the question in both my imperfect English and Ymelda's perfect Spanish.

We tried to be crafty. We told Carbonel we were going to our room to rest a couple of hours. We waited until we figured he had gone, then sneaked back to the lobby. He met us at the foot of the steps.

For the whole of our stay in the country, on the south coast, north coast, plains and mountains, we never succeeded in shaking him once although we tried every scheme we could think of. The only time Carbonel did not have us under direct surveillance was when we were in our room—and we caught him standing watch in the corridor a couple of times.

Carbonel said the Tourist Bureau would be glad to facilitate transmission of my column. Instead of entrusting it to him, however, I slipped it every day to a fellow American who was leaving the country, to be mailed on touching U.S. soil. I was happy to note that this drove Carbonel almost berserk with frustration.

We kept asking about Flor Trujillo. Carbonel could never get the name. Finally a bartender whispered she had gotten loaded one night and kicked out a couple of lights in the bar. Her father put the Jaragua out of bounds for her.

Everywhere we went, under guard, Carbonel kept up a steady patter about the wonderful things the "Benefactor" had done for the country. He said before Trujillo the peopled lived in squalor. Now their homes were all so spotless you could eat off the floor.

To demonstrate, he drove us past rows of huts. In front of each sat children in pristine white, all starched and ironed. Ymelda remarked you would never find children in the United States all dressed up at 2 o'clock of a schoolday afternoon.

When we got back to the hotel I told Carbonel I though we would take a taxi and go take another look at the frilly kids. He said there wasn't a car of any sort to be had.

There wasn't. The normally car-jammed court of the Jaragua was empty of all transportation.

Telephone and Taxes

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1960

Mr. STRATTON. Mr. Speaker, the House recently failed, unfortunately, to eliminate the telephone tax from the excise tax extension bill, in spite of the fact that a number of us made a very determined effort to bring about this change even under the "gag' rule under which the measure was presented to the House. Fortunately the issue of the telephone tax is not yet dead, however. Only today the Finance Committee of the other body voted to eliminate the telephone tax, as well as the transportation tax, from the excise measure. I am still hopeful therefore, that before the bill emerges from Congress in its final form the telephone tax will have been eliminated.

Something of the effect of this tax can be gained from a reading of a thoughtful editorial which appeared recently in the Amsterdam Evening Recorder, and under leave to extend my remarks I include that editorial:

[From the Amsterdam (N.Y.) Evening Recorder]

TELEPHONES AND TAXES

There is a note of painful irony in the approach Congress is taking to two closely

related questions. On the same day that the House began debate on a $975 million Federal school-aid bill, its Ways and Means Committee voted to retain the $350 million telephone tax, instead of dropping it so that States which so desire could levy it for support of their schools.

So, on the same day, the House was told that the Federal Government needs revenue so badly that it can't afford to surrender the telephone tax, and that States need school aid so badly that it may be necessary to provide $975 million in Federal funds for that.

We have opposed the telephone tax on the grounds that it is discriminatory and un-American. We still feel that way about it.

But it does seem that if Congress actually wants to help the States improve their schools the way to do it would be by repealing the telephone tax. In New York State this would provide $70 million worth of the most direct aid to education.

Even in those States which chose not to levy the telephone tax for school support, the people would benefit from comparable sums in tax relief. This would enable them to carry the tax burden for school support through local taxes levied in other ways.

New Yorkers have a particular interest in this. Of the $350 million Uncle Sam collects in telephone taxes, $70 million comes from our State. But under the proposed Federal school aid plan we would receive only $44 million. In other words, New York would get almost twice as much from repeal of the telephone tax as it would under the Senate version of the aid-to-education bill.

If it keeps the telephone tax and passes a school-aid bill, Congress will, in effect, be taxing New Yorkers for the benefit of other States. Our representatives in both House and Senate should do everything they can to prevent this from happening. They may not succeed, but they certainly do not have to vote for it or profess to be unaware of what is taking place.

A Time for Extra Effort

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES

Wednesday, June 15, 1960

Mr. MAGNUSON. Mr. President, this is a season for graduation at all levels in education—grade school, high school, and college.

Unfortunately, not every graduate received the kind of challenging stimulation given those in Seattle University's graduating class.

The date was June 3, 1960. Speaker was Richard E. Berlin, president of Hearst Corp. Into his remarks went a wealth of personal experience, and observation; the formula for success as Richard Berlin had discovered it through perseverance and diligence.

Conferred upon Richard Berlin was a richly deserved doctor of laws degree. He, in turn, imparted the sage advice, outlined the specific objectives and offered to those graduating from Seattle University and other colleges across the Nation the needed help which is contained in his address.

I ask unanimous consent that Dr. Berlin's remarks be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AN ADDRESS BY RICHARD E. BERLIN, PRESIDENT, HEARST CORP., AT THE COMMENCEMENT EXERCISES, SEATTLE UNIVERSITY, SEATTLE, WASH., JUNE 3, 1960

Your Excellency, Archbishop Connolly, Very Reverend Father Lemieux, Very Reverend and Reverend Fathers, devoted Sisters, distinguished faculty, members of the graduating class, parents, and friends, I am happy to be a member of the class of 1960, although I am a little old for such a distinction.

I was asked to make a commencement address. I am, of course, not an orator and you will not hear an oration. I am a publisher and business executive of newspapers, magazines, radio and television properties, not an intellectual, not a philosopher, not a politician; just a simple businessman and white-collar worker like most of your fathers. Therefore, perhaps I was brought to you under the false pretense that I would tell you something that would elevate your spirit and how to leave this hall and immediately become a great man because you have a college degree.

Frankly, I would not know how to say that. It has not been my experience. In the trade with which I am associated, it has been traditional that those who succeed work hard along a thorny path. Many start; few reach the top. I cannot give you the comfort that it is easy to go from rags to riches. Quite the contrary; with our present tax structure, it is much easier to go from riches to rags.

I do not want to mar your day by seeming to be so pessimistic. In my business, we give employment to thousands of writers, reporters, short-story writers, novelists, editors, business administrators, cartoonists, artists, and specialized columnists. We seek them out more avidly than a Hollywood talent scout hunts for future stars. We watch young men, like yourselves, fresh out of college, emerge into authors of note, or experts on particular subjects. We are always in need of new talent and there is always room at the top.

But we cannot take anyone at his own valuation. You would be surprised how good most writers think they are until their work is rejected. The really competent person does not become discouraged. He never quits. He works harder and harder until he clicks.

You may hear that so-and-so got the breaks. He knew somebody who knows somebody who knows a man who can give him a break. Of course, that does happen. You know it as well as I do. But can the fellow last?

In our business, where we deal with black type on white paper, there are no alibis. The stuff is printed and there it stands for the whole world to read. It is too late to cover up. It is too late for an alibi. There are the words; there is the result of his work and his genius.

The point I want to make to you is that these are difficult times you are moving into and I, for one, am glad that they are difficult. I say that because it is in such times that it is possible to discover real ability and real talent. What does it mean to have real ability? It means the will and the capacity to work hard—not 35 hours a week or 40 hours a week or 56 hours a week, but as long as it takes to do a job so competently that it attracts attention.

I do not wish to mention names or show favoritism, but in our organization we have some remarkable people. We sell the intellectual product of men and women. We do not sell the products of steel or copper or fabrics; we sell the mental outpourings in words and drawings of men and women who must attract readers or we do not need them. Some of our writers attract as man as 20 million readers a day.

They are the hardest working people I know anywhere. They work all the time. You see them at a dinner party. They seem to be having a good time but they are storing up ideas and incidents which they will research. They read a novel and a thought comes to them. One of them can pursue such a thought for months until he has found the data to establish its truth. One goes to a fashion show not only to look, but to write a description in such detail that it represents absolute experience. One watches the march of international relations, reading a vast amount of material, reading day and night, meeting important people, training his memory so that he does not forget what is said. One reporter I know has never used a notebook in his long career. He depends entirely on a trained memory.

I can go on for hours telling you what men do to succeed in our business: But it all comes down to one word. That word is work.

I have said often, success is the result of 85 percent perspiration and 15 percent inspiration.

This country was not built by security and leisure; it was built by risk and work. Certainly those of you who live in this fine State of Washington descend from daring men and women who braved a wilderness to reach the great Pacific Northwest. These men and women did not worry about their leisure, or their security, or the breaks in life. They had enormous confidence in themselves and in the future of their country and they went to work to prove that their confidence was not misplaced. They built a wonderful civilization here and it was not done by miracles or breaks; it is the result of risk and work.

Some young men who come to see me about jobs these days often ask about the fringe benefits, about how much vacation they will get with pay, about what their chances are to advance by seniority. I cannot help but feel that these young men lack confidence in themselves; that they are more interested in the protection of the mediocrity than in the opportunity to seek advancement through hard work and ability. I say this to you to emphasize the importance of individual initiative. It is not intended as any reflection on the unions for the gains they have achieved for the working man and woman. I well realize the good they have done in helping to raise the standard of living of the workers. I recall when Mr. Hearst first championed the union movement in this country with Samuel Gompers. No group of newspapers supported organized labor more strongly than the Hearst newspapers did in those days when unionism was in its infancy. Today we respect those unions who leaders honestly represent the interests of the rank and file members and who show a sense of responsibility for the welfare of the properties that provide well-paid employment for the workers. We welcome the members of such unions into our organization, and we offer them complete equality of opportunity to move ahead.

All must take their chances with other men, the college graduates as well as those who may not have been forunate enough to get a college education. College graduates sometimes think that a bachelor of arts degree entitles a man to a job, that a master of arts is a dead cinch and that a doctor of philosophy ought to bring a byline or an editor or publisher's assignment.

Truth to tell, the degrees are just the word "commencement" means. You have an excellent background. You have learned many things. You remember some of them. You have assimilated some wisdom. Now you must begin to learn to apply your knowledge

to life. And life is a very tough master. It compels you to prove your capabilities.

Today we live in an international society. We are closer to other countries than we ever were in our history. Here in Seattle, in the past, there was always an association with Canada and a friendly rivalry with Vancoover. Now, Seattle is only a short distance from Tokyo and across the North Pole to Paris.

What this destruction of distance will do, we really do not know. There are some who believe that because distance is being annihilated, people know other people better than before. Do they? Do we, for instance, know Soviet Russia better than we knew czarist Russia? The Soviet regime has organized Russia into a power not only to conquer the world but to destroy the religious civilization which is the basis of our way of life. Do we understand the Soviet communists? Do we recognize the peril of international communism's hatred for the United States? Do they hate us because we are capitalists or because we acknowledge the supremacy of God?

For more than a century, American ships sailed from this country to China, first from Salem, Mass., and then from all the eastern ports. In time, Seattle picked up this trade and a constant service was set up between Yokohama, Shanghai, Hong Kong, and other ports with Seattle, Vancouver, and San Francisco. I recall the beautiful President ships that sailed out of this harbor and I recall the pride of Capt. Robert Dollar in this important Asiatic trade.

But do you understand how it could come to be that the Chinese people whom we aided and benefited for over a century, whom we protected after the Boxer Rebellion, whom we safeguarded when Russia and other countries tried to partition their country, which we guarded with John Hay's Open Door policy, to which we sent missionaries to educate and help medically millions of people—can you explain why this same country turned on us, imprisons our sons, violates priests, nuns, and ministers of the gospel, abuses our flag and expresses hate for us?

The shortness of distance has thus far not improved human relations. Perhaps as the years go by, it will all be different but today an American must recognize that his country is still the envy of the world, that what your parents and mine have achieved hereby their work is still the grandest structure of human rights and human freedom ever known to man and that to preserve these and also our way of material life, we need to labor valiantly, each in his own way.

Idleness, laziness, featherbedding, waste, the tendency to try to get the most and give the least—these are our most dangerous diseases. These can destroy America. They are the termites eating into and rotting the foundations of our society.

I hope you will prove immune to them. I hope you will show the courage and the spirit reflected in an editorial I read recently. This editorial was not written by Horace Greeley or William Randolph Hearst. It was written by a young man in Cuba whose name is hardly known elsewhere, but whom history will surely record as one of the great patriots of his country.

I know this young man's father, who was a fearless fighter for the principles of democracy. His son seemed to be a mild-mannered, unemotional young man. Yet the editorial he recently wrote at the risk of his life glows with the courage that has inspired the spirit of freedom in mankind throughout history.

I am going to read to you a free translation of pertinent excerpts from this editorial which was written by Jose I. Rivera, editor and publisher of Diario de la Marina in Havana, Cuba, and published on Passion Sunday, April 3, 1960. I believe you will be pleased to know that such a courageous fighter for political freedom exists in Cuba today. The editorial is entitled "With God and My Conscience." The editorial reads:

"Christ came upon this earth to redeem men. Human beings are not perfect but they will come closer to perfection if they live according to the dictates of their conscience, in accordance with the will of God. This is written from the heart as well as the intellect. It comes naturally to a writer when he writes what he knows he ought to write. Courage is to stand fast and to make a sacrifice if necessary, for the sake of justice. Cowardice is to abandon justice because of the risk entailed. The task of an editorial writer is always risky but more so in these times in our land when passions blind those who wish to gain advantages by creating chaos. It is the writer's job to fight with the pen.

"In these difficult times, it would be easier to remain silent about things which do not please us and which violate justice. Communism is a dangerous and a deadly enemy. The Diaro de la Marina is not so much interested in physical health and safety and neither am I. We are interested in moral health. I am young but I have already suffered and I remain faithful to my principles and ideals. Only God and my conscience guide me. This newspaper is the same.

"We wish to devote our lives to the defense of our most precious rights—our liberty, our faith, and our ideals. If these are made to disappear, all that remains will be of little value. We must sacrifice even our lives, if such sacrifice becomes necessary, and we must do so that men can remain free, to believe in God and enjoy the benefits of modern civilization in a spirit of thankfulness to Him to whom we owe all."

"For us the triumph of materialism, atheism, hatred, spoils, persecution, and communism would be worse than death. This newspaper is trying to defend Cuba against these evils.

"We are Catholics and we cannot reconcile our Roman, Apostolic Catholicism with Russian atheism.

"I do not look for danger but I will face it if and when it appears. I am on a crusade without fear." End of editorial.

This paper was confiscated by the Castro government on May 12. I understand my friend, Jose I. Rivera is alive, under the protection of a foreign Embassy in Havana.

The author of this editorial is a young man who I believe was trained by the Jesuit Fathers. Their teaching obviously took root and has yielded fruit. His philosophy of life leads me to express to you one final thought.

I began speaking to you of worldly and material things. They are proper things of which to think and speak because we must live our lives among worldly and material things. They are, however, merely means to an end. I am no moralist and I would not suggest that anyone pattern his life after mine, but I have lived long enough and observed enough to know that there is no substitute for good character.

You have just concluded 4 years of intense training under the guidance of the Jesuit Fathers, the last two of which have been devoted in large part to the study of philosophy, which enables man better to seek and to know the truth. Sometimes the highly educated become lost in a maze of learning, which they are unable to relate to the task of everyday living, and sometimes they use their learning to rationalize and justify wrongful acts. In either case, such people lose track of fundamental principles. At the end of your student days and the commencement of your life in the world, I ask you to remember what you learned as a child—that you were created for the greater glory of God, and that which necessarily follows—the salvation of your own soul. These are the ends to which all material things are a means. Anything which tends to swerve you from those ends, however pleasant or gratifying, must be put out of your lives if you are to attain success.

If the class of 1960 runs true to form, a few—and thank God only a few—will forsake the ideals with which you are all now imbued and either forget or deliberately subvert the eternal and immutable laws of God and the laws and regulations of His vicar on earth. When the final accounting takes place, these will be the failures among you, and all the others, however insignificant their material accomplishments and however humble their status in life, will be the successes. So I say to you keep ever in your thoughts and actions the motto of Saint Ignatius, the founder of the Society of Jesus, "To the greater glory of God"—"ad majorem Dei gloriam." Thank you.

Minority Views on Compulsory Old-Age Annuities Expressed in 74th Congress

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 1, 1960

Mr. ALGER. Mr. Speaker, since the very beginning of the program for old-age and survivors insurance, warnings have been sounded that such a program is of dubious constitutionality and that the basis upon which the program was planned was unsound. It may be well for us to review some of these early warnings, the logic of which have never been disputed, merely ignored. Under permission to extend my remarks, I call your attention to the following statement by minority members of the Ways and Means Committee to the first report on social security. This statement is taken from House Report No. 615 of the 74th Congress, 1st session, on the social security bill:

COMPULSORY OLD-AGE ANNUITIES

The bill is separated into several titles. Title II provides for compulsory old-age annuities, and title VIII provides the method by which the money is to be raised to meet the expense thereof.

The two titles are interdependent, and neither is of any consequence without the other. Neither of them has relation to any other substantive title of the bill. Neither is constitutional. Therein lies one of the reasons for our opposition to them.

The Federal Government has no power to impose this system upon private industry.

The best legal talent that the Attorney General's office and the brain trust could marshal has for weeks applied itself to the task of trying to bring these titles within constitutional limitations. Their best effort is only a plain circumvention. They have separated the proposition into two titles. This separation is a separation in words only. There is no separation in spirit or intent. These two titles must stand or fall together.

The learned brief submitted by the Attorney General's office contains in its summation the following, weak, apologetic language:

"There may also be taken into consideration the strong presumption which exists in favor of the constitutionality of an act of the Congress, in the light of which and of the foregoing discussion, it is reasonably

safe to assume that the social security bill, if enacted into law, will probably be upheld as constitutional."

We also oppose these two titles because they would not in any way contribute to the relief of present economic conditions, and might in fact retard economic recovery.

The original bill contained a title providing for voluntary annuities. This was another attempt to place the Government in competition with private business. Under fire, this title has been omitted. It was closely akin to title II. In fact, it had one virtue that title II does not possess in that it was voluntary while title II is compulsory. These titles impose a crushing burden upon industry and upon labor. They establish a bureaucracy in the field of insurance in competition with private business.

The minority membership of the Ways and Means Committee have at no time offered any political or partisan opposition to the progress of this measure, but on the contrary have labored faithfully in an effort to produce a measure that would be constitutional and that would inure to the general welfare of all the people.

House Joint Resolution 757

SPEECH
OF
HON. NEWELL A. GEORGE
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the joint resolution (H.J. Res. 757) proposing an amendment to the Constitution of the United States granting representation in the electoral college to the District of Columbia.

Mr. GEORGE. Mr. Chairman, "As the District of Columbia goes, so goes the Nation" could very easily become the new political slogan.

The only reservation I had with respect to House Joint Resolution 757 was that if the District of Columbia is granted the privilege of voting for President and Vice President and the election returns were broadcast while the polls were still open in the States to the west, the outcome of the election could very easily be affected. With the difference in time from here to Hawaii and the fact that the majority of people go to the polls in the late afternoon and evening, the returns of a Presidential election in the Capital of the Nation—the Federal city—could have a tremendous psychological effect upon the results elsewhere in the Nation.

To those people who have never been in Washington and know nothing about its citizens or the compact nature of its population, together with their attitude of hostility toward the occupant of the White House regardless of his political affiliation, the vote in the District could be controlling. This unprecedented situation should be desired by no one.

A study of the resolution, together with the committee report and the explanation by the able chairman, plus the colloquy between the gentleman from North Carolina [Mr. WHITENER], and the gentleman from Colorado [Mr. ROGERS], both members of the Judiciary Committee and able lawyers, have resolved this question to my complete satisfaction. The debate this afternoon has made it clear that Congress would have the power to prohibit the counting of the ballots or the totaling of them on voting machines until after the polls had closed in our most western State. It is also clear that Congress would have such power and authority to determine when the results of a presidential election in the District of Columbia would be made public.

No doubt House Joint Resolution 757 will receive early approval by the Congress and will be signed by the President. The critical hurdle will be to secure the approval of three-fourths of the State legislatures on the proposed amendment within the 7-year period.

Many State legislators might very well oppose the adoption of the amendment were they not cognizant of the fact that the Congress could postpone the release of the District of Columbia returns until the last American had cast his ballot. The debate this afternoon should resolve all doubt as to the congressional power in this regard.

The Committee on the Judiciary and its great and sincere chairman deserve much credit for the measure now about to be approved by the House, and the rapidity with which House Joint Resolution 757 was brought to the floor for consideration. The distinguished chairman and the members of the Rules Committee are to be commended for their expeditious consideration.

The prompt action by these two outstanding committees, composed of members from different sections of the country and of different psychological viewpoints, demonstrates the desire and purpose of this body that no American should be denied the right to vote for the two highest offices in the land.

I am sure the vote in both bodies, Mr. Chairman, will be practically unanimous, and I join with my fellow Members in hoping that the requisite number of States act within the prescribed time.

The AMA, as Usual, Is Running Day Late, Dollar Short, on Proposed Health Bill

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1960

Mr. ULLMAN. Mr. Speaker, I think my colleagues will be interested in the following brief editorial from the Bend (Oreg.) Bulletin of June 4, 1960. It reflects again the concern which exists across the Nation relative to the problem of medical care for our older people. It also reflects the disappointment which many of us feel that organizations such as the American Medical Association have not devoted more time to the formulation and presentation of constructive proposals and less time to blind opposition.

The article follows:

THE AMA, AS USUAL, IS RUNNING DAY LATE, DOLLAR SHORT, ON PROPOSED HEALTH BILL

This being an election year, some sort of national health insurance bill will probably be passed, the most prominent candidate right now being the Forand bill.

Aside from the merits of the Forand bill, or the proposed administration substitute, one thing is clear: the doom-criers of the American Medical Association have no one but themselves to blame if the bill is not to their liking.

More than a year ago, in discussions of health insurance at that time, Health, Education, and Welfare Secretary Arthur S. Flemming suggested that a bill be postponed for a while to see what the private segment of the medical insurance business, namely the doctors and insurance companies, could come up with.

The AMA, instead of, first, realizing the time for evading this question was past, and, second, presenting a program for more extended medical care of its own volition, chose to fight the whole idea of planned medical assistance to those who need it. All the old "socialism" cliches, shelved since the fight against Truman's health insurance program in 1950, were dusted off for reuse. We shall probably hear more of them before some Federal bill is finally passed.

Time, however, and the needs of old persons, wait for no man. The medical association would be performing a much greater service to the cause it affects to promote if it were to acknowledge the need for greatly expanded health services, and assist the Government in producing the best program for that purpose.

Federal Aid to Distressed Areas Is Urgent

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1960

Mr. DONOHUE. Mr. Speaker, as you are well aware the whole matter of depressed areas was thoroughly explored and debated during our recent House approval of the aid-to-depressed-areas bill and I am not going to, at this hour, unnecessarily belabor the subject.

The Department of Labor officially testified to the existence of multitudinous pockets of economic distress and decline throughout the country and we have our unhappy share of them in the New England region and within my own home State of Massachusetts. It has been demonstrated that the economic distress in these areas cannot be alleviated by the resources of area industries and municipal authority, alone.

Unfortunately the President saw fit to veto the bill to extend these areas Federal aid and the Congress did not override the veto. However, the President did express his hope "that suitable legislation would be enacted at this session of the Congress."

Mr. Speaker, on that hope, and in that spirit, I most earnestly urge that the leadership, together with administration representatives, will work out compromise legislation that can be presented and acted upon by the Congress before adjournment.

Minority Views on the Compulsory Social Insurance System—81st Congress

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 1, 1960

Mr. ALGER. In a further study of the history of the social security program, I would like to call to the attention of the Members some of the thinking contained in the minority views to H.R. 6000, a bill passed by the 81st Congress, increasing benefits and expanding coverage. I would like to point out again that a conscientious minority has constantly warned against the unsoundness of a political system of providing security for our older citizens. The following views were expressed by the minority in Report No. 1300, 1st session, 81st Congress in the report on Social Security Act Amendments of 1949:

THE COMPULSORY SOCIAL INSURANCE SYSTEM

The provisions we oppose will increase the cost of this system at its maturity by approximately $3,500 million a year and this amount when added to the huge and pyramiding cost of the other features of the program may well mean the difference between the success or breakdown of the system.

In our opinion, the purpose of compulsory social insurance is to provide a basic floor of economic protection for the individual and his family and in so doing to encourage and stimulate voluntary savings through personal initiative and ambition. It should not invade the field historically belonging to the individual.

We believe that such a form of compulsory social insurance which unnecessarily takes from the individual funds which he would invest or otherwise use for building his own security is incompatible with our free-enterprise system. Accordingly, we do not conceive it to be a proper function or responsibility of the Federal Government either to compensate individuals for all types of losses in earning capacity or to provide a scale of benefits which pay substantially higher amounts to those with higher income.

We believe further that if this vast program is to fulfill its social objectives, the most important factor is to restrict the burden of its pyramiding cost within an amount which the economy can bear. This is so because in the final analysis the basis of all security is a productive economy and the burden in any one year of the mounting cost of this program will have, in the main, to be paid for out of the production of the goods and services which the system seeks to distribute. In 20 years the payroll tax provided for in this bill will be 6.5 percent or a dollar cost based on present wage levels of over $8 billion a year in this one program alone. If this burden becomes too great, the system may well be repudiated by future generations, and if benefit payments are carried to extreme, the inevitable result of the companion tax burden will be a stifling of the incentive and ambition to produce.

Daniel A. Reed, Roy O. Woodruff, Thomas A. Jenkins, Richard M. Simpson, Robert W. Kean, Carl T. Curtis, Noah M. Mason, Thomas E. Martin, Hal Holmes, John W. Byrnes.

Capital Punishment—Should It Be Abolished?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1960

Mr. MULTER. Mr. Speaker, in connection with my bill, H.R. 870, to abolish capital punishment, I commend to the attention of our colleagues the following article by J. Robert Regan, Jr., which appeared in the June 15, 1960, issue of Contact Concern, a publication of the General Board of Christian Social Concerns of the Methodist Church:

CAPITAL PUNISHMENT—SHOULD IT BE ABOLISHED?

(By J. Robert Regan, Jr.)

Congress is giving renewed consideration to the matters of the use of the death penalty for Federal offenses. Congressman ABRAHAM J. MULTER, Democrat, New York, has introduced H.R. 870 which would abolish the death penalty under all laws of the United States except the Uniform Code of Military Justice. Life imprisonment would be authorized instead.

Reaction of the press and the public to the Caryl Chessman case indicates a general distaste for capital punishment in the United States. It is one of the things that an enlightened civilization gradually sloughs off much as it does slavery, polygamy, and dueling.

In most of Western Europe and Central and South America, the death penalty has now been abolished. Nine States in this country do not use it.

UNITED STATES MAY FOLLOW SUIT

Statistically speaking, the United States is gradually following Europe's lead. In the 1930's there were approximately 82 executions per year. But in 1959, there were only 48.

The General Conference of the Methodist Church passed an outstanding comprehensive statement calling for the abolishment of the death penalty. (See June 1 Contact, p. 17.) This statement was read into the record of recent hearings on the Multer bill before the House Judiciary Subcommittee concerning the Multer bill by the Reverend Robert Regan of the Methodist General Board of Christian Social Concerns.

DETERRENCE QUESTIONED

The Methodist statement and statements from other groups emphasized that the death penalty, contrary to popular opinion, does not deter capital crimes. The homicide rate in the nine States that do not use the death penalty is similar to or lower than the rate in the other States.

Stuart Innerst, of the Friends Committee on National Legislation, pointed out that executions in old England were held publicly to serve as a warning to potential wrongdoers. There were 8 hanging days in the calendar. Work was put aside so that the whole population might turn out to see the offender put to death. Pickpockets operated freely in the large crowds although men were sentenced to die before their eyes for that same offense.

Innerst further pointed out that in the States of Rhode Island, Michigan, and Wisconsin, which do not have the death penalty, the average homicide rate per 100,000 for the years 1934–46 was 2.4 percent. In three States respectively adjacent to these, Connecticut, Indiana, and Illinois, which have the death penalty, the average was 44 percent.

EXECUTIONS MAY CAUSE CRIME

Testifying for the American League To Abolish Capital Punishment, Mrs. Herbert B. Ehrmann gave a striking example of the fact that capital punishment does not deter other crimes. While the Chessman case was headlined in all the newspapers, an Associated Press release carried the story of another red-light robbery and acts of sexual perversion in Los Banos, Calif., similar to the crimes for which Chessman was executed. Her measured opinion, following a 30-year study of homicides, in that capital crimes occur during, preceding and following sensational capital trials and executions. Instead of deterring crimes the publicity given a death penalty case may actually incite further acts of violence, Mrs. Ehrmann related.

She said that eight States have abolished capital punishment and then reinstated it later. A study of the States indicates that the change back came before there was time to see any results of the deterring effects of either law. In most instances, the change was simply an action that came with a change in administrations.

WHAT IS JUSTICE?

The demand for justice is a second reason proponents of capital punishment use as an argument.

On this point the Methodist statement emphasizes that to define justice as retribution or retaliation "is a sub-Christian concept." The emphasis must be on the reformation and rehabilitation of offenders. This, of course, cannot be done if the death penalty is used.

The Christian Gospel expressly forbids the treatment of another human being singly on the basis of "an eye for an eye and a tooth for a tooth."

Even if the law should require a life for a life, in practice the principle is denied. Innerst pointed out that in 1957, 7,000 Americans were found guilty of murder, but less than 1 in 100 paid for it with his life.

ADMINISTRATION DISCRIMINATORY

One sobering fact—the way the penalty is administered. Often there is discrimination against the poor, the helpless, and minority groups. Warden Lewis E. Lawes, formerly warden of the Sing Sing Prison, escorted 150 men and women to the death chamber. All were alike, "all were poor, and most were friendless," he stated. The defendant of wealth and position seldom goes to the electric chair or the gallows.

The concluding emphasis of the Methodist statement argues that punishment and segregation from society can be corrective and remedial action for offenders. The emphasis must be on discipline, reform, and rehabilitation, however.

STATE ACTION LIKELY

Although churchmen and the thoughtful enlightened citizenry of the Nation realize the need for the abolishment of the death penalty, it is still a controversial issue as far as Congress is concerned.

Therefore, it is not expected that Congress will give the issue much more atten-

tion in the hurry to finish business before adjournment. But it is also evident that many State legislatures will be dealing with questions of capital punishment during the coming months. Eighteen States saw bills introduced in 1958.

WHAT CAN INDIVIDUALS DO?

Congress and various State legislatures will be given further attention to capital punishment in the next several months. The opinions of annual conferences, districts, local churches, and individuals could therefore be made known to Congressmen and legislators.

Letters and statements might go immediately to Congressman THOMAS J. LANE, House Office Building, Washington, D.C., in support of H.R. 870, which would abolish capital punishment for capital offenses and substitute life imprisonment instead. Congressman LANE, Democrat, of Massachusetts, is chairman of the Judiciary Subcommittee conducting hearings on this issue.

A careful study of the general conference statement (Contact, June 1) and of the above article will help in phrasing letters and statements. There is also an excellent article on capital punishment by Lester Kinsolving in the June issue of Pastoral Psychology.

Going Through the Motions

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1960

Mr. PHILBIN. Mr. Speaker, in a recent editorial captioned "Going Through the Motions," the Wall Street Journal analyzed the status and implications of the foreign aid bill and made some extremely pertinent comments about what it termed "this annual ritual."

As all of us in the House know, a definite pattern has been established by the Congress for considering and acting upon this bill.

First, we have very extensive hearings conducted by our able friend, the very distinguished gentleman from Louisiana [Mr. PASSMAN], an undoubted expert on this subject, and his able committee. Then, almost invariably, the bill is brought to the House floor during the closing weeks of Congress. The practice has been and apparently is for the committee to make sizable cuts predicated on the elimination of waste and inefficiency in the program well known to all observant citizens as well as to Members of Congress, and these cuts are usually sustained in their entirety by the House.

After the bill is passed by the House, which is usually even closer to the adjournment date, it goes to the other body where, in the past, practically all of the cuts made by the House are restored at a time when adjournment is imminent and when any real serious consideration of the action of the other body by the House would be almost impossible.

I have nothing but words of praise for Chairman PASSMAN and his committee because I think that they have done outstanding and most painstaking work throughout the years in considering this legislation, even though I am of the opinion that the committee hearings could and should be completed and the bill brought to the floor at an earlier date.

It is especially noteworthy that this year, as in former years, the total amount listed on the recap sheet for the ensuing fiscal year as being available for expenditure is well over $8 billion.

I recognize that this huge sum may seem to be a mere bagatelle to those good souls who insistently urge the largest and most lavish foreign aid grants. Notwithstanding that fact, $8 billion is a tremendous sum of money, and it all has to be taken painfully from the pockets of the hard-working American people. That fact should be kept in mind as we appropriate funds for foreign aid or for any other purpose.

I have long favored streamlining and revamping the entire foreign aid program to weed out wasteful practices, inefficiency of administration, and demonstrated flaws in the way these vital matters have been handled.

Certain objectives of the program are not only laudable but necessary to security, the fulfillment of our international commitments and definite humane obligations which most Americans feel. But there is no reason for waste, nor is there justification for unnecessary outlays. To the contrary, the Congress must insist upon strictest economy and prudence in formulating and conducting this program.

It is for these reasons that a basic reappraisal and reevaluation should be made and it should include the appropriate consideration of the fact that many of the perennially assisted nations have developed high economic and financial potentials of their own, which we have every reason to expect, should be put at the disposal of any free world program for strengthening our common military and security posture, and the various programs for developing backward areas and serving humane needs as best we can.

It is not a healthy situation to lay such a program open to so much justifiable criticism from thoughtful citizens and the people as a whole. This is especially true in the light of our growing national debt, our ever-increasing burdensome and heavy taxation, and the serious budgetary and financial problems which we face as a nation.

Too much money for this or any other program, however worthy, is worse than too little, because it begets maladministration and waste, and it engenders deep-seated bitterness from large numbers of people who have to pay the bills at considerable sacrifice to their own standards of living and their own financial standing.

The Congress has a distinct obligation to right the wrongs that are implicit in this vast program and demand a much higher degree of accountability and efficiency from those who are charged with administering the program, as well as a larger participation and contribution by those nations now able to make them.

Under unanimous consent I insert in this part of my remarks the very thoughtful editorial, "Going Through the Motions," to which I have alluded:

GOING THROUGH THE MOTIONS

It was expected that the House Appropriations Committee would cut the foreign-aid request, just as it is expected that the Senate will restore a sizable part of the cut. There are some comments to be made about this annual ritual.

In reducing the appropriation by $790 million, the committee is still providing $3.4 billion for the fiscal year beginning July 1—a handsome sum in any language. Actually, when previously appropriated but unspent funds are added, the available money comes to well over $8 billion. In such circumstances it is ridiculous to talk about the committee's cut imperiling the foreign-aid program.

That kind of money, moreover, is an invitation to continue waste, blunders and loose practices for which the program has always been known. The committee action, in one sense, can be taken as a protest against the defective concepts and poor handling of foreign aid. And in fact the committee report, like so many previous congressional studies, cites specific instances of haphazard management and worse.

The truth is that the effectiveness of foreign aid has never been imperiled by lack of funds; if anything, it is ineffective because there is so much money the dispensers don't rightly know what to do with it all. More basically, its ineffectiveness rests at the door of successive administrations and Congresses; in all these dozen or more years they have failed to come to grips with the fundamental questions, and they have failed to develop selective programs of worthy help that might really promote American national interests.

There is, in short, no rationale for foreign aid; there has been, and continues to be, only indiscriminate squandering. Instead of going through the motions of cuts and restorations of cuts, Congress should at last insist on a thorough review and a thorough overhaul.

Until it does, foreign aid will appear to foreign eyes as either dollar imperialism or an amazing demonstration of national gullibility.

Results of Poll on President and Issues in Third Congressional District of Indiana

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1960

Mr. BRADEMAS. Mr. Speaker, in April I mailed questionnaires to some 160,000 registered voters in the Third Congressional District of Indiana, asking my constituents to register their opinions on major issues facing this Congress and also requesting them to indicate their preferenoe for President of the United States. More than one of every eight persons receiving the poll responded.

Because the Third District of Indiana is considered a representative cross-section of public opinion, I believe the tabulation of the 23,485 replies may be of interest to my colleagues.

POLL PREDICTS ACTUAL PRIMARY VOTE WITHIN 1 PERCENT

I point to the fact that the poll, which was taken before the May 3 presiden-

tial preference primary in Indiana, predicted within 1 percent the actual Democratic and Republican Party votes in the Third District.

The poll showed 55 percent of the voters indicating a preference for President favoring Democratic candidates while 45 percent favored Republican candidates. The actual primary vote in the district on May 3 in the presidential race was 56 percent Democratic and 44 percent Republican.

The apparent accuracy of the poll's presidential results strongly suggests that the answers to questions on issues should provide a fair and reliable measurement of public opinion in my district.

SUMMARY OF SOME RESULTS ON MAJOR ISSUES

Mr. Speaker, let me summarize some of the more interesting results of the poll. Substantial voter approval was given to such programs as health insurance for the elderly, Federal support of education, loans and grants to depressed areas, and amendments to the minimum wage law.

Nearly two-thirds of all voters were for using Federal funds for classroom construction. Democrats favored such aid by a margin of 5 to 1, Republicans by 5 to 4, and independents by 5 to 3; 53 percent of all voters approved the use of Federal help to improve teachers' salaries as well.

Voters strongly supported—by 2 to 1—a Federal program of health insurance for social security beneficiaries—70 percent approved an increase in the minimum wage from $1 to $1.25 an hour as well as extension of coverage to more workers.

Opinions were most divided on the issues of agricultural policy and the missile gap. Nearly one-third of the voters expressed "no answer" on the complex issue of farm policy. A slim majority of 51 percent felt the United States was keeping up with Russian space and missile developments.

Because voters were asked to indicate their party preference, the following tables of the results of the poll are divided into these categories: Democratic, Republican, independent, and total of all replies.

TABLE 1

Questions	Democratic			Republican			Independent			Total of all replies (23,485) and percentages					
	Yes	No	No answer	Yes	No	No answer	Yes	No	No answer	Yes	Percent	No	Percent	No answer	Percent
1. Do you favor legislation to guarantee all Americans, regardless of race or color, the right to vote in State and Federal elections?	8,699	445	199	5,233	278	117	7,754	402	268	21,686	92	1,215	5	584	3
2. Do you favor reducing the national debt in preference to cutting taxes if the budget shows a surplus?	5,681	3,243	419	4,317	1,112	199	6,036	2,056	422	16,034	68	6,411	27	1,040	5
3. Do you favor an agricultural program providing:															
A. Price supports and limitations on production?	3,750	2,889	2,704	1,141	2,895	1,892	2,003	3,647	2,864	6,894	29	9,131	39	7,460	32
B. No supports and unlimited production?	4,353	1,955	3,035	3,645	824	1,159	5,151	1,245	2,118	13,149	56	4,024	17	6,312	27
4. Do you favor providing health and hospitalization insurance to social security beneficiaries?	7,507	1,702	234	2,564	2,852	212	4,841	3,325	348	14,912	63	7,879	33	794	4
5. Do you feel confident that the United States is keeping up with Russian space, missile, and other defense developments?	3,843	4,779	721	3,658	1,451	519	4,596	2,885	1,033	12,097	51	9,115	39	2,273	10
6. Provided there is a guarantee against Federal control, do you favor Federal support of State and local efforts to:															
A. Build more classrooms?	7,503	1,460	380	2,928	2,460	240	4,947	3,095	472	15,378	65	7,015	30	1,092	5
B. Improve teachers' salaries?	6,000	2,528	815	2,424	2,871	333	4,069	3,697	748	12,493	53	9,096	39	1,896	8
7. Do you favor a program of loans and grants to areas of serious and persistent unemployment?	6,862	1,912	869	2,299	2,846	483	4,302	3,375	837	13,463	57	8,133	35	1,889	8
8. Do you favor:															
A. Raising the minimum wage to $1.25 an hour?	7,801	1,145	397	3,126	2,171	331	5,451	2,515	548	16,378	70	5,831	25	1,276	5
B. Extending coverage of workers not now covered?	7,533	832	968	3,449	1,507	672	5,638	1,672	1,204	16,620	71	4,011	17	2,844	12
9. Do you believe we should seek an agreement with the Russians for nuclear disarmament with effective inspection?	7,203	1,660	480	4,333	1,030	265	6,357	1,589	568	17,893	76	4,279	18	1,313	6

TABLE 2.—*Results of presidential preference poll*

Candidates for President	Democrats	Republicans	Independents	Total	Percent
Humphrey	866	26	330	1,222	5
Johnson	331	35	173	539	2
Kennedy	4,572	232	1,488	6,292	27
Nixon	352	4,789	2,897	8,008	34
Rockefeller	165	276	416	857	4
Stevenson	1,201	29	431	1,661	7
Symington	1,003	19	302	1,324	6
No answer	823	222	2,477	3,522	15

Mr. Speaker, I attempted to present these questions on issues as fairly and objectively as possible, and I am glad to say that the reaction of my constituents as well as the press in this regard was excellent. I cite the following editorial which appeared in the LaPorte, Ind., Herald-Argus on May 20 as an example of the nonpartisan reception given the poll:

BRADEMAS' POLL

For several years Third District Congressmen have sent questionnaires to register voters of the district to try to get voter reaction on various issues. Returns on the recent one of Congressman JOHN BRADEMAS were the most extensive of all with 23,485 persons responding. This represented about one out of every eight to whom the questionnaire was sent.

Questionnaires which require straight yes or no answers are not wholly satisfactory. A weakness of any such query is also that so few voters out of the total electorate respond at all. Once a Congressman gets the returns, he will if he is honest with himself be somewhat in doubt as to just what he has on his hands.

However, just as only a relatively small percentage of the registered voters go to the polls in any election so the fact that only one of eight voters responded to the questionnaire does not mean it is valueless. That 34 percent of those responding indicated Nixon as their choice for President seemed to dampen the effectiveness of any charge that inasmuch as BRADEMAS is a Democrat only Democrats would respond to the queries.

If we can accurately assume that those replying constitute a cream of the crop of registered voters in that they give more attention to issues and tend to think them through and are willing to express themselves, then the results give some solid food for political thought.

Substantial majorities of those replying favor hospital and health insurance for social security beneficiaries, Federal aid for more school classrooms and improvement of teachers' salaries, legislation to guarantee full voting rights in Federal and State elections for all persons regardless of race or color, raising the minimum wage from $1 to $1.25 an hour, Federal loans and grants to areas of serious and persistent unemployment.

In short, those replying feel rather strongly that responsibilities of the Federal Government for the general welfare should be extended rather than cut back. Those replying in this Third District poll apparently don't take seriously the cries of those Hoosiers who would turn back the calendar to a rapidly receding States rights era.

Panama and the United States

EXTENSION OF REMARKS
OF

HON. GERALD T. FLYNN

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 26, 1960

Mr. FLYNN. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include a recent lecture by His Excellency, Dr. Erasmo de la Guardia, Ambassador of the Republic of Panama to the United States of America. The views expressed here are not necessarily my views and do not represent my thinking but in my judgment, the Ambassador presents a clear picture of the principles which can guide friendship and progress between the people of Panama and the citizens of the United States. He very clearly sets forth the Panamanian case and I believe it well that their case be printed in the CONGRESSIONAL RECORD so that each Congressman can judge for himself as to the true merits of Panamanian-American relations.

In this connection, one can say that it is always good to get the point of view of a good neighbor, even if that outlook may not coincide with views that are current in our own beloved country. Ambassador Erasmo de la Guardia, as is clear in this speech which I commend to the attention of my esteemed colleagues, thinks as a friend, writes as a good neighbor, and speaks as a loyal suporter of inter-American solidarity. His development of the Panamanian point of view on an important subject is bound to be of value to all those who seek a constructive solution.

Dr. Erasmo de la Guardia is respected throughout the Western Hemisphere as a distinguished man of letters, an author of books, a master of international law and a talented diplomat who has won many friends in Washington. The lecture is inserted at this point:

LECTURE ON THE RELATIONS BETWEEN PANAMA AND THE UNITED STATES DELIVERED BY HIS EXCELLENCY, THE AMBASSADOR FROM PANAMA, DR. ERASMO DE LA GUARDIA, AT THE AMBASSADOR'S FORUM, CHAMBERSBURG, PA., APRIL 28, 1960

Having successfully digged the Suez Canal, the French undertook to build the Panama Canal but failed in their try because of a sad state of affairs at home brought to a climax by the famous Dreyfus case. One of the engineers for the French company, very smart and shrewd, then took upon himself to convince the United States of finishing the job. And we find before us here, another sad story whose most colorful and revealing aspects I shall only touch upon.

This man's name is verboten to Panamanians. Anyhow, I would not care to mention it, since it is not in the least my intention to hurt anyone's feelings nor to stir up the past. When the possibility of the Nicaraguan route was discussed in your Congress he distributed among Congressmen Nicaraguan postage stamps showing one of its volcanoes. The implication that such was not the place for a canal produced the expected results. He got therefore your Government to support us in our aspiration to become independent. That was the preliminary step for your signing a treaty with us and purchasing the French interests, which was what mattered to him, in order to finish the construction of the canal. The French company received $40 million.

With your help we were a free nation the 3d of November 1903. It was a decisive help no doubt. But in view of the historical antecedents would it be accurate to say that you created us? Not when we had been stubbornly persistent throughout a whole century in our eagerness to tear off the chains binding us to Colombia. But I shall not dwell in that aspect. Once free, the leaders of our new Government sent this man as our diplomatic representative to Washington and when the negotiations of the treaty were in progress they realized it was not to our best interest to let him act with full powers and sent a commission which would serve as a check to him. Upon discovering that the commission would soon arrive, he speeded up the signing of the treaty.

What followed is too embarrassing and disagreeable to retell here. That night he worked hard on a final draft to present to your Secretary of State whom he led to believe all kinds of complications would ensue if any time was lost. So when our three representatives arrived the damage had been done. It was because of those circumstances that an outstanding spokesman of your government made the revealing comment that it would be difficult for Americans in high official posts to conceal how disadvantageous that treaty was for Panama and that "no Panamanian patriot would agree to it." However, we did agree to it—compelled by the irresistible force of necessity. In a few words; a double cross, a state of despair, and this little nation of ours had again fulfilled its urge for liberty but would come to grips for years on end with the most powerful nation in the world.

At this point I wish most respectfully to make a reference to a gentleman who has adopted a definite stand against Panama in your Congress. In a recent session he paid a warm tribute to a report prepared by a person who has been a resident in the Canal Zone for over 20 years. Therein this individual asserts that the United States "most certainly did create the Republic of Panama." From the previous outline you must have surmised how distant from the truth that assertion is. We do not take offense at it, or even resent it. We just feel disappointed to hear such a thing at this day and age and from one who has been our neighbor for such a long time. And yet one wonders if his attitude does not reflect that of many of those neighbors today.

What does he pretend? That the United States by helping Panama against Colombia actually expected it to be forever bound and submissive; that it acted in bad faith counting on making a protectorate out of us? If it did, then it too, like him, was unaware of our past and shortsighted. Showing a contrast, the Honorable Senator Mr. GEORGE AIKEN refers to the "support and encouragement" given us by you in the early days.

The person goes on to say that, based on the original treaty of 1903 with the United States, "Panama has raised a hue and cry that they have complete jurisdiction and sovereignty over the Canal Zone." Again, that is not so, not at all. Our basic claim concerns sovereignty, titular or residual or bare sovereignty, whichever way you wish to call it, but still sovereignty. In the next couple of paragraphs he talks of our Government's objectives being developed and extended, by the example of the Suez Canal. How could our objections be extended any farther than a "complete" jurisdiction and sovereignty?

I can assure you definitely that Panama, in what concerns the main issues arising from the canal treaties, has maintained a remarkably consistent position throughout the years, not a bit less so than that of the United States, probably more. Which gives me a footing to glance over the legal aspects of our position.

Article III of the original treaty of 1903, the Hay-Bunau Varilla Treaty, if I must mention it by its name, has been the heart of the controversy. Its relevant wording is as follows:

"The Republic of Panama grants to the United States all the rights, powers, and authority within the zone * * * which the United States would have if it were the sovereign of the territory * * * to the entire exclusion of the exercise by the Republic of Panama of any such sovereign rights, power, or authority."

When Americans quote that article in a controversial mood they are inclined to underline the words "grants" and "to the entire exclusion." We underline the words "if it were sovereign," putting emphasis on the "if" and "to the entire exclusion of the exercise," putting further emphasis on "the exercise."

We claim simply that the very fact that we granted all rights, power, and authority which the United States would have if it were sovereign implies clearly and indubitably that the United States would not be sovereign. In our judgment, that is no less and no more than a way of saying that sovereignty was not granted. Indeed, had we granted it then the Canal Zone would have been transferred or ceded, which it has not, by any means, as you can readily see if you consider that your country cannot sell or transfer it, nor internationalize it, nor even use it for any other purpose than operating the canal, without our consent.

The deal did not involve a sale, obviously, not even a lease. It is true that according to the same article the grant is in perpetuity and this phrase Americans will also underline heavily. But you must bear in mind, too, that in the treaty the United States agrees to pay a yearly amount or annuity. From the legal standpoint a sale requires a set price and you cannot conceive of one in which the buyer is bound to pay an annuity forever. By the same token, at the light of legal principles a lease for an indefinite period of time is inadmissible. The deal involved a grant or consession of public utility, the interoceanic transit, which is more apt to have a limitless duration. Anyhow, the least that can be said is that we have here an unusual and anomalous type of agreement probably due to the very rush in which it was sealed.

We could quote from a long line of eminent Americans ranging from Mr. William Taft in 1906, one of the Presidents of the United States and one of the Chief Justices of your Supreme Court; from Mr. Davis, the first Governor of the Canal Zone; up to Mr. Dwight D. Eisenhower, the actual Chief Executive, to show that they agreed with us on the specific point so far considered. We could quote from some of your great minds in the field of international law as well as from decisions handed down by your Supreme Court. A special reference must be made to Mr. Merchant's public statement issued when he flew down to Panama at the end of last year in a capacity of a sort of troubleshooter, in behalf of the State Department. He said then that the position maintained by the United States since more than 50 years ago is that Panama retains titular sovereignty. But it is not worth the while to stress the point since article III of the 1936 treaty settles it once and for all stipulating that the Canal Zone "is territory of the Republic of Panama under the jurisdiction of the United States."

Using the simplest terms possible, let me say that sovereignty represents a nation's full capacity of action over its territory.

Whence it follows as plainly as daylight that if the Canal Zone territory is Panama's the sovereignty over it resides in Panama as a matter of principle. Jurisdiction, on the other hand, represents something like the bundle of attributes or perhaps outlets or means through which sovereignty finds expression. So a brief, graphic and practical way of putting it would be this: Panama owns, the United States controls. Despite all that and against the very words of the above quoted Treaty of 1936, one critic has declared that the Canal Zone is "constitutionally acquired territory of the United States," giving us a baffling surprise.

As to our hottest issue, that of the flying of the Panamanian flag next to yours in the Canal Zone, our position boils down to this: Our flag should fly there as a symbol of our sovereignty. Just as it flies alone over all the rest of our territory it should fly alongside yours within the limits of that part of our territory controlled by you.

Nothing is more striking than to note, by the way, that the American authorities in charge of the Zone immediately after our independence did not feel they could raise the American flag there; and the first Governor, when questioned by a Senate committee, in 1906, said it never had and he thought it never would be raised, since the right to do so was questionable.

For your information, the first of last March, on occasion of one of our festivities, we woke up to see our two flags flying together on every pole, along the border, within the Canal Zone's side.

One more thing I must point out in connection with this question of sovereignty and jurisdiction. Article II of our first treaty of 1903, stipulates that the zone is granted for purposes of constructing, maintaining, operating and protecting the canal; in short, we could say operating since the construction is already finished and the rest of those purposes are of a secondary nature. I have established as a premise that Panama has sovereignty over the strip of land while the United States exercises jurisdiction. Now then, in view of the fact that the grant was exclusively for the purpose of operating the canal, does that imply the exercise of full and total jurisdiction, that is, the exercise of the whole bundle of attributes of sovereignty or only of those necessary or pertaining to the operation of the waterway?

We claim that those questions answer themselves, it being obvious that Panama retains the exercise of such jurisdiction as is not pursuant to the fulfillment of the end of the deal, such jurisdiction as has not been expressly or specifically granted. In this respect it is interesting to turn to article XIII, for example, insofar as this stipulates that only merchandise classified as "convenient and necessary to the operation" of the waterway may be introduced or imported into the zone free of Panamanian duties. Thus it reasserts the principle that the zone's activities and scope of action are constrained by its lofty purposes of rendering an international transit service.

In keeping with the same idea we claim naturally that in the commissaries and post exchanges articles not convenient and necessary to the operation purposes should not be sold at all.

Apart from the main issues, there are many minor differences and smaller problems between your country and ours. Most of them are due to the complexity of our contracts with the zone resulting from the mere fact of our neighborliness. Some have no connection with the zone. As an illustration of the latter, take the case of our sugar quota. It does not come up to 4,000 tons a year and we are very anxious to have it raised to 10,000. A mere trifle, considering that countries like Cuba have one that goes up to millions. But then again we meet there with your huge administrative machinery and the democratic structure of your Government with all the inevitable delays and stumbling blocks. This matter depends now upon your Congress.

However, I am not here to tire you out with an endless recount of our claims, complaints, and differences. Furthermore, this by no means would be the proper occasion. On the contrary, there are good tidings at present. The State Department gave an important press release a few days ago wherein it announced a nine point program to be carried out in Panama. We are quite pleased with it, since it satisfies some of our aspirations. It is bound to relieve the tension existing of late since it represents comforting evidence of a new attitude and a step forward in the road leading to a closer understanding and to a revival of our old cordial friendship.

Many of the points in the program have to do with favoring our laboring classes. There has been a general insistence in that direction, both in your Senators' and your newspapermen's reports. From some of those reports you would draw the impression of a feudal or medieval setup existing in Panama, in which 50 families, representing the business interests, rule over a million people in abject poverty. That not only is exaggerated but overlooks significant factors. However, I do not care to discuss them. The really important thing is that we, too, are developing a deep social sense and are determined to improve the economic condition of the people. We share with you, therefore, a common interest in this respect.

Finally, let me turn to the setting of the overall picture, by pointing out a series of basic considerations:

Our relations are unique in the international field because of our country being split in two by a strip of land under a foreign jurisdiction, which in itself is enough to arouse our sensibility.

The Canal Zone represents a sort of segregated socialist state, which makes quite a contrast of manifold consequences. There should be all the integration possible, in both the human and the economic sense; the latter in order that Panama obtains the benefits deserved from its geographical position and that the joint enterprise develops into a real joint venture.

More confusion and difficulty is added by the fact that the canal is run by the Panama Canal Company, an agency of the American Government under the Defense Department, while a Governor, also appointed by the Defense Department, is in charge of the zone. The Governor is at the same time the head of the company. On the other hand, the Ambassador of the United States in Panama handles before our Government, in behalf of the State Department, the problems arising from the Zone.

People from the Zone may naturally have a grudge against us at times. The viewpoint of American residents and investors in Panama should also be taken into account. They have always received a fair treatment from our authorities and our people and will certainly vouch for it. Let that be clear.

Because of the canal, Panama has become a sort of show window for Latin America as to the attitude and policy of the United States toward its neighbors to the South. No one can doubt that the latest measures taken by the State Department have had a favorable reaction there.

Times change, and we must simply face present and future realities as they present themselves, which calls for a periodical revision of our stands instead of so much hairsplitting about interpretation of outdated texts.

The Canal Zone brings face to face about the weakest nation in the world with the most powerful of them all. Herein lies another extraordinary feature of our relations.

The United States is much more than a powerful nation, it is a great nation. It is great because of its wealth and power, which made possible the building of the Canal for example; because of its true democratic spirit and sense of fairplay, which explains the open and varied expressions of opinions concerning problems like ours, sometimes perplexing, in search for the right and just answer; because of its humane feelings toward others not so fortunate. Equally great are the responsibilities weighing on its shoulders and the wisdom required to bear them.

We must, in the last analysis, so rid ourselves of anything obstructing our vision that we may see our mutual problems as something of common concern in a common venture. This is my highest and sincerest hope, just as it is that, in so doing, the day is not distant when we will celebrate together the raising of our national emblem over the strip of land at the service of the world.

We must strive to be the good friends we were. I, for one, say this from the bottom of my heart.

And thank you so much for your kind attention and the opportunity to speak my mind.

Honored War Dead of the Brotherhood of Railroad Trainmen Are Paid Solemn Tribute in Annual Ceremonies at Neahwa Park in Oneonta, N.Y.

EXTENSION OF REMARKS

OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1960

Mr. STRATTON. Mr. Speaker, the district which I have the honor to represent includes the birthplace of one of the great labor organizations in our country, the distinguished Brotherhood of Railroad Trainmen.

Every year for the past 10 years members of this great labor organization, from the United States and Canada have assembled at Neahwa Park in Oneonta, N.Y., for the purpose of paying tribute to their departed comrades who lost their lives during World Wars I and II and the Korean conflict. The 10th annual memorial ceremonies were held at the base of the brotherhood's war memorial in Oneonta on Sunday, June 5. Under leave to extend my remarks, I include an account of these ceremonies which appeared in the June 13 issue of Trainman News, the official publication of the Brotherhood of Railroad Trainmen:

BRT WAR DEAD CITED AT ANNUAL CEREMONIES—OVER 300 ATTEND MEMORIAL DAY PROGRAM HONORING DEPARTED VETS

ONEONTA, N.Y.—Solemn tribute was paid to departed BRT war veterans at services conducted here recently in Neahwa Park.

Over 300 from the United States and Canada turned out for the 10th annual BRT Memorial Day program honoring BTR'ers who lost their lives during World Wars I and II and the Korean conflict.

General Secretary and Treasurer W. E. B. Chase represented President W. P. Kennedy.

"There is no higher honor," Chase declared, "than to pay homage to departed members who gallantly made the supreme sacrifice to preserve the principles of democracy and brotherhood."

Before placing a dedicatory wreath at the base of the BRT war memorial monument, General Secretary and Treasurer Chase stated that the "Brotherhood of Railroad Trainmen will never forget these patriots who rose from its own ranks" during World War I, World War II, and the Korean conflict.

"We cannot long stand here without feeling the power of their sacrifice," Chase emphasized. "We are here, free, strong, confident in our nations and in ourselves because these men gave their lives for us."

In his solemn tribute to the railroaders who heroically rose to the national emergencies, Chase declared:

"We salute them, and take courage from their gifts to us, the gift of freedom."

General Secretary and Treasurer Chase also made note of another group of inspired men who met in Delaware & Hudson Caboose 10 on September 23, 1883, to launch the BRT. They were men of principles, he declared. Railroadmen of that day were denied the basic rights of free men by heartless managements.

"Their battle was against the prejudice of the times" and they lived in constant dread of violent death due to unsafe conditions, he said.

One of the founders of the BRT, Elmer Wessell, a resident of Oneonta, is still living today.

Drawing a parallel to the war dead and to the founders of the brotherhood, Chase said railroadmen "will always rise in the future, as these men did in the past, so that our organization and our nations might continue leading the way among free men.

Another highlight of the service was the presentation of emblems to veteran BRT'ers.

Principal figures attending the services where General Secretary and Treasurer Chase delivered the main address included Vice President James Anderson, Deputy President Carl Savage, BRT New York State Representative C. H. Sullivan, Board of Appeals Members Dan Curry, chairman; George B. Beck and Fred Shearer; David Wykle, 705 local chairman; Joseph E. Gallagher, chairman of New York Legislative Board; General Chairman W. K. Kniskern, Delaware & Hudson Railroad; Field Supervisor J. J. McGurn, Tim Brust, BRT organizer; E. V. Heeran, 37 president; P. S. Kennedy, former 37 local chairman, and Hugh J. Wuerdeman, 250 president.

Officers of lodge 1 present were Gordon Haskin, president; John Erickson, vice president; A. W. Ludwig, treasurer, and T. J. Rosenfeld, secretary.

Members of the memorial committee were General Secretary and Treasurer Chase, G. E. Haskin, J. W. Erickson, A. W. Ludwig and T. J. Rosenfeld. Those on the reception committee were Gladys Butts, Mildred Rosenfeld, Violet Hicko and Theresa Howland of LA Lodge 96.

The memorial services opened with the Oneonta High School band playing "The Star-Spangled Banner" and "O' Canada" (Canadian anthem). Invocation was given by the Reverend Roswell W. Lyon of First Methodist Church. Gordon E. Haskin was master of ceremonies and the welcome address was delivered by Oneonta Mayor James N. Georgeson. After a few selections by the Oneonta High School band and a few remarks by General Chairman Kniskern, General Secretary and Treasurer Chase delivered the memorial address.

Benediction was given by the Right Reverend Monsignor Arthur A. Cunningham, St. Mary's Church. Company C Firing Squad and 2d Armored Rifle Battalion gave a salute to the dead which was followed by taps. After closing remarks by Haskin, the high school band, under the direction of Carmen E. Caiazza, rounded out the program with several numbers.

Bank Holding Companies and Branch Banking Under New Omnibus Banking Act

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Richard S. Simmons, deputy superintendent and counsel of the New York State Banking Department as it appeared in issue 31 of the New York State Banker dated May 2, 1960:

BANK HOLDING COMPANIES AND BRANCH BANKING UNDER THE NEW OMNIBUS BANKING ACT

(By Richard S. Simmons, deputy superintendent and counsel, New York State Banking Department)

Provisions of the holding company section (of the act) relate primarily to the subjection to administrative approval of the formation and expansion of a bank holding company which owns or controls or will own or control a specified percentage of the voting stock of two or more banking institutions, one of which is located in a banking district different from that in which the other or others are located. The principal exception to this is that in no event may two bank holding companies merge or acquire all or substantially all the assets of another bank holding company without the approval of the banking board regardless of whether all their banking subsidiaries may be located in the same banking district.

To be more specific, the following comprises the situations in which a company may become a bank holding company:

(1) Where a company which is not a banking institution, directly or indirectly, with power to vote, holds (a) more than 50 percent of the stock of a bank holding company, (b) 25 percent or more of the voting stock of two or more banking institutions, (c) 25 percent of the stock of two or more bank holding companies, and (d) 25 percent of the stock of one or more bank holding companies and 5 percent of the stock of a banking institution.

(2) Where a company is a banking institution and holds, directly or indirectly, with power to vote, 25 percent of the voting stock of another banking institution.

(3) Where a company controls in any manner the election of a majority of the directors of each of two or more banking institutions.

(4) Where a company controls the election of the majority of the directors of a bank holding company.

(5) Where a company is not a banking institution and (a) 25 percent of the voting stock of each of two or more banking institutions is held for the benefit of such company's stockholders, or (b) 25 percent or more of the stock of a bank holding company is held by trustees for the benefit of the stockholders of such company.

(6) Where a company is a banking institution and (a) 25 percent or more of the stock of another banking institution is acquired after July 1, 1960, and is held by trustees for the benefit of the stockholders of such company, or (2) 50 percent or more of the voting stock of a bank holding company is acquired after July 1, 1960, and held by trustees for the benefit of the stockholders of such company.

(7) Where a company or banking institution, through a combination of direct or indirect ownership of voting stock and stock acquired after July 1, 1960, and held by trustees for the benefit of the stockholders thereof, is a company which is or would be a bank holding company if the aggregate of such voting stock were either, directly or indirectly, held by the trustees for the benefit of stockholders or members thereof, or entirely held, directly or indirectly, by such company or banking institutions, as the case may be.

Giving effect to the possible number of combinations, there appear to be approximately 22 separate situations in which a company can become a bank holding company. To my mind, the foregoing situations are fairly clear and should not cause any undue difficulty. There is one point, however, which has apparently troubled some people; namely, the provisions with respect to a bank owning stock of another bank. First, such provisions do not authorize a bank to purchase the stock of another bank. Regardless of New York's attitude toward the desirability of authorizing a bank to acquire the stock of another bank, members of the Federal Reserve System could not be so authorized. (12 U.S.C. sec. 334). Of course, State banks and trust companies which are not member banks could be authorized by the Banking Board to acquire directly the stock of other banks. The primary purpose, therefore, is to prohibit indirectly acquisitions, especially by those banks which may still have wholly owned subsidiaries under the grandfather clause of section 97 of the banking law.

Transactions requiring approval

Now, assuming that a company is or plans to become a holding company, only the following transactions require the approval of the banking board:

(1) For a company to become a bank holding company having two or more banking subsidiaries, of which at least one is located in a banking district different from that in which the other or others are located, unless all such banking subsidiaries are located in New York City.

(2) For a bank holding company which is a banking institution to have a banking subsidiary located in a banking district different from that in which such bank holding company is located, unless such banking subsidiary and such bank holding company are located in New York City.

(3) For a bank holding company which is not a bank institution and which has two or more banking subsidiaries, of which at least one is located in a banking district different from that in which the other or others are located, unless located in New York City, or for any trustee or trustees acting for the benefit of the stockholders or members of such bank holding company, to acquire, directly or indirectly, voting stock of any banking institution, if, after such acquisition, such company or such trustees or both will hold more than 5 percent of the voting stock of such banking institution.

(4) For a bank holding company which is a banking institution, if such company and a banking subsidiary thereof are located in different banking districts, unless located in New York City, or for any trustee or trustees acting for the benefit of the stockholders or members thereof, or both, to acquire or hold more than 5 percent of the voting stock of a banking institution.

(5) For a bank holding company to merge or consolidate with, or acquire all or substantially all the assets of another bank holding company.

(6) For any bank holding company, or for any trustees who hold for the benefit of the stockholders or members thereof the voting stock of any banking subsidiary thereof, to vote or cause to be voted the stock of any banking subsidiary in favor of or

against a merger or consolidation with, or the acquisition of all or substantially all the assets of, any banking institution, if such bank holding company has, or will as a result of such merger have, two or more banking subsidiaries, of which at least one is located in a banking district different from that in which the other or others are located, unless all such subsidiaries are located in New York City.

Your attention is called to the fact that those transactions which are prohibited without prior approval generally relate to the holding or acquisition of voting stock. In other words, a company which held nonvoting stock of a banking institution would not be considered a bank holding company, but if such nonvoting stock became voting stock upon the happening of a condition subsequent, e.g., nonvoting preferred stock which is granted voting rights upon failure of the issuer to pay a certain consecutive number of dividends, the holding of such stock would then be unlawful without prior banking board approval. Consequently, in order to prevent the necessity of immediate divestment of stock upon the happening of such condition subsequent, any company which would become a bank holding company upon the happening of such condition subsequent should apply to the banking board for prior approval. I believe that in the rare instances in which this would be necessary, we would recommend to the banking board that it grant a conditional approval, that is, approve the holding of such stock for, say, 180 days after the happening of such condition subsequent, which elapse of time should be sufficient to enable both the company involved and the banking board to consider what course of action should then be followed.

"A banking subsidiary"

You will note that the above-mentioned provisions setting forth those transactions which are prohibited without prior approval frequently mention the term "banking subsidiary." There are five situations in which a company would qualify as a banking subsidiary:

(1) If 25 percent or more of the voting stock of such company is, directly or indirectly, owned by a bank holding company.

(2) If the election of a majority of the directors of such company is controlled in any manner by a bank holding company.

(3) If 25 percent or more of the voting stock of such company is, directly or indirectly, owned by trustees for the benefit of the stockholders or members of a bank holding company.

(4) If at least 25 percent of the voting stock of such company is, directly or indirectly, held through a combination of direct or indirect ownership by a bank holding company and by a trustee or trustees for the benefit of the stockholders or members thereof.

(5) Finally, if a company has any of the above-specified relationships with a bank holding company, it will be a subsidiary of such company.

The act contains certain exceptions, which briefly, are as follows:

(1) No company which would otherwise be a bank holding company shall be such if—

(a) the majority of the stock of such company is owned by the United States or any State, or (b) it is a corporation, community chest, fund, or foundation organized exclusively for eleemosynary purposes, if the net earnings which do not inure to the benefit of any private stockholder or individual and no substantial part of its activities involve lobbying, or (c) its ownership or control of voting stock resulted from an underwriting of securities and such stock is being held only for such period as will permit the sale thereof on a reasonable basis.

(2) For the purpose of determining whether there is the requisite ownership of stock in order for a company to be considered a bank holding company, there is excluded (a) stock owned by a banking institution in good faith in a fiduciary capacity, (b) stock acquired in settlement of a loan, (c) stock acquired by a bank holding company in a banking institution in which such bank holding company already owned or controlled a majority of the voting stock prior to such acquisition, and (d) stock dividends, stock splits, or additional stock acquired by a bank holding company in the exercise of its preemptive rights as a stockholder.

Prohibition on loans

In addition, the act contains three prohibitions which were included for purposes of conforming with the State's policy as now contained in the banking law. None of such provisions should cause any undue difficulty. The act declares it to be unlawful for any person knowingly to borrow, directly or indirectly, for the purpose of enabling him to purchase or hold shares in a bank holding company, from any subsidiary of such bank holding company. Loans for such purpose, however, secured by collateral having an ascertained market value of 115 percent of the amount of such borrowing are permitted. The penalty is forfeiture to the State of twice the amount of the borrowing. Section 103(7) of the banking law declares it to be unlawful for a bank or trust company to make a loan for the purpose of enabling any person to acquire or hold shares of its stock unless secured by collateral having an ascertained market value of at least 15 percent more than the amount of the loan. The penalty in that case is forfeiture by the bank or trust company to the State of twice the amount of the loan. In drafting the act, however, it was considered desirable to have the prohibitions read on the individual concerned, rather than the banking institution involved, since the provisions of the act pertain to holding companies which have as subsidiaries not only New York State banks and trust companies but also national banking associations located in this State. In this manner, direct State supervision over a national bank's activities is avoided. Your attention is also called to the fact that the act imposes absolutely no burden on the bank involved to inquire as to the purpose of a loan.

For the same reason, the act prohibits an executive officer or director of a bank holding company from borrowing from any subsidiary of such bank holding company, unless such borrowing has been approved in advance by the board of directors of such bank holding company or unless the specific exceptions now contained in the banking law in regard to loans by a bank or trust company to one of its executive officers or directors are applicable. The penalty again is forfeiture of the State of twice the amount of such borrowing. In determining who is considered to be an executive officer, the department follows the definition contained in regulation O, promulgated by the Board of Governors of the Federal Reserve System, under section 22 of the Federal Reserve Act, which states that the term executive officer means "every officer * * * who participates or has authority to participate in the operating management, regardless of whether he has an official title or whether his title contains the designation 'assistant' and regardless of whether he is serving without salary or compensation." In the absence of evidence to the contrary, however, the department will proceed on the assumption that only the chairman of the board, the president, the vice president, the secretary, and the treasurer of a bank holding company are executive officers.

Prohibited affiliations

The act further provides that no officer, director, clerk or employee of any bank holding company after October 1, 1960, shall be an officer, director, or employee of any corporation or unincorporated association or a partner or employee of any partnership, or be an individual engaged primarily in the issue, flotation, underwriting, public sale, or distribution of stocks, bonds, and other similar securities. The Banking Board is permitted to grant exceptions thereto. In passing, I should like to note that there was great objection on the part of various underwriters to the inclusion of such provision. The reason for such inclusion was that it was illogical and inconsistent to prohibit those engaged in underwriting to be an officer or director, etc., of a bank while at the same time permitting them to be an officer, director, etc., of a company which controlled banks. It is my personal view that either members of underwriting firms should be permitted to be connected with a bank, as well as a bank holding company, or that the present prohibition should continue to apply to both cases. Needless to say, the banking board has permitted members of underwriting firms to be directors of a bank in the past and, presumably, will continue to do so in the case of bank holding companies.

Before discussing the present departmental attitude toward the formation and expansion of bank holding companies, I should like to discuss briefly the sections of the act which relate to purchases of assets and mergers, since, to a large extent, the three are interrelated, and it is only through comparison that the emphasis to be given by the department to certain factors in considering applications therefor can be made meaningful.

PURCHASE OF ASSETS

With respect to the purchase of assets, the act requires the approval of the Superintendent of any proposed purchase of all or a substantial part of the assets of one banking institution by another. In addition, the stockholders of the selling bank are granted appraisal rights under the same terms and conditions as are now granted to the stockholders of a bank which is to be merged into a receiving bank. No appraisal right is granted to a stockholder of the purchasing bank. If the assets of the selling bank exceed 10 percent of the assets of the acquiring bank, however, approval of the stockholders of the acquiring bank owning at least two-thirds of the stock thereof is also required. Specifically, commercial banks and trust companies, industrial banks, safe deposit companies, and investment companies are permitted to purchase the assets of a corporation subject to the provisions of the same article of the banking law as the acquiring corporation. New York City commercial banks and trust companies are permitted to purchase the assets of commercial banks and trust companies located in the counties of Nassau and Westchester and vice versa. Your attention is called, however, to the fact that the act specifically provides that nothing contained in the new section dealing with purchase of assets is to be construed as prohibiting any other purchase of assets which is otherwise permitted by applicable law.

The insertion of the requirements as to purchase of assets was considered desirable since, under the holding company section of the act, a bank holding company could not vote the stock of a banking subsidiary for or against an acquisition of assets without prior approval of the banking board. Under the law prior to the enactment of the subject act, a purchase of assets could be effected without departmental approval if it was not intended to continue to operate the offices being acquired by purchase. As was often the case, however, the parties intended to

continue the offices being acquired by purchase and as a result had to obtain banking board approval. A purchase of assets by banking subsidiaries of a bank holding company, however, had to be subjected to some form of control; otherwise some of the purposes of the act could have been frustrated by a banking subsidiary acquiring another bank and ceasing to operate its offices or by having the acquiring bank be a national bank, in which event New York State would have had no control.

MERGERS

In regard to mergers involving commercial banks and trust companies, the principal change in the enabling section of the banking law is that New York City banks and trust companies may merge with banks and trust companies in Nassau and Westchester Counties and vice versa.

Mutual institutions

For those interested in savings banks and savings and loan association mergers, the provisions in regard to permitting branch banking anywhere in the city of New York, and, in the case of savings banks, in the counties of Westchester and Nassau rather than the county in which their principal office is located possibly could be interpreted as permitting mergers of any two savings banks or savings and loan associations in the city of New York and in Nassau and Westchester Counties regardless of where their principal offices are located. At present, savings bank mergers in a city with a population of over 250,000 are limited to savings banks located in that city and in the same county or borough. Similarly, one or more savings and loan associations may merge with another located in the same or an adjoining county. In neither case, does the statute refer to the location of the principal office but merely to the location of the savings bank or savings and loan association, as the case may be.

Consequently, there is by no means a captious argument that a savings bank or savings and loan association is located wherever it has a branch. As a result, intercity savings bank and savings and loan association mergers might possibly be permitted, since the prerequisite of establishment of a branch can easily be circumvented by each of the two applicants by exchanging existing branches through a change of location application prior to the merger. This matter is, however, still under study by the department. For example, the same problem has existed for quite some time under existing law in the case of savings and loan associations, although no one has ever broached the subject to our knowledge. An interpretation which would permit mergers in any country in which an office of a savings and loan association was located could lead to some unintended results, such as a savings and loan association being able through mergers to have offices located throughout the State.

New York City suburban areas

In the case of both purchases of assets and mergers involving commercial banks and trust companies, however, no branch acquired as a result of such merger or purchase of assets may be continued to be operated after 5 years from the date of such merger or purchase of assets, if such branch is so located that the establishment thereof would not be permitted by any other provision of the banking law. Consequently, if the principal office of the purchasing or receiving bank is located in New York City, branches aquired and not located in the city of New York or in the counties of Nassau and Westchester could only be operated for 5 years. On the other hand, if the principal office of the receiving bank were to be located in Nassau or Westchester County, it would be perfectly permissible to open and occupy branches in the banking district in which such principal office was located. For example, a New York City bank could be merged into a Nassau County bank and branches could be established or maintained by the merged institutions in New York City and the counties of Nassau and Suffolk, but not in Westchester County. Similarly, if the receiving or acquiring bank were to be located in the county of Westchester, branches could be established anywhere within the third banking district and the city of New York, but not in the counties of Nassau and Suffolk.

Prerequisites for expansion

I would like now to discuss the factors which will primarily be considered by the department in recommending to the banking board approval or disapproval of applications to form a bank holding company or to expand an existing holding company, and in approving or disapproving a proposed purchase of assets or merger.

First, however, it might be helpful briefly to repeat the factors required to be considered by the superintendent and the banking board, as the case may be, in reaching a decision. Initially, consideration must be given to the declaration of policy contained in section 10 of the banking law. As you know, the standards therein set forth are, at best, amorphous.

The principal considerations under such declaration are, however, the protection of the public interest, the protection of the interest of the depositors, creditors, shareholders, and stockholders, and the elimination of unsound and destructive competition among banking organizations.

Secondly, consideration must be given to whether the effect of the proposed formation or expansion of a bank holding company or of a proposed merger or acquisition shall be to expand the size or extent of the resulting or acquiring institution beyond limits consistent with adequate and sound banking and the preservation thereof, or result in a concentration of assets beyond limits consistent with effective competition.

Thirdly, it must be determined whether there will be such a lessening of competition as to be injurious to the interest of the public or a tendency toward monopoly. Finally, the act requires that primary consideration be given to the interest of the public and the needs and convenience thereof.

When one analyzes the foregoing criteria, they essentially require three separate considerations: (1) protection of stockholders, creditors, and depositors; (2) effect upon competition, and (3) the needs and convenience of the public. Certainly, under almost any applicable standard, both State and Federal, any acquisition or merger which is necessary to preserve the financial integrity of any banking institution would receive speedy approval regardless of the effects upon competition. Such factor, fortunately, is hardly ever prevalent.

Competition—Public need

Consequently, the two principal considerations are the effect on competition and the needs and convenience of the public. It is obvious that in many areas of the State today, numerous local banking monopolies have been created and are being sustained through the device of home office protection. It is an unfortunate fact, but one which must be recognized, that certain of such local monopolies are not being operated in an economic and efficient manner and are not serving the needs and convenience of the public. The act codifies the belief of the department that the needs and convenience of the public should be considered as paramount and that scrutiny of a proposed merger or acquisition should not be limited solely to competitive considerations. Consequently, if the public is not being adequately served, competitive considerations, unless extremely adverse, would not necessarily warrant disapproval of a proposed transaction if, as a result thereof, the public will be adequately served and there is no ready and feasible alternative by which such services may be provided. For example, if there is one large and one medium size bank in the area in which a small inefficiently operated bank is located, the department would prefer to see the latter two merge, but if the medium size bank does not have adequate capital or surplus to permit the acquisition of the small bank or the management to operate it efficiently as a branch, the department might permit the smaller and larger bank to merge. On the other hand, if there is a reasonable probability that in the near future a holding company might acquire such smaller bank and such acquisition would not have adverse competitive effects either from the standpoint of the relevant market area in which the smaller bank to be acquired competes or from the standpoint of competitive conditions existing between the holding company and its competitor, the department might not permit the smaller and larger bank or perhaps even the small and medium size banks to merge.

In some rare situations, it may only be through a small local monopoly that the public may receive the services to which it is entitled. Too, the banking department would not wish of necessity to look with disfavor upon any proposed merger or acquisition which achieved such result. An example of this would be a merger of two small unit banks serving the same village, neither one of which is large enough to serve the needs of the village. On the other hand, if feasible within a reasonable time, the department would naturally favor the two small banks to independently merging with two other banks in that district or being acquired by two competing holding companies, since this would preserve competition which could no longer be fostered if the two smaller banks were to merge because of home office protection.

Aging management

An analysis of the mergers involving non-New York City bank approved by the department in recent years indicates that by far and away the most prevalent factors which led to approval thereof were the aging management of the institution being taken over and the total absence within that institution of any suitable replacement for such management, as well as the absence of any feasible method of attracting new management. It should be readily apparent that if because of factors such as aging or inadequate management, the public does not receive both qualitatively and quantitatively the services to which it is entitled, often because of the umbrella of home office protection, it would make no difference to the department whether the acquisition by means of which such services would be offered is through the holding company device or by merger or purchase of assets. If there is a need for an acquisition, further competition can be fostered at any time by permitting others to enter, since once a banking institution becomes a banking subsidiary of a bank holding company, such banking institution is no longer entitled to home office protection.

Concentration of assets

I cannot stress too much, however, that the department is vitally concerned with preventing any undue concentration of banking assets in various areas of this State in a few large banks or holding companies. There is no magic figure which can be cited as being the maximum figure beyond which an undue concentration in any one institution exists. Much depends on the relevant geographic and market areas involved, the ease of entry of competitors and many other factors.

It is my personal opinion, however, that concentration in excess of 33 percent would

be a most significant factor and that concentrations ranging between 15 and 33 percent certainly require serious consideration. Where there is a question of whether, as a result of a proposed transaction, there will be a concentration of assets in two or more institutions beyond limits consistent with effective competition, the factors involved are so complex as not to permit any significant generalization. Suffice to say that I believe the act can and should be administered in such a way as to cause a diffusion of concentration rather than an increase in concentration inimical to effective competition, unless required by the presence of the most positive and persuasive banking factors.

Federal legislative impact

As is usually the case, a proposed transaction will involve a situation in which it may result in some benefit to the public but which will also involve serious questions as to whether such advantages are more than offset by adverse competitive effects. In this respect, we, in New York State, cannot afford to ignore the current status of proposed Federal banking legislation with respect to commercial bank mergers. I am certain you are all familiar with the provisions of S. 1062, as amended by the House of Representatives.

The criteria to be considered by the appropriate Federal supervisory agency, as set forth in S. 1062, are essentially the same as the criteria the department is required to consider, including consideration of the effect of the transaction on competition (including any tendency toward monopoly). Under the amended bill, the appropriate Federal supervisory authority cannot approve the transaction unless, after considering all such factors, it finds the transaction to be in the public interest. The House report (H. Rept. 1416, 86th Cong., 2d sess.), accompanying such bill, states that the approval of a merger should depend "on a positive showing of some benefit to be derived from it * * * the burden should be on the proponents of a merger to show that it is in the public interest, if it is to be approved * * *." Under the New York act, however, it is necessary to determine whether the effect on competition is such as to be injurious to the public interest. In other words, under New York's approach, if all other factors are equal, approval will be granted unless it can be shown that the public will be harmed.

Under the proposed Federal approach, all other factors being equal, approval will be denied unless it can be shown that the public will benefit. In the majority of cases, this difference is purely a matter of semantics, but it can become controlling in a few unique situations. Obviously, we in New York in those situations cannot continue to adhere to the present presumption in the act in the event the Federal Government takes a contrary approach. To do so would only lead to the anomalous situation of New York State adhering to criteria which are meaningless, at least as far as the Federal Government is concerned, and thus rendering approval by the State, if given, under such criteria, meaningless.

Speaking personally, I would hope that the House's version of S. 1062 will be amended to remove the requirement that the transaction be affirmatively in the public interest, since I believe it creates an unfortunate inference that banking, unlike most segments of private industry, does not have the right to engage in mergers, acquisitions, etc., unless the public can benefit therefrom rather than showing that there would be no substantial harm to the public through a lessening of competition. In addition, of course, there is the further danger that over the years a more and more affirmative showing that a particular merger is in the public interest may be required by the Federal supervisory authorities either as a result of conviction or political pressure.

That the difference in the approach of New York State and that under S. 1062 would not be too significant, if limited by interpretation of S. 1062 to the question of burden of proof, can best be illustrated by a quote from the statement of the superintendent in approving a recent merger, in which he said: "It is only in unusual and extraordinary circumstances that a proposed merger has a neutral or indifferent effect upon the public interest. In almost every case, a proposed merger will tend to a greater or lesser degree to be either in or against the public interest. It is incumbent upon the appropriate supervisory authority to determine that degree. In the absence, however, of any affirmative showing on the part of the parties concerned that a particular merger is in the public interest, the burden is placed upon the supervisory authority to make a determination that it is not. Such view is predicated on the philosophy that it is the prerogative of stockholders and directors of a profitmaking institution to effect a merger unless inimical to the public interest."

Such approach merely suggests that if the parties do not show that the merger is in the public interest, it is incumbent upon the superintendent to show that it is not, since I neither know of nor can imagine a situation in which a proposed merger or acquisition can have a neutral or indifferent effect. Consequently, it will be invariably necessary for a merger to be in the public interest, if approval is to be given, I can find no case of a merger before the department in which the parties did not attempt to show that it was in the public interest. Needless to say, in many instances after independent investigation the department did not so conclude. I, for one, do not believe the question of burden of proof is to important since in the department's experience, it has always been its independent investigation which has been controlling and not what the parties alleged.

Public interest question

Applications for the formation or expansion of bank holding companies throughout the State may have a slightly easier task supporting a contention that the public interest will be benefited thereby than in the case of mergers or asset acquisitions, since there is now only one significant statewide holding company. I think it would be most difficult to show that the entry of a number of competitors for such holding company would not be in the public interest. Such is not to say, however, that the formation of holding companies in areas in which such holding company does not now compete would necessarily be subject to the same presumption. Moreover, expansion of holding companies by means of taking over sizable institutions which are more than able to compete with present banking subsidiaries of the one significant statewide holding company could not be justified merely on the grounds that such holding company will become a competitor or a stronger competitor.

Similarly, in the case of mergers and the purchase of assets, such transactions may be in the public interest if it is apparent that as a result thereof additional competition will be furnished those institutions which already control a substantial portion of banking assets in the relevant market area. On the other hand, the taking over of a large institution in the relevant market area by a larger institution in an overlapping or different market area would probably not be favored by reason of the sole argument that the combined institution could more effectively compete with the largest remaining independent institution in the area in which the bank to be taken over is located. Lest I be misunderstood, let me repeat that the foregoing examples have been predicated on the assumption that there are no positive banking factors which might warrant approval of a proposed transaction, such as an inadequate financial condition or inadequate management.

For those of you who are interested in the question of savings bank mergers, again, the decisive factor is often whether there is adequate management, a sound financial condition, unsound competition and ability to compete with comparable institutions. If such factors are not prevalent, however, it has been argued that any merger between two sizable mutual institutions which would result in operating economies should be approved. Almost every such merger will result in some operating economies, but, in my personal opinion, it must be shown that the operating economies will be such as to result in substantial benefits to the depositors and that the proposed merger will not adversely affect competition. In addition, in any merger between mutual institutions, in contrast to stock corporations, where stockholder approval is required, it is incumbent upon the department to assure itself that the main benefit to be derived from the merger will not flow to the respective management groups of the institutions involved. I believe the reasons for this should be so sufficiently obvious as not to require elaboration.

BRANCH BANKING

Unincorporated village defined

In regard to branch banking, I am certain that you are familiar with the provisions of the act. One of the principal questions raised by the provisions thereof is one which may be new to many of you. That is what constitutes an unincorporated village. The determination as to whether a community constitutes an unincorporated village is important in order to determine where a branch may be located and whether a banking institution, be it a commercial bank, savings bank, or savings and loan association, is entitled to home office protection. Although on cursory inspection, it might seem that the determination of what constitutes an unincorporated village is the same for both purposes, greater difficulty arises in regard to the latter. For purposes of determining where a branch may be located, the department has continually applied the criteria that an unincorporated village must meet the minimum specifications for incorporation under section 2 of the village law, i.e., "a territory not exceeding 3 square miles or conforming to the entire boundaries of water districts, lighting, fire, or school districts, or an entire town, or two entire school districts, containing in each case a population of not less than 500, and not including any part of a village or city." Adherence to such criteria by the Department was approved in the matter of *State Bank of Kenmore* v. *Bell*, 197 Misc. 97, aff'd 227 App. Div. 924. Consequently, in order to ascertain whether a branch may be opened, it is normally sufficient to show that the community in which such branch is to be established has the requisite population within a 3-mile area. Of course, in line with common sense and the rationale in various out-of-State cases as to what constitutes a village, the department has required that the unincorporated village have some of the characteristics of a village community, such as a reasonably compact nucleus of population and shops and possibly businesses, churches, and schools located therein or adjacent thereto. It is not usually necessary, however, to establish definitively the peripheral limits of such unincorporated village in order to determine whether a branch may be opened and occupied therein.

Home office protection

On the other hand, where the problem of affording home office protection is at issue,

it is incumbent on the department to establish the peripheral limits of an unincorporated village. In highly populated counties, such as Nassau and Westchester, the determination of peripheral limits is somewhat arbitrary at best, because of the contiguous nature of the various communities located therein. For example, should the peripheral limits be based on a square, circle, rectangle, or some other type of geometric figure? Should, wherever possible, a 3-square-mile area be taken as the area of the unincorporated village? What method should be followed where two unincorporated villages, each containing 3 square miles, overlap? What focal point should be used for determining such 3-square-mile area where the proposed unincorporated village contains what might be considered two separate and distinct nuclei?

Peripheral limits

In determining peripheral limits, insofar as possible, the department will attempt to do so on the following bases:

(1) Apply the criteria set forth in section 2 of the village law.

(2) Wherever possible, set the peripheral limits so as to contain a 3-square-mile area subject to following natural boundaries wherever possible and by natural boundaries, we mean, boundaries of incorporated villages or cities, water courses and manmade boundaries, such as reservoirs and highways.

(3) Determine such peripheral limits as nearly as possible on the basis of a circle whose center is the focal point of the unincorporated village. (Subject to (2) above.)

(4) Where there are two or more focal points, select the one nearest the principal office of the bank to which home office protection is being afforded.

(5) Where unincorporated villages are adjoining and lacking in geographic individuality and an absence of a natural boundary between the two, the common periphery might well be approximately equidistant between the two focal points.

(6) Give appropriate consideration to school districts, telephone exchanges, post office addresses, and other indexes which tend to give a community a cohesive character.

In considering whether to grant an application for a branch, first it is incumbent upon the applying party to show that the public convenience and advantage will be subserved thereby. The department generally requires some type of consistent spacing measured on the basis of a normally traveled route, which, for example, has been approximately a mile or a little less for commercial banks in suburban areas. Normally, the department believes that it requires a year around population of approximately five to six thousand persons in suburban areas to support a branch of a commercial bank, such population to be located within a reasonable geographic and market area. For savings banks, the normal population criterion is approximately 25,000. In regard to savings bank branches in suburban areas, I would think a reasonable spacing would normally be from 2 to 3 miles in a suburban area between mutual savings institutions. In addition, the department has generally tried to limit the establishment of branches to a site to which the public comes with a fair degree of regularity. I should like to make it quite clear that the foregoing are merely guides and that, naturally, exceptions have been and will be made if circumstances warrant. In considering whether or not to grant a branch application, normally all other things being equal, the local bank will be favored. Naturally, in all cases it is necessary to determine whether the applying institution has the capital or surplus necessary to support and the managerial capacity to operate a branch and whether it is in a position to offer the services to which the community is entitled. Needless to say, the public convenience and advantage test requires that consideration be given to competitive effects not only as between types of institutions but also as between all competing institutions, subject to the premise that if an area can support only one type of institution, it should be a commercial bank.

In closing, I would like to stress that this act constitutes, in my opinion, a milestone in the development of banking in this State. I think the success or failure under the new act may largely control the future development of banking in this State and in other States, which are watching with interest what occurs here in New York. A great burden has been placed on the department to administer the new act with intelligence and reasonableness. Such can only be done if it receives the cooperation and assistance of those in the banking industry and their legal representatives. Many problems and views will develop which cannot be foreseen at this time, but we would appreciate your bringing such problems and views to our attention, for I am certain that with mutual cooperation such problems can be resolved within the spirit and intent of this act and that the department's policy of administration will be developed into one which is equitable, constructive, and beneficial to this State's banking industry and above all to its residents.

Freedom and the Laws of Conscience

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1960

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks I am pleased to place in the CONGRESSIONAL RECORD a splendid commencement day address at Brookside School, Great Barrington, Mass., by a well-known teacher of the law, and an outstanding attorney in Massachusetts, Dwight B. MacCormack, Sr., of Boston, Mass.:

FREEDOM AND THE LAWS OF CONSCIENCE

(Commencement day address at Brookside School, Great Barrington, Mass., by Dwight B. MacCormack, Sr.)

Let me have the privilege on this beautiful morning of addressing my words to all of you, but particularly to you young men of Brookside School for whom this commencement day has brought us together in one place. Here, under the shadows of Squaw Peak and beneath the Monument Mountain of Hawthorne's "Tanglewood Tales," and of the poet William Cullen Bryant, and of my people's people, we are gathered together to do honor to these youths of ours. Let these young men be assured that those of us who are older than they, and those of us here who have dedicated their lives to the instruction of young men, do in fact possess a considerable amount of understanding and wisdom concerning their mental processes of thought and their physical actions and reactions, which are always so much a part of every young man during the years of his maturing.

At Brookside School you have engaged yourselves in the acquisition of knowledge of academic subjects. You have also engaged yourselves in the acquisition of the knowledge of the difference between those things which are right and those things which are wrong. I know these things because, on numerable occasions within the past decade, I have been a visitor to Brookside School and I have heard some of the words of wisdom that have been passed on to the students who have lived here by your headmaster, Dr. Altaraz.[1] I have heard many words of his which have been spoken in his appeal to your conscience, words put together to constitute his lessons to you in the appreciation of justice and the American way of life. Regardless of whether his appeal to your consciences may have sometimes struck you with awe, or at other times may have eased your fears and tribulations, those are the lessons which I believe you will remember most about Brookside in the years to come.

It has been my very great fortune in life to be a lawyer. It is only natural for one who has been engaged in the practice of the legal profession for a number of years to have acquired the habit of thinking about many things in life in terms of their relationship to law. The things about which I am thinking this morning pertain to law. However, I am not going to talk to you about the kind of law you might expect to hear from a lawyer. Permit me to speak to you primarily about those laws which control our innerselves—which we will call the "Laws of Conscience." And in so doing, let us consider the laws which control our innerselves in their relationship to the freedom of man.

There are many species of law. There are many vocations in life, other than that of the lawyer, which have to do with the practice or use of law in one or more of its many kinds. For example, the doctor, the teacher, the scientist, the clergyman, or the economist—all know a great deal about their own particular kinds of law. Every kind of law under the sun pertains to man. Furthermore, every kind of law relates to man in his never-ending search for freedom. The doctor seeks to free man from disease and to give him health. The teacher endeavors to give man learning and free him from his ignorance. The scientist engages himself in the discovery and use of the physical and chemical laws of nature to broaden the spaces of man's freedom. The clergyman devotes his life to free man from many of his natural fears. The economist works to further the interests of one's security in a world that for so long has been so insecure.

There are the divine laws, the laws of nature, the moral laws, the laws of ethics, the laws of science, and the laws of man. There are what are called the law of averages, the law of continuity, the law of causation, the law of diminishing return, the law of definite proportions, the law of error, the laws of acceleration, or motion, of refraction and of gravity. There is Newton's law and Boyle's law, Farraday's law, the Law of Moses, the Laws of the Twelve Tables, the Ten Commandments, the laws of geometry, trigonometry and of Deuteronomy. The word "law" is a noun. It is an adjective. It is a verb. Once upon a time, it was even an interjection, and, as such, was defined as "an exclamation of mild surprise."

In general, law may be divided for our purposes this morning into three categories. First, there are man-made laws, devised and controlled by man, and by the use of which government exists so that man may live with man in the kind of society his government exists to preserve and improve. Under such law, men often disagree with each other upon the abstract theories under which government and the laws function. Man-made law is not constant. Hence, we have peace and we have war. Secondly, there are the laws of nature, of which the laws of science are a part. Man seeks to discover these laws for his own use. He may use them for his own good, or for his harm, but he cannot change them. These laws are constant. Thirdly, there is the kind of law that governs man's innerself, and by the use of which he is able to reason, to think and to conduct his actions. These are the laws of con-

Footnotes at end of speech.

science to which we have already referred. These laws belong to each man as an individual human being, and, because he has been given them by God, he is man and not an animal. Man's ability to reason, to think, and to act in accordance with his conscience will determine more than anything else his present welfare and future good.

The American democratic form of government was constructed upon the idea of freedom, which comes from the conscience of man. This idea of freedom was transformed into the words of a great Constitution, under which, in 1789, a new Government—with a new ideology—opened its doors to the world. Conceived by men who were strong in their belief that the individual person was endowed by his Creator with certain inalienable rights, including the rights to life, liberty, and the pursuit of happiness, there was new hope for man on earth. This Government began its functions with only those powers delegated to it by the people. It did not begin its business with the unreasonable assumption or usurpation of powers it did not have. The greatest purpose of our Government has been to secure the blessings of liberty, that is, to preserve the numerous freedoms which were the inalienable rights of each individual citizen before the Government was created.

We have always directed our thinking on the subject of liberty and freedom in a more or less stereotyped manner. By that I mean we have always looked to Government and the protection of our manmade laws to secure those freedoms which were ours in the beginning. We have long been content in our belief that the only restraints to be imposed upon us are those to be imposed under the law of the land—and those restraints upon our freedoms can be only those which the Constitution does not prohibit Government from imposing. But that is not a fact. By our thoughts and actions we often place restraints upon ourselves.

To the young men of America, World War I is a story out of the pages of the history books. Those of us who were then living remember well that the war was fought "to make the world safe for democracy." That was our slogan. After peace came in 1918, the ideology of democracy gained great popularity throughout the Christian world. A number of countries adopted a democratic form of government. Soon, however, other ideas of government began to appear in the thoughts and actions of many peoples abroad. Then came communism, fascism, and totalitarianism. Such ideologies denied to us everything in the way of liberty we Americans and our ancestors had won after centuries of struggle and sacrifice.

There are always hidden forces at work which shape the destinies of a people. Sometimes these forces are good and sometimes they are forces for evil. If the desire for liberty and freedom is not deeply rooted in the consciences of the people of a nation, the seekers after power will shape the destinies of that people according to their own liking. That is why nazism came to Germany.

The kind of government a people will choose for themselves will be the reflection of the free exercise of the collective and individual wills of a substantial number who can think and act for themselves according to the laws of their own consciences—and not according to the dominant wills of others. It man cannot exercise his own will according to his own conscience, there is nothing left but force. The exercise of force without reason brings a people to an unhappy end. That is why nazism failed.

Apparently, democracy has been working well in West Berlin since the end of World War II. The people there have rebuilt their city, their industry, their way of life, and they have prospered. In East Berlin, under communism, that is certainly not the case. In the two parts of Berlin, democracy and communism have been in close proximity to each other. We have there a living and a working illustration of how the ideology of each kind of government affects the people living under it. That is what the Communists fear in Berlin today—the living example of how democracy works.

The advent of totalitarian governments in Europe after 1918, and the spread of communism into many countries of the world, have had their effect upon us here in America. We are no longer a pioneering, agricultural, sparsely settled country. We have been transformed, as if by magic, into a great industrial nation of heavily populated communities and we have been drawn closer to the rest of the world by scientific achievements. In the short space of 170 years our conceptions of how government should function have changed. Government in the scope of its operations has become vastly different than originally planned by our Founding Fathers. We can no longer say, with our old convictions, that—because we have a government which has protected us from the external restraints upon our liberty and freedom—that modern democracy in fact has achieved the true individualism of man for all time. The ideas of freedom have been changing in all countries of the globe, because the ideas of man have changed, and are still changing, and will go on changing. Today the world is crowded. Until the world became crowded, our manmade laws went far to secure the self-assertion of the individual human being. There was not this friction, this fear, this hysteria we have today. The scientist will accept the laws of nature which he is able to discover, because he has no other choice. God's laws are immutable, and men have small opportunity to differ with each other. Man will not always accept the laws made by man, because man-made laws are not immutable. But man has come to expect more from science than science can give to man. Today the people cry out—not enough for their rights to the self-assertion of the human will, but too loudly and too long for the fruits of science and the satisfaction of their wants and desires. Men differ greatly in their philosophy as to these things, and the friction, the fears, the hysteria that follow from these differences have become the new challenges to our freedom. Until men are able to harmonize and reconcile their wants and desires, our freedom will always be in danger.

When we talk about the freedom of the self-assertion of our own will and the free exercise of our own conscience, we are talking about the kind of law that it is our very own privilege to legislate for our own good. That is the kind of law, the proper use of which will determine for ourselves what our character is and what it will become. What is the meaning of "conscience"? The word comes from the Latin verb "conscire," meaning "to know, to be conscious of." Webster defines the word as:

"Sense or consciousness of right or wrong; sense or consciousness of the moral goodness or blame worthiness of one's own conduct, intentions or character, together with a feeling of obligation to do or be that which is recognized as good."

Man is born with animal instincts which he has inherited from ancestors of many ages. These traits of human nature which man brings with him into this world are the products of the inexorable laws of nature to which man has been subjected for thousands of years. During the evolution of man, there came a time when he was born into life with a conscience. It might be said there came a time when the animal became a man. By the use of conscience, man was able to liberate himself from an animal-being completely chained and fettered by his animal instincts. He came to have a choice between doing what was right or what was wrong. Life no longer was a problem merely of survival, but a problem of how far he might progress. The use of his conscience awakened him. He learned to think and to act for himself with reason and became an individual person. It has been written:

"Evolution continues in our time, no longer on the physiological or anatomical plane but on the spiritual and moral plane. We are at the dawn of a new phase of evolution and the violent eddies due to this change in the order of things still conceal that fact from the eyes of the majority. The transition from the ancestral animal, still squirming within us, to man is too recent for us to be able to understand the ensuing conflicts which often seem disconcerting and incomprehensible." [1]

The right to exercise your own conscience, to worship God in your own way, to think and act for yourself on the subjects of morals, politics, education, and every other subject, constitutes one of those inalienable rights with which you have been endowed by your Creator and to which reference is made in the Declaration of Independence. No one person has the right by force to inflict his thoughts and ideas upon any other person. Such restriction upon the liberty and freedom of another individual prevents that individual from the free and full exercise of his own will. Only as long as man will exercise his own will according to the laws of his own conscience can he remain free.

All this makes the work of being free in our modern society, not only a political or an economical problem, but a problem in psychology as well.

Our younger generation has been referred to as the "lost generation" and the "beat generation." Some think of you young men as those who rebel for the sake of rebellion. Some have claimed that you like whatever your elders dislike and dislike many of the things which your elders like. Many of us who are the products of that decade which has been called the "turbulent twenties" never felt at the time that we were turbulent. The word "turbulent" is defined as being "inclined to rebel." I have no doubt that we were inclined to rebel a little. I think every younger generation rebels a little—some more, some less than other generations. But each younger generation seems to rebel in its own inimitable manner. For the most part, we were an optimistic generation, whereas some of us feel that the younger generation of today is unduly pessimistic in its attitudes of mind. However, we had our pessimists just as you have your optimists. F. Scott Fitzgerald in "The Great Gadsby" wrote of the men of the twenties as "leaking sawdust at every pore." T. S. Eliot in 1925 in "The Hollow Men" wrote of men as lost souls in a waste generation in a wasteland. Some present-day writers describe the younger fry as going to extremes in the character of their behavior in order to give vent to their individualism and in their attempt to attract the attention and recognition of those around them. They depict some of you as always seeking "kicks" out of such things as "hot rods" and "souped up jallopies," and as those defying the authority of your parents and the restraints placed upon you by our laws, our customs, and our traditions. However, not all of us of the twenties have turned out to be hollow men stuffed with sawdust, and not all of your generation will grow up to be men seeking little except escape from the dullness of a polite and exacting society.

To call your generation lost or beat is to admit a lack of understanding. Furthermore, such a designation is more picturesque

---

Footnotes at end of speech.

than it is descriptive. There is one characteristics of your generation which is outstanding to say the least. That characteristic is your individualism. The persistent efforts you make in the self-assertion of your own individual wills never seem to abate, nor deter you from your appointed tasks.

You young men know only life in its present state, except what you have read in books, or what you may have been told. Your elders have the advantage of having lived through several decades which they can compare, one with the other, in their appraisal of the value of our way of life. You have been born into a world torn by wars, and the rumors of war, so that it is not strange that you have at times felt the discomfort of disillusionment, bitterness and insecurity. You may be justified at times in your efforts to overcome some of the traditions of our society, not because you think necessarily that such traditions are bad, but because life becomes a little bewildering and confusing now and then. The present day speed with which life seems to pass us by does not always lend itself to taking the time necessary for careful thought, proper reflection and sound judgment. Some of the customs that have come down to all of us from our ancestors may require you to conduct yourselves in a manner of behavior which may at times seem austere. As individuals, you may sometimes champion a cause which has no cause, or you may be tempted to throw a little of your weight around and make a noise. You find some of the classics in the arts to be boring, "old stuff" and for "squares," whereas some of the westerns and mysteries on television and some of the "rock 'n roll" music on the hi-fi really dig you. There are times when everything seems useless, without purpose and you feel alone in a big world that fairly buzzes in your ears and which is bulging at its seams. Suddenly you cry out: "I have my rights. Is this America, or isn't it?"

You want to be free. You want the freedom you feel is yours. You want to assert your will . You want recognition. You want attention. You want your own place in the sun. You want to be independent. You want to give free rein to your own individualism and very often you do not want to be told what you should or should not do, nor what you can or cannot do. At times even mere advice from others seems to be most distasteful.

There is the story of the chicken who wanted to cross the road, for no other purpose than to get to the other side, so he just put down his head and ran. He never survived that short excursion into space. His elders had never explained to him the natural dangers of the modern highway and the chicken was unable to reason it out for himself. Every year there are many chickens who want to cross the road to get to the other side for no particular good reason, who never survive the experience. For such an animal as a chicken, there are no traditions, no experiences taken out of the past from which the chicken might benefit, because his elders do not possess the ability to communicate those lessons to him. A chicken does not have the ability to exercise his own will in accordance with a conscience which could point out to him the good and the bad of one's conduct. I might add by way of a very sad commentary on our own life that there are many human beings who use the highways in such an animalistic manner—without heed to the dictates of reason and consequently to their own extermination.

At Brookside School you have been exposed to psychology. It may be true that at times you have been required to conform to certain technical rules and regulations for the sake of discipline and the orderly process of the administration of school affairs. Today, as you look back upon such times, they do not seem to have the severity that they once appeared to have. However, in this school there has been no force exerted upon you which has restricted the free exercise of your own consciences, no force that has required you to think in any way other than as you yourselves have determined after the due use of your own processes of thought and reasoning. There may have been used upon you a little psychology, but only for the purpose of making you think for yourselves in accordance with the laws of conscience. In this way each of you has remained free as an individual—without restrictions upon the freedom of your thoughts. That is the important thing under our American way of life. Because you have received such instructions at Brookside, two of your teachers have this day been awarded medals by the Freedoms Foundation at Valley Forge.[3]

As young men, we are very sure that you have taken seriously the task of finding yourselves. Some men never find themselves; others find themselves early in life. To those of you who find yourselves, the welfare and the future of America is entrusted in the years to come—years which are not so very far ahead of us. When the history of your lives is written, it will tell what you shall have done with the freedoms to which you have succeeded and which today are yours, if you want them. We have great expectations that time will demonstrate that you will have done your job well. We have great hopes that the freedoms we have enjoyed will be preserved through you for our posterity and yours, as they were meant to be preserved from our beginning as a nation. We have great hopes that you will use this individualism, which undeniably you do possess in great abundance, in a way that will be the expression of your own will and the expression of your own free exercise of your own God-given conscience, in accordance with the laws of conscience. By so doing, you will remain free, instead of surrendering your liberty and freedom to the dominant will of those who would destroy you. By so doing you will secure the blessings of liberty for the posterity of all of us. The price of freedom is very great and must be borne by each succeeding generation. This is one of the great prices you pay for living in this world and there is nothing that my generation can do to make it otherwise for you. There will be nothing your generation will be able to do in this regard for the generation that will follow yours.

In closing, let me quote from some of the homespun philosophy of a great American, our beloved American poet, Robert Frost, who once was one of my teachers:

"I have not only hopes for the future. I have hopes for the present and hopes for the past. I have hopes that the past will be found to have been all right for what it was—and the present—this present of ours—I hope will be found to have been all right for what it was, that is, that it will have made its point in history.

"We are going to discriminate once and for all, or once again, between science—what can be made a science of, and what can't be made a science of. Science has been led to expect more of itself than it can perform. But right here and now I'm telling you that the whole half of our lives can't be made a science of—can't ever be made a science of—and we're going to know more about that before we get through this period. That's what it will be remembered for."

As each of you young men go on to continue your education—may you use this individualism, which as I have said you possess in abundance, under the dictates of your conscience—in order that you may remain free and preserve the American way of life.

Is Our Job Completed?

EXTENSION OF REMARKS
OF
HON. ALBERT H. QUIE
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 13, 1960

Mr. QUIE. Mr. Speaker, recently Mr. George Daley, chairman of the Rochester Dairy Cooperative, wrote a very wise and thought-provoking editorial in the cooperative's publication, the Milky Way, which I would like to call to the attention of the Congress:

IS OUR JOB COMPLETED?

I don't suppose there is a group of people making a living in our society, as we know it today, who are as far removed from one another in our everyday living and decision-making as we farmers.

You can select any group of people you wish and analyze their operation and come up with very much the same answer. They tend to organize themselves for their own welfare and bargain as units despite actually fierce competition with one another. It is natural for them to agree to limit their output or very mueh standardize their market price for products or services offered.

We, as farmers, have very strong sympathies for each other. We are, in general, glad to exchange ideas with each other about our farming operations—how we look after our livestock, raise our crops, and harvest. We have many things in common that we discuss with freedom and confidence.

The question I would like to raise is this: Why do we stop with our exchange of ideas at the point that other groups start to exchange ideas with each other? Other groups compete with each other with all the resources they have at their command. When it comes to price and output, they do not generally lash out at each other—usually the question is settled along the logical reasoning that there must be a margin on goods and services. This is logical and reasonable. As a matter of fact, the agreement on pricing of goods and services reached the point a half century ago, where it was necessary for the passage of what has been known ever since as the "Sherman Antitrust Law," which protects the public interest.

We go back to the farmer now, and see what the Congress of the United States, representing all of the people, did when it looked at his bargaining position. Let me say here again that the Congress acted in the public interest, and passed the "Capper Volstead Act," which in turn, gave farmers the right to group themselves together and bargain collectively. It was in recognition of the fact that farmers needed this bargaining ability to compete with other segments of the economy of this country, that this law was passed.

Today, in 1960, we have the situation as outlined above. Business and industry have lived with it and prospered. Labor has its

"Wagner Act" along with other laws that allow it to bargain collectively.

Labor and industry, along with professional and service groups, have had a steady increase of the consumer's dollar. The consumer, in this case, being all of us. The farmers' share has declined.

This is where we return to where we started. We, as farmers, are busy people. There are no controls on our time or output, and we have used this freedom to strangle ourselves with.

We have been demanding a good price for everything and with every means we can produce it.

This is an economic contradiction. No other segment of our economy asks for this much or gets it. It is limited by the economic fact that this is impossible to attain. Labor limits its hours and industry its output. These controls are fundamental to the well-being of our economy in this country. These limitations are the reason we have the standard of living we enjoy in the United States today.

The situation we farmers find ourselves in today, which is by averages, comparison of a return on investment and hourly labor return, is low. This situation is one that is brought about by reason of our entire mode of living; our "way of life".

The problem is not impossible to solve. As a matter of fact, it is more one of adjustment, one of reasonable approach, of yielding or compromising a position, if we might call it that—if we as farmers do not shudder too much at this thought. We may have to give up a little of our so-called independence to be a little more independent.

We need to update our ideas on what our cooperatives are doing for us. We need to coordinate our efforts as pertains to our cooperatives and bring them into line with present-day competition. The producers' cooperative, as it was known, which assembled the product, then turned it over to somebody else, has been good—is still good; but it must combine its services, goods, and bargaining power with other cooperatives, which, in turn, it must share in and control, to market the products it produces.

This is where we, as a producers' cooperative, must work with other dairy cooperatives, whether they be creameries or marketing cooperatives that have a service to offer. Keep the farmers' products in the farmers' possession to retain the overages on these products. Demand good management and an orderly, well-developed business enterprise.

We must eliminate our distrust for each other as farmer cooperatives, and work and plan for our mutual advantage.

The New Era of Pope John XXIII

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1960

Mr. MULTER. Mr. Speaker, I command to the attention of our colleagues the following article concerning the understanding which exists between the Jews and Catholics. The article was written by Benjamin R. Epstein, national director of the Anti-Defamation League of B'nai B'rith and appeared in the ADL Bulletin.

The article follows:

CATHOLIC-JEWISH RELATIONS: THE NEW ERA OF POPE JOHN XXII

(By Benjamin R. Epstein)

The meeting of the five-man B'nai B'rith delegation with Pope John XXIII was official, the exchange of sentiments warm and sometimes informal.

We were seated in the Pope's private library in the Vatican on the morning of January 18 of this year. Label A. Katz, president of B'nai B'rith, was our spokesman and, as he talked, the Pope interrupted, with a motion of his hand, "Slowly please, slowly." Interpreters were on hand but, apparently, the Pope wanted to see how much English he could understand. Mr. Katz talked about B'nai B'rith and its purposes. Pope John asked the meaning of B'nai B'rith, saying that he knew that the words were Hebrew but that his Hebrew was rusty. When it was explained that B'nai B'rith means "Sons of the Covenant"—the covenant between God and Abraham—Pope John nodded in understanding.

Label Katz told of his appreciation for the Pope's help in the rescue of thousands of Jews, particularly children, when he was Papal Nuncio in Istanbul during the time of the Nazi terror. He also thanked the Pope for his understanding in revising the language of several church prayers considered offensive to Jews. He discussed the wave of synagogue and church desecrations—then at its height—and said that he hoped that, in the long run, these acts of vandalism would help bring men of good will together in defense of "justice, morality, and universal peace."

The Pope, in response, said that he was glad to have the opportunity to discuss matters of mutual interest. What he had done during the war, he said, had been at the direction of the late Pius XII who felt deeply about the fate of those persecuted by the Nazis. Besides, his acts represented the only human thing to do. He said that he has great pleasure when some of the Jews he had aided as children now come to visit him as grown men and women with children of their own.

In talking about the changes in prayers, the Pope reminded us that Catholics daily recite many psalms and passages from the Old Testament. "And you of the Old Testament and we of the New must come closer and closer, as brothers under God, to work for peace throughout the world," he added.

He spoke of recent evidences of anti-Semitism, in Germany and other parts of the world. "These events are deeply painful, not only because they are violations of the human and natural rights of man, but because they tend to divide the children of God."

After the exchange of statements, we spoke informally. The Pope expressed deep interest in America and asked the names of the cities from which we came. He was pleased to learn that one of our group, Max J. Schneider, was a member of the board of trustees of a Catholic hospital; he said that he was familiar with the many philanthropic activities of B'nai B'rith as well as those of individual Jews.

The private audience lasted 20 minutes. We left the library deeply moved. Now, 4 months later, the visit and the Pope's expressions of humanity and warmth are vividly remembered. The memory will be a lasting one.

This B'nai B'rith meeting with Pope John XXIII received a great amount of newspaper attention. It was greeted by many Jews throughout the world as an event of singular significance. But not by all Jews—some said that the event was little more than a ceremonial occasion in which everyone said the correct things.

Behind these different reactions to our meeting with John XXIII—behind any understanding of Jewish attitudes toward the Roman Catholic Church—lies an involved and often tragic history. Many Jews recall hundreds of years of persecution and oppression perpetrated by fanatics under the banner of the Church, as in the case of the Spanish Inquisition. Some Jews recall their own mistreatment in not-too-distant days in Eastern European lands which were largely Catholic.

And many Jews believe that conventional Catholic teaching of the Crucifixion story still represents one of the principal sources of anti-Semitism.

Against this background, it is understandable that many Jews are surprised to learn that studies of social scientists reveal that anti-Semitism is no greater among Catholics than it is among Protestants.

Rabbi Arthur Gilbert, writing in the book, "American Catholics: A Protestant-Jewish View," points out that this contradicts "popularly held opinion in the Jewish community, which usually regards as particularly marked the hostility between Jews and Catholics." The Rabbi reports that, when speaking to Jewish audiences on Jewish-Christian relations, "someone always inquires into the content of parochial school instruction." Or they ask: "Have Catholics stopped teaching their children that the Jews killed Christ?"

These are the historical reasons that inhibit understanding between Catholics and Jews. There are the practical problems, too, that make for community controversy and tension. Jews often find themselves dissenting from Catholics on many issues related to the separation of church and state. Many Jews are wary of Catholics for their efforts to gain Government aid for parochial schools, for their position on released time, for efforts to deny distribution of birth control information by tax-supported clinics, for their opposition to liberalization of divorce laws, and the like. On the other hand, Catholics find it difficult to understand why Jews see anything wrong with their use of moral power in support of things they believe and why Jews don't recognize the principle of distributive justice—the fairness, for example, of obtaining Government help for Catholic institutions since, after all, Catholics pay the same amount of taxes as other Americans although they often do not make use of tax-supported public schools.

On another level, ADL frequently hears the complaint that it is difficult to find a priest willing to participate in a religiously sponsored brotherhood meeting or service. This reluctance, it should be noted, is shared by some orthodox Jews.

Some Jews also have the notion—held by many Protestants, too, that the Catholic Church is a monolith, a centrally directed army with the Pope its commander in chief. They believe that his word is law, that any order he issues will be immediately carried out by the entire priesthood and by millions of loyal Catholics in every corner of the globe. They are often unaware of the fact that practices vary from diocese to diocese according to the views of each bishop.

This is a stark listing of some of the things that many Jews worry about. Some of the concerns are real, some fancied. Some are based on historical truth, others on misconceptions.

There is need for continuing dialog between Catholic and Jew on these and many other points just as basic. I can allude to some of them here only sketchily.

Some Catholics interpret the New Testament as saying that Christ died to expiate the sins of all mankind and, therefore, all mankind was responsible for his death. Another interpretation of the New Testament places guilt for Christ's death on the Jews of the time. Even accepting the New Testament as a literal presentation of history—which Jews do not—is it not monstrous to use such an interpretation to damn Jews throughout eternity? Yet this is the impact in some cases.

One critic finds that passion plays are filled with intense emotion often mingled with harsh and powerful denunciation of Jews. In view of what we know about latent prejudice, he believes that the traditional type of passion play does grave disservice to the cause of good intergroup relations.

But the Passion Play started in 1633; today it too is a vestige of history.

The concept of the Catholic Church as a monolith is true—but only if the term is confined to dogma and religious truth. There is nothing monolithic about the way Catholics approach other matters, such as politics, social welfare problems, the arts. Personal knowledge of a few Catholic organizations, or Catholics themselves, is enough to shatter forever the concept of the general monolith.

But certainly the personal attitudes and influence of the Pope do create a climate of opinion within and without the Catholic world. A look at some of the statements and works of Pius XII and, particularly, John XXIII, is heartening to Jews and all persons concerned with human rights.

Cardinal Pacelli's opposition to nazism was well known and his election as Pope Pius XII was denounced in the German press. His efforts to help Jews throughout the war have now been chronicled. After the liberation of Rome, while there was apprehension over the fate of Jewish prisoners held in Northern Italy and Germany, he made one of his most fervent pleas for brotherhood:

"For centuries the Jews have been most unjustly treated and despised. It is time they were treated with justice and humanity. God wills it and the Church wills it. St. Paul tells us that the Jews are our brothers. Instead of being treated as strangers, they should be welcomed as friends."

Pope John XXIII has furthered the humanitarian tradition. As papal nuncio to Istanbul during the Nazi period, he personally aided in the rescue of many Jews. The late Chief Rabbi Herzog of Israel wrote of him: "Cardinal Roncalli is a man who really loves the people of the Book and through him thousands of Jews were rescued." One of the directors of rescue work for the Jewish agency during the Nazi period, Chaim Barlas, describes three private conferences with the papal nuncio which resulted in great aid. Barlas also lauded his personal devotion and courage in saving the lives of thousands of Jews.

Pope John's friendship and deep interest in Israel has been the subject of much discussion there. His appointment of the first bishop to Israel has been acclaimed there as another evidence of friendship.

Pope John's revisions of two prayers—an unusual occurrence in the Catholic Church—evoked the warmest expressions from Jewish leadership. In March 1959, the Vatican announced that the Pope had deleted a reference to the Jews as "perfidious" from the Good Friday prayer—a reference dating back to early Christian history. A spokesman said that the Pope's intention was to recognize "a common brotherhood of all men" as well as special ties binding all Christians to "those who were the chosen people."

The second change came 6 months later when Pope John changed the text of the act of consecration of the human race to the sacred heart. In this case, direct references to Jews and Moslems were eliminated. The Vatican said that the Pope had ordered the change "out of respect" toward the other religions.

His statement to the B'nai B'rith delegation was not the only one about the anti-Semitic desecrations in January. Repeatedly the Vatican spoke out against bigotry; the appeals for brotherhood were echoed throughout the Catholic world by clergymen and lay leaders. In the United States, the Catholic bishops of America—speaking through Archbishop Karl J. Alter of Cincinnati, chairman of the administrative board of bishops of the National Catholic Welfare Conference—called on "all citizens, whether Christians or Jews, and all those who love truth and justice, to protest privately and publicly against further manifestation of bigotry. * * * We urge that all right-minded people refrain from any word or deed which might (retard) the advancement of our common welfare."

"Common welfare"—the common good—is the key, the practical goad to better understanding. Jews and Catholics will continue to have different attitudes and approaches to many problems. And they should have, if they are to hew to religious principle. There is always room—even need—in America for differences of religious conviction and opinion.

There will be more irritation and angry words over specific issues. There will be misunderstandings too. But the basic ones—miscomprehensions of purpose and goal—will be fewer. For all men have more in common than they have to separate them. This becomes increasingly clear, to Jews and to Catholics. We see in our literature, our meetings, our homes, that Catholics and Jews feel freer to discuss things about which they sharply disagree.

In this dialog, on this road to greater maturity and less distrust, we are mutually helped by the words and deeds of John XXIII. In today's relations between Catholic and Jew, he is playing an inspired role.

The American Inheritance—Commencement Address by Tomlinson Fort

EXTENSION OF REMARKS

OF

HON. CLINTON P. ANDERSON

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Wednesday, June 15, 1960

Mr. ANDERSON. Mr. President, on May 29, the Honorable Tomlinson Fort, vice president of the Westinghouse Electric Corp., delivered a commencement day address entitled "The American Inheritance," at the New Mexico Military Institute, at Roswell, N. Mex.

I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE AMERICAN INHERITANCE

(Commencement Day address by Tomlinson Fort, vice president, Westinghouse Electric Corp., New Mexico Military Institute, Roswell, N. Mex., May 29, 1960)

General Gay, parents and faculty members, guests of the institute, ladies and gentlemen, to the 206 members of the graduating class of 1960 I extend a special greeting and offer my congratulations and best wishes.

I am deeply indebted for the privilege of sharing this happy occasion with you. It is an inspiring and heartwarming experience to address an audience of young people on a day so important in their lives.

General Gay has suggested that I say something that will prove of benefit and service to you who have reached this time of commencement. It is a formidable assignment, especially because I am aware that I do not have 206 identical personalities out in the graduating class, but rather 206 different and highly complex individual young men. I wish I could try to meet this challenge by talking to each one of you personally. Since that is impossible, I will give you, as a group, such counsel as I can and discuss with you some of the things that I think will be important to you in your future education and career.

I want to begin by telling you some things about a bridge. If you wonder why I am doing this, you will understand in a moment.

Men have dreamed of this bridge for years, but only now do engineers believe that they have the materials and techniques that will make it structurally possible. The bridge is being built across the entrance to New York Harbor. It will connect Brooklyn and Staten Island. It will cost $325 million and will be ready for traffic in 1965.

The bridge will have a center span stretching out 4,250 feet—four-fifths of a mile. It will be 115 feet wide and will have two decks, one above the other, each with six traffic lanes. The two main towers will rise 680 feet above sea level—the height of a 45-story building. There will be two main cables on each side of the deck, each of them three feet thick. This is the longest and heaviest suspension span that men have ever attempted to build.

I would like you to keep the picture of this bridge in your mind for a few moments while I tell you about another enterprise—one which Herbert Hoover has called "the greatest engineering project in the world."

This is a $705 million project for converting more of the enormous energy of Niagara Falls into electric power. The installed generating capacity of the new Niagara project will be the largest in the Western World—2,190,000 kilowatts. If you remember what Major Ellis taught you, you will immediately know that this represents almost 3 million horsepower.

Two hydroelectric plants are being erected in this project. The larger of the two—the largest in the Western Hemisphere—is being built into the side of a 310-foot cliff which forms one wall of the Niagara gorge, 4 miles downstream from the falls. This plant will house 13 identical waterwheel generators, each with a capacity of more than 200,000 horsepower. A massive flow of water will be carried from the river above the Falls, past the city, and on to the powerplants through two enormous conduits, each of them 46 feet wide, 66 feet high, and 4 miles long.

It may interest you to know that the chief problem encountered so far in this monster project has nothing to do with engineering stresses or power economics. The project has been held up by unfriendly Indians. One of the proposed reservoirs occupies the same area as a Tuscarora Indian Reservation, and the Indians are pretty cool about the notion of moving out.

Now, why have I told you about the building of a bridge and of a power project many hundreds of miles from us here in Roswell? Well, I have done it for two reasons.

If you are like the other young people I know, your attitude toward bridges and powerplants is somewhat matter-of-fact. You can take them or leave them alone. The mills and factories you see around you, the roads and airports, the stores and schools,

the railroads and canals, the hospitals and houses—most of these have been standing where they are now ever since you began to notice such things—and therefore they seem to you to have been standing there since the beginning of time. It is only natural that you should take them for granted. I did it once myself.

The point I want to make is that, on the contrary, these things have not always been standing where they are now, and they are not to be taken for granted. Just like the Narrows Bridge below Manhattan and the Niagara power project today, they all had to be built. And building them took years of planning, years of work, a great deal of money, and the combined talents of many, many people.

These are all a part of our national wealth. They are part of your inheritance as Americans.

What I want to say is that this new bridge and this new power installation belong to you. As American citizens, you own them just as surely as you own the Grand Canyon and the Mississippi River, the Carlsbad Caverns, the Lincoln Memorial and the ground at Valley Forge.

We elders are giving you young people many problems to solve. We will leave you much unfinished business—including quite a few bills to pay for the things we have built. But we are also giving you a first-rate physical plant—the best physical plant in the world.

Your national inheritance includes, for instance, 3 million miles of paved roads. It includes almost one-third of the world's railroad mileage; and almost one-half of the world's installed electrical generating capacity. It includes almost 300,000 manufacturing establishments; some 2,000 colleges and universities; 6,786 hospitals; and 4,000 industrial research laboratories—all of these staffed with highly trained people.

To know the value of such an inheritance as this, you need only to live in a country that does not have it. Go among people who are short of professional talent, of investment capital, and of the minimum needs for making life comfortable and productive. You will find that these people do not take such possessions for granted. They know something of the cost that must be paid to earn them.

In all America there is no better example than our own State of New Mexico to show what determined men can accomplish against great handicaps, and the inheritance they can build up through hard work for their sons and daughters.

We know that our culture here is an old one—the oldest, in fact, in the Nation. God gave us a healthful climate and some beautiful scenery, but He left the rest to us. Sixty years ago, only 4 percent of this State's land surface was included in farms, and only one-fourth of 1 percent was classed as improved farmland. Only 203,000 acres were irrigated. Roswell was a town of only 2,006 people, and the territory of New Mexico had fewer than 200,000 inhabitants.

We had one valuable asset, however, and that was the caliber of the people who came to settle here. These men saw the possibilities of this territory if capital could be found to irrigate the land, to reclaim the desert, to extract the minerals, to extend the transportation system, to bring in industry, and to build up our communities.

For example, there was Ed A. Cahoon, who came to New Mexico with a moneybelt in which he carried $25,000 in gold—money which he used to establish the First National Bank of this city. There was Col. James W. Willson, a graduate of VMI who, between 1901 and 1922, did so much to build a struggling little military school of the frontier into the great institution it is today. There was James John Hagerman, who between 1890 and 1900 carried out a dream to make this entire Pecos River country the garden spot of New Mexico. He invested and lost millions of dollars in the effort, and he died a disappointed man, but John Hagerman brought the railroad and irigation to this country, and you see all around you the happy results of the work he started. Here, in the shadow of the building that bears his name, I am proud to pay tribute to a great pioneer.

Closer to our own time, there is the outstanding example of a young man, a graduate of the University of Michigan, who was ill with tuberculosis and whose doctors gave him only a few months to live. Rather than surrender, this man fought to live and to make a notable contribution to society.

Under the virtual sentence of death, with no financial resources, he chose the western country as the best place to recover his health. His choice was not unusual, for more and more good people, including many business and professional people, had begun to come here in search of health. My wife's father, my own father, and the parents of most of my old friends here in Roswell did the same thing.

This young man became a newspaper reporter in Albuquerque. He did regain his health and make a very great contribution to his fellow men. He overcame further setbacks to his health, built up a business, and entered public service. He represented New Mexico as a Congressman. He became a member of the President's Cabinet. In 1948, this man—CLINTON ANDERSON of New Mexico—became a U.S. Senator. As a Senator, he is making a major contribution to the peaceful harnessing of atomic power—the new and powerful form of energy first revealed in this State just 15 years ago.

It is because of the services of men like these that New Mexico has been able to make so much of its land productive, and is now having an economic growth far above the national average. It is because of them that this is one of the most flourishing and fastest growing States in the Union, both in percentage of population increase and in industrial expansion.

Let me give you quite a different example of what a man can do when he chooses to struggle against odds and is determined to improve the environment in which he lives. This example comes from my other and second home, the city of Pittsburgh.

Probably the most distinguished citizen of our community is a man named Richard K. Mellon. In 1945, Mr. Mellon took his army discharge and, like 10 or 12 million other Americans, returned home. He found Pittsburgh, a chewed-up, rundown, decaying community, hurt in the great depression and worn out with fighting a war. A blanket of smoke hung almost continuously over the valleys. There was an ever-present menace of floods. There were terrible slums—industrial, commercial and residential. The city was losing much of the industry which had built it up. It was very difficult for companies like my own to employ capable young men, for they—and their wives—did not want to live and work in the "Smoky City."

Now, Richard Mellon is one of the wealthiest men in the country, and he could have lived in any of the world's most delightful places. Instead he chose to follow a course of struggle and service. He decided to stay in the city which for 100 years had meant so much to his family, and devote his efforts and his resources to leading a fight against the city's problems.

Today, Pittsburgh is one of the cleanest and most progressive communities in America. We have rebuilt much of our city. A leading magazine said recently of us: "Except for a few war-devastated cities in Europe, probably no city in the world during the past decade has altered its physical appearance so much as Pittsburgh." We no longer have to coax young men to live in our community—they are eager to be part of a vibrant, exciting city of opportunity.

This happened largely because one man accepted a new responsibility and chose to follow the hard instead of the easy path. His action is typical of the demand that our society makes on its best people—on those who have the education, the ability or the means to make a major contribution. You who are being graduated from this institute will be expected to do more than others in future years, simply because you will have the training to do more. If any of you happen to have the talent for public service of a Senator CLINTON ANDERSON, or the wealth of a Gen. Richard Mellon, then your obligation to your fellow men will be so much the greater.

I told you, earlier in this talk, that I had two reasons for describing two great engineering projects to you. I wanted to convince you, first, that you should not take your Nation's physical plant—your own national inheritance—for granted, since men had to build it laboriously, at great cost, over many years.

My other reason for telling you of these projects is that you may feel a pride in them—and may be inspired to live up to what they represent.

To me, these two projects stand as symbols for a dynamic national spirit. They represent daring achievement by a nation of builders—of men who are never satisfied with things as they are and who continually struggle to change and improve their surroundings.

The charge has been made many times in recent years that we Americans have become decadent, or "soft," or both. We are told that we are too rich—"affluent" is the word generally used. We are too fond of gadgets. We ride when we should walk. We are not willing to make personal sacrifice for the good of the majority. We have lost our sense of national purpose. And so on and on.

This criticism is normal, for we are the most self-critical people on earth. But to our young people I want to say, "Don't you believe it." This is a false estimate of our personal attitudes and of our national character. Americans have always been a dynamic and determined people, and they are a determined, dynamic people today.

I think that the people who call us "soft" are not really aware of what is going on in this country. Certainly they do not know or understand the wave of stunning engineering and construction projects that have recently been changing the face of America and are now underway throughout the length and breadth of the land. These are not the works of a soft people. They could be conceived, planned and finished only by men of talent and determination. Let me show you what I mean.

At Denver, Americans are drilling a 23-mile tunnel under the Continental Divide to bring billions of gallons of fresh water to the city. In the Catskill Mountains at the eastern end of the country, the tunnel is even longer—44 miles through mountain rock—and it will carry a river of water to New York City, 100 miles away.

At Baltimore, Americans recently completed a 7,600-foot twin tunnel under the harbor for automobile traffic. There is nothing unusual about an automobile highway that runs under water, of course. There are 16 of them in the world now, and 12 of them are in the United States. A 13th connects the United States and Canada.

The Baltimore tunnel, however, was a tunnel with a difference. It was first constructed on dry ground. It was floated into position in the harbor. It was lowered part by part into place in a trench dug across the

bottom of the harbor. This was a brand-new technique, and if the Russians had done it, they would have shouted at the top of their voices that it was a great victory of the Communist system. We Americans take such engineering achievements for granted.

At Sacramento, Americans are bringing the ocean 61 miles inland to make the city into a Pacific seaport.

At Washington, D.C., men are converting a 9,600-acre site into the world's largest airport. The project manager there supervises operations over a shortwave radio network.

At Pecos, Tex., Americans have sunk the world's deepest oil well—almost 5 miles straight down into the earth. The hole was a dry one, and the next record well may be dry too, but the search will go on.

We are building school classrooms at the rate of 70,000 a year. We are laying down a 41,000-mile network of top-standard, limited access expressways which will interconnect almost all our cities with a population of 50,000 or more.

In West Virginia, we are building a huge radio telescope that contains 20,000 tons of steel and is as wide as two football fields are long. In southern California, we expect soon to begin building the world's largest atomic powerplant—360,000 kilowatts of central station power derived from the fission of the atom.

In Ohio not long ago, I saw a power shovel at work—but what a power shovel. It stood as high as a three-story house, and it needed two operators to run it. Each of them rode to his separate cab in an elevator. It cost more than $2½ million, and when I saw it, it was taking 90 tons of earth from a hillside at a single bite.

A few months ago, Nikita Khrushchev, who is ruler of a country with a standard of living somewhat below most industrialized countries, spoke pityingly of our sad condition here in America and declared, "Capitalism is a wornout old horse." To that I can only say: "Some horse."

We Americans can make small things as well as giant ones. In the Westinghouse laboratories, we are carrying out intensive research and development work in molecular engineering. This is an exciting new concept which is revolutionizing the whole field of electronics. We have already shown a high-fidelity phonograph in which the preamplifier, instead of being the size of a shoe box, is the size of a matchhead, and the power amplifier is smaller than a dime. We believe that within 2 or 3 years we will be able to build a complete radio receiver, for military or other use, no larger than your smallest fingernail.

I say that achievements like these—and I could have named many more of them—are something we can all be proud of. I hope you will be proud of them. I hope you will be more aware of the exciting industrial and engineering developments that are going on around you today, more interested in them, more eager to play, some day, a large part in them. If I have made you feel any of this, then my purpose in addressing you is richly rewarded.

You young people are the inheritors of far more than the fine physical plant I have described. You will inherit a political and economic system that has worked longer and better, and is bringing greater benefits to more people, than any other system ever developed.

Within this system, you will always be free to choose and to change jobs. You will find opportunities to do the work that interests you most in whatever part of the country you like best—and to have some fun in life while you are doing it. You will have a higher standard of living and more leisure time—if you want it—than any other generation of young people in history.

In return for these opportunities and privileges, your country asks only that you make the best contribution you possibly can in your work and in your daily life, up to the full level of your capabilities and your training.

The capabilities of each of you are widely different; but for all of you, your training thus far has been excellent. You have enjoyed the best early education your parents, your teachers, and any State can provide. I know that you will use this training wisely and well.

One of the blessings which goes with your diploma is the privilege of having lived in New Mexico. I know this is true whether you are a resident of this State or have come here from one of the other 49 States. The days you have spent in these historic surroundings will be one of the greatest experiences of your life.

I hope the future for each of you will be a happy and productive one. I wish each of you luck and happiness in the exciting years that lie ahead.

The Intelligence Feat of the U–2 Plane Is Remembered in Oneonta N.Y., Birthplace of the Famous Fairchild Camera

EXTENSION OF REMARKS

OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1960

Mr. STRATTON. Mr. Speaker, in all the recriminations, criticisms, and expressions of disappointment and dismay which followed on the unfortunate shooting down of an American U–2 plane over the Soviet Union last month there appears to have been little attention paid to the tremendous technical achievement represented by the modern American photographic equipment carried by this plane and the significant contribution to American intelligence operations which modern photography represents.

As the Representative in this body of the 32d Congressional District of New York, which includes the city of Oneonta, N.Y., I am particularly conscious of the surprising and remarkable developments of American photography because Oneonta happens to be the birthplace of Sherman Fairchild, the original developer of the famous Fairchild camera, the very kind of high-acuity instrument which is able to carry out the feats attributed to the U–2 and recently demonstrated so graphically on television by President Eisenhower.

Something of the background of Mr. Fairchild's camera and also Mr. Fairchild himself is contained in two articles which appeared recently in the Oneonta Star, and under leave to extend my remarks, I include these articles for the information of my colleagues. One appeared on May 13, 1960; the other appeared on May 11:

[From the Oneonta Star, May 13, 1960]

FAIRCHILD CAMERA IN SPY PLANE?—IDENTIFIES 2-FOOT OBJECT AT 100,000 FEET

National attention is being focused on an Oneonta native since an espionage plane was downed in Russia.

Was the aerial camera used by the pilot a modern improvement over the pioneer camera invented in Oneonta by Sherman Fairchild?

This question has been fired repeatedly at Fairchild Camera & Instrument Corp., Syosset, Long Island.

In addition, newspapers have been calling for reissues of a 1956 public address made on aerial reconnaissance by Mr. Fairchild.

His words, not too seriously regarded then, are now hailed as those of a far-seeing prophet.

The phone call Thursday by the Star to the Fairchild firm at Syosset disclosed both the interest in the aerial camera and the revived interest in the 1956 speech.

It also revealed that Fairchild has come up with an ultranew camera which, from 100,000 feet, will identify any 2-foot cube object on the ground.

Fairchild is generally accepted as the world's foremost authority on aerial photography, and his cameras are in use by the Air Force. It was presumed that the instrument on the espionage plane was a Fairchild but confirmation was not possible.

Jim Moore, public relations director for Fairchild Camera & Instrument Corp., said that he and his department had been swamped with inquiries. He said he had no way of knowing, at the moment, whether the camera was a Fairchild.

He also said that security restrictions might be involved.

Two other firms, Hycon and Chicago Aerial, have followed Farchild into the field, but Fairchild is much larger than both, Mr. Moore said.

In his 1959 speech, made before the West Coast Electronics Manufacturers Association in Los Angeles, Mr. Fairchild made statements that now have become highly significant.

At that time President Eisenhower had called for disarmament with aerial inspection. The subject of "open skies" was before the public when Mr. Fairchild told the west coast men:

"Disarmament is impossible without the right to inspect, and I predict that if we continue the advances in technology at the same rate as we have in the past, no nation will ever again be able to build up secret arsenals or military strength without being detected.

"I believe the reconnaissance team of the future, and by this I mean not only the flying crews but the technical ground squadrons composed of photo lab technicians, photo interpreters, photogrammetrists, and electronic experts, will be able to learn everything about a given country regardless of size that is essential to know."

Mr. Moore, the public relations director, added Thursday:

"We just delivered to the Air Force last month a new aerial camera which, from 100,000 feet, can identify an object on the ground that is 2 feet by 2 feet by 2 feet. You can tell whether it is a typewriter or a box of canned gods."

The new instrument is the Fairchild High Acuity Camera, and was delivered to the Air Force at the Wright Air Development Center, Dayton, Ohio.

[From the Oneonta Star, May 11, 1960]

FAIRCHILD RICHEST OF FORMER ONEONTANS—HE HOLDS 99,864 SHARES OF IBM—AND MORE

(By Francis Forrest)

Keeping up with Oneonta's alumni.

The May issue of Fortune magazine carries a full-length feature article about an Oneonta native, the title being "Multifarious Sherman Fairchild."

It discloses that Mr. Fairchild is the largest individual stockholder (99,864 shares) in International Business Machines, a forerunner of which his father founded.

When Fortune compiled its list of 76 richest Americans ("The 50-Million-Dollar Man," November 1957), Fairchild was not even on the list of also rans; currently, however, his net worth is more than $80 million, and his fortune is among the biggest in the land," says the magazine.

"Sherman Fairchild's flow of bright ideas," the article states, "has produced three companies, a number of useful devices, some considerable fortunes, and a legion of breathless executives. There's no sign yet that the flow is diminishing.

"Considering the number of fields in which Sherman Mills Fairchild has achieved distinction—and made himself rich—it is surprising that he is not better known.

"Part of the trouble may come from the fact that the sum total of his activities make him sound like several different people.

"There is, for example, Sherman Fairchild the aviation pioneer, who built the first enclosed cabin monoplane, and participated in all the romance that pictures of old biplanes now conjure up: flying the mail in Mexico and and the Caribbean, and beginnings of Pan American (Air Lines), of which Fairchild was a director for 28 years.

"The Fairchild Engine & Airplane Corp., which he founded, had its ups during the war when he built the famous PT-19 trainer and the 'Flying Boxcar'; currently it is having its downs building a turboprop called the F-27.

"Then there is Sherman Fairchild the photography pioneer, who devised the first coupled exposure-and-stop camera and the first large between-the-lens shutter, which made aerial mapping possible.

"The Fairchild Camera & Instrument Corp., which he also founded, is currently performing as brilliantly as the aviation company is sluggishly.

"Then there is Sherman Fairchild the audiophile, former president of the Audio Engineering Society, whose Fairchild Recording Equipment Corp. lost money for years, in part because its products were too good.

"Finally, there is Fairchild the individualist, a tall, somewhat shy, boyishly enthusiastic man, interested in a wild variety of things. Some of them—notably wines, women and, if not song, music—gave him for years the reputation of a playboy, who was seen at '21' wearing a fresh pretty girl every few days like a new boutonniere.

Being a bachelor, and rich, Fairchild still crops up in the gossip columns, but for the most part apocryphally.

"The Fairchild empire did not grow from any consuming ambition on Fairchild's part to build an empire. Instead it flowered almost happenstantially as a result of his enthusiasm for his various interests. Now, at 64, he steers a course somewhat between executive and scientist; he acts as a kind of technical interpreter in his companies for nontechnical directors.

"He can talk in technical terms with any of the engineers in the companies, and though he has taken an active part in management at several periods (at some point he has been president of all the companies that bear his name), administration is not a role he relishes. As a rule his activity in day-to-day company affairs has been inversely proportional to the prosperity of the company."

Fairchild's gift of quick and deep absorption in some matter of interest was manifest several years back when he returned to Oneonta for the funeral of his Aunt Jenny.

He visited the Star office and asked, somewhat timidly, if the newspaper had one of his engraving machines. Learning that it did, Fairchild eagerly accepted an invitation to see the Star's photoengraving department.

In company with a friend, William Sherman, now Otsego County probation officer, Fairchild spent 2 hours in the Star building and radio station WDOS, talking with a reporter.

He inquired about one of his former school teachers, Dr. Albert E. Fitzelle, Sr., now retired, who had a class in physics which Fairchild attended in Oneonta High School.

The next time Fairchild visits the Star he can see another Fairchild product in action, namely, a Teletypsetter, for he now controls the Teletype Corp. He lives in a house in Manhattan which has ramps instead of stairs and has been known to break business engagements to receive callers from the city of his birth.

Nationwide Insurance Co.'s Policy Position on Health Insurance for Aged

EXTENSION OF REMARKS

OF

HON. PAT McNAMARA

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Wednesday, June 15, 1960

Mr. McNAMARA. Mr. President, I want to call attention to the enlightened action of the Nationwide Insurance Co., with assets of $350 million, as stated in its recent policy resolution regarding the desirability of the social security principle in legislation on health care for the aged of America.

Nationwide is the first insurance company to recognize the point I have made earlier in this vital topic—that the type of legisaltion such as I have introduced in S. 3503 will create opportunities for private insurance companies to offer supplementary protection in addition to the basic benefits provided in such legislation.

This public policy statement by a progressive insurance company management should be given the widest publicity possible, since it affirms my insistence, and that of my cosponsors, that we are not out to destroy the field of private health insurance. Just as the creation of the original Social Security Act 25 years ago established the springboard for the mushrooming of private pension plans to augment OASI benefits, so will the passage of such a bill as S. 3503—for financing basic health benefits for the retired aged—result in an improvement and expansion of additional protection through private programs around the country.

I ask unanimous consent that the policy statement of the Nationwide Insurance board of directors, dated May 31, 1960, be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

POLICY ON HEALTH INSURANCE FOR THE AGED

On April 7, 1960, the Nationwide Insurance board of directors adopted the following policy relative to health insurance for older persons:

"Whereas the Nationwide Insurance Cos. are deeply committed to the principle of helping people to meet their social and economic needs; and the health needs of their older citizens are among the most urgent and pressing social problems remaining unsolved; and

"Whereas most of the health costs of older people are not being met by insurance as evidenced by certain statistics which indicate that 86 percent of couples receiving social security benefits in 1957 had none of their medical care costs met by insurance; and

"Whereas certain statistics indicate that most older people had neither the income nor the assets to meet such expenses as evidenced by the figures that nearly 4 out of 10 couples over 65 years of age had total income of less than $2,000 in 1958: Be it

"*Resolved*, That it be the policy of the Nationwide Insurance Cos.:

"(a) To support the use of the social insurance principle to meet the health needs of older citizens.

"(b) To support the application of this principle in appropriate legislation to provide basic health insurance to those eligible for old-age, survivors, and disability benefits as a feasible and desirable step in this direction.

"(c) To continue our efforts in our own insurance program, in conjunction with cooperative health plans, and as members of the private insurance industry to provide further health care through voluntary coverage in addition to that which may be furnished through Government programs."

The adoption of this policy was based on certain major considerations which are summarized as follows:

PROBLEM

Nationwide Insurance is deeply committed to the principle of helping people meet their social and economic needs. The health needs of our elder citizens are among the most urgent and pressing social problems remaining unsolved.

Understandably, on an issue of this sort many different sets of figures can be cited; in fact, there are as many figures as there are viewpoints. All of them, however, have one thing in common: they all conclude that most of the health costs of older people are not being met by insurance. In Nationwide's approach to a management decision, the figures most often referred to were those provided by the U.S. Department of Health, Education, and Welfare: 86 percent (85.6 percent) of couples receiving OASDI benefits in 1957 had none of their medical care cost met by insurance. Nine out of ten (91.8 percent) of the single beneficiaries had none of their medical care cost met by insurance. Of those who received some benefit and were hospitalized, 44 percent of them had less than 25 percent of their bills covered by insurance and 73 percent had less than half of the bill covered.

Nine percent of the aged couples receiving the social security benefits had medical expense in excess of $800 annually in 1957 and 16 percent had medical expense in excess of $500. One in five (22 percent) had expense in excess of $400.

Most older people have neither the income nor the assets to meet such expenses. Nearly 4 out of 10 (37.4 percent) couples over 65 years of age had total money income of less than $2,000 in 1958. And more than half (55.4 percent) of such couples had incomes of less than $3,000 in that year. Nearly half (45 percent) of the spending units with the head of the household more than 65 had total financial assets of less than $500 and 63 percent had assets of less than $2,000.

It is not surprising that approximately 14 percent of the couples receiving social security benefits in 1957 either increased their medical debts or received charity.

The cost of voluntary insurance policies cannot be borne by older persons alone. Realistically, the most that can be hoped for is that somewhat more than half the aged can pay premiums of about $100 per year. A $100 annual premium cannot cover more than a fraction of the aged medical care needs. The enactment of a bill providing basic hospital coverage for the aged will, in fact, open up markets for voluntary insurance among our older people. Private insurance companies can design health insurance packages to meet the important supplemental areas of medical need not met by the existing legislative proposals.

For example, 20 percent of all persons over 65 who were hospitalized in 1958 remained in the hospital for more than 60 days.

Persons over 65 use, on the average, 4.4 visits annually to the doctor's office and average 1.4 physician calls at home each year. The need for home and office care provides wide opportunities for voluntary insurance to build on the base of bills presently proposed.

DETAILS

The opponents of the social insurance approach stress the potentially high costs of the program. Some estimates place the cost as high as $2 billion. Yet when it is considered that medical care for the aged is one of our most pressing social problems, and that this amount will be less than four-tenths of 1 percent of our gross national product in 1960, this seems extremely modest.

The actuarial staff of the Department of Health, Education, and Welfare estimates the annual cost of the Forand bill (one bill now under consideration in the Congress) at somewhat less than a billion dollars ($895,400,000), or 0.428 percent of taxable payroll. The Department of Health, Education, and Welfare estimates that the cost in 1975 will be between 0.49 and 0.62 percent of taxable payroll, assuming a taxable limit of $4,800, which is the current figure.

In a democratic society people decide how much of their incomes they will devote to public services.

The consumer, as a voter, secures a desired balance between public and private services. Through this process, the Federal Government has always provided a national minimum of welfare services for its citizens.

In 1935 the need for a national pension program was fulfilled by enacting the social security system. At that time the medical associations and the life insurance companies opposed the program for most of the same reasons that today they oppose the social insurance approach to health care for the aged. Yet for three decades that program has demonstrated its effectiveness in providing a floor for retirement income. In fact, its minimum provisions have made possible the widespread development of private plans in recent years.

In our opinion, private insurance carriers would have a broader, sounder market for voluntary insurance among our older people by building on the basic provisions of social insurance legislation. With a balance of effort on the part of both industry and Government, a program can be built which will provide for every citizen's health needs in his old age. The social security system can provide the foundation for a comprehensive private-public health insurance system; it is the function and the opportunity of private, voluntary insurance to build on this for completely adequate health care at reasonable cost. On behalf of our 3 million policyholders, we want to do our part.

The need for social insurance in this area has been summarized best by Business Week magazine, February 13, 1960:

"If the Government steps in to provide insurance against catastrophic illnesses of the aged, it will not be moving in where private industry can do the job. It will be assuming responsibility in an area where industry has found it cannot offer the protection needed."

An objective and unbiased article in the Harvard Business Review, "Health Care of the Aged," January-February 1960, comes to a similar conclusion:

"Notwithstanding the considerable technical problems of providing hospitalization and surgical benefits under social security, the very difficulty of cost prediction itself, as well as the essentiality of these benefits, would seem to recommend the social insurance method."

CURRENT LEGISLATIVE PROPOSALS

Health insurance for the aged is probably the single most important domestic issue now before this country. There is a growing recognition by all groups that some form of Federal legislation must be enacted. You are undoubtedly aware of the fact that there are a number of bills now before the Congress. The situation is changing constantly and at this time it is impossible to predict which bill or combination of bills may progress through the Congress or whether any bill will pass. The basic point of contention is whether the social security system will be used to provide this protection, or Federal funds will be used to subsidize insurance for older persons who qualify on the basis of a means test. The company policy supports the use of social security.

All of the bills now being publicly discussed have various benefit proposals. It is unlikely that any one bill will emerge unchanged and, for this reason, the bills will not be analyzed in detail.

Under consideration in the U.S. Senate are:

1. The Javits bill (sponsored by seven Members of the Senate) would appropriate Federal funds for grants to the States. Federal funds supplemented by State funds would then be used to subsidize health insurance for older persons who qualified on the basis of a means test.

2. Bills introduced by Senators KENNEDY, HUMPHREY, and MORSE would increase the social security tax to finance health care for the aged. All three of the bills are different in terms of benefits but all would cost about an additional one-quarter of 1 percent for both employer and employee.

Under consideration in the House of Representatives are:

1. The Forand bill would also use the social security system to finance the health care of older persons. Benefits are somewhat different than the other bills. The cost would be one-quarter of 1 percent for both employer and employee.

2. A proposal is being considered by the House Ways and Means Committee to increase the old-age assistance program so that larger Federal grants will be made to the States for medical care for indigent older persons.

(Later legislative developments include (1) submission to the House Ways and Means Committee by the Eisenhower administration of a "medicare program for the aged," and (2) introduction in the Senate of a bill sponsored by Senator PAT MCNAMARA, of Michigan and 16 Democratic colleagues. Under the administration program the States, with the aid of Federal matching grants, would administer a plan to be offered to those 65 and over who either did not pay an income tax in the preceding year or had gross income not exceeding $2,500 ($3,800 for a couple). Those eligible and accepting the plan would pay a $24 a year enrollment fee. The McNamara bill, like the Forand bill, is based on the social security plan but would provide more comprehensive coverage than the Forand bill. It also makes provision for coverage of people ineligible for OASDI benefits.)

All of the bills in the area of health insurance for the aged have been evaluated on the basis of whether the program will be financed by the social insurance approach or the charity approach with a means test to determine eligibility.

H.R. 12176—Farm Labor Legislation

EXTENSION OF REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1960

Mr. GATHINGS. Mr. Speaker, the Fruit Growers League, an organization of some 400 growers in the State of Oregon, has contacted me with reference to their strong interest and support for H.R. 12176, the farm labor legislation reported by the House Committee on Agriculture.

These growers, in a letter dated June 9, 1960, and signed by Mr. Charles E. Henry, their president, and Mr. Robert K. Norris, chairman of their labor committee speak from personal knowledge and experience relative to the need for this legislation which would reaffirm the intent of Congress that the Secretary of Labor has no authority in the matter of wages or conditions of employment of domestic farmworkers and which would extend for an additional 2 years the provisions of Public Law 78.

Their letter is so very helpful to an understanding of the need for enactment of this legislation at this session that I wish to include their letter in these remarks so that all Members may benefit from their views. Because the State of Oregon has been singled out by some as a State which would have no interest in such legislation because, as it was alleged, there is available local labor to meet the needs of agriculture due to the high wages paid farmworkers. The letter and the information therein will be of great interest both to those who so contend and to those who are better acquainted with the facts.

The letter follows:

FRUIT GROWERS LEAGUE,
Medford, Oreg., June 9, 1960.

Re H.R. 12176.
Hon. E. C. GATHINGS,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN: The Fruit Growers League of Jackson County, Oreg., is made up of some 400 growers who are dependent upon other than local labor for their harvest work. The local work force is so largely employed in packing and storage plants that the balance cannot even begin to furnish the necessary orchard help.

Due to its geographical location, 300 miles from Portland, the nearest metropolitan area, the Medford district is in no position to compete with more adjacent districts for domestic seasonal farm labor. This, together, with a short harvest season (normally about 6 weeks) makes it essential that we have available a certain number of Mexican Nationals, if we are to handle a highly perishable crop within permissible harvest dates.

We, therefore, urge the passage of H.R. 12176 which extend Public Law 78 to June 30, 1963 and restricts the authority of the Secretary of Labor in the regulation of wages,

hours, transportation, and other prerequisites of domestic farmworkers. We request the support of this bill because:

1. We cannot believe that the Congress ever intended to give to the Secreary of Labor legislative power over agricultural labor.

2. The Secretary of Labor has ample authority, under Public Law 78, for the protection of domestic farm labor against misuse, or abuse, of imported foreign labor.

3. The minority report of dissenting committee members is misleading in so many respects that all its statements should be carefully scrutinized:

(a) An average annual wage of $761 per farmworker includes women and children who constitute almost one-half of the seasonal farm labor, and most of whom work locally for only a few weeks.

(b) Harvest work is predominantly piece rate work. If a worker makes only 30 to 35 cents an hour that is a return for the amount of labor they have performed.

(c) The four distinguished consultants, whos recommendations were made a part of H.R. 11211, are undoubtedly men of wide experience, but is extremely doubtful that any one of them has ever had personal experience in meeting a farm payroll, financing orchard production against an unknown market or harvesting crops with domestic migrant labor.

(d) The statement on page 7 paragraph 3, implies that there is no shortage of domestic labor in Oregon and Washington because these States pay the highest farm wages in the Nation, yet the Oregon State Employment Service has had to certify the Medford district for the use of Mexican nationals since the program started, with the exception of a crop failure in 1954. High wages alone do not make more competent workers available.

(e) It states that foreign labor was never used in the United States prior to 1942. The Department of Labor "Farm Labor Fact Book" states that: "Foreign workers have been employed in this country for more than 50 years." Most of these were Mexican wetbacks who crossed the river both spring and fall to work in the border States.

(f) The 300,000 migrant farm work force is undoubtedly a social problem and one that requires attention, but the committee minority imply that such solution of the migrant is the duty of the farmer. They refuse to concede that the great majority of these people belong to the professionally unemployed who either cannot or will not qualify for industrial employment. Others are merely indifferent workers on their own premises or just plain rovers. Naturally, such a condition is made to order for union officials and other well meaning but poorly informed persons who would protect this element of society at the expense of the farmer.

(g) The report states that an increase of 10 percent in farm labor wages would only increase prices one-half of 1 percent. Actually in the Medford district, labor costs are in excess of 65 percent of our total cost delivered to the packingplant. An increase of 10 percent over our present wages (the highest agricultural wages in the Nation) would mean an increase of 6.5 percent at the plant.

(h) It further states: "The consumer would gladly and voluntarily pay this very small extra cost to end labor conditions which blot the conscience of our Nation, according to witnesses." It is quite evident that the committee member who dictated that statement has had very meager experience with the purchasers of farm produce. Certainly it would be regarded as foolish by any informed person. The broker, distributor, retailer, and consumer are all going to buy as cheaply as possible.

(i) The minority report states that "experience has clearly shown that unreliability is not a characteristic of the seasonal farm worker." Here is what happened in Medford in 1959. One hundred and ninety-two domestic worker's from Texas were recruited through the employment service. These men were advanced transportation, housed in a good labor camp, and guaranteed work similar to the Mexican nationals:

Twelve never worked after arrival.

Seventy-nine had left by the end of the first week.

Fifty-two stayed through their 6-week contract.

One hundred and eighteen were recruited on the same basis in California:

Twenty-one left before checking into camp.

Sixty-three left the first week, 29 of whom did not go to work.

Twenty-five left the second week.

Four stayed through the season.

During this time Mexican nationals, working in mixed crews with these people, averaged $1.41 per hour for their full contract period.

4. Agriculture in general, and the fruit industry in particular, requires a large amount of seasonal labor; continuous full employment obviously cannot be guaranteed. However, agriculture as an industry is entitled to able, willing and qualified help. Our force of migrant persons (of which only a portion are actually employable) is not adequate to do the job. Supplemental foreign labor will be necessary to augment the domestic labor supply for some years to come. This is particularly true in the case of pear and apple picking which requires the use of 12- and 14-foot ladders with a 40-pound load in a picking bag. Such work cannot be done by the average woman or child. As a result, family groups will not work since only the man can be employed.

5. One of the misleading statements constantly made by the opponents of this bill is: "Foreign labor is used by only 2 percent of the American farms, hence it is only the corporation farm that benefits." Actually this means over 95,000 farms, located in 37 States. The idea that only the immediate user of Mexican nationals benefits is all wrong. When help is scarce in a district, the relief afforded by Mexican nationals helps everyone since that many other workers are available for nonusers. It is true that it is generally the larger operators who contract the nationals since this is an expensive operatiton unless they can be utilized for some time. This is obviously impossible for the small farmer.

Such arguments merely illustrate the fact that one of agriculture's greatest difficulties in dealing with the Department of Labor is due to so many people knowing so many things about agriculture that are just not true. It is for this reason that it is not to the best interest of agriculture, or the general public, to place too much power in the hands of the Secretary of Labor alone who appears to be influenced by pressure groups, with their own purposes in view, as well as by many emotional, but poorly informed and unpractical people. On the other hand, we believe that the very diversified and complex farm labor problem is much better understood by the Department of Agriculture. Therefore, if regulations, relative to farm labor are to be issued, they should come from the Department of Agriculture.

In conclusion, please understand that the operators, who are large enough to use the national program, are fully aware of the migrant wage and housing problems, and in self-preservation are doing what they can do afford better housing, wages, and living conditions. However, the fact remains, that due to geographical location wide variance in type of crop and perishibility of certain products, any attempt to impose poorly timed or adverse regulations could be disastrous to agriculture.

Very truly yours,

FRUIT GROWERS LEAGUE OF JACKSON COUNTY,
CHARLES E. HENRY,
President.
ROBT. K. NORRIS,
Chairman, Labor Committee.

President Eisenhower Thanks Democratic Congressmen for Their Assurance of Support of Mutual Security Funds

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 14, 1960

Mr. BRADEMAS. Mr. Speaker, today is a day of great importance to the security of the United States and the defense of the free world, for we are to begin debate on the bill providing appropriations for the mutual security program.

Mr. Speaker, I was glad to be one of a group of Democratic Members of Congress who on May 25, 1960, wrote a letter to President Eisenhower assuring him that, in spite of criticisms we felt with respect to the handling by his administration of the foreign policy of our country, we would oppose any unwise cuts in the mutual security appropriations bill.

We told the President of our pride in the support which the Democratic Party has given to the Marshall plan, the Truman doctrine, point 4 and the mutual security program. We concluded:

We wish to reaffirm the policy of the Democratic Party in past years of resisting the encroachment of communism and stimulating the advance of democracy in the underdeveloped areas of the world.

Mr. Speaker, under unanimous consent, I include at this point the text of the letter to President Eisenhower to which I have referred:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., May 25, 1960.

THE PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: We, the undersigned Democratic Members of Congress, are writing to you concerning the mutual security appropriations bill shortly to be considered by the House of Representatives.

We take note of the letters many of us have received from your Deputy Assistant expressing your gratification and appreciation for our support of the mutual security authorization bill. We take note as well of the action of the Vice President in urging Republican Members of the House Appropriations Committee to resist massive reductions in this program.

We have for the past 7 years been critical of the handling by your administration of the foreign policy of our country and in recent days we have been deeply distressed by the conduct of our affairs before the

summit meeting. Indeed, some of us have just written to you a series of questions concerning the collapse of the summit conference.

We nonetheless believe the mutual security program an indispensable part of our foreign policy and we wish to advise you that we shall oppose any unwise cuts in the mutual security appropriations bill.

We are proud of the support which the Democratic Party has given to the Marshall plan, the Truman doctrine, point 4 and the mutual security program. We wish to reaffirm the policy of the Democratic Party in past years of resisting the encroachment of communism and stimulating the advance of democracy in the underdeveloped areas of the world.

Respectfully,

CHET HOLIFIELD, 19th District, California; CHESTER BOWLES, Second District, Connecticut; STEWART L. UDALL, Second District, Arizona; JAMES ROOSEVELT, 26th District, California; CLEMENT W. MILLER, First District, California; CHARLES O. PORTER, Fourth District, Oregon; HUGH J. ADDONIZIO, 11th District, New Jersey; MARTHA W. GRIFFITHS, 17th District, Michigan; EMANUEL CELLER, 11th District, New York; GEORGE A. KASEM, 25th District, California; CHARLES C. BIGGS, JR., 13th District, Michigan; ROBERT N. GIAIMO, Third District, Connecticut; THOMAS J. LANE, Seventh District Massachusetts; LEONARD G. WOLF, Second District, Iowa; LEE METCALF, First District, Montana; FRANK THOMPSON, JR., Fourth District, New Jersey; JOHN BRADEMAS, Third District, Indiana; EDITH GREEN, Third District, Oregon; JEFFREY COHELAN, Seventh District, California; JOSEPH KARTH, Fourth District, Minnesota; JOHN A. BLATNIK, Eighth District, Minnesota; LEONARD FARBSTEIN, 19th District, New York; HERMAN TOLL, Sixth District, Pennsylvania; RALPH J. RIVERS, At Large, Alaska; JAMES G. O'HARA, Seventh District, Michigan; JOHN R. FOLEY, Sixth District, Maryland; EUGENE J. KEOGH, Ninth District, New York; WILLIAM J. GREEN, JR., Fifth District, Pennsylvania.

Mr. Speaker, Mr. FRIEDEL, of Maryland, also asked to be associated with the letter.

Under date of May 31, 1960, I received, as the signatory of the May 25 letter on behalf of my colleagues, a letter from President Eisenhower expressing his appreciation for our assurances of support for this program.

Said President Eisenhower, "It is gratifying to me, and reassuring, that we are in full accord in respect to this activity so basic to our security and the future of freedom everywhere."

Mr. Speaker, under unanimous consent I include at this point in the RECORD President Eisenhower's letter of May 31, 1960:

THE WHITE HOUSE,
Washington, May 31, 1960.

Hon. JOHN BRADEMAS,
House of Representatives,
Washington, D.C.

DEAR MR. BRADEMAS: I hope you will advise the cosigners of your May 25 letter of my appreciation of their assurance, and of yours, that your group will steadfastly support adequate funds for the mutual security program. Of course I am aware that we may differ on certain aspects of the Nation's affairs, but it is gratifying to me, and reassuring, that we are in full accord in respect to this activity so basic to our security and the future of freedom everywhere.

With best wishes.

Sincerely,

DWIGHT EISENHOWER.

REPUBLICAN EX-CONGRESSMAN STRONG ON WORDS, WEAK ON DEEDS

And, Mr. Speaker, if I may be permitted to make a personal reference, as I listen to some of the criticism directed at me by my Republican predecessors in Congress because I am among those Members of Congress from both sides of the aisle interested in having more facts about the U–2 incident—as I listen to some of my Republican predecessor's criticisms, I am constrained to point out that the voice of the demagog is once more heard in the land.

For the Republican ex-Congressman who seeks to cover with a blanket of silence an honest and essential discussion of foreign policy events that may deeply affect the security of our country is very strong on words but very weak on deeds in the support of freedom against the menace of communism.

REPUBLICAN EX-CONGRESSMAN VOTES AGAINST EISENHOWER PROGRAM

For, Mr. Speaker, the Republican ex-Congressman to whom I refer on May 14, 1958, voted for the mutual security authorization bill but on July 2, 1958, turned right around to vote against the mutual security appropriation bill. This Republican ex-Congressman thus cast his vote against a program which President Eisenhower has repeatedly insisted is essential to the defense of the free world against the forces of communism.

Mr. Speaker, I voted for the mutual security authorization bill and I shall vote for the mutual security appropriations bill as well. The times are too dangerous to be able to afford the doubletalk of voting for the first and against the second.

Mr. Speaker, under unanimous consent I insert at this point the text of a letter to me dated May 17, 1960, from Bryce N. Harlow, deputy assistant to the President, concerning my vote in support of the mutual security authorization bill:

THE WHITE HOUSE,
Washington, May 17, 1960.

Hon. JOHN BRADEMAS,
House of Representatives,
Washington, D.C.

DEAR MR. BRADEMAS: On Saturday last, as he completed preparations for the summit conference in Paris, President Eisenhower requested me to send to you, in his behalf, this note of gratification and appreciation for your support of the mutual security authorization bill. He stressed once again his profound conviction that this program is indispensable to our own and free world defense against Communist imperialism, and indispensable also in encouraging struggling millions in less fortunate nations in their effort to live their lives in freedom. It is a program requiring, he said, unreserved support by all of our informed citizens and officials, and he feels it would be the height of folly to allow isolated administrative shortcomings and disappointments, or local considerations, political or otherwise, to tempt anyone to jettison or cripple the entire undertaking.

Especially the President voiced this hope, and asked that it be communicated to you in his behalf: that your responsible act of support for the mutual security authorization be matched by a determined resistance to any effort to effect massive reductions in the mutual security appropriations soon to be considered by the House. Massive reductions, he pointed out, can be accomplished only by undermining our own security, free world security, and the cause of human freedom everywhere in the world.

The President asked me to explain that he would have advised you himself of these views had his time permitted before leaving for Paris.

With best wishes.

Sincerely,

BRYCE N. HARLOW,
Deputy Assistant to the President.

Mr. Speaker, I hope very much that we Democrats will support adequate funds for the mutual security program. It is in the interest of our country and of the cause of human freedom that we do so.

Some Penetrating Questions on the Subject of Foreign Imports

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1960

Mr. STRATTON. Mr. Speaker, I frequently have taken the floor of this House in an effort to point out to my colleagues the tremendous impact on the people of my congressional district of the rising percentage of foreign imports and the depressing effect that these imports are having on the economic livelihood and jobs of the people whom I have the honor to represent in this body. Nothing that I have been able to say, however, puts this serious question more dramatically than a letter I have recently received from one of my constituents, Mr. John Blatchford, president of Local 2004, the International Brotherhood of Electrical Workers. Under leave to extend my remarks, I include Mr. Blatchford's letter in the CONGRESSIONAL RECORD:

LOCAL 2004, IBEW,
Amsterdam, N.Y., May 24, 1960.

To Whom It May Concern:

Our local union, No. 2004, IBEW, has appointed a committee to interpret for rank and file the effects of foreign competition on American labor in general, and on the workers in our area in particular.

To help us in this project we would appreciate answers to some questions asked by your members. May we stress the importance of making the answers simple and direct so that our people will have a fair opportunity to evaluate them objectively and subjectively.

Question 1:

(a) What direct and immediate benefit does the American wage earner derive from low priced foreign imports made possible by our low tariff?

(b) What if there is such a benefit, how do we show it to the person whose job has been eliminated because cheap foreign labor has stolen it from him with the apparent blessing of our Government?

Question 2: If, as we understand, it is America's policy to raise the living standard of the rest of the world to our level, how do you explain the apparent contradiction in the way our tariff laws work? Will not the current trend eventually lower our living standard to the substandard endured in other countries?

Question 3: What happened to the old slogan "Buy American." Is it now un-American to buy American? Is it now un-American to protect American labor?

Here in Amsterdam we are gravely perplexed and concerned. Our community is one of the hardest hit by the blight of cheap foreign competition, and one of the longest suffering. Our future looks very bleak indeed. We are told, in effect, that our situation is necessary to our governments overall policy. Frankly, that sounds like gobbledygoop. Perhaps you can rationalize it for us so that when we find ourselves in the breadline, we can comfort ourselves with the knowledge that we are there in a good cause.

Sincerely,

JOHN BLATCHFORD,
President.

Public Debt and Tax Rate Extension Act of 1960

SPEECH
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 8, 1960

The House in Committee of the Whole House on the State of the Union under consideration the bill (H.R. 12381) to increase for a 1-year period the public debt limit set forth in section 21 of the Second Liberty Bond Act and to extend for 1 year the existing corporate normal-tax rate and certain excise-tax rates.

Mr. O'HARA of Illinois. Mr. Chairman, if there is any excise tax that cannot be supported by sound legislative reasoning and justified by morality it is that imposed on communications and transportation. There was necessity and there was justification when we were at war. No one in those grim war years complained of the sacrifices entailed. The wartime excise tax served the double purpose of adding to our war dollars and of discouraging civilian overburdening of the wires and the rails so essential to the war effort.

With the end of hostilities the excise tax, certainly that on telephone calls, immediately should have been lifted. The telephone in the modern world and in the way of life we follow is a necessity. The overwhelming majority of telephone users are little men and little women, composing ordinary families who run their households on tight budgets. To further burden them with an excise tax on their telephone calls in peacetime has seemed to me downright unfair. I have said so many times on this floor and elsewhere. I have said so in many letters I have written my constitutents.

What is the situation in which I find myself today. We have before us a package bill. It carries some $4 billion in taxes, revenues without which our Government cannot function. It also provides for the raising of the debt ceiling in order that our Nation can be spared the ignominy of bankruptcy and not paying our debts as contracted. In this package bill—a very small part of the bill—is the item of the excise tax on communications and transportation. Under an open rule we could have eliminated by amendment the excise tax on telephones, which was relatively small in dollar measure, and retained the parts of the bill that were necessary and which would bring to the Federal Treasury the money needed for the functioning of our Government.

It was clearly developed in the debate preceding the adoption of the rule that the only way open to those of us who were committed to an elimination of the excise tax on telephones was to vote against the rule. I voted against the adoption of the rule. Had the closed rule been defeated, the way would have been clear for the adoption of an open rule, under which an amendment would be in order to strike the telephone tax.

In fairness to the Ways and Means Committee, which has the hard job of writing tax legislation, and nobody wants to be taxed if he can avoid, it should be pointed out that the reason given for retaining the Federal telephone tax was that State governments were preparing to pick it up so that the taxpayers would still have the burden to carry. The Ways and Means Committee I am sure has the deep respect and confidence of every Member in this body. Certainly there is not a harder working group of American public servants or private citizens anywhere in the country. The workload is terrific, and I wonder how the members of the committee are able to carry the workload, week after week, month after month.

Nevertheless, on the matter of the excise tax on communications and transportation I have felt ever since I have been in the Congress that it is so unfair in its very nature that in my own evaluation I could accept as valid no excuse for its continuance. I have so voted on every occasion given me. I so voted earlier today in voting against the adoption of the closed rule.

As to the bill now before us and upon which we soon shall be voting I doubt very much if a single Member of this body would cast his vote in opposition if that Member knew that his vote would be decisive. Regardless of my strong objection to an excise tax I believe to be most unfair and unjustified, I have too keen a sense of fiscal responsibility to throw away $4 billion of needed revenue and to invite financial chaos by voting no on the only tax measure upon which under the circumstances existing we shall have the opportunity to act.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

OFFICERS OF THE SENATE

Secretary—Felton M. Johnston.
Chief Clerk—Emery L. Frazier.
Sergeant at Arms—Joseph C. Duke.
Secretary for the Majority—Robert G. Baker.
Secretary for the Minority—J. Mark Trice.
Chaplain—Rev. Frederick Brown Harris, D.D.

STANDING COMMITTEES OF THE SENATE

Committee on Aeronautical and Space Sciences

Messrs. Johnson of Texas (chairman), Russell, Magnuson, Anderson, Kerr, Symington, Stennis, Young of Ohio, Dodd, Cannon, Bridges, Wiley, Mrs. Smith, Messrs. Martin, and Case of New Jersey.

Committee on Agriculture and Forestry

Messrs. Ellender (chairman), Johnston of South Carolina, Holland, Eastland, Humphrey, Symington, Talmadge, Proxmire, Jordan, Young of Ohio, Hart, Aiken, Young of North Dakota, Hickenlooper, Mundt, Schoeppel, and Cooper.

Committee on Appropriations

Messrs. Hayden (chairman), Russell, Chavez, Ellender, Hill, McClellan, Robertson, Magnuson, Holland, Stennis, Johnson of Texas, Pastore, Kefauver, Monroney, Bible, Byrd of West Virginia, Dodd, McGee, Bridges, Saltonstall, Young of North Dakota, Mundt, Mrs. Smith, Messrs. Dworshak, Kuchel, Hruska, and Allott.

Committee on Armed Services

Messrs. Russell (chairman), Byrd of Virginia, Johnson of Texas, Stennis, Symington, Jackson, Ervin, Thurmond, Engle, Bartlett, Cannon, Saltonstall, Bridges, Mrs. Smith, Messrs. Case of South Dakota, Bush, and Beall.

Committee on Banking and Currency

Messrs. Robertson (chairman), Fulbright, Sparkman, Frear, Douglas, Clark, Proxmire, Byrd of West Virginia, Williams of New Jersey, Muskie, Capehart, Bennett, Bush, Beall, and Javits.

Committee on the District of Columbia

Messrs. Bible (chairman), Morse, Frear, Hartke, Beall, Case of South Dakota, and Prouty.

Committee on Finance

Messrs. Byrd of Virginia (chairman), Kerr, Frear, Long of Louisiana, Smathers, Anderson, Douglas, Gore, Talmadge, McCarthy, Hartke, Williams of Delaware, Carlson, Bennett, Butler, Curtis, and Morton.

Committee on Foreign Relations

Messrs. Fulbright (chairman), Green, Sparkman, Humphrey, Mansfield, Morse, Long of Louisiana, Kennedy, Gore, Lausche, Church, Wiley, Hickenlooper, Aiken, Capehart, Carlson, and Williams of Delaware.

Committee on Government Operations

Messrs. McClellan (chairman), Jackson, Ervin, Humphrey, Gruening, Muskie, Mundt, Curtis, and Javits.

Committee on Interior and Insular Affairs

Messrs. Murray (chairman), Anderson, Jackson, O'Mahoney, Bible, Carroll, Church, Gruening, Moss, Long of Hawaii, Lusk, Dworshak, Kuchel, Goldwater, Allott, Martin, and Fong.

Committee on Interstate and Foreign Commerce

Messrs. Magnuson (chairman), Pastore, Monroney, Smathers, Thurmond, Lausche, Yarborough, Engle, Bartlett, Hartke, McGee, Schoeppel, Butler, Cotton, Case of New Jersey, Morton, and Scott.

Committee on the Judiciary

Messrs. Eastland (chairman), Kefauver, Johnston of South Carolina, Hennings, McClellan, O'Mahoney, Ervin, Carroll, Dodd, Hart, Wiley, Dirksen, Hruska, Keating, and Cotton.

Committee on Labor and Public Welfare

Messrs. Hill (chairman), Murray, Kennedy, McNamara, Morse, Yarborough, Clark, Randolph, Williams of New Jersey, Goldwater, Dirksen, Case of New Jersey, Javits, Prouty, and Brunsdale.

Committee on Post Office and Civil Service

Messrs. Johnston of South Carolina (chairman), Monroney, Yarborough, Clark, Jordan, Randolph, Carlson, Fong, and Brunsdale.

Committee on Public Works

Messrs. Chavez (chairman), Kerr, McNamara, Randolph, McCarthy, Young, Muskie, Gruening, Moss, Long of Hawaii, Lusk, Case of South Dakota, Martin, Cooper, Scott, Prouty, and Fong.

Committee on Rules and Administration

Messrs. Hennings (chairman), Hayden, Green, Mansfield, Jordan, Cannon, Curtis, Keating, and Brunsdale.

UNITED STATES SUPREME COURT

Mr. Chief Justice Warren, of California, Hotel Sheraton-Park, Washington, D. C.
Mr. Justice Black, of Alabama, 619 S. Lee St., Alexandria, Va.
Mr. Justice Frankfurter, of Massachusetts, 3018 Dumbarton Ave.
Mr. Justice Douglas, of Washington, 4852 Hutchins Pl.
Mr. Justice Clark, of Texas, 2101 Connecticut Ave.
Mr. Justice Harlan, of New York, 1677 31st St.
Mr. Justice Brennan, of New Jersey, 3037 Dumbarton Ave.
Mr. Justice Whittaker, of Missouri, 5000 Van Ness St.
Mr. Justice Stewart, of Ohio, 3013 Q St.

OFFICERS OF THE SUPREME COURT

Clerk—James R. Browning, 454 New Jersey Ave. SE.
Deputy Clerk—Edmund P. Cullinan, 4823 Reservoir Rd.
Deputy Clerk—Richard J. Blanchard, 427 St. Lawrence Dr., Silver Spring, Md.
Marshal—T. Perry Lippitt, 6004 Corbin Rd.
Reporter—Walter Wyatt, 1702 Kalmia Rd.
Librarian—Helen Newman, 126 3d St. SE.

UNITED STATES JUDICIAL CIRCUITS

JUSTICES ASSIGNED
TERRITORY EMBRACED

District of Columbia: Mr. Chief Justice Warren. District of Columbia.

First judicial circuit: Mr. Justice Frankfurter. Maine, Massachusetts, New Hampshire, Puerto Rico, Rhode Island.

Second judicial circuit: Mr. Justice Harlan. Connecticut, New York, Vermont.

Third judicial circuit: Mr. Justice Brennan. Delaware, New Jersey, Pennsylvania, Virgin Islands.

Fourth judicial circuit: Mr. Chief Justice Warren. Maryland, North Carolina, South Carolina, Virginia, West Virginia.

Fifth judicial circuit: Mr. Justice Black. Alabama, Canal Zone, Florida, Georgia, Louisiana, Mississippi, Texas.

Sixth judicial circuit: Mr. Justice Stewart. Kentucky, Michigan, Ohio, Tennessee.

Seventh judicial circuit: Mr. Justice Clark. Illinois, Indiana, Wisconsin.

Eighth judicial circuit: Mr. Justice Whittaker. Arkansas, Iowa, Minnesota, Missouri, Nebraska, North Dakota, South Dakota.

Ninth judicial circuit: Mr. Justice Douglas. Alaska, Arizona, California, Idaho, Montana, Nevada, Oregon, Washington, Guam, Hawaii.

Tenth judicial circuit: Mr. Justice Whittaker. Colorado, Kansas, New Mexico, Oklahoma, Utah, Wyoming.

Appendix

President Eisenhower's Address in Manila

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, June 16, 1960

Mr. WILEY. Mr. President, the withdrawal of the invitation by the Japanese Government for President Eisenhower to visit that country is a cause for deep concern to the free world.

We recognize, of course, that the Government of Japan maintains its friendly attitude toward the United States. Moreover, I am confident that a large majority of the people do not endorse the anti-U.S. activities—agitated and directed by the international conspiracy of communism.

Nevertheless, the fact that the long arm of Moscow and Peiping could reach into Japan, disturb internal affairs, result in riots that wounded many, and, yes, killed one student, and required the government to reverse its diplomatic policy—this is indeed a serious matter.

Realistically, this is aggression by "agitation and subversion." We can expect, of course, that there will be gloating in the circles of communism.

The fact that this could happen—despite a postwar policy in which we have attempted to build up and reconstruct Japan, however, requires a need for a reappraisal of our policy.

The President's tour of the Far Eastern countries reaffirming our dedication to peace, as well as pledging cooperation and friendship to the people of Asia, will constitute, I am confident, a major antidote to the spread of Communist influence in that area of the globe.

As in the past, the President, wherever he goes, leaves a wake of good will toward our country.

Following the President's return home, however, I believe that we need to reappraise the effectiveness with which we are getting across, not only the ideas of freedom, but with which we are countering, or failing to counter, the Communist ideological offensive.

Yesterday the President laid the groundwork for realistic, ideological recognition, and countering the menace of communism to the Asian people in a speech in Manila.

At this time I ask unanimous consent to have printed in the RECORD at this point two items—first, a partial text of the Manila address, and, second, a splendid editorial from the Washington Post entitled "Nationalism in Asia"—reviewing the significance of the President's presentation.

There being no objection, the address and editorial were ordered to be printed in the RECORD, as follows:

PARTIAL TEXT OF IKE'S MANILA ADDRESS

MANILA, June 15.—The following is that part of President Eisenhower's address to the Philippine Congress which dealt with communism:

Communist leaders fear constructive nationalism as a mortal foe. This fear is evident in the continuing efforts of the Communist conspiracy to penetrate national movements, to pervert them, and to pirate them for their own evil objectives.

To dominate—if they can—the eternal impulse of national patriotism, they use force and threats of force, subversion, and bribery, propaganda and spurious promises. They deny the dignity of men and have subjected many millions to the execution of master plans dictated in faraway places.

Communism demands subservience to a single ideology, to a straitjacket of ideas and approaches and methods. Freedom of individuals or nations to them is intolerable. Freemen, free nations make their own rules to fit their own needs within a universally accepted frame of justice and law.

Under freedom, thriving sovereign nations of diverse political, economic, and social systems are the basic healthy cells that make up a thriving world community. Freedom and independence for each is in the interest of all.

AIM OF U.S. ASSISTANCE

For that very reason—in our own enlightened self-interest, in the interest of all our friends—the purpose of American assistance programs is to protect the right of nations to develop the political and social institutions of their choice, rather than having to accept extremist solutions under the whip of hunger, or the threat of armed attack and domination.

We readily accept the fact that there is a great variety of political, social, and economic systems in the world; and we accept the further fact that there is no single, best way of life that answers the needs of everyone, everywhere.

The American way satisfies the United States. We think it best for us. But the United States need not believe that all should imitate us. What we do have in common with the free nations in Asia, Africa, Europe, and Latin America are basic and weighty convictions, more important than differences of speech and color and culture.

Some of these convictions are: That man is a being capable of making his own decisions; that all people should be given a fair opportunity to use their God-given talents, to be worthy heirs to their fathers, to fulfill their destiny as children of God; that voluntary cooperation among groups and nations is vastly preferable to cooperation by force—indeed, voluntary cooperation is the only fruitful kind of effort in the long run.

True enough, in a too lengthy period of history, some European nations seemed convinced that they were assigned the mission of controlling the continents. But always powerful voices within those countries attacked the policy of their own governments. And we of the American Republics—21 independent nations, once European colonies—denied in arms and in battle the validity of the assumed mission. Colonialism died there because true nationalism was a more potent force.

WHO ARE COLONIALISTS?

Since 1945, 33 lands that were once subject to Western control have peaceably achieved self-determination. These 33 countries have a population of almost a billion people. During the same period, 12 countries in the Sino-Soviet sphere have been forcibly deprived of their independence. The question might be asked: Who are today the colonialists?

The basic antagonism of the Communist system to anything which it cannot control is the single, most important cause of the tension between the free nations in all their variety on the one hand, and, on the other, the rigidly controlled Communist bloc.

One purpose of the Communist system's propaganda is to obscure these true facts. Right now, the principal target is the United States of America. My republic is painted as an imperialistic seeker of limitless power over all the peoples of the world, using them as pawns on the chessboard of war, exploiting them and their resources to enrich our own economy, degrading them to a role of beggarly dependence.

The existence, the prosperity, the prestige of the Republic of the Philippines proves the falsity of those charges. You, as a people, know that our Republic is no empire of tyranny. Your leaders repeatedly have so testified to the world. But for a few minutes I should like to speak to you on what America stands for: what it stood for before I became President and what it will continue to stand for after I have left office.

More important than any one year, any one incident, or any one man is the role we have played through our whole history—the role we shall continue to play so long as our Republic endures.

Two hundred years, lacking 16, have passed since our forefathers proclaimed to the world the truths they held self-evident; that all men are created equal; that they are endowed with unalienable rights to life, liberty, the pursuit of happiness; that governments are instituted to secure these rights, deriving their just powers only from the consent of the governed.

SEATO IS CITED

Beyond the guarantees of American strength, we seek to expand a collective security. SEATO demonstrates what can be accomplished. Since its inception, not one inch of free southeast Asia territory has been lost to an aggressor.

Collective security must be based on all fields of human endeavor, requiring cooperation and mutual exchange in the areas of politics, economics, culture, and science.

We believe in the expansion of relations between nations as a step toward more formal regional cooperation. In accord with this belief, we support the initiative taken by the Government of the Philippines during the past several years in establishing closer ties with its neighbors.

Patience, forbearance, integrity, an enduring trust, must characterize our mutual relations. Never, I pray, will the United States because of its favored position in size and numbers and wealth attempt to dictate or to exercise unfair pressure, to forget or to ig-

nore the Republic of the Philippines—its equal in sovereign dignity. And never, I pray, will the Philippines make a whipping boy of the United States. Each of us proudly recognizes the other as a sovereign equal.

And, my friends, at this point I just want to interpolate one simple thought on the cooperative efforts for our own security, for advancing the standards of living of peoples, for everything that we do together. There are of course differences in the ability of each nation to make contributions.

MORAL LEADERSHIP

Each of us as an individual is different from every other individual. Physically, mentally, and in the possession of the world's goods, we are somewhat different. But I submit, Members of the Congress, that there is one field where no man, no woman, no nation, need take a secondary place, and that is in moral leadership.

The spirit of a people is not to be measured by its size or its riches or even its age. It is something that comes from the heart, and from the very smallest nation can come some of the great ideas—particularly those great inspirational ideas that inspire men to strive always upward and onward.

Therefore, when I say that our two nations are sovereign equals, I mean it just in that spirit, in the sense that you have just as much to contribute to the world and to yourselves and to freedom as the greatest and the most powerful nation in the world.

In the great cause of peace and friendship and freedom, we who are joined together will succeed. The eternal aspirations, purposes, ideals of humanity inspire and hearten and urge us to success.

But we face repeated challenges; endless temptations to relax, continuous campaigns of propaganda and threat. Let us stand more firmly together against them all.

With God's help we shall march ever forward toward our destiny as free nations and great good friends.

[From the Washington Post, June 16, 1960]

NATIONALISM IN ASIA

President Eisenhower's speech to the Philippine Congress was a pointed reply to the noisy elements who are trying to distort the nature of his good-will mission to the Far East. His thesis was the antithesis of the imperialism everywhere attributed to the United States by Communist agents seeking a cover for their efforts to impose a new form of tyranny on mankind. The President found only satisfaction in the fact that 33 lands once under Western control have peacefully achieved self-determination since 1945. Americans of all political faiths like to think that, in some measure these liberated peoples are following the U.S. example of 1776.

The President made it unmistakably clear that the United States has no interest in imposing its way of life on any people. On the contrary, it recognizes that freedom for all peoples is the only sound basis on which peace can be built. The hullabaloo that has arisen in Japan is based on the Communist-trumped-up charge of American domination over friendly countries in the Far East. Actually, the United States welcomes diversity in the free world and encourages genuine nationalism that respects the dignity and rights of the people.

History and bitter experience fully sustain the President's assertion that communism is the real enemy of national aspirations. It is Moscow that is trying to sap the freedom of young countries striving for independence and higher standards of living. "The basic antagonism of the Communist system to anything which it cannot control," the President rightly said, "is the single, most important cause of the tension between the free nations in all their variety on the one hand, and, on the other, the rigidly controlled Communist bloc."

The first tragic error of the rioting Japanese students lies in their failure to see that the only hope for a tolerable future lies in freedom and respect for the individual. Their second tragic mistake is in assuming that national aspirations, freedom and better living conditions can be attained, in the face of the Communist threats and pressures, without cooperation among the free peoples. The basic truth of our age is that the forces of freedom and human dignity must be organized and work together in order to survive the assaults of the monolithic force that is trying to destroy them.

In a spirit of candor the President also acknowledged that many evils still persist in the free world. Sometimes free men are misled; sometimes they dissipate their energy; they bicker over trifles; they may be fearful when they should be bracing themselves for more vigorous effort. Nevertheless, he maintained, "the resources of free men living in free communities, cooperating with their neighbors at home and overseas, constitute the mightiest creative temporal force on earth."

The message is one that should have an appeal throughout Asia. The choice of the millions who have been disadvantaged in the past is not between communism and colonialism but between the new imperialism of the left and a mature nationalism that can be harnessed to the general welfare and disciplined to the necessities for survival in the atomic age.

Tabulation of Annual Public Opinion Poll

EXTENSION OF REMARKS

OF

HON. MARGUERITE STITT CHURCH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1960

Mrs. CHURCH. Mr. Speaker, at the request of many Members, I am happy to place in the CONGRESSIONAL RECORD today the tabulation of answers obtained through a scientific sampling of the current opinions within the 13th District of Illinois on 31 leading issues, as expressed in my 1960 annual poll.

Signed returns, representing a percentage of response of 17.4 percent, gave the following results:

Annual public opinion poll tabulation from Marguerite Stitt Church, Representative in Congress, 13th District, Illinois

[In percent]

	Yes	No	No opinion
1. Is it essential to balance the national budget?	81.2	13.8	5.0
2. If a budget surplus develops next year, do you prefer:			
(a) Payment on the national debt?	73.6	6.5	19.9
(b) Tax decrease?	29.5	23.9	46.6
3. If a budget deficit develops, do you prefer:			
(a) Tax increase?	15.5	29.5	55.0
(b) Increase in the national debt (now $290 billion)?	6.2	33.1	60.7
(c) Elimination of nonvital Government programs? (If "Yes," what programs?)	73.6	2.7	18.7
4. Do you favor gradual transfer back to States and local communities of complete responsibility for local needs (education, slum clearance, sewage treatment plants, etc.) assuming a transfer of some tax sources from the Federal Government?	78.0	16.7	5.3
5. To meet education needs, do you approve:			
(a) Continued reliance on local and State support of education?	74.0	9.0	17.0
(b) Federal grants to States for school construction?	25.6	39.2	35.2
(c) Federal grants to States for teachers' salaries?	17.6	45.9	36.5
(d) Federal aid for scholarships?	32.3	31.9	35.8
(e) Providing some method, perhaps through tax benefits, for individuals and business to finance expanded education?	50.5	16.8	32.7
6. If new programs increase Government spending, do you prefer:			
(a) Increase in personal income and corporation taxes?	24.0	38.6	37.4
(b) New Federal sales or manufacturers' tax?	43.3	29.1	27.6
7. Where economic changes cause loss industrial activity and unemployment, do you prefer:			
(a) Federal funds to solve the problem (aid to depressed areas)?	25.3	34.5	40.2
(b) State and local efforts?	74.0	7.2	18.8
8. Would you prefer medical and hospital care for the aged through:			
(a) Private, low-cost medical and hospital insurance programs?	69.0	9.7	21.3
(b) Increased social security taxes on employees and employers to cover social security beneficiaries only?	14.6	42.9	42.5
(c) Federally supported voluntary medical insurance program?	22.2	37.2	40.6
9. With Government investment in farm commodities now over $9,000,000,000 and storage and other expenses approximately $1,000,000,000 each year, should price supports and controls be:			
(a) Increased?	2.4	39.8	57.8
(b) Decreased?	44.8	11.5	43.7
(c) Unchanged?	5.0	30.0	65.0
(d) Abolished?	55.3	11.9	32.8
10. Would you favor a plan to use surplus crops instead of cash to pay farmers for taking land out of production?	65.9	12.5	21.6
11. Should cooperatives be taxed on same basis as other businesses?	78.7	8.7	12.6
12. Should the interest rate on Government loans to REA cooperatives be increased from 2 percent to the higher rate paid on Government bonds?	64.3	9.9	25.8
13. To provide for adequate defense should we:			
(a) Attempt to match the Russians in every phase of defense, regardless of cost?	15.0	45.9	39.1
(b) Continue our present level of defense spending for a balanced deterrent program?	58.5	10.7	30.8
(c) Make every effort to reach a workable agreement with the Russians for disarmament?	66.3	9.5	24.2
14. Do you believe sufficient emphasis is placed on our missile and space programs?	64.3	22.5	13.2
15. Should United States transfer nuclear weapons and material to friendly nations?	25.0	58.8	16.2
16. Without guarantee of a reliable inspection system, should we permanently abandon atomic tests?	11.4	81.7	6.9
17. Do you approve a firm stand on Berlin at the summit conference?	88.6	4.9	6.5
18. Do you favor the repeal of the Connally amendment, which reserves to the United States the right to decide whether issues brought before the World Court are essentially within our domestic jurisdiction?	28.1	44.1	27.8
19. Do you favor diplomatic recognition by the United States of Communist China?	26.8	62.1	11.1
20. Do you favor an increase in repayable U.S. loans, rather than grants, for foreign aid?	84.5	6.7	8.8
21. Do you favor U.S. aid to Communist-satellite countries?	11.6	77.7	10.7
22. Should the buy America policy, adopted by the Development Loan Fund, be extended to other U.S. foreign aid programs?	46.1	18.6	35.3

Annual public opinion poll tabulation from Marguerite Stitt Church, Representative in Congress, 13th District, Illinois—Continued

[In percent]

	Yes	No	No opinion
23. Should the differential in wages and working conditions between this Nation and foreign countries be taken into account in formulating our foreign trade regulations and policies?	72.0	14.3	13.7
24. Should Congress change the Sugar Act under which Cuban sugar is now imported at above world market prices, so as to:			
(a) Reduce the commitment?	19.2	16.1	64.7
(b) End the commitment?	34.6	15.5	49.9
(c) Give President discretionary authority to make such changes?	55.6	12.3	32.1
25. Should more immigrants be allowed to enter the United States annually?	28.0	56.0	16.0
26. Do you favor stronger civil rights legislation?	52.6	33.0	14.4
27. Do you favor a change in the minimum wage law to provide:			
(a) Extension of coverage?	37.3	23.7	39.0
(b) Increase to $1.25 an hour?	33.4	28.2	38.4
(c) Increase to not more than $1.15 and hour?	20.1	28.6	51.3
28. Do you favor an increase in postal rates to put the Post Office Department on a self-paying basis?	65.0	27.7	7.3
29. Do you favor legislation to preserve wilderness areas in our national parks, forests, wildlife refuges, and other public lands?	90.6	4.4	5.0
30. Should the Federal Government be given greater authority to regulate radio and TV programs?	30.6	61.2	8.2
31. Should GI benefits be extended to our peacetime veterans?	20.5	71.5	8.0

Address by Senator Mike Mansfield, of Montana, at 58th Annual Session of Inland Empire Education Association

EXTENSION OF REMARKS

OF

HON. HENRY M. JACKSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Thursday, June 16, 1960

Mr. JACKSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a significant address by Senator MIKE MANSFIELD before the 58th annual session of the Inland Empire Education Association in Spokane, Wash., on April 8, 1960.

This address, entitled "The State of Our Foreign Relations," reflects the exceptional understanding, analytic ability, and constructive outlook of the distinguished assistant majority leader. This address should have a wide reading.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE STATE OF OUR FOREIGN RELATIONS

(Address by Senator MIKE MANSFIELD, Democrat, of Montana, 58th annual session of the Inland Empire Education Association, Spokane, Wash., April 8, 1960)

An invitation such as you extended to me is an invitation to come home. It is an invitation to think through old questions in the fresh but familiar perspective of this wonderful part of the Nation.

Of these questions, that of foreign relations is most compelling. As Americans, we need to understand the problems of foreign relations because none of us escapes their consequences. As teachers—I am still one of you although my membership in the club has temporarily lapsed—as teachers, we need not only to understand these problems but also to stimulate the capacity of others to understand them. We need especially to convey something of their meaning to the young people who must live in the world which our foreign policies now are doing much to shape.

Let me say, at the outset, that foreign relations are not the products of alchemy. They are the consequences of human acts. As such they are not beyond normal human comprehension. To be sure, the conduct of foreign relations is largely in the hands of specialists and that is as it should be. But in a Nation such as ours, the work of these specialists needs the understanding and broad guidance of our people if it is to be done most effectively.

Foreign relations arise because each nation in the world, as it comes into contact with others, has its hopes, its interests, its fears. Each expresses these national drives in its foreign policy: If the policy is effective, it advances the hopes and interests of a nation, not at the expense of others, but by the process of reconciliation and accommodation. In so doing, it mitigates the fears on all sides. In so doing, it acts for peace.

To put it briefly, an effective foreign policy is one which serves national needs in a complex world, a world of many nations, and many needs, by methods other than those of the jungle.

How do we grasp the essence of these matters? How do we convey an understanding of them to others? These are questions which have preoccupied me for some time, particularly in anticipation of this meeting with you who are specialists in the process of understanding the complex and helping others to learn to understand it.

It seems to me that we do not begin to appreciate the dimensions of the problems of foreign relations, if we employ as yardsticks such familiar terms as isolationism or internationalism. These are ambiguities of the past and they do not help us in the present. As far as isolationism is concerned, I think that, as a nation, we have long since recognized the impracticability of a policy designed to insulate ourselves or even the Western Hemisphere from the massive currents which flow through the world and the storms which beset it. The military conflicts, three in the lifetime of some of us, have dispelled the illusion of isolation. As a more recent reminder, if any is needed, I call to your attention the Soviet test rocket which dropped into the Pacific some weeks ago. It landed about an hour after it had left a launching pad almost 8,000 miles away.

I do not think it is necessary to labor the point. It is clear that, for better or for worse, we are in and of this world or, in these days of space exploration, perhaps I should say in and of this universe. It is obvious that it will be for worse rather than better if we close our eyes to that fact or try to pull the cover over our heads to shut out that fact.

I do not say that the urge to isolationism, this urge to escape from reality, is gone entirely from the Nation. It is there to some degree, but it is no longer the principal source of our difficulties in foreign relations. The present problems come more, I believe, from a rather widespread belief that all which is classifiable as internationalism has, per se, a special claim to virtue.

The fact is there are no panaceas in an indiscriminate embrace of internationalism any more than there is escape in isolationism. That is the point I wish to stress most strongly. Let me illustrate it by a story which, since you are teachers, may shock you, but a story whose meaning will not be lost on you. As teachers we know, I think, better than most, of the immense value to our relations with other nations, of improving our abilities in foreign languages. In recent years, the teaching profession has given great emphasis to the study of languages and the Government has taken steps to encourage it. That is a most desirable development. What we may overlook in our present enthusiasm for this great tool, however, is that it is only a tool. It is not a foolproof guarantee of effective foreign relations. The story with which I wish to illustrate the point is that of an American diplomat in Latin America some years ago. He made public statements which did a great deal of damage to our relations with that part of the world. Yet he spoke these statements in perfect Spanish, of which he was a master. The Latin Americans were astounded by his knowledge of Spanish. They were even more astounded and, in addition, were infuriated by what he said in Spanish. Obviously, here was a case where our relations might well have profited from someone with rather less capability of communicating in that language.

As it is with languages, so it is with policies of internationalism in general. It by no means follows that if 5 American military bases abroad are helpful, 10 will be doubly helpful. It by no means follows that an aid program which costs $5 billion a year will be five times more useful than a program which costs $1 billion. It by no means follows that if 20 American representatives are doing an effective job in a country in Asia, 200 representatives will increase the effectiveness by a factor of 10. It by no means follows that each additional agency added to the United Nations system will increase the total contribution which that useful system makes to peace. In short, in any category of action, not excluding international action, it is possible not only to go beyond the point of diminishing returns but even to the point of increasing loss.

What I am suggesting, then, is that we need to divest ourselves of the notion that all policies, all acts automatically are to be sanctioned if they are classifiable under the general heading of internationalism. There can be illusions no less misleading, no less dangerous to the hopes and interests of the Nation in this generalization than those which appeared at an earlier time in the guise of isolationism.

The basic problem of maintaining effective foreign relations and of building peace, insofar as we can contribute to it, lies not so much in more policies or more machinery but in giving fresh direction to existing policies and in refining the machinery by which these policies are now pursued. If we would meet this problem we need, first, to see the world as it is. We need to see it as it is now, before we can reasonably hope to see it as we should like it to be. We need to see our present policies as they are, rather than as we imagine them to be.

No illusion in our present understanding of the world is more misleading than that which assumes that there has been peace since a truce was signed in Korea in 1953. To equate the present situation in that country or, indeed in most parts of the world with peace, may well be to equate it with the period of 1940 in Europe, the period of the so-called phony war just prior to the German drive into the lowlands and France or with

the state of Japanese-American relations on the eve of Pearl Harbor.

If it is enough to define peace as the immediate absence of gunfire then I suppose the present world situation, on the whole, may be so regarded. But if peace means to you what it means to me, a reasonable assurance that the young people whose education is now in your charge shall have an opportunity through that education to develop their potentialities and to grow into constructive maturity without the ever-present prospect of sudden and immense devastation being visited upon them, then the present situation cannot be defined as peace. We have a long way to go to peace. To create the illusion that we have already arrived at it, is to do a grave disservice to the Nation. That, may I say, is one of the principal dangers of goodwill tours and meetings at the summit, whatever advantages they may offer.

We shall not achieve peace by studying the applause meters or the comparative Hooper ratings of Mr. Khrushchev and Mr. Eisenhower in India or France or wherever else they may visit. The road to peace does not lie in the winning of international popularity contests. Rather, it lies in the reduction of the fears which push nations and systems of nations toward military clash. It lies in a frank recognition of conflicting national interests and ideological hopes and, if they cannot be reconciled at this time, in turning them away from the channels which lead to the nuclear destruction of a recognizable civilization in the world.

If we scan the principal regions of the world we shall be able to discern quickly that there is no peace in this sense, but, instead, a series of points of potential conflict. In the Far East, these points are to be found in Korea, in the Formosan Straits and in Indochina. In each of these areas, a truce written or unwritten prevails. The truce conceals but it does not heal the ideological and political divisions which plague the Korean people, the Chinese people, and the people of Vietnam and Laos. In the case of Korea, the 38th Parallel is still guarded 24 hours a day on both sides. In the Formosan Straits, Chinese Communist guns fire from the mainland at the outpost islands of the Nationalists—at Quemoy and Matsu—every other day. In Indochina—in Laos—there was a narrow escape from a large-scale conflict just a few months ago and the situation remains unstable. In Vietnam a rigid division separates the Communist north from the free south and shows no signs of closing in peace.

In short, throughout the Far East, there exists, in excess, one of the most common precipitants of war—unnatural political divisions of peoples who are in reality deeply united by culture, by geography and by history. I shall not review the circumstances which brought about the divisions. All of them, to be sure, are overlaid with the ideological schism between communism and freedom. But each division, too, has its own local characteristics. It is to these characteristics no less than to the broader ideological question which we must look if there is ever to be a full understanding of the situations, and, hence, a chance for them to evolve in the direction of a stable peace. That refinement of the problem in policy has yet to begin.

Until it begins, a basis does not exist upon which to proceed toward peace. Any suggestion that our policies have actually produced peace in these areas is gravely misleading. It obscures the problems which sooner or later, may well engulf in conflict not only those peoples immediately involved but the world and ourselves as a part of it.

What our policies have done so far is to buy time in the Far East. We have spent billions through the deployment of our own Armed Forces in that region and through aid programs to hold the line against a Communist advance. Thousands of American and other lives were sacrificed to the same end in Korea. But I repeat: All we have done so far is to buy time in the Far East.

If we look elsewhere in Asia, to China, we find still another common cause of conflict. We find a nation recently revived from a long slumber which had been induced by an inner decay and by outer pressures upon it, now being revived under the forced draft of a militant totalitarianism. This revived China tests its new-found strength in an aggressive and brutal probing into territories of its neighbors. The China of today is a China which is vastly different—so far as we can judge, for our information is all second hand—from the China to which we were allied during World War II. It is a China in which tens of millions of young people are coming of age with no direct knowledge of Americans but with an induced hatred of this country and its institutions.

Let no one underestimate the long-range effect of these years of animosity between ourselves and China. It is, to say the least, illusory to talk of peace while the animosity is present in virulent form. It is illusory to talk of peace with a China on the march, not in the paths of progress by accommodation with other nations but in the ancient way of empire under a canopy of modern totalitarian trappings. I do not say that this development—this emergence of a new and bristling China—in the heart of Asia must lead inevitably to war. I do say that I see little in it or in our policies with respect to it which warrants the assumption that we are at peace.

Moving westward to the Middle East, here, too, we find a situation which by no stretch of the imagination can be identified as peace. Rather, it is a situation of suspended war. On repeated occasions in the past, the suspension has all but ended in grave border clashes. On two occasions, at the time of the Suez crisis, and in connection with the Lebanon crisis, the world dangled with one foot over the brink of disaster. Our political intervention at the United Nations in connection with the Suez crisis may have forestalled a total collapse in the Middle East. Our military intervention in Lebanon may have had the same effect. But Communist peneration of that area—economic and political—has not been curbed nor has a basis for peace been established.

The Eisenhower doctrine on the Middle East was intended to help achieve both objectives. So, too, have the enormous sums of public funds which have been spent on various kinds of aid to that area. Yet both have proved remarkably ineffective.

It is conceivable that we may have helped to hold back the floodwaters of conflict in that region by our acts of intervention and by our aid, but we have done little if anything to disperse or to rechannel them constructively. And behind the barriers which our policies have tried to build, the floodwaters are accumulating in a dangerous fashion. Each outbreak in the Middle East appears less controllable than its predecessor. In these circumstances it is, to say the least, illusory to talk of peace.

If there is grave instability in the Middle East, the same is true for Africa. New forces are at work in that continent which we are just beginning to recognize in policy, let alone understand.

For decades Africa was preponderantly a region acted upon rather than a region which acted in international relations. Since the end of World War II, however, seven new nations have come into being in Africa. This year, an additional five are scheduled to achieve independence and more will follow in due course. This enormous and rapid political change alone is sufficient to bring about massive problems of readjustment. But it is not only a political upheaval which rumbles through that great continent. Other forces common to all the underdeveloped nations, from eastern Asia to Latin America, are felt no less strongly in Africa. The urge is there, for human equality and for a continuing and rapid modernization, with its promise of economic and social benefit to all peoples. The urge is there, but the means to satisfy it adequately in peace have yet to be devised either by the African nations themselves or in concert with others.

Again, Africa is in danger of being more acted upon rather than acting itself in international affairs as it finds itself increasingly the focal point of rival ideologies and systems. This competition for African favor may be flattering to the Africans for the moment but it contains accumulating dangers to them and to peace. The dangers will be curbed only as Africa, increasingly, finds its own way in the world, largely by its own genius and efforts. I venture to say that if the continent is not sidetracked by the blandishments from outside during this transition, if it does not become careless with the strong new wine of national independence, it will in due course make an enormous and unique contribution to the progress of mankind and to peace.

I should note in this connection that with the political transition in Africa, the composition of the United Nations General Assembly is changing in a fashion which assures a decisive voice to the Afro-Asian nations. As you know, it is in the General Assembly that expression is given to world-wide aspirations. We can hope that the Afro-Asian nations and this Nation will more and more see the problems of peace and freedom in similar perspective and that their voice will be raised in harmony with our own. That is, however, by no means a certainty. If much depends on the manner in which the African nations develop and use their newly achieved freedom, much also depends on the wisdom and the sensitivity of the policies of the older free nations toward the changes which are taking place in the emergent African Continent.

Much closer to home are the problems of peace in Latin America. Notwithstanding the President's recent good will tour we are still faced with the need for harmonization of Latin American interests with our own. Beneath the facade of hemispheric unity there are deep divisions and much dissatisfaction particularly in economic matters. Fortunately, the present state of our relations with Cuba is not typical of our Latin American relations. But, then, neither was the very warm welcome extended to President Eisenhower in any way typical. As a man of good will, Mr. Eisenhower invariably evokes a response of good will. A firm basis for sound relations, however, is not conjured up out of ceremonial journeys of less than 2-week duration. Such journeys may open doors but the problem of keeping them open is one of followthrough in policies.

It seems to me that the need now in inter-American relations is a broad movement forward to new and higher grounds of hemispheric understanding and cooperation. We need this development in inter-American education and cultural exchange no less than in defense. We need it in economic matters no less than in political questions. And if our great neighbor to the north, Canada, is so inclined, we should welcome its participation in any and all matters of hemispheric interest. Unless this movement forward begins soon and in earnest, I am afraid we may anticipate in this hemisphere whose solidarity is an essential of peace, at worst, more sharp clashes in the present Cuban pattern and at best, a steady erosion of hemispheric intimacy which will increasingly drain inter-American ideals of their substance.

Turning next to Europe, we find there, too, an illusion of peace which masks deep and dangerous divisions. That is particularly

the case in Germany but it is also true of the entire continent which is split asunder by the ideological cleavage. Across the chasm only rickety bridges of contact are maintained.

If there is a need for progress toward unity in the divided countries of Asia, there is a compelling need for progress toward unification in Germany and for a growing reconciliation between Eastern and Western Europe.

Until recently, at least, our policies on Europe had remained unchanged in essentials for a decade. We have been engaged in a vast holding action in the fear that the Russians might attack Western Europe, a fear which was intermingled with the hope that sooner or later the Russians would withdraw from Eastern Germany and Eastern Europe. To that end, we spent billions to rearm Western Europe and to maintain our forces in that region. The Russians, similarly, have engaged in a vast holding action—an action in the expectation that Western European freedom would fall prey to communism and an action to hold on to a dominance in Eastern Europe which they had obtained in consequence of World War II. To that end they have kept military forces in the Eastern European nations and rearmed those nations and, until the advent of Mr. Khrushchev, minimized contacts between East and West.

It is increasingly clear that these policies have not led to the achievement of the aims of the one side or the other. The Communist grip shows no signs of weakening in Eastern Europe and freedom has come back with great vitality in Western Europe.

Certainly, the policies now pursued have not led to peace. They have been, on both sides, holding actions which have produced, at best, an unstable truce based upon a Germany split inside the larger split of Europe. That the truce is highly unstable was indicated by the first German crisis last year. This crisis arose out of the mere announcement that the Russians intended to change one factor in the situation: that is, to withdraw from Berlin and the routes of access to the city in favor of the East German Communists. It is ironic that a Russian announcement with a withdrawal, of all things, should produce a crisis; yet it did so, for the move threatened to upset the present delicate balance which depends, with equal irony, on the continued Russian presence in Eastern Germany.

In the round of good will tours and conferences, the Russians were persuaded to remain a while longer in Berlin and Germany and the crisis eased. The source of crisis, however, remains in the outdated policies of both sides in Europe. In short, the tours and conferences have served as safety valves but I need hardly emphasize the danger of relying indefinitely on safety valves. Sooner or later, it will be necessary to come to grips in a practical fashion with the problems of a divided Germany and a divided Europe. The visiting back and forth, notwithstanding, the promise of peace will be illusory until the divisions in Germany and Europe begin to close in peace on the basis of policies attuned to today's realities rather than yesterday's expectations.

In the same fashion, the problem of control of armaments—armaments of massive destruction in particular—must begin to yield to tangible solution before we can talk of peace in any meaningful fashion. We have watched the mathematical progression in the development of the megaton power of these weapons since the end of World War II. The Russians, the British, no less than ourselves, have advanced from a capability of destroying cities to a capability of destroying nations, to a capability of destroying civilization. The number of nations able to produce such weapons has increased from one in 1945 to four in 1960 and is subject to further increase if other countries who have the capacity decide so to deploy their science, technology, and energy. The missiles of delivery have improved, from the crude but destructive V-bombs which carried devastation to London in the closing days of World War II to those which encircle the moon and the sun in 1960.

All the while the wisest humans among us, the most compassionate humans among us have warned the world of what it is about in this deadly race for greater and more certain means of human annihilation. All the while, there have been disarmament conferences in which these words of the wise have been echoed with a remarkable unanimity by all nations. Yet a decade and a half has passed and we have yet to achieve a single agreement, signed and sealed, for the control of armaments. I do not wish to minimize the difficulties involved in this process but surely there is something amiss, something illusory when all endorse the warnings of wisdom, when all agree on the extent of the danger to all and yet agreement is not achieved which makes possible even the beginnings of a beginning of substance on this critical problem.

In 1955, I suggested that a summit conference be held on the one question of ending the testing of nuclear weapons. Five years later, we may be on the verge of such a conference. If it can now produce this one achievement it will mark a major, if long-delayed, step forward. Important as it would be, however, this achievement will be but the start of a long road. Until there exists a firm pattern for the progressive extension of international control over armaments we will do well not to speak of peace as prevailing in the world. This pattern, moreover, is not likely to be established until the political differences and divisions which I have been discussing begin also to yield to practical and progressive solution. In this connection, I may be wrong and I hope I am wrong but I see little likelihood that the current session of the disarmament conference in Geneva, anymore than its innumerable predecessors, will lead to any agreement of substance.

If I may summarize, then, let me say that the United States has made, in the past decade, a vast international effort. That effort has helped to keep open the prospect for peace but it has not yet begun to produce conditions of peace in any significant degree. In no single instance is this more evident than in foreign aid. We have made available for such purposes, funds approaching $100 billion since the end of World War II. The great bulk of this aid has gone to restore the damages of war or to hold by military means existing situations against deterioration. The positive aspect of aid as it is currently expressed in the point 4 program of technical cooperation and in loans for modern development has a relatively small part of the total aid program ever since the Marshall plan came to a successful termination. In the current year, for example, the President has requested $4.1 billion for foreign aid. Of this total, however, only $200 million is for point 4 aid and $700 million for development loans. By contrast $2 billion is for military aid and $700 million for military-related defense support.

In short, we will do well to recognize still another illusion in our policies; namely, that the vast amounts of aid now being spent is of a kind which necessarily builds conditions of peace. By far the larger share, as I noted, serves primarily to hold existing situations as they are and only a relatively small proportion goes into the constructive effort which is essential in Asia, Africa, and Latin America if we are to have a reliable peace.

Many Members of Congress who recognize the importance of foreign aid in the conduct of our foreign relations have been pressing for years to bring about reforms and refinements in this program. We have sought and we will seek again to consolidate fully the functions of the aid agency with those of the Department of State. We have sought and we will seek again to give added emphasis to economic aid as contrasted with military aid. We have sought and we will seek again to substitute as far as possible long-term loans on easy terms for large grants of aid. We have sought and we will seek again to protect and advance the point 4 concept, that is, the people-to-people type of technical assistance. We have sought and we will seek again to bring about a united aid effort which draws increasingly on the cooperation of Western Europe and Japan, whose recent progress has been such as to enable them to assume a much larger share of the initiative and the cost of assisting the less favored nations.

Discriminating changes in any major governmental undertaking such as foreign aid are hard to bring about by action from Congress. We can alter legislation as we have done, or pass new legislation, but in the last analysis, effective change depends even more on the administration which has the responsibility for giving effect to the law. In this connection, I would call to your attention the fact that on two separate occasions in the past Congress voted to abolish the aid agency and turn its functions over to the Department of State and the Department of Defense. And two times this action was reversed by the administration which, on each occasion, reconstituted the aid agency under a different name. Despite such setbacks, some progress has been made in streamlining and improving the administration of the aid program but much still remains to be done.

The aid program is, in may ways, typical of our foreign policies as a whole. The problem of bringing about effective foreign relations lies not so much in new policies and new machinery as it does in sharpening existing policies and refining existing machinery. The absence of clear-cut, attainable objectives and the moribund administration of the aid program—as a recent Senate study of the program in Vietnam made clear—are principal weaknesses in foreign aid. So, too, are these factors of weakness in our foreign policy as a whole. I have no desire to minimize the tasks of the President and Secretary of State in these matters. Theirs is an exacting responsibility. Nevertheless, it seems to me that there is a great need to look beyond and to act beyond the expensive holding action in which we are now engaged throughout the world. We need to see anew the facts of the divisions in Asia no less than those in Europe. We need to think anew the costly and ineffective effort merely to keep the situation as it is in the Middle East. We need to recognize fully the defects of the aid effort in Asia, no less than in an emergent Africa and in Latin America. We need to sharpen the policies by which we deal with these problems, in the hope that the problems may begin to yield to practical solution. In short, we need a new determination and a new approach to foreign relations which will move the Nation forward from this costly, lackadaisical and dangerous illusion of peace toward the reality of peace.

A "Bad Tax" Has No Sanctity

EXTENSION OF REMARKS

OF

HON. BYRON G. ROGERS

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1960

Mr. ROGERS of Colorado. Mr. Speaker, recently when the House of Representatives was considering the ex-

tension of the transportation tax, I voted against the same. I notice the Finance Committee of the Senate has refused to extend this excise tax. I am hopeful the Senate will follow the committee's recommendation.

The transportation tax works to the disadvantage of the Western States. The Denver Post, on Monday, May 23, 1960, in the following editorial, gives excellent reasons why this tax should be repealed:

In this time of cold war and staggering expenses for space exploration, any talk of making a general tax reduction is sheer folly.

But that does not mean there can be no readjustment of the tax structure to eliminate bad taxes, provided the loss in revenue is made up in some more equitable way.

Last year Congress voted such a readjustment when it passed a bill to reduce from 10 percent to 5 percent, effective July 1, 1960, the Federal tax on the transportation of persons.

President Eisenhower has asked that the reduction be repealed so the tax may continue at 10 percent for another year. At 10 percent the tax would raise $310 million next year. At 5 percent, it would raise half that or $155 million.

Neither amount is impressive nor would it amount to more than a small fraction of the national budget.

It seems likely that the net benefits to the Treasury are nil if all side effects of this transportation tax are considered. For example:

The tax, by discouraging travel, affects the amounts railroads, buslines, and airlines pay in income taxes.

Some of the receipts of the tax are illusory in that persons who travel on business are allowed to deduct the cost of such trips, including the transportation tax, in making out their income tax returns.

By discouraging travel, the tax makes it necessary for the Government to pay more on subsidies to feeder airlines than it otherwise would have to pay. Federal payments to air carriers next fiscal year are expected to amount to $69 million.

The transportation tax is not absorbed by the carriers. The traveler pays it as an extra and separate charge when he buys his ticket.

The transportation tax, it should be remembered, was a wartime measure. One of the reasons for imposing it was to discourage unnecessary travel at a time when the transportation facilities of the country were strained by their duties to the military.

This is a tax which raises but little money, discourages tourism and adversely affects an important industry.

Congress would do well to repeal it entirely or, at least, let it drop to the 5-percent rate which was approved last year.

National Harmony, Not Conflict, Key to Future Success

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, June 16, 1960

Mr. WILEY. Mr. President, in an age when our security—yes, our survival—is threatened by an international conspiracy of communism, we, as a nation, need to adhere more closely to the concept that domestic harmony, not conflict, is the key to future progress and success.

The effort toward greater cooperation must include labor, government, industry, and all others in the economy. Unless this is done, the Nation will suffer—to an unnecessary degree—from a dissipation of its energies and resources.

We recognize that the spirit of cooperation can best be achieved—not by laws—but by instilling in our people the kind of understanding and perspective to realize that harmony is the best policy.

As a splendid example of this kind of cooperation, a special supplement to the New York Times, entitled "On Wisconsin—A State of Power and Plenty" included an article, "Business Teams Up With Wisconsin Government," by Joe E. Nusbaum, commissioner, department of administration in Wisconsin. Another example is reflected in an article from the Milwaukee Journal by Richard H. Leonard, "UW Aids Labor, Management." I ask unanimous consent to have these articles printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

BUSINESS TEAMS UP WITH WISCONSIN GOVERNMENT—SUCCESSFUL PARTNERSHIP

(By Joe E. Nusbaum, Commissioner, Department of Administration)

Business and government are partners in the job of making government more efficient and responsive to the needs of the people of Wisconsin. Cooperation is close and friendly, with mutual recognition of the advantages of collaboration. They feel a community of interest that is stronger than other considerations.

Wisconsin's government is close to the people, and in the formulation of laws, each segment of the population has its voice. In the administration of laws, government has sought out business leaders for advice and participation.

The latest example of government-business cooperation is the formation of the Governor's advisory committee on business practices. It was assummed that businessmen, spurred by the force of competition, had developed techniques and practices that well might be emulated by governmental agencies in the interest of efficiency. It was also assumed—an assumption that proved to be correct—that businessmen were as interested in doing something to improve the efficiency of State government as were those in charge of government operations. The result was the formation of a committee of business executives; this group has attacked the problem with enthusiasm and determination.

The Governor's committee has formed seven subcommittees to review seven management functions such as data processing, personnel management, and purchasing. Each subcommittee is composed of specialists from business, State officials, and a legislator. After reviewing practices, the subcommittees will make recommendations for improvements to the Governor's advisory committee, which, in turn, will recommend administrative and legislative changes to the Governor and the legislature.

The newly created Department of Administration, the State agency with the major responsibility for the State's business management functions, is working closely with the Governor's advisory committee.

The Governor's Advisory Committee on Business Practices is only the latest of many advisory groups with business representation. The Natural Resources Advisory Committee, the Unemployment Compensation Advisory Committee, and various subcommittees of the Legislative Council are policy review groups which make valuable use of the talents of business executives. When it became apparent that the State needed a long-range tax revision, a 19-member blue-ribbon committee was appointed to help the State chart in course; the Governor leaned heavily upon leading business executives, along with leaders in other fields, to formulate policy.

Those who do business in Wisconsin can depend upon competent, honest, and equitable administration of laws. There are no hidden costs in dealing with public officials. Wisconsin has a deep-rooted tradition of clean Government and a well-established merit system in public employment. The taxpayer is sure that all costs are shown on the public records and that he will receive a full measure of public service for his tax dollar.

[From the Milwaukee Journal, Apr. 1, 1960]

UNIVERSITY OF WISCONSIN AIDS LABOR, MANAGEMENT—UNION SHOP STEWARDS ARE ALERT IN SPOTTING TERRIBLE GRIEVANCE IN COURSE AT BEAVER DAM; EXECUTIVES ATTEND INSTITUTES

(By Richard H. Leonard)

It is night in Beaver Dam. Lights burn brightly in just one room in the junior high school—the room where union shop stewards at industrial plants in the area are learning from a University of Wisconsin instructor how to present workers' grievances to management.

The instructor reads a sample complaint written by a worker:

"A while ago the foreman illegally transferred Charles Swedberg to the first shift. He doesn't have the seniority that I do and it's not fair to move him up. I think the foreman has it in for me and shouldn't be allowed to get away with it. They ought to put Swedberg back where he belongs."

"What do you think of that one?" asks Prof. Robert W. Ozanne, director of the UW school for workers.

"BURN THAT ONE UP"

"Burn that one up," shouts back one of the men in the class. "It's no good."

"Right," agrees Ozanne, "it's terrible—and that's why shop stewards have got to learn how to write up grievances for the workers."

Another class was underway in the UW extension division's program to educate labor. On the other side of the labor-management hyphen, the extension division's management institute presents 150 or more programs a year in the field of management training. Both operations are part of the famed Wisconsin idea of extending UW services to everyone in the State.

"GOOD ONE." "WHY?"

But let's get back to Beaver Dam and the quarrel over Swedberg's transfer to the first shift.

Ozanne pointed out that the grievance written by the worker did not give enough facts, made the issue a personal one with the foreman, drove Swedberg and the foreman into each other's arms and made no request for a proper settlement of the dispute.

Paper was passed out and the stewards—28 are enrolled—wrote grievances they thought were better than the one under discussion. Then Ozanne read each to the class and asked for comment. One struck the fancy of a plaid-shirted steward.

"Good one," he shouted.

"Why?" asked Ozanne.

"It's clear, precise," was the reply.

"Right," said Ozanne, "but don't try to get too specific and start acting like a lawyer."

REASONABLE ATTITUDE ASKED

The subject shifted to the steward's role in defending an employee against company charges, and most of the stewards indicated they would go a long way in fighting for the worker.

"Are you going to represent a man whether he is right or wrong?" asked Ozanne.

"Until he is proven wrong," shouted a steward.

Ozanne spoke briefly in favor of a reasonable attitude toward the employer. He emphasized that one of the steward's main responsibilities was to see that an employee got a good, fair hearing.

The university's school for workers, in continuous operation since 1925, is said to be the oldest university labor education program in the Nation.

EXCLUSIVELY FOR LABOR

Its philosophy, as outlined by the extension division, is that:

Workers are entitled to educational services based on their needs.

Longrun industrial relations harmony is best achieved through making available to labor union members and officers all possible information and training.

Labor education is educationally more efficient when classes are reserved exclusively for labor.

Extension classes, such as the one at Beaver Dam, are given in steward training, contract administration, arbitration, collective bargaining, time study, job evaluation, labor law and related subjects.

Weekend and weekday conferences on these subjects are also held out in the State, and summer institutes are held on the UW campus. About 1,500 workers attend the evening classes each year; 800 go to the summer institutes and 1,300 take part in the weekend and weekday conferences.

IT IS QUITE ESSENTIAL

Has the school for workers been of value to labor in Wisconsin?

"Oh, yes, without any doubt," said Jacob F. Friedrick, president of the Milwaukee County Labor Council. "We think it has had a very great value. It gives instruction to members of the organized labor movement in subjects in which they are interested as officers or rank and file members of local unions. We feel it is quite essential."

UW was also a pioneer in management training, entering the field in World War II when thousands of workers had to be promoted to supervisory positions to meet wartime needs. In answer to requests, the extension division and the school of commerce set up a series of evening courses.

PROGRESS WITH STABILITY

In its first year, 1944–45, a total of 23 programs were presented with 28 companies participating and 386 persons attending. The 1959 figures were 133 programs, 668 companies and 5,275 participants.

"Progress with stability" is the motto of management institute (MI) and its announced objectives are:

To help improve the performance of management personnel.

To help prepare selected management personnel for increased responsibilities and promotion.

To achieve these ends, 3-day executive seminars are held on topics such as long-range planning, marketing and sales functions, and management development. One-day management conferences are offered on subjects such as labor relations management, plant management, and office management.

WORTHWHILE CONTRIBUTION

MI also offers workshops for specialists in such fields as sales supervisors, budgeting and traffic management. Supervisory institutes are held for foremen.

Management response is reflected in these letters received by MI:

"I thoroughly enjoyed my brief visit to the university, and I feel that you are making a worthwhile contribution to industry," said H. W. Fulton of Continental Can Co., Inc.

"Yours was the most informative session of its kind I haev ever attended. The men who attended had a wealth of experience and ideas, and you ran the program with a deft touch," said R. R. Featherman of the State Farm Insurance Cos.

"An excellent, well-conducted series of meetings. The discussion leaders were outstanding. I feel I have greatly benefited from the series and hope to be back to attend more of these fine sessions," said P. S. Joyce, of General Mills, Inc.

"The progress we have made in the field of human relations is much to the credit of the guidance and inspirations we have received from management institute," said John Esch of the Leverenz Shoe Co.

CENTER IS BUSY

Many of the institutes are held in the Wisconsin Center building on the UW campus, a $2 million gift to the university from the University of Wisconsin Foundation. The center, three stories high, is situated on the lower campus.

The 19 meeting rooms in the center vary in capacity from 14 to 230 persons. Last year a total of 82,342 persons were recorded as attending 700 different events in the building. Actually, there weren't this many people because the attendance was added up daily and, consequently, a person attending a 3-day event was counted on each of the 3 days.

In laying the cornerstone for the Wisconsin Center in 1957, Gov. Oscar Rennebohm made this statement concerning the Wisconsin idea:

"The strength of Wisconsin is in her people; talents, skills, and know-how are, indeed, her greatest resource. And it has been the good fortune of both State and university to have a vigorous and steady working relationship between State government and university to extend and enhance this most prized resource."

Rayburn Declares Burleson "In Clear"

EXTENSION OF REMARKS

OF

HON. FRANK IKARD

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1960

Mr. IKARD. Mr. Speaker, recently there appeared in Life magazine an article purporting to expose certain alleged irregularities in congressional expenditures some 2 years ago. One of our colleagues, OMAR BURLESON in particular, was severely criticized because of some items that appeared in an expense account turned in for expenses for the committee of which he is chairman. I feel that this criticism was unjust. I do not believe there is anyone who is more concientious and scrupulous in handling funds under his supervision than OMAR BURLESON. I have absolute faith in his honesty and integrity and I am not alone in my viewpoint. I include the following articles appearing in the Abilene Reporter-News, Abilene, Tex., and the Stephenville Daily Empire, Stephenville, Tex., with regard to this matter, in the RECORD:

[From the Abilene Reporter-News, June 4, 1960]

RAYBURN DECLARES BURLESON IN CLEAR

(By Elizabeth Carpenter)

WASHINGTON, D.C.—The Texas congressional delegation, from House Speaker SAM RAYBURN on down, is indignant at any unfavorable reflection on Representative OMAR BURLESON created by the Life magazine stories of congressional expense accounts, it was evident Friday in congressional cloakrooms.

Speaker RAYBURN told the Reporter-News, as he left to fly to New Mexico with Senator LYNDON B. JOHNSON, "I have checked into the matter. OMAR BURLESON is absolutely in the clear and you can quote me."

Part of the Texas indignation here arises from the real explanation of the $1,379 which BURLESON received from committee expenses in 1958, an explanation which he has refused to use, but is known to his Texas colleagues.

"The irony," one Texas member told me, "is that while OMAR's expense account was very modest and completely justified, most of the money reportedly paid to him actually went to an assistant for committee work."

This is the inside story which members of the Texas delegation say is accurate: In 1958, the House Administration Committee, of which BURLESON is chairman, employed a legal expert to do a special research job on election practices of the Hatch Act. The simple and practical way to allow him to draw expenses was to apply for it in the chairman's name and per diem was paid him for about 44 days which he worked."

This accounted for most of the $1,379 mentioned in the Life story; the rest was drawn by BURLESON for committee studies.

Members of the delegation have urged BURLESON to give this explanation but he has refused to, stating he would rather "just sweat out" the present situation. It has cost him several sleepless nights.

Asked about this explanation given by his colleagues, BURLESON replied, "I'm not making any further explanations. My conscience is clear."

"Another irony," one Member told me, "is that BURLESON, who has power over all the committee expense money, probably taps it less than any other member."

Another said: "It is pretty ridiculous for a magazine to try to expose him for making committee studies to save money at home when there are so many who use it to see how they can give it away abroad."

[From the Stephenville Daily Empire, June 7, 1960]

Bad judgment: When Life magazine sent staff reporters to Washington, D.C., to look into some of the infractions of Members of Congress it seems that they took an unfair advantage of some of the most scrupulous men in the Capitol. Regardless of how anybody feels about OMAR BURLESON we happen to know that he is a man of honor and integrity. It is going to take something stronger than a feature story in the big magazine to convince us that OMAR BURLESON ever committed a single indiscretion as far as any irregularities with money is concerned. If all the other Members of Congress would take a lesson from the pattern of this good man we would be far better off—both in matters of legislation as well as finance. Too bad that these things have to happen. However, they come along every few years and frequently with penalizing results. Frankly, we are firmly convinced that it is going to take some influence stronger than a feature writer in Life magazine to cause the voters of the 17th Congressional District to turn their backs on OMAR BURLESON.

Medical Care for the Aged

EXTENSION OF REMARKS
OF
HON. OREN E. LONG
OF HAWAII
IN THE SENATE OF THE UNITED STATES
Thursday, June 16, 1960

Mr. LONG of Hawaii. Mr. President, in his wonderfully lucid manner, Walter Lippmann has set forth the essential differences between the administration's hastily contrived medical program for the aged and the bill introduced by Senator MCNAMARA, with which I am proud to be associated. A great deal of material has been printed on this important problem now facing the Congress, but none better states the issue than Mr. Lippmann's column in today's Washington Post and Times Herald. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

MEDICAL CARE FOR THE AGED
(By Walter Lippmann)

Almost everyone realizes that a great mass of the old people do not have the savings, and cannot depend upon their children, to pay for the doctors, hospitals, nursing homes, and drugs which, because they are aging, they need more than do younger people.

There are a few eccentrics, professing to be conservatives, who think that in a truly rugged individualism these ailing old people would do without medical care if they can't pay for it, or would make their children mortgage the future to pay the medical bills.

But the country is not that ruggedly obtuse to the facts of life, and accordingly both the administration and the Democratic opposition are agreed that the need, which is obvious and urgent, must be met by Government measures.

Thus, this administration has prepared a program which the Director of the Budget, Mr. Stans, says will cost $1.5 billion by 1964 and $2.5 billion by 1970. For the Democrats, Senator MCNAMARA and some 19 Senators, including KENNEDY, SYMINGTON, and HUMPHREY, have introduced a bill that would add medical insurance to the existing old-age insurance. After the first year, the cost of this program would be $1.5 billion. Thus the two programs are approximately of the same size.

But between the two programs there is a basic issue of principle. On one side are the President and his advisers. On the other side are the preponderant mass of the Democrats and also a considerable minority of the Republicans led by Governor Rockefeller. They differ essentially on how the program shall be financed.

Shall it be financed by compulsory insurance, which means that throughout a person's working life he and his employer will be taxed to provide an insurance fund for his medical needs when he is retired and is no longer earning an income? This is the principle of the McNamara bill in the Senate, as it was of the Forand bill in the House, and it has the support of the leading Democrats and of Governor Rockefeller.

Or shall the program be financed, as the administration proposes, by charitable doles to the very poor, paid for out of compulsory taxes collected by the National and State Governments?

For reasons which he has never explained, the President regards compulsory social security taxes as unsound, socialistic, and rather un-American; on the other hand, he regards compulsory taxes to pay for doles based on a means test as somehow more "voluntary," sounder, more worthy of a free society, and more American.

Under the McNamara bill, medical insurance would be added to the existing old-age insurance system. During his working life, each person covered by the social security system would contribute an additional amount, as would also his employer, to supplement his retirement income to include medical services.

It is true that during the first few years benefits would be received by persons who had not contributed because the system did not exist when they were earning their living. These benefits would be paid for by the younger people. But as the younger people would be buying their own insurance, there is little inequity in this. Nobody will lose anything although those who are already too old to have been contributors to an insurance plan will benefit. In a few years everyone receving the benefits will have paid his share.

Why does the President feel so strongly opposed to the principle of compulsory insurance for medical care to supplement the insurance, which already exists, for old age? What is wrong about its being compulsory that a man should insure himself against the needs of his old age? What is so wonderful about a voluntary system under which a man who doesn't save for his old age has to have his doctors and his hospital bills paid for by his children or public welfare funds? There is nothing un-American in the principle that the imprudent shall be compelled to save so that they do not become a burden to their families and the local charities, so that they can meet the needs of their old age with the self-respect which comes from being entitled to the benefits because they have paid the cost out of their own earnings.

The President has been led to think, he says, that compulsory insurance is "a very definite step in socialized medicine." Why? In a system of compulsory insurance the Department of Health, Education, and Welfare, which would administer the program, could and should use as its agents private organizations like the National Blue Cross Association in negotiating with hospitals and nursing homes and in dealing with claims and complaints. The system would be financed as insurance. But it would be worked not by a new Government agency but by the kind of private voluntary association which the President otherwise believes in.

In this connection it is interesting to remember that in the early 1930's when voluntary health insurance plans were inaugurated, our old friend, the American Medical Association, was declaring that they were communism and socialism and socialized medicine. Today, the American Medical Association is pointing to these same voluntary insurance plans as the solution of our present need and the proper alternative to compulsory old age medical care insurance.

Among the opponents of medical insurance there seems to be a vague and uncomfortable feeling that it is a new-fangled theory, alien to the American way of life and imported, presumably, from Soviet Russia.

The Founding Fathers were not subject to such theoretical hobgoblins. In 1798 Congress set up the first medical insurance scheme under the U.S. Marine Hospital Service. The scheme was financed by deducting from seamen's wages contributions to pay for their hospital expenses.

If that was "socialized medicine," the generation of the Founding Fathers was blandly unaware of it.

Schedule of Grassroots Conferences

EXTENSION OF REMARKS
OF
HON. PAUL F. SCHENCK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 16, 1960

Mr. SCHENCK. Mr. Speaker, it is an honor and a privilege to represent the people of the Third District of Ohio here in the Congress of the United States. I am deeply grateful for this opportunity to be of service, and it is my constant desire to serve my constituents in the best way possible. During my service here I have made it my regular policy to keep in close touch with the people of my district so that I may know how they feel about the many important issues facing us here in Congress.

I have considered it my duty, as the representative of this great district, not only to be well-informed of the opinions of my constituents, but also to be of the greatest possible service to persons having problems dealing with agencies or departments of our Federal Government.

Nine years ago I initiated the idea of holding grassroots conferences throughout our district, and I have continued this practice each year during the time Congress is in adjournment. I also have a full-time congressional service office at the U.S. Post Office Building in Dayton, where I can meet with people personally at any time that my official duties permit me to return to the district.

During the time I am in Washington attending to legislative and official duties, a competent secretary is in charge of my district service office to assist callers and to help them with requests for aid in dealing with the Federal Government so that I can be of every proper assistance to them.

In these ways I have sincerely tried to keep well informed as to the personal opinions of my constituents, and I have also tried continuously and sincerely to be of every proper service to them.

Members of Congress are constantly called upon to give careful and earnest consideration to legislation dealing with many complex national and international problems. These day-to-day decisions often affect the lives and living of every citizen in our Nation. Consequently, these personal and private conferences help me to serve all of the people in my district in a much more effective manner.

This year, during our official congressional recess, I am again taking time to hold these grassroots conferences throughout our district at convenient public buildings. I deeply appreciate the fine cooperation of the many officials who have made these meeting places available to me as an aid in rendering this public service.

This is the schedule I have arranged:

Dayton Post Office, room 314, September 6 and 7, 9 a.m. to 4 p.m.

Germantown City Building, September 9, 4 p.m. to 8 p.m.

Phillipsburg City Building, September 10, 1 p.m. to 3 p.m.

Brookville City Building, September 10, 4 p.m. to 8 p.m.

Middletown American Legion, September 13, 9 a.m. to 4 p.m.

Miamisburg City Building, September 14, 4 p.m. to 8 p.m.

Oxford Municipal Building, September 15, 4 p.m. to 8 p.m.

Fairfield City Building, September 16, 4 p.m. to 8 p.m.

Hamilton Courthouse, September 19, 9 a.m. to 4 p.m.

I have been greatly encouraged by the increased attendance at these conferences each year. It is sometimes surprising to see how much can really be accomplished when a citizen and his Congressman can sit down face to face and talk over problems of mutual concern.

Special appointments are not necessary for these conferences, and I sincerely urge individuals or groups to meet with me on the date and at the place most convenient to them. The knowledge obtained through these grassroots conferences will help me to render better service, both legislative and personal, to all of the people of our important Third District as their Representative in the Congress of the United States.

Statement of Al Hayes on Strikes at Missile Bases

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, June 16, 1960

Mr. HUMPHREY. Mr. President, there has been a great deal of attention called to the work stoppages which have taken place in recent days at various plants throughout the country which are engaged in missile production and testing. In the papers which I have been reading, at least, little space seems to have been given to presenting the employees' side of the case.

I do not pretend to have sufficient knowledge about these current disputes to make any judgment as to where the blame for the breakdown in negotiations lies. But I do feel that the workers' arguments as well as the employer's as regards the work stoppages merits equal coverage and attention.

I, therefore, ask unanimous consent that a statement by the President of the International Association of Machinists, Al Hayes, on the strikes at missile bases, as delivered on June 6, be inserted in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

AL HAYES' STATEMENT ON STRIKES AT MISSILE BASES

IAM President Al Hayes today issued the following statement on the strike by members of the International Association of Machinists against Convair Division of General Dynamics Corp.:

"Today's work stoppages at the missile bases and test sites have taken place with the full knowledge of both management and Government officials on the highest level.

"Only the most routine efforts have been made by our Government to effect a settlement of this dispute. Negotiations have dragged along since early March when proposals for modest improvements in our working agreement with Convair were submitted.

"IAM negotiators have been meeting with management representatives up to 6 days a week since March 14 in an effort to work out a just settlement. During this period, management representatives have made no substantive attempt to meet the legitimate proposals of the union. Instead, the representatives for management have challenged the membership by insisting on taking away benefits that our members have enjoyed for several years.

"Termination date of the agreement between IAM District 50, San Diego, and Convair was May 8. It is usual for IAM members to refuse to work in the absence of a contract.

"However, because of the critical nature of the work being performed for Convair by our members, a 30-day contract extension was obtained in a further effort to work out a settlement without any interruption of work.

"During these past 30 days, everything possible was done to arrive at an honorable settlement with this company. On May 14, following a meeting of our joint coordinating committee with the UAW, I issued a public statement explaining the situation and warning that it could not continue indefinitely.

"On May 17, I personally called on the Secretary of Labor at his office and reported the seriousness of the situation. At that time I urged him to send a team of the Nation's top mediators into this dispute.

"When no movement was forthcoming from management and little interest evidenced by Government, our members took strike votes. Management was fully informed on the outcome of those votes.

"At no time has there been any evidence that anyone was greatly upset by the prospect of a strike. It is apparent to me that this company is trying to exploit its position as a prime defense contractor in an effort to impose substandard conditions on its employees.

"For those who are not familiar with the ecenomics of the aircraft and missile industry, let me say that the weighted average being paid by this industry is $2.68 an hour, including overtime, as of February 1960. Yet, Convair in line with the rest of the industry, is attempting not only to deny its employees a justified wage increase but is also attempting to weaken the cost-of-living escalator that has given some measure of protection to our members.

"Aircraft and missile employees have little job security. Yet not only does Convair refuse to discuss severance pay, it is demanding contract language that would permit indiscriminate layoffs without regard to seniority.

"Convair has refused even to discuss with union negotiators an improvement in its pension program, although other companies in this industry are negotiating pension improvements at this moment.

"This strike is a result of mistakes by management on the one hand and either unwillingness or inability within our Government to face up to the realities of legitimate union activity."

East Coast Shipyard Strike

EXTENSION OF REMARKS
OF
HON. JAMES A. BURKE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 16, 1960

Mr. BURKE of Massachusetts. Mr. Speaker, this is the 146th day of the strike in the eight east coast shipyards.

It is unbelievable that this strike could continue this long.

However, due to the neutral attitude of the present administration this strike has been prolonged to a point where the defense program of our Nation has been seriously impaired. Of course, this neutral attitude, while it may sound very lofty to some, in reality is nothing more than a case of ducking and dodging of responsibility.

The Secretary of Labor, Mr. Mitchell, has been so silent on this important issue that it causes one to wonder whether or not he realizes a strike is in existence. The Vice President who accepted the accolades for settling the steel strike has remained in an insulated shell and has shown no interest whatsoever in the problems of maintaining a shipbuilding program so vitally needed at this time.

With the entire world in an explosive state, we find this administration has its head in the sand. Yes, the administration is sitting idly by hoping that this shipbuilding stoppage problem will vanish.

A short time ago, 105 Members of this Congress sent an appeal to the President asking for the establishment of a factfinding board. The White House sidestepped this request with a rather willy-nilly answer about policy of the administration being one of waiting for both sides to make the request. The unions requested the President to establish a factfinding board and said they would abide by any recommendation made. The company refused to request a factfinding board to be appointed by President Eisenhower. Why the company officials will not trust the President is rather surprising. They apparently have their own reasons.

I would like to include an article which appeared in the New York Times, Thursday, June 16, 1960, reporting on the warning issued by Vice Adm. Wallace M. Bleakley, head of the Navy's ship construction program, about the peril to the security of the national defense being caused by a continuation of this strike:

SHIPYARD STRIKE DECRIED BY NAVY—BETHLEHEM AND UNION HEAR VICE ADMIRAL'S WARNING OF PERIL TO DEFENSE

WASHINGTON, June 15.—The Navy warned union and management negotiators for Bethlehem Steel Co. shipyards today that the 5-month strike on the east coast was a "black day" for United States defense.

Vice Adm. Wallace M. Bleakley, head of the Navy's ship construction program, said the strike at the eight yards had tied up work on one-fifth of new Navy ships. He urged a speedy settlement.

He made a special appearance before the negotiators for management and the shipbuilding workers union who met with Federal mediators in an attempt to settle the dispute.

Vice Admiral Bleakley told the negotiators that the United States could not be permitted to get "soft."

"Every day we lose puts the Russians that much ahead," he said.

He mentioned specifically the importance of two nuclear surface ships under construction at the yard at Quincy, Mass., and four new destroyers.

The vice admiral told both sides that the Navy planned to rush ahead with its shipbuilding program for the fiscal year 1961 and would not put any orders for ships in "struck yards."

Vice Admiral Bleakley said he considered the construction yards at Quincy and one at Sparrow's Point, Md., "national assets." Other Bethlehem yards are used mostly for repairs.

He indicated before the session that the Navy might withdraw the nuclear vessels from Quincy because "we can't leave them there forever." They are the cruiser *Long Beach* and the destroyer *Bainbridge*.

The main point in the dispute has been seniority clauses in the contract, which expired last July. It affected 18,000 workers.

The union has offered to let an independent fact-finding board or arbitrator rule on the dispute. The company has declined.

National Driver of the Year

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, June 16, 1960

Mr. JOHNSON of Texas. Mr. President, safe driving is a national problem of interest to all Americans.

In the same manner, courage is a quality universally admired.

In recent days, a young Texas truckdriver, who is also a minister, received national recognition for not only his safe driving ability but his bravery as well.

Russell R. Brown, an ordained Baptist minister who also drives an oil company tank truck, was named national Driver of the Year by the American Trucking Associations.

Mr. Brown who has driven approximately 900,000 miles without a chargeable accident, also received recognition for his courage and quick thinking that resulted in the rescue of a drowning 6-year-old boy.

The full story of Mr. Brown's achievements are detailed in a statement released by the American Trucking Associations, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

MINISTER WHO RESCUED DROWNING BOY NAMED AS TRUCKDRIVER OF YEAR

WASHINGTON, D.C., June 10.—A young Texas truckdriver-minister who rescued a drowning 6-year-old boy was named national driver of the year today by the American Trucking Associations.

One of the highest awards offered to professional truckdrivers in the United States went to Russell R. Brown, 31, Mount Pleasant, Tex., an ordained Baptist minister who drives a tank truck for the American Petrofina Co. of Texas, with headquarters in Dallas.

Mr. Brown won the coveted title for his record of 14 years of professional truckdriving without a chargeable accident, as well as his heroism in diving into a 12 by 12 foot concrete pit filled with muddy water to locate and rescue Charles Ray Schedule, 6, of Alvin, Tex. Mr. Brown was forced to dive twice to locate the unconscious boy. He then used artificial respiration until breathing was restored.

Mr. Brown has driven close to 900,000 miles without a chargeable accident. In addition he has been an ordained minister of the Baptist church since 1953 when he was 24, and has been pastor of three churches in Texas. After his ordination, he was given a special shift so that he could study at the Texas Bible Institute, Henderson, Tex., and perform his pastoral duties at the Liberty Hill Baptist Church, near Mount Pleasant, while still working full time.

He later was pastor of the Corinth Baptist Church in Timpson, Tex., and the Fellowship Baptist Church in suburban Houston. Medical and family expenses forced him to return to full-time truck driving.

Mr. Brown, and his wife, Robbie Louise, have four children: Gary, 5; Mary Lynn, 7; Ronnie, 8; and Jimmie 10.

Mr. Brown's rescue deed came last July while he was working for the Groendyke Transport Co., of Houston. While delivering a cargo of gasoline in Alvin, near Galveston, he saw three small boys screaming and running into a house nearby. They emerged with an elderly man and soon disappeared from view. Mr. Brown soon heard the man's cry for help and upon investigation found him bending over the side of a concrete pit or tank, filled with about 7 feet of muddy water. He was told a boy had fallen into the water.

Without hesitation, Mr. Brown dove into water and searched vainly for the boy's body. Rising to the surface breathless, Mr. Brown dove again, and finally came up with the Schedule boy, who apparently had drowned.

With the help of the elderly man and the small boys, the youngster was lifted to the side of the pit where Mr. Brown immediately started artificial respiration. Before long, little Charles Ray drew a feeble breath. He was taken to John Sealy Hospital in Galveston, where he recovered.

Without his "alertness, bravery, and immediate action" the Schedule boy would have drowned, the chamber of commerce, agriculture, and industry of Alvin said in commending Mr. Brown for his heroism. He also was cited by the Texas Department of Public Safety and was chosen "Most Representative Knight of the Road," an award given annually by the Hobbs Trailer Co. to a Texas truckdriver.

Russell Brown was the youngest in a Mount Pleasant family of 14 children. He began earning his own way at the age of 9 after his father died. Soon he was driving a small truck on his brother's poultry and egg farm. He first went to work for the American Petrofina Co., then the American Liberty Oil Co. in 1949. Following his pastorate at the Fellowship Baptist Church and his employment by Groendyke Transport Co., in Houston, he recently returned to his hometown and the driving job with American Petrofina. His run takes him from Mount Pleasant to Dallas and Fort Worth.

Professional truckdrivers from many States, nominated by their State trucking associations, were in competition for the annual driver-of-the-year award. Judges in this year's competition were: Congressman Kenneth A. Roberts, of Alabama; Gen. E. H. Qualls, director of the Bureau of Motor Carriers, Interstate Commerce Commission; Arthur C. Butler, director of the National Highway Users Conference; and Richard O. Bennett, secretary-treasurer, Insurance Institute for Highway Safety.

Hazleton's Can-Do Program—Jobs for Displaced Workers

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 16, 1960

Mr. FLOOD. Mr. Speaker, in the current issue, June 1960, of the VFW magazine there appears an extremely interesting and highly important article entitled: "Operation—Jobs for Displaced Workers," written by Mr. Dominic A. Antonelli, assistant editor, the Plain Speaker, Hazleton, Pa.

As Hazleton is the place of my birth and my hometown, I am particularly proud of the truly magnificent job that the people of Hazleton have done in their long fight for economic survival. It is an amazing story, a marvelous example of "Operation Bootstrap" accomplished successfully in the best American tradition.

The writer of this article, Mr. Antonelli, is widely known in our region as one of the most talented and hardest working reporters and writers, a gentleman dedicated to the progress and well being of his community and a leader and organizer in civic programs and affairs. This article could not have come from a better pen.

The success of Hazleton's can-do program is in great measure due to the guidance and counseling as put forth by Attorney Louis G. Feldmann, the present commander in chief of the Veterans of Foreign Wars, who has served in the capacity of legal adviser for the campaign organization.

It is very interesting to note, Mr. Speaker, that all those in the forefront in this program are veterans of past wars in which this country has been involved.

They are veterans who have won many military victories over implacable foreign enemies and now they return to their homeland and attack and defeat an economic enemy in their own backyard, with the same espirit de corps that they displayed so magnificently on foreign soil and battlefields.

It has often been said, Mr. Speaker, that the Lord helps those that help themselves. The Hazleton can-do program is a perfect example of the meaning of this phrase.

There is no doubt the expression "can-do" was derived from the classic American military term when an order was given to carry out a mission that seemed to be an impossible one. The unhesitating reply always comes forth, "Can-do," in response to a difficult assignment.

It gives me great personal pleasure, Mr. Speaker, to include as part of my

remarks the excellent article by Mr. Antonelli from the June 1960, issue of the VFW magazine:

OPERATION—JOBS FOR DISPLACED WORKERS

(By Dominic A. Antonelli)

When World War II ended, thousands of soldiers, sailors, and marines who had won the battle for survival in the jungles of the South Pacific, and the hedgerows of Europe, went home to the hard coalfields of Pennsylvania. The joy of their homecoming was soon tempered by the discovery that the homefront had become a "third front," and that they had yet another battle to wage—a fight for economic survival.

Like many of his human counterparts, King Coal had been toppled from his throne. The anthracite industry, which had provided the basic wealth of the area for nearly a century, was dwindling rapidly. Thousands of jobs were sliding down the empty coal chutes.

Gaunt abandoned collieries, rusting machinery, and gaping mine pits were grim reminders to the ex-GI's of the foreign areas that lay devastated in the wake of their recent campaigns.

The veterans soon exhausted their 52-20 benefits. Many of them registered in trade schools to train for jobs which did not exist. They left their homes in droves to seek work elsewhere.

As King Coal fell, it seemed he would drag down entire communities with him. Many despaired of ever seeing the region make a comeback.

But hopelessness was not what had just won a war for the United States. Nor were most of those who fought in the war ready to lie down and accept defeat in their own hometowns.

And so the lines were drawn for a battle which has amazed the entire Nation. This is the story of the battle fought by the Can-Do city which won its own bright, new future through community courage, cooperation, and self-help.

The city is Hazleton, Pa., the home town of Commander in Chief Louis G. Feldmann. Actually, the title of its recovery organization, Can-Do, tells the dramatic story. It is a tale of vital interest to numerous towns and small cities throughout the Nation, and to countless thousands of veterans. Not because Commander in Chief Feldmann has been one of the principals in the drama. Not because veterans of the community were prominent in the fight. But primarily because it is a story of what any red-blooded American town can do for itself if it has enough get up and go to do so.

It was no idle gesture that brought the Secretary of Commerce of Pennsylvania to the VFW National Convention in Los Angeles last summer. Secretary William R. Davlin, of the Governor's cabinet, made the long trip to Los Angeles to give recognition to Can-Do through its vice president, Louis G. Feldmann, who was about to be elected commander in chief of the Veterans of Foreign Wars. Among the 50 States, Pennsylvania has been setting the pace for industrial development. Hazleton and Can-Do are examples of how it can be done.

Since 1947, acting without Government subsidy or handouts, the community of greater Hazleton has secured new industries which have put over 2,000 men to work. New plants under construction will soon push the total number of new jobs well over the 3,500 mark.

But let's go back to the dark days right after World War II when the returning GI's found their homecoming dreams threatened and the old hometown on the verge of becoming a ghost town.

In those days the commander of VFW Post 589, Hazleton, was an energetic exmarine sergeant just returned from the Pacific theater. His name was Louis G. Feldmann. He was a young attorney who felt that the veterans had to attack their homefront problems with the same vigor they displayed on the battlefronts. He organized what was truly a unique group for those days, an association of all the veterans groups in the area. It became known as the Greater Hazleton Veterans Association. It included the VFW, American Legion, Catholic War Veterans, Jewish War Veterans, AMVETS, and Disabled American Veterans.

The Greater Hazleton Veterans Association provided the basic cohesion needed by a community which had begun to lose its spirit and its will to fight. It indicated that the ex-GI's were ready to unite in any project which would lead the way back to economic stability—with jobs for all who wanted to work. The opportunity to do so soon presented itself.

Early in 1947, a committee of the Hazleton Chamber of Commerce headed by Victor C. Diehm, a prominent radio executive, made contact with officials of the Electric Autolite Co., of Toledo, Ohio, and interested them in locating a new plant in Hazleton. There was only one catch. The community would have to come up with $500,000 cash within 60 days to help finance construction of the million-dollar plant which the firm would have to build.

Surprising no one but themselves the people of Hazleton and its suburbs, encouraged by the cooperation shown by groups such as the veterans, took the challenge and proceeded to make history at a fireball pace which has continued unabated since.

In the 60-day time limit, the people put up in hard cash, not the $500,000 asked, but a total of $659,000. Contributions, which had to be paid in cash immediately, ranged from the nickels and dimes of bootblacks to the thousands of dollars donated by commercial establishments.

Hazleton learned a good hard cash type of lesson with that project, too. Because once its commitment was paid to Autolite, the town had no more funds to go after another industry. The Autolite money was well spent, however. Over 300 men have been employed at the plant which manufactures wire for bombers and other electrical uses. Just recently, 10 years and 7 million miles of wire later, the company wiped out the mortgage to its plant and revealed its total payroll since coming to Hazleton had been over $11 million.

Now the community sort of sat back and wondered where to turn next. Meanwhile, some of the textile mills moved to States in the South. The last big coal operation was crippled by the flood waters of hurricane Diane in 1955, offsetting the intial gains.

Again, the VFW played a role in setting the stage for the next big act in this life-and-death drama of a community. A series of open meetings sponsored by VFW Post 8253, West Hazleton, and VFW Post 589, Hazleton, resulted in the formation of a help committee to mobilize the support of all organizations—veterans, service and social clubs, fire companies, farternal groups, church bodies, etc.

Simultaneously, an estimate of the situation made by chamber of commerce leaders who had young, versatile Dr. Edgar L. Dessen, veteran of the Midwest war theater and a VFW member, at their head, indicated that further progress would depend on acquisition of a site for an industrial park, and the development of a revolving fund to finance the construction of industrial buildings.

The first step was accomplished by an "operation jobs—dime-a-week" program. Lunch boxes were placed on restaurant counters, bars, and in other places for the collection of dimes. A "mile of dimes" was donated on the city's main street where a tape was rolled out for several blocks and people were invited to place dimes on it. Over $5,000 was raised and immediately used to buy a 500-acre site for the industrial park.

The community leaders then went to the people, through the veterans organizations, service clubs, and so forth, to explain what was needed. They pointed out that industry was expanding rapidly, that firms were looking for modern buildings ready for occupancy. They proposed to raise money, build an industrial shell building of standard size, find a prospect and finance it to his specifications. It was pointed out, "We no longer give money away to get industry. The funds will be revolving. Eventually all money spent on new buildings will be returned."

A goal of $500,000 was set. It seemed to be a tremendous amount for a community that just had put up $659,000 in cash for one industry. This time it was decided to sell 15-year, 3-percent debenture bonds in $100 denominations to individuals and to seek what cash donations were available from business and established industry.

"You just can not do it," many citizens insisted.

"But we can do it," just as many more insisited. Thus a name was born. The new industry group was labeled "Can-Do" and words were found to fit the letters: Community Area New Development Organization.

A 4-week drive was launched in the spring of 1956. Lou Feldmann was in charge of bond sales and William Deisroth was head of cash solicitations. Dr. Dessen served as general chairman. In 4 weeks aproximately $200,000 in cash, and $540,000 in bonds, were raised for a total of $740,000—almost 50 percent more than the goal which some had claimed could not be reached. All this was done in an area with a population of less than 60,000 people.

A significant feature of the drive was that 3,000 people bought the bonds, most of them working people who could not come up with $100 in cash but who signed payroll deduction plans. Employers deducted $2.50 a week from their salaries until the $100 bonds were paid for.

A classic example of community solidarity was set when the Can-Do board of directors was organized. In addition to chamber of commerce representatives, labor groups were given representation, as well as banks and any group which had sold $25,000 or more bonds. The West Hazleton Lions, with only 40 members, qualified for 5 seats with sales of $125,000.

Can-Do then went to work. A site was cleared and a 60,000 square foot building shell erected. In a few months, General Foam Corp., manufacturers of foam rubber products, signed a lease for the building which was financed with Can-Do putting up 20 percent, local banks 50 percent, and the Pennsylvania Industrial Development Authority loaning 30 percent.

Under these arrangements, Can-Do was getting $5 worth of industrial building for every $1 raised in the community.

In quick succession, Capitol Products Corp. took Shell No. 2 to manufacture storm doors and windows; Lewis Steel signed up for No. 4 to make steel cabinets while No. 3 was built specifically for Highway Trailer Co. This last, a huge plant of 143,000 square feet, now employs 700 people and the company has announced plans to expand at Valmont Industrial Park, which the Can-Do site has been named, by constructing an adjacent facility of 160,000 square feet.

Just a short time ago General Foam, the first Can-Do industry, announced it will

build another 62,000 square foot plant adjacent to the first.

Once these first four industries had been established, Can-Do found that its reputation for vigorous action and solid financing was bringing in more prospects than its treasury could handle. Again it was time to go to the people for funds.

As before, and perhaps to a greater degree, there were those who said it couldn't be done. "You'll kill the goose that lays the golden eggs," and "you can press the people just so far" said the doubters about the new drive.

But Can-Do had heard all that before and, in early 1959, opened its second cash-and-bond campaign. The same leaders, including Lou Feldmann and his fellow veterans, went to work. When the final results were tabulated, the first drive had been exceeded and another $850,000 was in the Can-Do till. This brought the total raised in less than 3 years to almost $1,600,000.

The building committee went to work, and soon shells were going up for New Moon Mobile Homes, to employ 300 people; for Lone Star Boat Co., to employ 300; Spaulding Bakeries, to employ 200; Foldes Shoe Industries, 100; Utrilon Shoe Corp., 860.

As the shiny, new buildings spring up in an area once dotted with open mine pits and refuse banks, they represent a historic change for the hard coal region. No longer are black diamonds the basic wealth of the community. The name of Hazleton now goes forth on highway trailers, steel cabinets, pleasure boats, trailer homes, shoe cartons, rubber products, and other items which indicate diversification of the industrial base.

It might be added that established firms, such as Tung-Sol Electric with two plants in the area; Dorr-Oliver, which manufactures industrial filters, and Barrett-Haentjens, manufacturer of pumps and similar machinery, have been expanding their facilities in the prevailing spirit of progress which now permeates the community. Beryllium Corp. has placed its nuclear division in abandoned railroad shops and a roundhouse nearby.

There is a lot more to the story—of men who work long, hard hours without compensation except their own satisfaction; those who supervise site developments; those who travel from bank to bank arranging financing; those, like Commander in Chief Feldmann, who handle the multiplicity of documents, negotiations, and other legal matters, and those who receive prospects and show them the community.

Also part of the story is how a little community like Hazleton doggedly fought and won scheduled airline service; how it is fighting for early completion of two scheduled interstate superhighways to pass near there; and how it is planning parks and recreational areas to fit its new outlook on the future. The community was recently described by one visiting European economist as "a classical example of what can be done to strengthen the national economy at the community level."

The project's growth has been so tremendous that all can-do funds, and what the area banks can loan, are tied up to the hilt. Did can-do go looking for a handout? No. Can-do officials went to Washington but, instead of asking for something for nothing, asked Congress to pass a bill authorizing the Government to rediscount the mortgages on the buildings so that funds can be freed for additional building—a deal which would pay a handsome profit to the Government. Does this seem like a strange outlook in these days of subsidies and simpering for handouts?

It is not so strange when you know what can-do's motto has been in its fight for community survival:

"Where there is no vision, the people perish" (Proverbs 11: 29).

Foreign Aid and the American Economy

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Thursday, June 16, 1960

Mr. TALMADGE. Mr. President, figures furnished me by the Department of the Treasury speak for themselves in demonstrating just how badly this Nation's economy has been jeopardized by its present foreign aid and trade policies.

In 1949, the United States had gold reserves totaling $24.6 billion, against which there were $6.4 billion in foreign claims. Today, American gold reserves have shrunk to $19.4 billion, while foreign claims against them have risen to a staggering total of $17.9 billion.

While the American citizen cannot redeem his dollar in gold, there is no bar to foreign governments and citizens demanding redemption in gold for dollars they hold. Thus, it is obvious from the figures I have cited that should all foreign claims against American gold reserves be pressed at one time, it would be impossible for the U.S. Treasury to pay them off and maintain the required reserve of 25 percent of the total of circulating currency which, at the present time, runs to $11.7 billion. If these claims were presented for payment, our Government would have only two alternatives: One would be to default on the payment; the other would be to devalue our dollars.

The relationship between this alarming situation and American foreign aid and trade policies has been the subject of a careful study by Georgia's distinguished Congressman, J. L. PILCHER, following an around-the-world tour of foreign aid projects, last fall. Congressman PILCHER returned convinced that policies governing foreign aid must be drastically and realistically revised if our economy is to be preserved.

The Albany (Ga.) Herald, in its issue of June 11, 1960, featured an excellent editorial setting forth Congressman PILCHER's views about, and conclusions on, this subject which should be of great concern to every American. I ask unanimous consent, Mr. President, that the text of the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

EDITOR'S OUTLOOK—JOHN PILCHER TALKS SENSE

In summing up his criticism of the administration's foreign aid bill, Representative JOHN PILCHER of Georgia's Second Congressional District made some telling points, not the least of which was his reminder that lack of know-how in this respect was dangerous to the American economy. Mr. PILCHER's words were listened to carefully by his colleagues because of his intimate knowledge of his subject. As chairman of the House Subcommittee on Foreign Economic Policy, the man from Meigs traveled some 42,000 miles and visited 22 countries on 6 continents. What he saw, he saw through the keen eyes of a businessman who made his success the hard way; and much of what he saw he did not like. It smacked of prodigious waste and bureaucratic tomfoolery. It made a jest of the administration's plea that "self-help" is the key to its foreign assistance program.

Among other things Mr. PILCHER's arguments raised the issue of the need for study of America's system of extending credit to other countries to see whether more of the money sent overseas could not be used to buy American products. The Development Loan Fund has already announced that it will require that credits extended to other lands be spent primarily in this country. Should this policy be applied to all Government lending and giving agencies of our foreign aid program, it will be not only a departure from the way in which we have dispensed some $63 billion since the end of World War II. It will also inevitably stir some questions about a change in direction of another main principle of our foreign policy, which is the gradual banishment of trade barriers.

The Development Loan Fund's policy is frankly restrictive, but the reasons for it were plainly cited by Mr. PILCHER. One is that the United States does, indeed, need to find a way to increase its exports. Its balance of payments is pretty much out of kilter. Another is that the economy of other Western countries has improved so much that the United States has a right to expect them to carry a share of the burden of aiding underdeveloped lands; the United States must take some steps to see that some of the dollars we spend overseas come back to us for goods bought from us. A third reason—and probably the chief one—is that a great many countries have foreign monetary restrictions aimed mostly at the dollar.

The continued outflow of gold has concerned Washington officials, and there is no question that the new policy of tying loans to purchases of American goods is a lever to induce other governments to loosen their own restrictive practices. But none of this really gets to the heart of the trouble. If our aid programs are to be blamed for our export deficits and our gold outflow—and they are certainly not altogether to blame, for our high taxes and high labor costs have made us unable to compete in some markets—it is not because they are aid programs. Mr. PILCHER says it wisely when he assails not the concept of foreign aid but its conduct.

Unfortunately, we have not restricted aid to actual need, or to countries where aid can be a realistic help, or to countries where our own self-interest indicates aid would be valuable. We have spread it about the world without regard to any of these things. Our policy has been based more on a belief that the dollar can produce civilization in a short time, democracy in even less time, and allies overnight.

If our policy of giving aid had been realistic, there would be no need now for the restrictions being applied to trade matters by the administration. And unless something is done about the amount of aid and the uses of aid we give, these restrictions are likely to prove only a temporary solace.

Mr. PILCHER believes that the United States can no longer support the rest of the world indiscriminately. This is certainly true. It may be that rearranging the burden a little will seem to help for a time. But in the end an overloaded United States can only be helped by reducing the burden to what can be carried usefully, realistically, and in our own interests.

Salary Increases for Postal and Other Federal Employees

SPEECH
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 9883) to adjust the rates of basic compensation for certain officers and employees of the Federal Government, and for other purposes.

Mr. METCALF. Mr. Chairman, our Government has a tremendous responsibility today—greater than ever before. The quality of the discharge of this responsibility depends to a very great extent upon the 2,200,000 civilian employees of the Government.

There are a number of ways in which pay scales can affect the quality of the work the Government receives from its civilian employees: First, by attracting more and better qualified candidates for Government service; second, by encouraging experienced employees to remain in Government service; third, by providing incentive and increasing morale. We cannot afford today to have a demoralized civil service.

There has not always been a crisis. We have been fortunate to have employees of quality and dedication. We could have continued to underpay our employees and would still have had many who were dedicated and qualified—and only considerations of the justice of it all would have made us pay them more. But today, we are forced to consider more than justice.

We need to make Government service attractive to young people who will make it their career. Young people today are not so much interested in the things that are going to happen to them in 20 to 30 years from now as they are in the immediate present. They think not in terms of some future date, but in terms of today, in terms of present-day food and clothing and shelter, and education for their children. Unless the wage of postal and Federal employees is made and remains sufficiently attractive, the postal service and the Government generally are going to be unable to attract and, perhaps even more important, retain the best type of young people. Low pay scales force the prospective employee to choose between responsibility to his job interests or his loyalty to his Government and responsibility to the economic well-being of his family.

The "Report on Civilian Compensation in the Executive Branch of the Federal Government," compiled by the steering committee of the Interdepartmental Committee on Civilian Compensation in November 1957, stated in summary:

Personnel turnover is increasing and quality is decreasing. Many jobs remain unfilled. Quality and quantity of applicants is inadequate.

Why are we failing to attract qualified applicants? Why are dropouts increasing? The committee hearings on Federal and postal pay raise bills are full of figures indicating that pay of Government workers is lagging seriously behind rates for comparable jobs in the private sector of the economy. For example, during the period between July 1951 and November 1959, post-office clerks received wage increases averaging 38½ cents per hour, or approximately 20 percent, while production workers in manufacturing industries received wage increases averaging 70 cents per hour and in excess of 45 percent. In July of 1951, after the enactment of Public Law 204 of the 82d Congress, the entrance rate for a substitute post-office clerk was $1.61½ per hour. This was about 1.8 cents per hour above the industrial average. By November of 1959 the entrance rate for a post-office clerk was 27.2 cents per hour short of the industrial average.

The purchasing power of many Government employees today is substantially behind that of 1939. For G–5, G–7, G–9, G–11 and G–13 employees, a percentage wage increase of from 5.2 percent to 20.3 percent would be necessary to give them the purchasing power they had before the war.

A study of pay scales for policemen and firemen in large metropolitan centers, where 40 percent of all postal employees live and work, reveals that the lowest wage in 10 of 17 cities studied was greater than the highest wage which a letter carrier or clerk can receive according to the national postal salary schedule.

The evidence presented to the Committee on Post Office and Civil Service clearly shows, according to indicators such as purchasing power and comparative wages, that our Government and postal employees are underpaid.

A pay raise for Federal employees has been criticized as a contribution to inflation. We do not know if rising wages are a cause of inflation. Even if they were, merely equalizing wages of Federal employees would not push up other wages. Those wage demands which endanger stability are not the ones which equalize, but those which are excessive and unnecessary. It is definitely not excessive and unreasonable to ask that Federal employees be paid at rates "reasonably comparable" to those in private business. The administration cities reasonable comparability as a basis for judgment of Federal wage scales. If this is so, why do they not help us to make the wages comparable?

The administration suggests that we should wait for further studies of comparability. Many of us would like to see a comprehensive plan for coupling Government and postal pay increases to increases in the rest of the economy. But we cannot wait. Should we postpone a raise in salaries, we will have increasing difficulty in finding qualified applicants for Government service, increasing numbers of resignations, and increasing demoralization. Do we have the right to say once again to our Government and postal employees: "Just wait another couple of years and keep up your good spirits. As soon as we finish all our studies of the problem we will all agree on a comprehensive plan to provide regular salary increases. We're sorry, but we just don't know yet how to give you the salaries you deserve."

We need qualified workers in Government service. There, employees are performing functions which are crucial to the national defense, safety, economy, and welfare. Large numbers of them act in direct support of defense activities or in other equally important tasks wherein failure might adversely affect the entire Nation. Not only do we have a responsibility to our present employees, but it is necessary that we have a Government service which is efficient and up to the enormous responsibility which faces it. I would feel responsible to neither my fellow citizens who are Government workers nor to the citizens of the country who demand and deserve good government, if I did not continue to support a just rate of pay for Federal and postal employees. H.R. 9883 will go a long way toward making their salaries what they should be.

Enslavement of Peoples of Czechoslovakia

EXTENSION OF REMARKS
OF
HON. FRANK J. LAUSCHE
OF OHIO
IN THE SENATE OF THE UNITED STATES
Thursday, June 16, 1960

Mr. LAUSCHE. Mr. President, recently, I received a copy of a letter which, in my opinion, expresses the true hope of the enslaved people of Czechoslovakia that some day they may get out from under the yoke of communism.

I ask unanimous consent to have the letter printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

PARMA, OHIO,
June 12, 1960.

Mr. CYRUS EATON,
Arcadia Farms,
Northfield, Ohio.

DEAR MR. EATON: In May 25, in the Cleveland Plain Dealer on page 18, you were quoted as saying in Prague, "In Cleveland, where I live, there are many people of Czechoslovak origin. They are fine people. Unfortunately there are some people in the United States who want to make them unfriendly toward Czechoslovakia."

In reading this statement—I know from experience that you are a victim of Communist propaganda. I spent 3 weeks in Czechoslovakia last summer, and the most asked questions were: Do you like Czechoslovakia? Why is there so much propaganda against Czechoslovakia in the United States?

Being of Czechoslovak descent, I presume I would be more aware of any such propaganda against Czechoslovakia in the United States. And then I would explain—that we know their circumstances—that they are under Communist rule, not necessarily by choice. The democracy that once existed in Czechoslovakia is well known history. And believe me, their hope is to some day get out from under the yoke of communism. You would tear down what good I could do as an ordinary American.

And they know they are a satellite of Russia. You said in another statement that the "satellite" countries did not like to be called "satellites." Who did you speak to—Communist leaders—and whom else—certainly not an ordinary citizen?

Your intentions may be what you consider right—but somehow you're getting mixed up. Why don't you spend more time preserving democracy—rather than tearing it down? Just where would you be in a Communist country? And do show appreciation of freedom—for even my 8-year-old son could feel the difference between a free country and a slave state.

Sincerely,

MRS. WILLIAM J. KALL.

The Farm Problem

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 16, 1960

Mr. BERRY. Mr. Speaker, under leave to extend my remarks, I would like to insert in the RECORD portions of a letter I received from Chas. M. Fuller of Redelm, S. Dak. His 8-page, handwritten letter contains some of the best philosophy, best commonsense, and best judgment I have read in a long time. His letter reads in part as follows:

I have been following what has been done in Congress with the farm question. I am disturbed by the apparent support given the Poage-McGovern bill. It has all the bad features of the present farm laws, that have not solved the surplus problem or raised farm income. It includes higher supports, more restrictions on farmers, more redtape, bigger temptations for chiseling with two wheat prices and will only make a bad mess worse.

A farm law, a labor law, or business regulating law must consider not only the people it regulates, but the taxpayers, the consumers, the Government financial position and last but not least, does it lead us toward or away from communism?

All of these controls and regulations lead us closer to communism by setting up a system all organized for a few dictators to take over and operate. With Mr. K. barking and snarling at us, I think every law and regulation affecting our economy and Government should get us back toward free enterprise and political freedom. We should not spend billions to fight communism and then set a system that they could easily operate.

I am proud to be a member of the stockgrowers organizations that have opposed Government help and regulation. I would like to see the farmer take the lead and stop leaning on the Government for economic advantage and then hope that others would follow, and all be governed by supply and demand. Labor should be ready and willing then to bargain downward instead of forcing layoffs, so that farmers can buy labor's products. Then we can all compete in world markets.

Patrick Henry said, "Give me liberty or give me death." We farmers and laborers, also, are saying "Give me some dollars and you can have my liberty." I am sure that with free enterprise we would all be better off economically.

The Government is in serious financial trouble, and every bill passed by Congress should keep that in mind. Government spending more than it takes in and giving I O U's for the difference raises prices and helps price us out of world markets. Inflation also steals from those who save for retirement. What we have been doing there is also playing into the Communists hand, and it is time we reversed the trend before it is too late.

Protest Against Small Business Administration Policy and Matters Pertaining to the American Economy

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1960

Mr. DENT. Mr. Speaker, I know this session is about to end and adjourn sine die.

Even so, I must call to the attention of the House a serious matter and one that will effect every nook and corner of our country, our economy and our national well-being.

Recently at the request of a fellow Member of Congress, my friend and associate, FRED SANTANGELO, of New York, I had luncheon with an American small businessman.

The story he told about certain interpretations and rulings made by the Small Business Administration astounded me and caused me to do a little checking into matters that I believe should be checked by this Congress.

The case I present is only one of many that will be uncovered if a committee of this Congress will take the necessary steps to set up a proper and vigorous board of inquiry into the whole area of foreign influences and impacts upon our domestic economy.

The question herein involved is one that goes deeper than the setting aside of congressional intent and is intermeshed with the whole picture of foreign aid, trade, imports, exports, intrigue, collusion, national defense, national welfare, quotas, migration, immigration, and the complete gamut of greed, avarice, and exorbitant profits.

It spells out the serious impact upon national thinking by a new and powerful group, the foreign importers, foreign investors, and special interest groups whose influence is felt in legislative action in the many acts creating and perpetuating money lending, credit giving, concession granting agencies. The opening wedge covered in this case can be the pry needed to unlock the bolted doors that have kept Congress from the whole truth of deceit, profiteering, kickbacks, and other questionable practices that have been fed to the American public as an excuse for foreign relations in the better part of the past decade.

You may wonder why I bring in the whole field of trade and aid, in a simple little case involving less than $5,000.

I do so because in this case we may find the straw that is breaking the camel's back. If an agency of Government created by the Congress for one specific purpose can circumvent the pronounced and spelled out will of the Congress of the United States, then maybe other agencies spending millions, even billions of taxpayers' dollars can be operating in the same mistaken area of disregard not alone for Congress, but in the main, for the people of the United States.

The invitations for bidding upon Small Business Administration contracts contain the following langauge:

NOTICE OF SMALL BUSINESS SET-ASIDE

Bids or proposals under this procurement are solicited from small business concerns only, and this procurement is to be awarded only to one or more small business concerns. This section is based on a determination by the contracting officer, alone or in conjunction with a representative of the Small Business Administration, that it is in the interest of maintaining or mobilizing the Nation's full productive capacity, in the interests of war or national defense programs, or in the interest of assuring that a fair proportion of Government procurement is placed with small business concerns. A small business concern is a concern that (1) is not dominant in its field of operation and, with its affiliates, employs fewer than 500 employees, or (2) is certified as a small business concern by the Small Business Administration. In addition to meeting these criteria, a manufacturer or a regular dealer submitting bids or proposals in its own name must agree to furnish in the performance of the contract, supplies manufactured or produced in the United States, its territories, its possessions, or Puerto Rico, by small business concerns; provided, that this additional requirement does not apply in connection with construction or service contracts. Bids or proposals received from firms which are not small business concerns shall be considered nonresponsive.

Further, let me quote from title 13—Business Credit and Assistance—chapter 1, Small Business Administration—121.3-8—Definition of small business for Government procurement:

(a) Small business definitions. A small business concern for the purpose of Government procurement is a business concern, including its affiliates, which is independently owned and operated, is not dominant in its field of operation and can further qualify under the following criteria:

(1) General definition. Any business concern (not otherwise defined in this section) is small if: (1) Its number of employees does not exceed 500 persons; or (2) it is certified as a small business concern by the Small Business Administration.

(2) Construction industry. Any business concern in the construction industry is small if its average annual receipts for the preceding 3 fiscal years do not exceed $5 million.

(3) Food canning and preserving industry. Any business concern in the food canning and preserving industry is small if its number of employees does not exceed 500 persons exclusive of agricultural labor as defined in subsection (k) of the Federal Unemployment Tax Act (68A Stat. 454, 26 U.S.C. (I.R.C. 1954) 3306).

(4) Petroleum refining industry. Any business concern in the petroleum refining industry is small if its number of employees does not exceed 1,000 persons and it does not have more than 30,000 barrels per day crude oil capacity from owned and leased facilities.

(d) Definition of a small business nonmanufacturer. Any concern which submits a bid or offer in its own name, other than a construction or service contract, but which proposes to furnish a product not manu-

factured by said bidder or offerer, is deemed to be a small business concern when:

(1) It is a small business concern within the meaning of paragraph (a) of this section, and

(2) In the case of Government procurement reserved for or involving the preferential treatment of small businesses or one involving equal bids, such nonmanufacturer shall furnish in the performance of the contract the products of a small business manufacturer or producer which products are manufactured or produced in the United States: *Provided, however,* If the goods to be furnished are wool, worsted, knitwear, duck, webbing, and thread (spinning and finishing), nonmanufacturers (dealers and converters) shall furnish such products which have been manufactured or produced by a small weaver (small knitter for knitwear) and, if finishing is required, by a small finisher.

It would seem clear to any elementary school graduate that up to this point anyway, the set-aside provisions for Government procurement were established for one purpose and one purpose only, namely, to keep small business in America ready and producing in times of peace to be ready in times of war, coupled with the compelling need to keep all segments of our productive security economically sound and participating in the benefits of tax dollar spending by Government.

To think or act otherwise is contrary, in my humble opinion, to both the will of Congress and the welfare of our Nation in both peace and war.

In the face of the above plainly stated requirements, the Small Business Administration ruled in favor of an import firm against an American producer on Invitation Bid DA–Eng–11–184–60 B/E 485 JD dated April 15, 1960.

At this point, allow me to put into the record facts pertaining to this particular case that I believe will show to the Congress the utter disregard for the intent and will of the Congress involved in this decision.

Quoted below is an excerpt from a letter of protest from Union Instrument Corp. on the decision by the Small Business Administration to award a contract for foreign-produced goods:

The low bidder on the invitation was Geo-Optic & Paper Corp., who offered a price of $2,876.50 against our offer of $3,570. Since Geo-Optic & Paper Corp. is an import firm dealing mainly in foreign products, it has been determined that they plan to have steel blanks made in this country, and then forward them to Germany for the major and important part of the production—that is, calibrating, engraving, and finishing of the end products.

This matter was discussed in a lengthy meeting with Mr. James Mills of your office, attended by our Mr. Scavuzzo, and Mr. Q. Johnson, and Mr. Arthur Chodosh, attorney for our company. Mr. Mills did not give us any satisfactory explanation for disregarding the small business set-aside procurement provisions of the invitation and the provisions of the statutes and regulations governing such procurements.

Mr. Mills cited a case of a foreign produced cable imported to this country to which was attached a tip representing about 4 percent of the value of the finished product, which was qualified by the Small Business Administration as a product and manufactured in the United States. Mr. Mills took a box of pencils from his drawer and stated that in his opinion the pencils and box could be manufactured in a foreign country and could qualify as a product produced in this country if the importer simply sharpened the pencils in this country prior to sale. These were cited as the basis for the interpretation applied to our case.

At the end of a long discussion, starting in the morning, and finishing after lunch, Mr. Mills stated that he thought that an error might have been made, but could not offer any means of rectifying this error. This error, of course, is at our expense.

If our interests were to be protected, and to avoid a repetition of such strange interpretations, we felt that we were left with no alternative but to refer this matter to our Congressmen for clarification. We discussed this with a number of Members of Congress, and were referred to the U.S. Senate Select Committee on Small Business. After numerous discussions, we are now firmly convinced that this decision of yours is in violation of the terms of the invitation covering the small business set-aside provisions, and the statutes and regulations covering such procurements.

May we have your early reply to our protest?

Yours very truly,

UNION INSTRUMENT CORP.

After reading the protest, I asked the Union Instrument Corp. officials to send me a report on the whole matter which I now make part of the RECORD.

A

UNION INSTRUMENT CORP.,
Plainfield, N.J., June 6, 1960.

The Honorable JOHN DENT,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN DENT: My meeting with you on Thursday, June 2, was an honor and a pleasure. Your grasp and understanding of the problem concerning a decision made by the Small Business Administration procurement as to foreign-made products was most gratifying.

Enclosed you will find a copy of a memorandum covering the facts in the decision which we are protesting. This decision, if allowed to stand, establishes a serious precedent particularly in view of a pending proposed change contained in Release No. 617, dated April 21, 1960, issued by the Small Business Administration, a copy of which you will also find enclosed.

Release No. 617 states that the major proposed change in this definition is to "bar firms from preferential treatment under the Small Business Act if the products they propose to sell to the government consist of more than 50 percent of foreign made materials." The inference is that the regulations now allow foreign products of more than 50 percent. Actually, the reverse is the truth since none is now allowed as the regulations clearly state.

Under the terms of this proposed change, every procurement under the Small Business Set-Aside could be lost to foreign competition. This change does not protect 50 percent of such procurements for small business in the United States. It proposes to practically destroy the purposes of the Small Business Set-Aside program. Only a small portion of procurements are made by the Government under Small Business Set-Aside provisions, and now it is proposed to practically eliminate the last measure of protective regulation left for the small businessman.

The proposed change in Release No. 617 will take away one of the last remaining protections against disastrous competition and can only result in further hardship to small businessmen in this country. It is difficult to understand how such a proposal can come from an agency established to help small business in this country. The only small businesses which can benefit from this change are nonmanufacturers; importers, brokers, etc., of foreign produced products, at the expense of manufacturers and taxpayers in this country who have to pay for such procurements in their taxes.

Our industry has been seriously affected by foreign competition. Manufacturers in this country cannot compete with foreign labor costs. The history of the drawing instrument manufacturers in the United States illustrates the effects of lowered protection. At the end of 1945, there were at least 12 manufacturers of drawing instruments in this country. Now only two remain, and these two only because they make instruments of a quality and character with limited markets. The import duty in 1945 on drawing instruments was 45 percent, now it is 18 percent. Buy-American protection originally was 25 percent, and is now 6 percent. The net result is that 95 percent or more of the drawing instruments used in this country are of foreign make, chiefly German.

One of the stated purposes in Defense agency small business set-aside procurements is "that it is in the interest of maintaining or mobilizing the Nation's full productive capacity, in the interest of war or national defense programs." Should the Government be faced with an immediate need for large quantities of drawing instruments for engineering purposes, and if the German source of supply were cut off, it would be faced with a serious problem.

The originally announced purpose of giving vast aid to many countries by lowering protective tariffs, was to help build strong allies and friends. The rebuilding of these countries is more than complete. Germany is the main competitor of our industry on many manufactured items. It is now enjoying tremendous boom prosperity. Enclosed are two releases, one from the New York Times, dated May 11, 1960, and the second from the German American Trade News, dated March 1960, describing Germany's booming economy has been attained at tremendous cost to manufacturers in this country, some of whom have been forced out of business, and has caused unemployment in many areas with an adverse effect on our economy.

The importer, broker, etc., is now only affected by restrictions in small business set-aside procurements, not by the Buy-American differential of 6 percent. We recently quoted Weems Systems of Navigation on a requirement for 12,000 proportional dividers with special markings for the U.S. Air Force. This is an extraordinarily large requirement for this item. Our price of $9 on an American made instrument could not compete with that of a German importer's price of between $6 and $7, with only a protective differential of 6 percent in price. While this may seem a savings for the Government, when the losses in taxes to the Government are considered, it is doubtful that anything has been saved. The loss to the manufacturer, and the American worker is serious. In addition, American business and American workmen have to pay for this procurement from a country booming with prosperity. This is particularly ironic in view of the fact that this item was designed by a domestic firm for use by our Air Force.

SEC. 2. (a) of the Small Business Act states in part as follows:

"It is the declared policy of the Congress that the Government should aid, counsel, assist, and protect, insofar as is possible, the interests of small business concerns in order to preserve free competitive enterprise, to insure that a fair proportion of the total purchases and contracts for property and services for the Government * * * be placed with small busness enterprises."

It is respectfully submitted that the present regulations of the Small Business Administration granting preferential treat-

ment to products manufactured or produced in the United States are in complete harmony with the purposes and intent of the Small Business Act, and any deviation from this regulation or any change in the regulations permitting the furnishing of foreign made merchandise to the U.S. Government, is contrary to, and in violation of the purposes of the law itself.

We respectfully urge you to oppose the changes proposed in Release No. 617, for the reasons outlined above. We are gravely concerned for our existence and the welfare of our workers if these changes become effective. This matter is being acted on now, and if you agree with our position, we ask you to take whatever steps you can to prevent these changes from becoming effective.

Your interest in this matter will be greatly apreciated.

Very sincerely yours,

S. SCAVUZZO,
President, Union Instrument Corp.

B

UNION INSTRUMENT CORP.,
Plainfield, N.J.

SECTION 121-3-8 of "Definition of Small Business Nonmanufacturer for Government Procurement, paragraph (b)(2), dated May 1, 1959, provides that in the case of Government procurements reserved for or involving equal bids, such nonmanufacturer shall furnish in the performance of contracts, the products of a small business manufacturer or producer which products are manufactured or produced in the United States. The same provisions are contained in "Definition of Small Business" as amended June 1, 1957. Photo copies of both are enclosed.

Because the provisions of the invitation and the regulation require that a nonmanufacturer shall furnish in the performance of this contract, products of small business manufacturer or producer in the United States, Union Instrument Corp. took this matter up with the Small Business Administration Office in New York, and was advised that under the terms contained in the invitation, an award could not be made to a nonmanufacturer offering foreign products or production, to inform the SBA office in Chicago, and to immediately file a protest with the U.S. Army Engineers office in Chicago, against any award to Geo Optic & Paper Corp. A visit was made to the small business office in Chicago who also advised the immediate filing of a protest and who also said that under the terms of the invitation, and the regulations, an award could not be made to a firm offering foreign products or foreign produced products.

A protest dated May 4, 1960, against any award to Geo Optic & Paper Corp. was filed by Union Instrument Corp. The contracting officer of the U.S. Army Engineers office informed Union Instrument on May 18, 1960, that the Small Business Administration office in Washington, D.C., ruled on May 5, 1960, that the product being furnished by Geo Optic qualifies as a domestic product. Since the contracting officer is bound by interpretations of the Small Business Administration on Small Business "set aside procurement," an award was made to Geo Optic & Paper Corp.

This interpretation is contrary to all previous rulings of the Small Business Administration on items in which Union Instrument Corp. has had business, including a previous case of a proposal on the same item by Geo Optic & Paper Corp. and contrary to the decisions of the New York and Chicago offices of the SBA.

Union Instrument Corp. protests that the interpretations of the Washington office of the SBA is in violation of the terms of the invitation for bids. Also, that it is a violation of the SBA "small business set-aside" regulations. The language of the SBA "set-aside" regulations are clear, concise, and definite: and we cannot see how such an interpretation can be put into the regulations as stated.

DECISION OF SMALL BUSINESS ADMINISTRATION ON SMALL BUSINESS SET ASIDE PROCUREMENT

Union Instrument Corp. of 1447 East Second Street, Plainfield, N.J., submitted a proposal to the U.S. Army Engineer Procurement Office, Chicago, Ill., on April 15, 1960, on Invitation No. DA-ENG-11-184-60-B/E-485-JD, for (95) graduated steel straight edges at a total price of $3,570.00. A competitive bid in the amount of $2,876.50 was submitted by Geo-Optic & Paper Corp. of New York, N.Y., a firm dealing in foreign import products.

Since Geo-Optic & Paper Corp. is an import firm, it was determined that they planned to have steel blanks made in this country, and then forward them to Germany for the large and important part of the production, that is, the calibrating, engraving, and finishing of the item.

The invitation contained the following provisions:

Notice of small business set aside

"Bids or proposals under this procurement are solicited from small business concerns only, and this procurement is to be awarded only to one or more small business concerns. This section is based on a determination by the contracting officer, alone or in conjunction with a representative of the Small Business Administration, that it is in the interest of maintaining or mobilizing the Nation's full productive capacity in the interest of war or national defense programs, or in the interest of assuring that a fair proportion of Government procurement is placed with small business concerns. A small business concern is a concern that (1) is not dominant in its field of operation, and with its affiliates, employs fewer than (500) employees, or (2) is certified as a small business concern by the Small Business Administration. In addition to meeting these criteria, a manufacturer or a regular dealer submitting bids or proposals in its own name, must agree to furnish in the performance of the contract, supplies manufactured or produced in the United States, its territories, its possessions, or Puerto Rico, by small business concerns: provided, that this additional requirement does not apply in connection with construction or service contracts. Bids or proposals received from firms which are not small business concerns shall be considered nonresponsive."

This matter was discussed in a meeting on May 26, 1960, with Mr. James Mills of the Washington office of SBA, with Mr. S. Scavuzzo and Mr. Q. Johnson, of Union Instrument Corp. and Mr. A. Chodosh, attorney for the corporation. After a long discussion, Mr. Mills conceded that an error might have been made, but could not offer any means of correcting this error.

C

UNION INSTRUMENT CORP.,
Plainfield, N.J., June 10, 1960.

The Honorable JOHN H. DENT,
Old House Office Building,
Washington, D.C.

MY DEAR MR. DENT: Enclosed you will find a copy of our official protest of a decision of the Small Business Administration in a case involving a nonmanufacturer who has been certified as entitled to preferential treatment under the Small Business Act, in spite of the fact that this nonmanufacturer proposes to furnish material which is manufactured in major part in a foreign country. This decision apparently contravenes paragraph 121.3-8(b)(2) of the regulations issued under the Small Business Act of 1958. A copy of the pertinent regulation is enclosed.

Existing regulations provide that a nonmanufacturer, in order to qualify for preferential treatment as a small-business concern, must agree to supply end items manufactured in the United States, its territories, its possessions, Puerto Rico, or the District of Columbia. No specific provisions concerning foreign source materials are contained in these laws or regulations with respect to manufacturers or producers who furnish material to the U.S. Government; with the result that the Small Business Administration has in interpretive decisions ruled that:

(a) Nonmanufacturers must, for preferential treatment, supply items wholly manufactured or produced in the United States, its territories, its possessions, Puerto Rico, or the District of Columbia, by small-business concerns. (To this interpretation there has been at least one exception, in which the Small Business Administration ruled that a nonmanufacturer was qualified for preferential treatment by furnishing the product of a firm which proposed to send materials to Germany for manufacturing and finishing operations.)

(b) Manufacturers or producers can qualify for preferential treatment if any part of what they propose to furnish is manufactured or produced in the United States—e.g., a manufacturer who imported cable, and whose sole operation in the United States consisted in cutting this cable to required lengths, was accorded certification by the Small Business Administration for preferential treatment under the Small Business Act—and an official of the Small Business Administration has stated that pencils made in Japan and sharpened in the United States also would be qualified for such preferential treatment.

In a proposed amendment to the definition of small business concerns (Federal Register, April 16, 1960, p. 3341—copy of which is enclosed) the Small Business Administration recommends the addition to their regulations of a paragraph defining a "domestic product" as one in which the cost of foreign materials does not exceed 50 percent of the cost of all materials used; and recommends revision of these regulations to allow preferential treatment to both manufacturers or nonmanufacturers who offer "domestic products" as so defined.

The effect of this proposed change would be to relax existing restrictions imposed on nonmanufacturers with respect to foreign-made items, while limiting manufacturers or producers who receive preferential treatment to end items which are 50 percent or less of foreign origin. Thus, the door to American subsidization of foreign manufacturers and producers is to be opened with respect to import brokers; while the door which has been opened by administrative interpretations of the Small Business Administration with respect to importing manufacturers is to be fixed open at 50 percent.

Since the provisions of the "Buy American Act" already afford protection to domestic products at the 50 percent level proposed by the Small Business Administration, the only real change which would result if this amendment is accepted would be to permit nonmanufacturing concerns to furnish end items which are 50 percent foreign in origin, rather than domestic as required by existing regulations. The net effect will, therefore, be a reduction in the degree of protection now afforded American manufacturers and producers.

The Congress may wish to deliberate the matter with this in mind. Your comments and suggestions are solicited.

Very sincerely yours,

UNION INSTRUMENT CORP.
S. SCAVUZZO, *President.*

D

LAFAYETTE BUILDING,
Washington, D.C., April 21, 1960.

Proposed changes in the definition of small business for purpose of Government buying.

designed to give preference to products containing chiefly United States-made materials, and other minor amendments, were announced today by the Small Business Administration.

The proposed changes apply only to the definition of "small business" under which firms may qualify for contract awards on Government purchases reserved for bidding by small firms, or involving other preferential treatment for small businesses seeking to sell their products or services to the Government.

Generally, under the present definition of a small business for purposes of selling to the Government, the Small Business Administration has considered a nonmanufacturing firm as small if it is individually owned and operated, not dominant in its field of operation, and has no more than 500 employees. If a firm is a nonmanufacturer it must in addition to the foregoing, supply a product manufactured in the United States by a small manufacturer.

The major proposed change in this definition is to bar firms from preferential treatment under the Small Business Act if the products they propose to sell to the Government consist of more than 50 percent of foreign-made materials.

Other changes require that concerns must be organized for profit and must be located in the United States in order to receive assistance from the Small Business Administration.

Persons wishing to comment on the proposed definition changes will have approximately 30 days in which to file their comments with the Small Business Administration.

Mr. Speaker, may I state at this time that if this new regulation becomes the law, the need for a Small Business Administration will no longer exist.

This country cannot regulate the size of the foreign manufacturer or the ownership of the foreign manufacturer who will produce the products sold by an American based firm whose ownership may also be foreign, under the protective covenants of the Small Business Administration Act.

Let us not fool either the American manufacturer or the American taxpayer. Let us face the true facts and at least save the taxpayer the taxes required to operate this administrative bureau and at the same time save the American manufacturer both embarrassment and money.

Just in case any crocodile tears are being shed for our worthy and friendly allies, the foreign producers, let us look at what is happening in defeated, devastated nations, our former mortal enemy, Germany, as well as others who benefit from our lending, spending programs financed by our American taxpayers including the under-bid American small businessman.

E

WHALEY-EATON SERVICE,
Washington, D.C., June 7, 1960.

DEAR SIR: Obituaries for world inflation are just a bit premature, in spite of the optimism of such authorities as Monetary Fund Chairman Per Jacobsson. He thinks the inflation danger is about gone. But many skilled observers in West Europe aren't at all so sure. Pressures have certainly eased off dramatically in the United States, but Europe is riding the upside of a major boom.

The feeling is getting around that the sky's the limit—that expansion can continue almost indefinitely without a blowoff. So far West Europe's governments have shown luck and skill in their efforts to keep the boom from blowing up. But the roughest test is still ahead.

Pressure is building up in Europe at two strategic points—productive capacity and the labor supply. Most countries, but particularly Germany, simply cannot build new plants fast enough to cope with current and anticipated demand. At the same time, the labor supply is being stretched to the breaking point. Again, Germany feels this the most, but is not alone.

Competitive bidding for labor supplies is becoming common. This has an inevitable effect on wage costs. Employers aren't inclined to quibble about such things when they're confident of being able to market all their output and more—and to pass on higher costs to customers.

Typically, we've heard of a U.S. owned firm in Germany which is putting new plants in remote villages chiefly because untapped local labor was available. There are now about 10 vacancies for every 4 unemployed workers in Germany as a whole. Thousands of Italians have been brought in and an effort is underway to recruit others in Greece and Spain.

In Britain, job openings about equal the number of unemployed. Allowing for "frictional" unemployment and turnover, this means some areas are in for a worsening pinch. Even Italy has been hit by a shortage of trained technicians and engineers, though not of unskilled labor.

Switzerland reports more than twice as many vacancies as unemployed. The proportion of foreign workers (10 percent in machinery industries and up to 60 percent in construction) is rising fast. The Swiss, like the Germans, are out trying to recruit more labor, chiefly in Spain and Portugal.

The effect of labor shortages on wages is obvious: wages are heading up. Even in Germany, the redoubtable Dr. Erhard is saying that the climate is very favorable to wage increases. He says, too, that the economy is elastic enough to meet the needs of vigorous growth—provided, of course, that people don't lose their sense of proportion. That's the big question.

Conservative economists are worried over the danger that the boom atmosphere will prove too intoxicating, that restraint will be forgotten.

[From the New York Times, May 11, 1960]

WEST GERMANY ECONOMY BOOMS, SAYS KRUPP AID VISITING UNITED STATES

(By Joseph Carter)

The West German economic boom is continuing virtually unabated, Berthold Beitz, second in command of the Krupp industrial empire, said on his arrival here yesterday.

He said there was full employment and that the West German economy was still able to absorb the flow of refugees from Communist-ruled East Germany.

One of the main purposes of his visit, Herr Beitz said, was to talk with leaders of American finance and industry. "You always go back a little more intelligent and better informed on industrial procedures and methods," he commented.

Herr Beitz emphasized that in his talks with businessmen here he would seek ways to collaborate with them in advancing the economies of underdeveloped countries.

"Such development programs are the job of private enterprise," he declared. "We at Krupp, and other West German industrialists, regard them as extremely important."

The 46-year-old chairman of the executive board of Krupp of Essen arrived on the liner *Bremen*. He said he planned to stay in this country about 10 days. With him was Count Claus Ahlefeldt Laurvig, representative in Britain and the Commonwealth of the industries headed by Alfred Krupp.

Herr Beitz said he planned to visit Washington, Detroit, and Richmond, Va. He added that he would talk with executives of the Ford Motor Co., General Motors Corp., Reynolds Metals Co., and the United States Steel Corp., among others. He indicated that he hoped to meet with officials of the Federal Government.

The industrialist emphasized that he was not here to sell steel but to exchange ideas with American leaders. He said he wanted to see the latest steel production methods here because "in that field you are the leaders."

Herr Beitz said that Krupp's relations with organized labor were excellent.

[From the German American Trade News]

GERMANY'S PERSISTENT FOREIGN EXCHANGE SURPLUS

That it may be harder to spend money than to make it, is currently a problem of major economic significance for Germany. The condition arises out of the Federal Republic's persistent foreign exchange surplus. Internationally, this situation is viewed with misgivings by Germany's trading partners. Domestically, the surplus endangers the balanced development of the economy.

In an effort to remedy the situation Germany's Federal Bank has in recent months sharted a course designed to meet national necessity on the one hand and to avoid likely foreign criticism on the other, in decreeing higher minimum reserve requirements for German banks as well as a reduction in the rediscount quota (see GBW, Feb. 24). The bank did not resort to raising the discount rate, the common remedy, because such a move would have only served to create an influx of foreign funds attracted by higher interest rates.

TEMPORARY SOLUTION

In large part the surplus problem was solved by prepayments on foreign debt obligations, allocations to the World Bank, and so forth. Because these payments will not recur regularly Germany is faced in 1960 with the task of planning a program for the possibility that a surplus in the balance of trade in goods and services may be permanent. Writing in London's Financial Times, Dr. Hermann J. Abs, one of Germany's leading bankers, said: "It must not, however, be overlooked that it is a moot question whether the era of such surpluses is going to last for any great length of time. The position of Germany's oversea trade is not as strong as it might appear in the relatively favorable course of German exports during recent years. Even comparatively slight changes in the terms of trade might well—at least if the present high level of business activity recedes—cause a notable deterioration in the Federal Republic's position in world trade."

"Be that as it may, a progressive liberalization of imports will in any case be among the tasks with which Germany will have to cope."

On the other hand, what is Germany's position in regard to promoting export of capital? There are many who are prepared to support such a move particularly in the form of aid to underdeveloped countries and recommend therefore government guarantees, cheaper loans, and other facilities. However, Dr. Abs feels that there might be some complications in this respect because it is difficult to differentiate between capital exports promoted by governmental action for political and economic reasons, and capital exports undertaken strictly in consideration of economic factors without any artificial supports. "Presumably," said Dr. Abs, "the Germans would with certainty come in again for heavy criticisms on the part of other exporting countries if their capital exports were generally to be stimulated through government action."

Exports of German capital in various forms have been steadily on the increase in recent years. In regard to the future, Dr. Abs

stated that West Germany's main concern is to assist underdeveloped countries in which conditions are sufficiently stable, however, such investments should not be undertaken with the intention to engage in a bitter competitive struggle with other industrial nations, but should conform to the scope of Germany's economic and financial potential and the tasks to be fulfilled in the underdeveloped countries.

What about the intensification of German investments within the Common Market?

"In my own view," said Dr. Abs, "it cannot be desirable, either economically or politically, to accord a general privilege to capital export within the European Economic Community. There are only two respects where certain privilege treatment might be justified. The Rome Treaty provides for capital contribution on the part of member governments toward helping economically weaker regions within the European Economic Community or its associated areas, this contribution to be channeled through the European Investment Bank. Provided this bank, as its bylaws proclaim and its management is clearly striving to do, models its activities on the excellent example of the World Bank, it might indeed produce a beneficial contribution toward strengthening the Community, which no outside party could look upon as discriminating."

SATISFACTORY PROGRESS

"Moreover," continued Dr. Abs, "a complete liberalization of money and capital transactions, by agreements among governments, bankers, associations, and other parties concerned, may possibly come about in the European Economic Community more rapidly than could happen in a much larger area." In that event, however, it would be desirable, according to Dr. Abs, that the example of the EEC countries be imitated, that is to say that other nations should be prepared to free their capital exports and imports of restrictions in the same measure at the earliest opportunity.

No matter how these programs develop in detail, it is most important, said Dr. Abs, "that just as the European Economic Community must not be allowed to segregate itself under the aegis of monetary policy, so there must not be any obstruction of capital imports and exports of the partners to the Treaty from and to other countries. It seems to me that in this respect things have so far been going quite satisfactorily; the favorable trend in the foreign exchange reserves of all EEC countries during the past year has served to facilitate this."

TRIPLE PLAY

At the government level, plans are now being developed to solve the problem of Germany's foreign exchange surplus. These plans aim toward the establishment of a government-guaranteed fund which would perform a triple function:

1. In providing aid to underdeveloped nations.

2. In being financed through the sale of low-cost shares to the public which would have the advantage of draining money otherwise available for domestic spending and thus remove a stimulant for inflationary tendencies. The shares would pay progressively higher interest, starting at a level above that paid by savings banks. Banks would not be allowed to participate in such a subscription.

3. In exporting Germany's foreign exchange surplus the fund would realize its primary goal.

While these plans have been merely advanced in the form of ideas, they do reflect the current concern in Germany for the persistent foreign exchange surplus.

Mr. Speaker, in order that this Congress may have some idea of just how badly an American producer will fare if the proposed regulation goes into effect, let me quote from letters received from American small goods manufacturers who are now facing annihilation from foreign imports.

It is important to note that one recent news item really ought to awaken the sleeping American conscience—the one concerning a strike in Virginia and the demand of the union for protection against foreign production financed by the very same employer being struck here in the United States.

F

A. G. SPALDING & BROS., INC.,
Chicopee, Mass., May 24, 1960.

Mr. JOSEPH E. TALBOT,
Chairman, U.S. Tariff Commission,
Washington, D.C.

DEAR MR. TALBOT: It was good to talk to you on the phone the other day, and I shall look forward to receipt of the proposed tariff changes as soon as it is off the press.

I have recently received my copy of the 1959 Industry Census Report, and I want to tell you it shakes any American sporting-goods manufacturer right down to his heels.

We are preparing a formal case along the lines you suggested when I was in Washington with you and your associates on April 5. However. I want to expose you to a few quick figures drawn from the Government's own import data, and the sporting goods industry's 1959 census report, which shows the sales of domestic made sporting goods only.

Tennis rackets sold in the United States

Country of origin	Quantity 1959	Quantity 1958
Belgium	70, 437	40, 239
Japan	362, 456	198, 748
Pakistan	223, 668	146, 714
Others	65, 848	75, 480
United States	642, 930	659, 957

It is immediately apparent, then, that:

1. Tennis racket sales are increasing as the game gains in general popularity.

2. The gain in 1959 over 1958 was a substantial 21.9 percent.

3. The imported rackets now have over 50 percent of the total market.

In fact, imports had 52.8 percent of the total U.S. tennis racket market in 1959 as against only 41.5 percent in 1958.

Obviously, then, in the midst of a growing tennis racket market, with sales up 21.9 percent in the past year, U.S. manufacture of tennis rackets was down 2½ percent.

I have repeatedly said to you and your associates that United States businessmen are aware of world problems and in the interest of furthering the worldwide economic goals of the United States, most American businessmen would be willing to share the growth of our markets with other nations—this has, however, reached the point where the imports have all of the growth and part of the original body.

Warning: Every indication is that 1960 will make 1959 look like a real good year for U.S. tennis racket manufacturers. Production is way down for 1960 and further declines are forecast for 1961.

Badminton rackets sold in the United States

Country of origin	Quantity, 1959	Quantity, 1958
West Germany	46, 132	91, 405
Belgium	428, 631	377, 063
Japan	1, 029, 145	3, 855, 161
Pakistan	213, 719	721, 477
Others	192, 251	159, 481
United States	734, 139	852, 895

It is immediately apparent that through the past several years, the badminton racket business has gone into the hands of imported rackets.

Let's look at some of the quick facts.

1. Badminton racket sales are up in the United States. The game's popularity is increasing.

The gain in badminton racket sales in 1959 over 1958 sales was over 43 percent.

2. Imported badminton rackets had over 91.6 percent of this total in 1959, as against 86 percent of the total market in 1958.

3. In the middle of a sensational 43 percent gain in badminton racket sales in the United States, the U.S. manufacturers' share of this market fell from 14 to 8.4 percent.

The U.S. badminton business, which has for years been plagued with imports, now finds itself making 16⅔ percent less badminton rackets in a year when the sales of badminton rackets are up 43 percent.

Warning: Every indication is that 1960 will be much worse and that 1961 may well see the abandonment of badminton manufacture in the United States unless very fast and substantial relief is granted the American manufacturers.

Baseball gloves and mitts sold in the United States

Country of Origin	Quantity, 1959	Quantity, 1958
Japan	1, 283, 959	557, 466
(Other countries not known)		
United states	1, 962, 168	2, 309, 436

1. It is apparent that the total sales of baseball gloves and mitts in the United States went up from 2,866,902 pieces in 1958 to 3,245,127 in 1959. This is an increase of 378,225 mitts and gloves, or 13.2 percent increase.

2. In this period, gloves and mitts imported from Japan increased by 726,493, or 130 percent.

3. In this period, the sales of U.S. manufactured gloves and mitts declined from 2,309,436 in 1958 to 1,962,168 in 1959, or a decline of over 15 percent.

4. At the end of 1958, Japanese imports accounted for 19.4 percent of total baseball glove and mitt sales.

At the end of 1959, this had become 39.5 percent.

In 1 short year the imported baseball gloves and mitts took another 20 percent of our total U.S. market.

American production fell off over 15 percent while total sales went up by 13.2 percent.

The conclusion is absolutely obvious.

Unless the Escape Clause is invoked very quickly the U.S. manufacture of tennis rackets, badminton rackets, and baseball gloves and mitts will cease; those people now engaged in their manufacture will join the hundreds already forced out of work by the imports in the ranks of the unemployed and another segment of the American industry will have been sacrificed on the altar of "world trade."

Is this going to happen?

Yours very truly,

EDWIN L. PARKER,
President.

A. G. SPALDING & BROS., INC.,
Chicopee, Mass., June 2, 1960.

Hon. JOHN H. DENT,
House of Representatives,
Washington, D.C.

DEAR MR. DENT: I hope you will take the time to read the attached copy of my letter of May 24 to Mr. Joseph E. Talbot, Chairman of the Tariff Commission.

I am sending it and this letter to you as the president of the largest exclusive sport-

ing goods manufacturer in the world, and as the chairman of the Import Committee of the Athletic Goods Manufacturers Association.

I want to emphasize here, as I do in my letter to Mr. Talbot, that ours is not a radical group, demanding that imports stop, etc.

So sure are we that our American welfare and world-at-large welfare cannot be fully separated that we are ready to share part of our industry's growth with manufacturers from other countries.

It is when we lose so much of the existing market that we find ourselves making and selling less units of sporting goods items in important, rapidly growing areas such as baseball, tennis, and badminton that we begin to realize that this has gone much too far.

Our economic health and the employment of our personnel are seriously affected when we not only are completely excluded from the market growth but actually lose a substantial part of the original smaller market.

Ours is a peculiarly vulnerable industry due to the high percentage of hand labor unavoidably necessary in our production.

Besides the items listed in my letter to Mr. Talbot, U.S. golf ball manufacturing industry is 100 percent vulnerable and is being very hard it in 1960.

Our own governmental agencies, which bought Japanese tennis rackets in 1959, bought Japanese golf balls this spring.

I urge your immediate serious consideration of these important problems affecting this industry.

The very minimum relief our industry needs for survival is the invocation of the escape clause in the Tariff Act.

Your help is needed—urgently.

Yours sincerely,

EDWIN L. PARKER,
President, A. G. Spalding & Bros., Inc.

Mr. Speaker, if we need any more proof, let us hold hearings, tear apart the shrouds of secrecy on foreign spending under mutual security, investigate foreign loans, check on who gets profits from foreign production, the effect on our employment, the extent of our enmeshment with private capital and profits in foreign countries, and check on whether we are buying peace or war with our trade-and-aid programs.

No man wants peace more, but no man wants to know for sure if we are getting peace as a harvest or reaping the wild wind.

Following are just a few samples of the results of our policies.

The protest I attach concerns me greatly for as a young man I worked in the plant in my hometown of Jeannette, Pa., that produced the largest U.S. production of tennis balls.

G

JEANNETTE, PA., *June 14, 1960.*

Hon. JOHN H. DENT,
Old House Office Building,
Washington, D.C.:

In negotiations by U.S. Government under 1958 Trades Agreement Extension Act we feel the proposed items listed on schedule 15, more particularly subparagraph 1502, would do considerable amount of damage to our company. Domestic competition has already created unfavorable atmosphere for athletic balls and tennis balls. Granting further concessions to importers could more adversely affect production and tend to reduce employment in our factories. Any assistance you can render toward defeating this proposal will benefit economy of area in which our factories are located.

THE GENERAL TIRE & RUBBER CO.,
P. C. MATHEWSON.

JUNE 15, 1960.

U.S. TARIFF COMMISSION,
Washington, D.C.:

On advice from the General Tire & Rubber Co., manufacturer of tennis balls in my district, I am protesting any action that would in any way reduce tariffs or grant further concessions to foreign-made tennis balls. This industry is very vital to the health and welfare of my community. Serious economic consequences to all concerned will follow any action by GATT and the Tariff Commission that will, in any way, make it more difficult for domestic industry to compete with low-wage, low-standard producers. Statistical data will follow.

JOHN H. DENT,
Member of Congress.

Automatic Warning Signal Devices for Automobiles

EXTENSION OF REMARKS
OF
HON. JOSEPH W. BARR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 16, 1960

Mr. BARR. Mr. Speaker, today I introduced a bill requiring the Secretary of Commerce to prescribe standards for certain automatic warning signal devices for automobiles. These devices would flash a warning light when the motorist takes his foot off the accelerator to slow down his car. We do have on all cars a brake light to show when the brake is applied, but there is absolutely no warning device for the traffic behind a car that slows down abruptly by deceleration rather than the brake.

Back in the old days when I learned to drive, it was customary to stick the left arm out the window and wave it up and down as a slowdown or stop signal. Since turn signals have been installed this practice seems to have died out and with traffic as vicious as it is, no one can really be blamed for hesitating to stick his arm out the window to signal a slowdown or stop. I really doubt that I have seen the up and down slowdown signal for 5 years.

The idea for this legislation is not original with me. It came from an Indianapolis columnist, Mr. Lowell Nussbaum, but I will cheerfully admit that I grabbed it quickly.

Traffic in my home town of Indianapolis is bad enough, but it is a picnic compared to Washington rush hours and of all the hazards of traffic today, especially in city driving, nothing is so nerve wracking as a sudden deceleration by the car ahead.

I used to welcome my 45 minute drive in to work every morning as a chance to plan the day's work. But after nearly climbing over the backs of cars that suddenly reduced speed, I gave up these intellectual activities and concentrated on the necessity of getting to the Capitol in one piece.

Mr. Speaker, this is a simple piece of legislation that should require little engineering effort by the automobile manufacturers. It is my honest opinion that this legislation would help reduce the appalling accident rate on the streets and roads of this Nation.

Annual Flag Day Program of Lodge No. 102, Benevolent and Protective Order of Elks, Altoona, Pa., June 15, 1960

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 16, 1960

Mr. VAN ZANDT. Mr. Speaker, one of the most impressive Flag Day programs in Pennsylvania was sponsored by Elks Lodge No. 102 in my hometown of Altoona, Pa., on June 15, 1960, at 8:15 p.m.

It was a privilege to participate in the Flag Day program and to deliver the following address:

FLAG DAY, 1960, ADDRESS BY JAMES E. VAN ZANDT, MEMBER OF CONGRESS, 20TH DISTRICT OF PENNSYLVANIA, AT THE ANNUAL FLAG DAY OBSERVANCE OF LODGE NO. 102, BPOE, ALTOONA, PA., JUNE 15, 1960.

Since the foundation of our order, the Elks have identified themselves with the cause of American patriotism, and have paid constant and conspicuous honor to the flag.

In addition, the BPOE has been in the forefront of the popular movement for national and public observance of Flag Day.

We of the Elks have made it our business to know the meaning of the Flag, and to fulfill our obligations of respect and love for the flag.

And finally, to give the flag's message of patriotism to all the citizens of our country, particularly the youth.

At this moment in history, when the disgraceful performance of Premier Khrushchev in canceling the scheduled summit meeting has offended America and damaged the prospects of international peace, it is a particularly appropriate time for Americans to rally, with enthusiastic unanimity, to the observance of this festival of our national unity and strength.

The flag, like the President of the United States, stands before the world as the symbol of the Nation.

The flag, however, is an impersonal symbol, nonpartisan, above any political dispute or disagreement.

It stands, in essence, for the spiritual ideals of America, for the virtues displayed by America's founders, and intended to be fostered by the Constitution.

Primarily, the flag stands for our national independence, and for the individual freedom of each citizen.

In our flag, we can read the basic meaning of those famous "checks and balances" written into our form of government.

This is the principle that each man's liberty is under the rule of law—that no man's liberty can be freedom to oppress another or invade his rights—that government itself, the guardian of our liberties and preserver of our rights, must be held back from invasion and injustice.

This is the principle of the rule of the majority—qualified by the important restriction that minority rights, and individual rights—must not be violated.

But the flag, this tangible, visible symbol of our country, stands for something more solid and perceptible than the ideals of freedom and justice that inspire us.

It represents the land itself, and its people.

Each of us, looking at the flag should bring before his imagination his own home, his family and friends.

He should think of, and visualize, the people and the surroundings he loves best, for there is the focal point of his patriotism.

Patriotism must spread out from self and family, from home and hometown, to encompass the multitude and the broad lands and waters of America.

A man's love of country, thus rooted in his native soil, and fostered by his relations with kin and community, stays real and practical and vivid as it grows to take in the scope of America.

The faces, and the landscape, that mean most in his life, should be firmly connected in his mind and imagination with the idea of the United States, and with the image of the Stars and Stripes.

He may think of a hero and a mountain, of his wife and a tree-surrounded home, of a child and a seawave on the shore.

To some people, the fact that the flag means America may be brought home most forcefully in the experience, actual or remembered, of seeing it bravely flying in some foreign land, or on the broad expanse of the ownerless ocean.

Not only our land and people of today are represented by the flag however.

This vast expanse of land, this great variety and number of people, is not enough to exhaust the depth of symbolism in the flag.

All the history of America lies in those folds, those red and white strips, those white stars in the blue field.

In the 13 stripes—in the 13 stars—with which the flag was provided when it first met the breezes of the earth and the light of heaven—we preserve at once the memory of the Thirteen colonies, so long ago established.

We recall their existence before they rose to demand their independence.

We preserve at once that memory of long ago, and the present existence of those same colonies as sovereign States in our great Union.

We of the Commonwealth of Pennsylvania are justly proud of our place among those Thirteen Original Colonies.

As we look at the flag we see our own colony—with its heritage of religious faith and toleration—with its memory of William Penn and his even-handed justice—with its strong central position in the establishment both of the confederation and of the Union.

It was in Philadelphia that the delegates from the colonies signed the Declaration of Independence.

It was in Philadelphia that the delegates from the States signed the Constitution.

Thus, Pennsylvania has played a major part both in making us free, and in making us one.

The Brandywine, the Delaware, and Valley Forge, will live in American history as long as the hearts and minds of men remember the youth of our country—and the sacrifices brave men made that they, and their sons, might be free.

Here in our flag is enshrined our political structure—what Chief Justice S. P. Chase, in 1868, defined as an "indestructible Union composed of indestructible States."

Each State is represented by a star, though we do not assign a special, numbered star to one named State.

Here, in physical, visible form, is shown the fact that our Nation is composed of many distinct political entities.

The flag is, in a sense, a pictorial representation of the ancient motto of our country: "E Pluribus Unum."

By a triumph of political wisdom, and by agreement forged out of a great conflict of keen minds and strong wills, the delegates to the Constitutional Convention worked out a system of government.

This system of government has stood the test of well-nigh two centuries of time, of civil and foreign wars, of prosperity and financial disaster, and of tremendous growth in territorial extent and in population.

The amendments we have made to the Constitution have not been real alterations, to the structure of the document, and to the structure of the government envisioned in the document.

In the flag today, as it represents our Government under the Constitution, we see the working of the structure envisioned by men of high philosophic thought and earnest devotion to principle.

Their efforts brought into being the cooperation of practical politicians, businessmen, and lawyers, who, through the years, have plugged the gaps and smoothed the rough places in this bold device for harnessing liberty and justice in one ordered team.

From our childhood, we have connected the red of the flag with the thought of the blood of heroes.

Certainly no American patriot can look at the flag without some thought of those who have died, on their native soil or abroad, on land or at sea, fighting under the flag and in its defense.

That banner waved over the victory of Yorktown as over the brave defense of the Alamo.

Men have bled for it in the mountains of Korea, as on the plains of Kansas.

In that flag we find the idea of courage, courage to live and die for our country, and for the ideals that make our country great.

The red is the red of our hearts' blood, whether poured out in brave sacrifice on the field of battle or surging in a living tide of hope and ambition for the service of the Nation in a time of peace.

We are inclined, too often, to forget our youthful idealism and enthusiasms, and, in particular, not to think of the flag except when it is brought forcibly to our attention by some official occasion such as the present.

Each of us needs, I am sure to think over his way of life, and see if patriotism and the flag that is the visible symbol and token of patriotism, plays a sufficiently large part in his home and daily routine.

Each citizen should have a flag—that goes without saying.

But, having a flag, it is incumbent upon him to show it proper respect and reverence in all ways.

He should keep it clean and covered when it is not flying—to protect it from any indignity or neglect at all times—and to raise and lower it, on appropriate occasions, with solemn though simple ceremony.

A man should go out, early in the morning of a national holiday, to put his flag out, not in the casual manner of one getting the morning paper or taking in the milk, but with some slight ceremony.

I know one man, for example, who makes a point of having his little children go out with him, and then, when the flag is flying, they recite together the pledge of allegiance.

It is a simple matter—easy and not at all time consuming—but it is likely to give the little children a memory that time will not erase from their minds.

At home—in school—in youth organizations such as the scouts—respect and honor for the flag must be taught with constancy and enthusiasm.

Our children must come to manhood and womanhood with a sure understanding—a confident resolve—so that they will be ready to serve their country in time of need with earnest devotion.

One of the most essential elements in the education of American youth is education in the meaning of the flag—and in the loving service that is due from each of us to the flag—and the country for which it stands.

When a woman comes to be a wife and mother, when a man is called to be a soldier, sailor, or airman—then it is too late for this basic training in patriotism.

If a person's heart and head are 4-F in this matter of patriotism—a healthy body and mental keenness will do us no good.

Last year and this year are great times in the history of the flag, and we should do our best to emphasize, in our own consciousness and in the public mind, the importance of the tremendous events that have changed the look of the flag, twice in 2 years.

We have acquired, as of last July 4, a star representing a vast new State—a land of magnificient scenery, great variety of climate, and a people of vigor and ambition to match the resources and scope of their land—the great new State of Alaska.

Tonight I have the honor to present to the Elks of Altoona a flag, not yet legally the flag of the United States.

It is the flag of the United States of the future—in this case definitely the foreseeable future—since it is established by law that this 50-star flag will become officially the flag of the United States on July 4, 1960.

The 50th star, thus to be added to our flag, and now visible in this preview, is a star of many particular glories.

The State of Hawaii, for which it stands, shares with Texas and California the distinction of having been an independent nation before seeking annexation by the United States.

Hawaii, too stands in an unusual position in being far overseas from the mainland of the United States.

We warmly welcome to our union a sovereign State of romantic history—of well-developed culture—of a high standard of education—of thriving agricultural, manufacturing, and commercial prosperity.

This independence day will be a day of special joy and pride for those most deeply concerned with the relations between America and the Orient—for we have—by welcoming Hawaii to the society of equal States, accepted the equal partnership of a people predominantly, oriental in ancestry.

I am sure that our Altoona Local Lodge No. 102 of the Elks will boldly continue its long-established custom of furthering, by word and example, the strict observance of flag etiquette.

These are forms, as you and I are deeply aware, of vital inward meaning, and of importance in forming the character of the citizen.

I think of the casual word spoken to me the other day by a young man:

"You know, maybe it's my military training, but I just like to see the flag folded up the right way."

These matters are not so small as they look.

The man who has learned a particular way of folding the flag, in scouts or military or anywhere else, has a routine in mind, but a routine with meaning.

There is a practical meaning—the flag folded up the right way when hoisted on the pole, will unfurl properly at the top.

When the flag is folded, it is in the shape of a compass, and easily stored.

By showing a portion of the union, it is instantly identifiable as the flag, and cannot be confused with striped bunting.

Finally, each of us owes to the flag the affection and respect that he owes to the persons nearest and dearest to him.

For after all it is those persons, themselves, who are at the heart of the symbolism of the flag we honor on this Flag Day of 1960.

Labor Chieftains To Fete Mitchell

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1960

Mr. CANFIELD. Mr. Speaker, during the 37 years I have been privileged to work on Capitol Hill, I have seen Sec-

retaries of Labor come and go. I recall no Secretary who has enjoyed more respect from the leaders of both labor and management, and our people generally, than the current Secretary, the Honorable James P. Mitchell, of New Jersey.

I was pleased to read the following story in today's issue of the Washington Post:

LABOR CHIEFTAINS TO FETE MITCHELL

Organized labor's top leaders, almost all of them Democrats, will toast the Republican Secretary of Labor James P. Mitchell at a dinner here June 29.

The unique testimonial is being sponsored by the AFL-CIO unions, and the independent United Mine Workers.

A dinner committee headed by AFL-CIO President George Meany said the affair "will demonstrate the high personal regard of American labor for Mitchell." The dinner also will be a pointed remainder to the Republican Party that it could do far worse than pick Mitchell as its vice-presidential nominee.

Views of Various Aspects of the Farm Problem

EXTENSION OF REMARKS
OF
HON. WINT SMITH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 16, 1960

Mr. SMITH of Kansas. Mr. Speaker, now and then, those of us who represent strictly agricultural districts receive a letter dealing with the problem in agriculture from a constituent which deserves the attention of our colleagues.

A few days ago I received a letter from a farmer in my district expressing his views on various aspects of the farm problem—the causes and effects—and some recommended cures.

Mr. Earl Emmerson, of Osborne, Kans., has in my opinion, clearly and ably exposed the economic difficulties with which our farmers presently have to deal. I am in wholehearted agreement with him that a simultaneous reduction in price and acreage under a program of controls is no solution to the surplus problem.

I hope all my colleagues will take a few minutes of their time to read Mr. Emmerson's letter which follows:

OSBORNE, KANS., *June 12, 1960.*

Hon. WINT SMITH,
House of Representatives,
Washington, D.C.

DEAR SIR: I've tried twice before this, during this session of Congress, to write a letter expressing my views to you, but each time I got the letter too long and discarded it. It may be too late for many matters now, but perhaps not for everything, so I'll try again.

So far, I've never heard of the bill regarding the conservation reserve of the soil bank coming out of committee, so there may be a chance of something yet being done on this subject. Personally, I feel that this may be the best piece of farm legislation which has yet been written. The acreage reserve was of little value, in my opinion, but the conservation reserve can accomplish something worthwhile. Check me if I'm wrong, but I understand that following the war, the Government gave help to many factories which had converted to war production, helping them to reconvert to peacetime production. I think it was right to do so, and it seems to me that this is the real purpose of the conservation reserve.

The demands of two wars have caused many thousands of acres of land to be broken out of sod to fill our needs for grain crops. Much of this is land which is not ideally suited to cultivation, and since it appears that in the foreseeable future, livestock production can be more readily consumed than grain crops, it seems to me that it will be well to have more of this land returned to grass to fulfill the need. It will not entirely solve the surplus problem, although it will help. Much of the land which should be so used is not the top-producing land, but it presents a problem in erosion, and cultivating it tends to waste the resource. Many farmers who own such land are not economically able to return it to grass by themselves, and I think this conservation reserve measure is a wonderful thing to help.

I do feel, however, that after the Government makes the investment in returning such land to grass or other natural cover, there should be some restrictions on plowing it up again after the 10-year contract is completed. I would suggest that future contracts require that such land must remain uncultivated for at least another 10 years without payment, unless some new national emergency should arise which should cause the Government to think it wise to allow it to be broken again.

Probably by the time you receive this, whatever is to be done with a wheat bill will be done. It's a hard problem to solve. My honest personal opinion is that the farm surplus problem never would have arisen, or at least reached a size to be a real problem, if we had not had so many economic restrictions in other areas of our economy. There are many of these; I suppose they began with tariff protection. Perhaps some was good. I think every voting relative of mine voted in favor of tariff protection when it was an issue.

However, each restriction which is created to help someone does so at the expense of the consumers of the particular article involved. I feel that labor and industry, being better organized than agriculture, have managed gradually to gain an advantage from it. Restricting the imports from countries which might normally be consumers of our agricultural surpluses, naturally makes them unable to buy from us, or encourages them to look elsewhere where they may make a more favorable exchange. Another thing, step by step we have raised our wage and price levels until we are far above most of the other countries with which we should normally trade. Increases in industrial prices naturally raise the cost of our agricultural products until we cannot compete with producers who can buy their supplies from cheaper sources on a basis of price.

All in all, I feel that agriculture has received the poor end of the bargain. It does not mean that I think trade restrictions should be removed entirely, but I do feel that if we had never had them, we probably never would have had a farm surplus problem.

Check me on this if I'm wrong, but it has been my understanding that many manufacturers, having considerable control of the selling price of their products, have made it a practice of filling the domestic demand for their products at one price level considerably above the world level, which they could do due to tariff protection, and then selling any surplus they had in foreign markets at a considerably lower price. It has seemed to me that this is essentially what the domestic parity plan for wheat proposed to do, except that the Government was acting as an agent for agriculture because we are not able to set our price as others do. I know this plan is pretty much dead, bit is has seemed to me to be entirely fair. I know you supported it, and I appreciate your efforts.

Farm income results from a simple formula—units times yield times price, minus operating costs, equals net income. It has been claimed by many that if we reduce price, we automatically reduce production. I don't think this is true at all. Most of us have definite costs to meet. If price and units are restricted, we must try that much harder to boost yield to make it up or face disaster. This is the reason so many attempts to reduce the surplus have failed. Really, I feel that we have been hurt worse by the operating costs factor. I feel that here is an area really outside farm bills which is probably more important to agriculture than the farm bills themselves. Something needs to be done to check the steady rise of wages and prices. Some interesting figures appeared a few months ago in the Kansas Agricultural Situation, an extension service publication published in Manhattan which you may be familiar with. In spite of the declining number of farmers in Kansas, net income per operator seems to be some 32 percent lower during the last 5 years of the last decade than during the first 5 years. Much of this is probably due to the rise in operating costs which they give as 62 percent and 74 percent of gross income for these respective periods.

I want to praise the present administration for their efforts to reduce Government costs and balance the budget. I feel that excessive government during the past 30 years has resulted in part of our national problems. Conversely, anything which can be done to cut costs is good, for this, I feel, is a major economic problem for all of us.

Yours truly,

EARL EMMERSON.

Imported Mexican Labor

EXTENSION OF REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 16, 1960

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of June 15, 1960:

IMPORTED MEXICAN LABOR

The time has come for the Nation to consider the termination of the iniquitous Mexican farm labor importation program authorized by Public Law 78. Under it some half million braceros are brought into this country every year to harvest crops, with shockingly low wages and poor working conditions, and in competition with domestic farm labor.

Public Law 78 is due to expire next year, but the Gathings bill (H.R. 12176), approved by a reactionary Republican and southern Democratic majority of the House Agriculture Committee, would extend its life for 2 years more. It would also take away certain powers which the Secretary of Labor now has to protect domestic farm workers recruited through the United States Employment Service.

A countermeasure, however—the McGovern bill (H.R. 11211)—will be introduced

when the Gathings bill reaches the floor of the House. It provides for the termination by stages of the Mexican labor program over a 5-year period, and during that time it would amplify and make more specific certain ambiguous and ineffectual provisions of Public Law 78 designed to give protection to American farm labor from unfair Mexican competition.

The Gathings bill should be decisively defeated and public support given unstintingly to measures designed to protect and improve the recruitment, wages, and working conditions of domestic agricultural workers.

Address by Former Governor Caldwell Before Southern Student Government Association

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 16, 1960

Mr. COLMER. Mr. Speaker, our former colleague in the House and former Governor of Florida, Hon. Millard F. Caldwell, recently addressed the Southern Universities Student Government Association at its annual conference held at Mississippi Southern College, Hattiesburg, Miss.

Governor Caldwell entered the Congress at the same time I did and served with distinction and ability for 8 years. He was Governor of the State of Florida from 1945 to 1949, serving as chairman of the National Governors' Conference in 1946 and 1957. In 1950 and 1951 he was the Federal Civil Defense Administrator. He is an outstanding attorney, presently practicing in Tallahassee, the capital of Florida.

I commend to the attention and consideration of the Congress, Governor Caldwell's very forthright remarks:

I am pleased with the privilege of speaking to the representatives of student government in major southern universities. Your group is of first importance to the future of the South, and, although presently and primarily interested in student governmental affairs, you will, in the short course of events, be even more deeply concerned in State and National affairs.

I will not presume to discuss such subjects as campus politics, entertainment, campus traffic and student discipline—you know far more about these problems than I will ever learn. I want to talk with you about certain social and governmental transitions which have occurred—the current contradictions and trends—and then I should like to ask you to think about where those transitions, contradictions and trends are leading your Nation.

In this discussion I should like us to avoid the negative attitude of just being against. I hope that our approach to decisions will be a positive one—that we will stand for those principles we think are sound and necessary to the welfare of the Nation rather than merely in opposition to the unwise and the unhealthy.

Because I will touch upon several facets of life and government in America I must perforce touch each of them lightly—I shall have to depend upon the assumption that your natural intelligence, as sharpened by your academic experience, will permit you to fill in the vacant spots—to round out the implications and to supply the conclusions.

I want to remind you of several basic principles and policies as they were prior to the Democratic New Deal and the Republican Super-New Deal and then refresh your memory as to what has occurred in the last three decades, leaving to you, as your problem, the determination of whether you approve or disapprove those drastic changes—whether you will encourage the ideological revolution or try to reverse it or just ignore it.

Before you conclude to ignore what's happening to this country just bear in mind that the chief enemy of America, the one force which can destroy you, is indifference—not communism. An informed American citizenship, spurred to concern on the streets, in the homes, and at the polls, can defeat all the Communists, the pinks, the do-gooders, and the bleeding-hearts; but indifference is tantamount to surrender.

And so I suggest that as I discuss these various questions we decide where we stand, on one side or the other, but never in the middle. The middle-of-the-roader, the compromiser, and the moderate are the excrescences of indifference.

First, because it has accomplished so much in undermining constitutional government and, briefly, because so much has been said about it already, let's take a quick look at the Supreme Court where, for our first 150 years, the Presidents placed the best legal minds available—but where, in the last 30 years, when able judges died or retired, they were replaced with pseudo-sociologists who could "rise above the law" and decide controversies on the basis of socialistic dogma. Presidents Roosevelt, Truman, and Eisenhower all stacked the court with disbelievers in the fundamental principles embodied in the Constitution. Where do you stand—with the watered-down philosophy of the new thinkers—or do you prefer your judicial decisions straight from the Constitution?

The 10th amendment of the Constittuion reserved in the States all the rights and powers not granted by the States to the Federal Government, including the right to control education, to police themselves, and to conduct their own elections. The Warren Supreme Court judicially repealed that amendment.

The Congress, during the first Reconstruction, attempted to circumvent the Constitution by the enaction of a force bill which gave the do-gooders of the last century legal authority to supervise, referee, and fix the elections in the South—but the results were so nauseous and blatantly corrupt the effort was soon abandoned. Nevertheless, the Congress, in this second Reconstruction, is about to enact another force bill, patterned after the first, as recommended by the President's Civil Rights Commission.

The question you and I have to decide is whether we agree with the Nixons, Rogers, and Butlers in their position that the backward people in the hinterland of the South cannot be trusted with the ballot—that a Federal commissar of elections is necessary—or whether we agree with the Constitution as it was written.

For some hundred-and-seventy-odd years and 50-odd Supreme Court decisions it was held that, under the Constitution, education was the peculiar responsibility of each State. But the third legislative chamber, sometimes referred to as the Warren Supreme Court, has enacted a new law, the Brown decision, predicated upon the assumption that the authors of the Constitution, notwithstanding the clear language used, never intended the benighted yokels of provincial States to control education—that so important an adjunct of civilization should be left to the omnipotence of Federal bureaucracy.

The ambitious politicians and all of the pinks gathered the philosophical mush of the Brown case to their bosoms and proclaimed it to be the law of the land. But, fortunately, the able bench and bar of America has discredited that driveling misconception and pinpointed the decision as an unconstitutional usurpation of a sovereign right of the States. Where do you stand—do you like the Constitution the way it was written, or do you prefer it as the Supreme Court said how it should have been written?

I'll not labor the point—there's no need to discuss the case in which the Supreme Court prohibited the firing by New York State of a Communist schoolteacher on the theory, perhaps, that one Communist more or less in New York, headquarters for the subversives, made little difference; or the case in which Pennsylvania was denied the right to arrest and try a Communist; or the California and Arizona cases in which the Supreme Court forced those States to admit two suspected Communists to the practice of law—on the theory, I suppose, that there is no conflict in the Communist dedication to destroy America and the lawyers' oath to protect it. What is your preference—is it that the States should enjoy the rights reserved to them by the Constitution or do you prefer that local matters be administered by the Supreme Court in the Constitution's Washington mausoleum?

Before leaving the Supreme Court let me remind you again that both political parties are responsible for, as some of us see it, the undermining of the constitutional safeguards or, as others see it, a vast improvement in an outmoded and archaic system. The Democrats laid the groundwork by the appointment of such people as Justices Black and Douglas and the Republicans supplied the capstone by the appointment of such as Mr. Chief Justice Warren. Your question is whether you prefer lawyers or amateur philosophers as Justices of that Court.

To those of you who may believe in constitutional government I suggest that the one hope for a return to sound ground lies with State courts which are and have been stanch and rugged in their support of the Constitution and the liberties and freedoms guaranteed by it.

But let's leave the judiciary and pass on to something else. In the pre-Roosevelt-Truman-Eisenhower era it was believed that Government should pay its way as it goes, that the budget should be balanced and that deficits should be avoided as the plague. When Mr. Roosevelt became President, the national debt was some $15 million, and the country regarded it as a debt which should and would be paid. We now owe, in direct obligations, some $300 billion and, in indirect obligations, as unknown sum estimated to be in the neighborhood of $1 trillion—all obligations created by the FHA, FCA, FHLBB, HHFA, FNMA, and a myriad other agencies and governmental corporations, the obligations of which are endorsed by the Federal Treasury. And now, of course, we know that in all likelihood that debt will never be paid.

Most of the States have followed the Federal example on matters of expenditure, budget balancing and deficits. Florida, for example, has moved up from $16 million of appropriations for the 1937–39 biennium to more than $700 million for the 1957–59 biennium. Although that State has only doubled its population in the last 20 years, it has multiplied its spending 43 times. Perhaps that is an extreme example but the trend is rapidly upward. Where do you stand? Do you believe, as some contend, that wild Federal, State, and local spending leads to ruinous taxation and inflation or do you agree with the new apostles that such spending is the way to permanent prosperity? It's not too early to reach some conclusions

because as quickly as you reach a taxpaying status you will have to pay your money and take your choice—or, at least, you will have to pay your money.

Next, let's ask what has happened to our foreign policy, or lack of foreign policy? What has happened to the policy of no foreign entanglements, established by President Washington, and the Monroe Doctrine? It was Washington's belief that we should not meddle in the affairs of other nations. When certain European powers tried to muscle in on South America President Monroe blasted them out and announced the doctrine which, until recent years, has kept them out. Prior to the ascension of the one-worlders we were bound by long-established policy to maintain a hands-off attitude toward the internal affairs of foreign governments.

But we've changed all that—we have now concluded that it is our duty to provide the food, shelter, and moral suasion for the rest of the world. To tell Great Britain how to run its business, to tell South Africa how to handle its racial problems, and we now contemplate the instruction of our less enlightened brethren in how to use contraceptives.

Perhaps that is as it should be—perhaps we are divinely endowed with the omnipotent right to guide the other nations spiritually and politically, the obligation to feed them, the power to dictate their internal political policies. Maybe we do have and should enjoy the prerogative of being a Nosey Parker or Meddlesome Mattie.

But let's take a position, one way or the other. Let's ask ourselves if it's possible that we, in sowing our whirlwinds of foreign meddling, are not certain to reap the tornado in the guise of communism in Cuba and elsewhere in the Western Hemisphere, including the United States. It is my belief, archaic or not, that I have no right to interfere with my neighbor, that Florida has no right to try to correct the bad government in Philadelphia or the stench of New York City; that America has no right to poke its long finger into the affairs of Great Britain or South Africa.

But everybody seems to be doing it—even the churches. The churches and the clergy, of whatever denomination, in America, were content, for some hundred and seventy years, with the preaching of their religions, ministering to the ill and unhappy and the persuading of people to a belief in God. But in the last 20 or 30 years many of the clergy have broadened their fields of activity to include the general area of politics. Some ministers have played with the Communists and been listed by the Attorney General and FBI reports as subversive. Others have wittingly or unwittingly contributed to the current racial misunderstanding. But, fortunately, still others have continued to be preachers of the divine Gospel. But, there again, we must take a position—if we like our wine in new bottles, we may have it.

But somehow or other I do not believe that the cause of religion is served when a minister of the gospel encourages racial demonstrations and lunch-counter sitdowns. It is the law of the several States that private property, whether it be a lunch counter or a front yard, is subject to the owners' control, with the right to say that he will serve none other than one-legged Chinamen at his lunch counter and will permit none other than frock coated Englishmen to sit on his front lawn. It is a violation of law to trespass upon an individual's private property against his wishes.

I incline to the belief that preachers would do well to avoid the fostering of class and racial hate. I agree with one of the South's greatest Episcopal ministers, Dr. Jeffery Alfriend, when he said the other day, "I question the motives, or the intelligence or the good judgment of any who encourage demonstrations which obviously will lead to increased racial hates and probable violence."

Let's move on to the changes which have occurred in the schools, colleges and universities of the land. They used to be devoted to education but, in recent years, the curriculums have been expanded to include other facets of human endeavor. Many institutions have adopted the John Dewey philosophy which makes their aim and end "education without work", a state of euphoric "life-adjusted, well-rounded living". Some universities have gone into the country club business, others have become training grounds for the demonstrators, the sitdowners and the troublemakers. And still others, influenced by working scholars, have continued to teach and to train students to think and to work and to be worthwhile men and women.

Using one State University as an illustration of the change which has occurred in education, let me say that that institution was, until 2 or 3 years ago, when it experienced an attack of social consciousness, one of the good schools in which emphasis was placed upon academic excellence.

Although a large majority of that institution's teachers have remained primarily interested in academic education, some of the faculty is no longer so hampered and devotes much of its time to the advancement of new and far-fetched social and political aims.

In the middle of a recent racial crisis, while local officials were seeking to avert violence, a professor of the institution spoke to a mixed group and in the course of his discussion asked how we could hope to achieve justice if we stay within the law and went on to tell them that "if you always obey the law and the law is no good, you get nowhere."

The university invited such people as Linus Pauling, the scientist whose loyalty was questioned, Mr. Atlee, Britain's former socialistic prime minister, characterized by Winston Churchill as "a sheep in sheep's clothing", and Mr. Justice Douglas, of the Supreme Court, who has ruled with the Communists in 66 out of 69 cases, to speak to the student body. When taxed with having overdosed the students with rosy liberalism the university authorities pointed out that they had balanced the program with Mr. Romulo, the Philippine Ambassador and Mr. Eric Johnson, the movie mogul who spent so much time in Russia trying to do business with Mr. Khrushchev.

Perhaps that trend is as it should be—perhaps the measure of a university's standing is its social consciousness as distinguished from academic accomplishment. The decision is one which you must make, not for yourselves, but for your children, because within a few years you will be furnishing the money to run those institutions and furnishing the children to attend them.

However, I should caution you that, if you take the position that educational institutions should devote their efforts to education, should teach obedience to the law and should not use the time of the teachers and the students and your tax money for the training of potential troublemakers in how to create strife and start riots, you will be clobbered as old mossbacks. And if you assume that the governing authorities should manage the affairs of the institution and, in doing so, prohibit subversive activities, you will be accused of having interfered with academic freedom. On the other hand, if you agree that the future of the institutions should be left to the tender mercies of the pinks you will be in step with the times.

If it suits your mood to be frank about the present situation, you will admit that the responsibility for the current trend falls upon the shoulders of the individual citizens of this country. They elected their Governors, the Governors appointed the boards of control or trustees or regents which, in turn, selected the presidents and approved the faculties of the several institutions. If the Governors and the boards encourage the spectacles of unlawful assembly, such as have occurred in the South recently, it is the responsibility of the citizens.

I do not want to leave the impression with you that Florida is by itself in playing footsie with the Paul Butler anti-South attitude. Virginia's Governor Almond launched the States rights battle roaring like a lion, but, after a brief flurry with the do-gooders, he retreated, squeaking like a mouse. And of course North Carolina's Hodges never even barked—he squeaked from the beginning. But let's decide where we stand—perhaps we prefer squeakers—it may be that we agree with the apostles of new thought in saying that our forefathers, who were willing to stand on their hind legs and fight for right, freedom, and independence are well forgotten.

If you are curious as to how all these great changes came about, I suggest you give credit to the movies and TV programs, spawned in the Red entertainment world, to such publications as Life, Ebony, and Look, such people as Mrs. Roosevelt, Paul Butler, Senators JAVITS and HUMPHREY and to self-proclaimed southerners of the hue of the Ralph McGills—to such organizations as the ADA, the NAACP, the Communist Party and various biracial committees and societies. But the greatest credit of all must go to the individual citizens of America who either approve the infiltration of Reds or are indifferent to the plight of the Nation.

I am not sure to what extent the average citizen is interested in the trends I've been discussing. Whether they are concerned with the implications of those trends—whether they are so concerned as to try to reverse them, are open questions. But, logically, they should be interested in vital public questions—they should be interested in the future of their children and grandchildren and in the future of their Nation and civilization.

But I would like to say to all of the people of the South and particularly our new citizens, the refugees from such septic centers of liberality as New York, Philadelphia, and Chicago, that this is still their America, that this is still their Nation and that they still owe the debt of good citizenship.

I am fully cognizant of the fact that the modern inclination is to think liberally, to compromise differences and to be tolerant. But I should like to point out to you that in all the history of mankind not one single noteworthy advance, whether in religion, science, medicine, human welfare, or government, has ever been accomplished by the timid middle of the roaders. All that the conformists, the moderates and the compromisers have ever been able to do was to maintain a status quo—to yield and sway with pressures and to put off the day of reckoning.

This land of ours is in trouble—in trouble at home and abroad. The Communists are carving great chunks out of the free world, our natural allies have little confidence in us and we stand on a perpetual brink of war. On the domestic front we are teetering between depression and inflation. We are disturbed by the clash of racial ideologies. The Congress and the White House are growing weaker and a despotic Supreme Court is growing stronger.

For some unaccountable reason this era has produced no great leaders—we are just drifting along, changing course with the wind. We need, and I look to your generation to provide, great leadership—men of opinion, conviction and courage—men who believe in and are willing to stand for the dignity of mankind.

Compromise is a factor in everyday living—and it's perfectly all right to compromise immaterial questions. But compromises are like narcotics—they can be overdone. Some things, some principles and some beliefs are and should be above compromise. One either believes in God or one does not—there's no compromise. One either believes in stealing or he does not—there's no such thing as token honesty. One either believes in freedom or he believes in slavery.

And I hold it to be true that we either believe in the fundamental principles embodied in the Constitution and in constitutional government in general or we believe in some other form of government—that we either believe in government by law or in government by man.

And now, in closing, I remind you that the very existence of America, as a democracy and as a bulwark of civilization, is at stake. The thoughtful people of this country can either wrest governmental control from the drooling Liberals, reestablish the ideals and principles which made it a great nation or they can watch the United States descend to a socialistic mediocrity.

The Social Security Inverted Pryamid—No. 1

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1960

Mr. ALGER. Mr. Speaker, as the House prepares to vote on social security amendments of 1960 which will further increase benefits, expand coverage, and add a whole new concept of Government-controlled medical care for the aged, I would like to call to the attention of the Members some pertinent thoughts by W. Rulon Williamson, the original actuary of the Social Security Board. In a letter, dated June 11, 1960, as a preface to an analysis of the social security program, Mr. Williamson declares:

The 16-fold increase in taxes under OASI from 1937 to 1959, and the 10,000-fold increase in the benefits over the same period seem to me like an inverted pyramid with the appex shallowly in the sand, and the yearly larger burdens of sporadic enlargements, demogically arranged, plus the wearing out of the earlier denials of benefits make for increasing instability.

Following are some of Mr. Williamson's thoughts on the 1960 amendments to the Social Security Act:

SOCIAL SECURITY AND THE CONGRESS

(By W. Rulon Williamson, research actuary)

The Congress is being pressured to add to the social security portfolio a new account, called "Medical Care for the Aged" and to go through the motions of rationalizing calling the process insurance, and thereby raising the status of the recipient from pauperism to dignified right. In 1929 or 1930 there were apparently housed in our poorhouses some 1 percent of the population of 65 and over. Today there is an expression of joy that we have stopped the parade to the poorhouse by the inventions of social security. Under that invention we have public assistance, with needs tests—liberal needs tests in some States—paying benefits to 2.4 million aged with Federal subsidy, and 10.1 million 65 and over drawing benefits from OASI, cheerfully called insurance. There is some overlap here, but apparently nearly two-thirds of our population of age 65 and beyond now get benefits which represent very little personal earmarked taxpayment toward them.

In our caste system, perhaps the poorhouse and general relief is plebian relief, the old-age assistance is bourgeois relief, and OASI benefits aristocratic relief. The parade is not to the poorhouse, but to Federal near-doles or federally subsidized local doles.

The original name of the Federal benefits was old-age benefits, as carried in the Social Security Act of 1935. The 1939 amendments made some radical changes in the 1935 act—some of the reestablishing goals of the staff servicing the Committee on Economic Security of 1934, some adding benefits to dependents of retired ex-OASI taxpayers, some adding benefits to the survivors—family dependents—of nonretired decedents among the OASI taxpayers. This last-named change gave more surprise than pleasure to the life insurance companies, but having waked up to the reality rather tardily, a surprising degree of resigned tolerance followed the heavy inroads into their business.

The World War II kept all but rather nominal amendments from passage until 1949 and 1950. Those amendments were monumental in scope and set the pattern for the biennial enlargement of the system from which we have since suffered. Again the tolerance of the citizen has been astounding. After five changes of 1950, 1952, 1954, 1956, and 1958, there has been a sort of stunned and cynical recognition that perhaps this was the essential consequence of allowing the bread-and-circuses doctrine to take possession of a Congress, suffering from actuarial anesthesia. As with Hamlet's comment on the drinking habits at the court of Denmark, the custom of biennial overloading of the OASI craft would also be more honored in the breach than the observance.

Two Passaic Girls To Live With French Families Abroad—Join 1,200 College Students for Summer Experiment in International Living

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 16, 1960

Mr. CANFIELD. Mr. Speaker, an interesting program to promote good will among nations and peoples is revealed in a splendid article written by Arlene Logioco and appearing in the June 14, issue of the Passaic, N.J., Herald-News. The article follows:

TWO PASSAIC GIRLS TO LIVE WITH FRENCH FAMILIES ABROAD—JOIN 1,200 COLLEGE STUDENTS FOR SUMMER EXPERIMENT IN INTERNATIONAL LIVING

"When in France, do as the French do." This expressive slogan will become a way of life this summer for Misses Jane Siegendorf and Ruth Zimbler, Passaic college girls.

They sail June 28 aboard the MS *Aurelia* for France where they will become unofficial ambassadors of good will for the United States.

Participants in the experiment in international living program, they join 1,200 other collegians who are traveling to 28 countries on 5 continents this summer. Each of these experimenters will live for a month as a member of a foreign family, and will spend another month traveling about the country.

Well versed in the language, customs, history, and culture of France, the young women will attempt to see the country as the inhabitants see it. To do this, they will "go to work with the father, market with the mother, and do what a French girl would do," says Miss Zimbler.

The program operates on the principle that the individual plays an important part in creating mutual understanding and respect among peoples of the world.

TO SEEK FAMILY FRIEND

Miss Siegendorf, daughter of Commissioner Hyman Siegendorf and Mrs. Siegendorf, 75 Reid Avenue, will stay in Nantes.

Her mother calls her assignment "an amazing coincidence." During World War I, Mrs. Siegendorf's brother, Melvin Spitz, was killed there while serving with the "Fighting Irishmen" under Father Duffy. Before his body was brought to this country for reinterment, his grave was cared for by Martha Lisez, a resident of Nantes, whom Jane will try to contact.

Miss Siegendorf, a junior at Vassar College, is studying French and English. Last summer she studied for her 5th year of French at the New School for Social Research. This is Miss Siegendorf's third trip abroad, but this one is different—"it's the first one without my parents!"

She likes the idea of staying with a family rather than at a hotel, because she "gets a kick out of people," and adds, "it will be good for my French."

BORDEAUX FOR MISS ZIMBLER

Miss Zimbler is the daughter of Mr. and Mrs. Philip Zimbler, 11 Idaho Street. On the dean's list at Douglass College, she is a political science major with options in French and philosophy.

As vice president of the International Relations Club, she feels that this sojourn will afford her the opportunity of applying what she has learned all year. She is an avid reader and Dostoevsky is her favorite author, but in preparation for this trip, she is reading French histories and dictionaries exclusively. A family in Bordeaux will be her hosts for the first 3 weeks.

Both young women are looking forward to their second month in France. They will spend 3 weeks bicycling through the countryside. They will travel in groups of 10 French and American students with a mature guide specially trained by the experiment.

At the end of their stay, they plan to spend their week of independent travel on shopping sprees in Paris.

The Social Security Inverted Pyramid—No. 2

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1960

Mr. ALGER. Mr. Speaker, in order to have a full understanding of the social security program before we vote on the proposed amendments for 1960, I include further remarks on the social security system by W. Rulon Williamson, the original actuary of the Social Security Board.

SOCIAL SECURITY AND THE CONGRESS

(By W. Rulon Williamson, research actuary)

The dogmas growing up under OASI include:

1. It is an insurance system. Insurance is dependable, actuarially sound, fiscally solvent. Therefore this system is dependable, sound and solvent.

2. While we do not know how to read the future, we can make assumptions. We will make low-cost assumptions and high-cost assumptions. Although there are scores of factors involved, we can hold many of them constant, as we vary the rest. This simplifies the work.

3. We can extrapolate two sets of cost assumptions—the low and the high—right out to infinity. We can also produce an intermediate assumption to infinity.

4. It is insurance. We can therefore know that for deferred benefits in life insurance there is fund accumulation, and under its assumptions we balance the present value of benefits against the present value of premiums, over the insured's lifetime. So in this insurance, social and open-end in nature, running out to infinity, we will discount taxes and benefits at presumptive valid interest rates, and show a balance, too. This discount reduces infinity to finite proportions.

5. There are well-established actuarial techniques in some types of life insurance. Actuarial techniques in use here for 25 years must also be well established.

6. Using these well-established actuarial techniques, the periodical surveys show actuarial balance.

7. Given the balance, we can call the system self-supporting.

8. Compound interest, in reverse, used as discount factors, maintain the balance, aided by any necessary increase in the tax rate as it seems to be needed.

9. It is an achievement of social insurance that the overpowering need of the citizens, with their incapacity for personal budgeting, with pauperism threatening almost all, which originally triggered the creation of social security, has in 25 years created the miracle of a self-supporting system.

10. A further miracle is that the Congress has been cost-minded all this time and may be expected to remain so.

Memorial Day in Hawaii a Soul-Stirring Occasion

EXTENSION OF REMARKS

OF

HON. E. ROSS ADAIR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1960

Mr. ADAIR. Mr. Speaker, five members of the House Veterans' Affairs Committee, led by Chairman OLIN E. TEAGUE, had the privilege of spending the 1960 Memorial Day weekend in Hawaii for the threefold purpose of: (a) Holding hearings and meeting with various veterans' groups in our 50th State; (b) representing the Congress at the dedication of the beautiful new carillon presented by the American Veterans of World War II and Korea at the site of the Arizona disaster in Pearl Harbor, and (c) attending the Memorial Day services at the Punchbowl National Cemetery in Honolulu.

The last of these was an occasion which everyone present will remember as long as he lives and, in beauty and in depth of feeling, it recalled the colorful patriotic observances which used to be so much a part of American life and which have, unfortunately, fallen into comparative disuse in recent years.

The Punchbowl National Cemetery has been created in a huge, extinct volcanic crater overlooking the city of Honolulu. In it are buried almost 17,000 men and women of all races who fought to preserve our freedom, and the freedom of all men of good will everywhere on earth, during the hostilities in the Pacific theater.

The magnificent resting place for the brave which has been created here was a breathtaking sight on Memorial Day. On each of the 17,000 graves a small American flag was fluttering in the soft Hawaiian breeze, and on each was a lei of orchids which had been put together with loving care and placed in position by Hawaiian schoolchildren. The ceremonies, in which all branches of the armed services and all veterans groups participated, were brief and extremely moving. The principal speaker on this occasion was Mayor Neal S. Blaisdell, of Honolulu, and the chairman of the proceedings was Spark M. Matsunaga, a leader of the 100 Club, a prominent Hawaiian veterans group.

World War II is a vivid and living memory in our 50th State and Memorial Day is an occasion of deep personal meaning. None of the visiting delegation will ever forget the sight of, literally, tens of thousands of Hawaiian citizens climbing the hill to the Punchbowl Cemetery in car or on foot, carrying their own flowers to lay upon the graves of the heroic dead. And, I am sure, that each of us felt a twinge of regret and remorse that here on the mainland the emphasis at Memorial Day has gradually been placed more and more on the holiday aspects of the occasion rather than on the sacred memories which it should arouse in every American heart.

Previous to these rites, the congressional group attended the ceremonies at the site of the *Arizona* disaster. This was indeed an occasion for heartbreak and deep thought. The platform on which we stood was erected upon a turret of the sunken battleship in which 1,102 American boys lie forever entombed. The outlines of the noble ship are still clearly discernible beneath the blue, translucent Hawaiian waters. Indeed, on a beautiful May morning such as was this Memorial Day at Pearl Harbor, it was difficult, if not impossible, to envisage the horror and the brutal savagery which ravaged this Pacific paradise on December 7, 1941, and which plunged the United States into 4½ years of global warfare.

The AMVETS carillon represents a first step in the construction of a magnificent national memorial at the site of the disaster. In presenting the carillon to the U.S. Government, Harold T. Berc, national commander of the AMVETS summed up the feelings of all veterans everywhere in the following address:

DEDICATION OF AMVETS MEMORIAL CARILLON OF THE PACIFIC, MAY 30, 1960

(By Harold T. Berc, national commander, AMVETS)

Men of the *Arizona*—We in AMVETS have come to memorialize your sacrifice on that infamous 7th day of December 1941. We commit ourselves to this act by the dedication today, aboard this gallant vessel, of a carillon. We devote ourselves to the language of its inscription, which says, "While these bells toll, safely rest; freedom lives."

In your moment of truth on that gray December morning about 19 years ago, you had already marked yourselves with the honor of serving your Nation's flag. But the swiftness of the enemy's assault prevented you from knowing the course of history which would flow from that day of surprise.

You could not know that your day marked the beginnings of World War II, and that 12 million brothers of yours would rise up to defend against the lust of Tojo, the avarice of Mussolini, and the madness of Hitler—that thousands of them would follow your devotion by being shattered in the skies, sunk below the seven seas, or lost on battlefields around the world—that thousands more would be returned to hospitals around our Nation, wracked in mind or broken in body, and that millions more of us on whom God's grace was shed would return with determination to atone your sacrifice—not alone by dedicating ourselves to concern for fellow veterans, their widows and orphans, but also to the highest acts of citizenship which would insure a healthful nation working toward a world of peace with justice.

You could not know, men of the *Arizona* that the days following World War II would be marked by the unlocking of the secrets of atomic energy revealing a force which could be either effectively used to accomplish men's destruction or used to bring the well-being of the peoples of the world to a state of peace and material good.

No, you could not know that the powerful nations of the world would gather in San Francisco for the organization of a body called the United Nations which would, for all time, commit the peoples of the world to an order of life which would minimize nationalistic abberations and provide a forum for help in bringing colonial peoples of the world into a day of independence, and which would cooperate in stamping out disease, in improving economic development, in advancing educational opportunity, and in making the elements of adequate food and shelter available to all.

You could not know that the Soviet Union which participated in the creation of this model tool, would fear and distrust the honest directives of that forum and would weaken its purpose by obstructionist vetos, by belligerent declarations, by an inordinate hardness in provoking an airlift at Berlin, and finally by the sponsorship of a limited war technique resulting in the Korean war * * * that the substantial part of the world would unite for peace and under U.S. moral leadership would resist this aggression by piecemeal technique through the fielding of a U.N. military force. Nor would you know that Soviet Union political opportunism would cause her to inject herself into Hungary for the purpose of suppressing the free will of its people and then to exceed this cynical intrusion by an even more cynical refusal to accept an impartial inspection of the Hungarian scene by a properly constituted committee of the U.N.

You could not know that the Soviet Union would pursue a course of purposeful espionage, and by industrial advance bring itself to a position of high nuclear war potential, the effect of which has been to commit the world to life on a diplomatic tightrope of terror.

And so we find ourselves on this Memorial Day remembering your sacrifice in the wake of surprise and concerned that from such a repeated surprise, in this day of nuclear power recovery potential would be minimal.

We do not raise for you the detail of the events of today. But we do say that the

act of overflight by the U–2 which caused such violent Soviet verbal reaction was a better reason for getting on with the summit conference than for torpedoing its potential. The cancellation of that conference was not an assault on the United States alone but on all the peoples of the world who looked hopefully to the summit conference as a means of controling the dangerouisy mounting tensions of the world.

From the White House we have today received the President's Memorial Day Proclamation in which he asks all Americans to make this a day of prayer for permanent peace. We now make this prayer on this hallowed site and we let you know that we bear witness to your sacrifice by dedicating ourselves to the essence of the words "Eternal vigilance is the price of liberty," and we expect to perfect that dedication by insuring that our Nation's strength continue to be second to none in the world.

At the same time, the essential truths of our aspirations for a world of peace with freedom will continue to be sought by us through every honorable means available—not as a matter of lip service, but as a matter of reality; that we seek this world of peace with freedom not alone for ourselves, but for all those people of the world who look hopefully toward this goal. We declare in ringing terms our decision to stand fast to the principle that all such peoples be free of dictatorship, free of oppression, and free of attack because of race, color, or creed. The terrible lesson of surprise is vividly portrayed by your mighty *Arizona*. But for all time, rather than let this be a symbol of tragedy, we shall make it stand as a signal of freedom through vigilance. And it is with this lesson in mind that AMVETS formally tender this carillon.

Mr. Speaker, before laying a wreath on the site in the name of the Congress of the United States, Chairman TEAGUE of the Veterans Affairs Committee expressed himself in the following remarks which, I feel, should be read by every American:

SPEECH BY HON. OLIN E. TEAGUE—DEDICATION OF THE AMVETS MEMORIAL CARILLON AT PEARL HARBOR, MEMORIAL DAY, MAY 30, 1960

This is really an occasion—not for speech, but for silence. It is an occasion for quiet memories, for prayer, for thanksgiving, and for great resolve.

Here, as we dediacte this carillon as a memorial to those 1,102 Americans who lie forever entombed within the shattered hull of the U.S.S. *Arizona*—we must be impressed by the fitness that lies in the fact that this has been made possible by the American Veterans of World War II and Korea. For the AMVETS are typically and completely a product of World War II—and, among all the battlefields and memorials of the world, Pearl Harbor is the most representative of the same war that gave the AMVETS birth.

I single out the AMVETS because of their part in making this memorial possible. However, the thoughtfulness and patriotism which motivated this gesture are typical of all our veterans' organizations. In my opinion, the growth and development of our veterans' groups has been one of the healthiest developments of 20th century America and we all owe a great deal to each and every one of them.

Pearl Harbor is unique. Few nations care to memorialize their military defeats. The French do not keep Waterloo green in the memories of their people; the English have no special reverence for Yorktown and Saratoga; Mexico does not glory in San Jacinto; the Spanish do not sing of the Armada.

But Pearl Harbor is different. It represents a physical defeat but a moral victory. It symbolizes the ability of free men to rise and conquer the forces of oppression, even when they have been crushed to earth.

Pearl Harbor will always serve as a reminder to future generations of the moral differences between freedom and totalitarianism. It will always serve as a perpetual reproach to all who would be slavemasters—and a testimonial to the invincibility of the human spirit.

And Pearl Harbor serves another essential purpose as a reminder that this must never happen again.

In all the history of humankind there has never been an instance in which freedom has been lost in a single day.

The positive act of snatching a people's freedom away from them may have been of short duration, but always the period of apathy and carelessness, of laziness, of complacency, and even of moral corrosion which made the act possible has been long and protracted.

This is something we must always remember. As we stand here today we are troubled—deeply concerned—by the reverberations resulting from the capture of the U–2. Certainly the conditions which surrounded this event are unfortunate in the extreme since they have given the Soviet demagogues a useful implement of propaganda. But we must remember that as long as we have for an international antagonist a closed society, such as that of Soviet Russia, then espionage must be a way of life, a necessity for national survival. If we had been as vigilant in 1941—if we had known as much about what was going on in Japan as we know about Russia in 1960—we would not be mourning our heroic dead here today.

For the free world can never afford another Pearl Harbor. If we are ever again caught so unprepared there will be no ceremonies to be conducted by the survivors—there will be no buglers, no tolling of bells, no flags, no memorial wreaths—for there will be no survivors. There will only be the long silence of destruction and universal death.

I have just one thought to add before the bells of this carillon ring out for the first time over these historic waters. We mourn, with aching hearts, the 1,102 Americans who lie entombed before us—young men who died in a war before they even knew a war existed. We mourn all the others who have died in this and in every other war in which we have been engaged—those who lie, as these do, with an ocean across their hearts—those who died in mudbank or cloudbank or who lie with the jungle roots entwined about their feet in the green hells in which they were forced to fight.

But mourning is not enough. Not nearly enough.

A generation of Americans gave their noondays to us so that we might enjoy a handful of tomorrows. They have made us the trustees of their sacrifice, the legatees of their suffering.

They have been most generous.

It is not sufficient to mourn them. They will be satisfied only if we can give them assurance that their sacrifice has not been in vain, and that we are worthy of their sacrifice.

This calls for self-dedication—for a firming-up of our faith—for a regrouping of our moral forces. We are all faced with troubled years ahead. The maintenance of peace is going to call for many things from many people—courage, unselfishness, stamina, sacrifice, wisdom. The challenge is enormous now and it will grow greater. We must meet that challenge every day of our lives or we shall be overwhelmed by it.

So—when these bells throw their gentle message across the harbor today—let us rededicate ourselves to this cause of maintaining liberty—the cause for which these 1,102 Americans gave up their lives. Let us swear in our hearts that we shall devote our lives—each in his own way—toward making certain that liberty—that torn and tattered document, signed by Christ and His angels and a most impressive list of sponsors, great and small, shall never be committed to the flames.

Thank you and God bless you.

As I have said, Mr. Speaker, Memorial Day 1960 in Hawaii was an occasion to remember. I wish every Member of Congress and, indeed, every American had the opportunity to attend these dual ceremonies.

Japanese Invasion

EXTENSION OF REMARKS
OF
HON. A. PAUL KITCHIN
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1960

Mr. KITCHIN. Mr. Speaker, I wish to call to the attention of the House an editorial from the Thomasville (N.C.) Times, June 13, 1960:

JAPANESE INVASION

"Remember Pearl Harbor" was the battle-cry of Americans only 15 years ago. The Japanese cried back "Banzai."

Today another battle with the Japanese is taking place. The American textile manufacturers criers "Remember foreign aid" as he tries to compete with cheap Japanese goods flooding the American market. The Japanese now cry "Yankee go home."

During World War II the Japanese infantrymen never set foot on American soil. But now Japanese textiles have staged an invasion that no army could compete with. The goods have infiltrated into every port, traveled by the courtesy of American transportation, found their way to every market, invaded every home, and all this is sanctioned by Washington as "Japanese rehabilitation."

Yet the Japanese cry "Yankee go home," as their invasion of goods flows across the Pacific more than ever and American dollars continue to fatten our conquered foe.

Prelude to the President's visit has even worsened the Japanese outcry. Now it's "American murderer, go home" and "Ike, don't come."

Yet the "American murderers" continues to purchase a blouse, tablecloth, underwear, a pair of stockings, or other goods manufactured by our humbled foe.

The Japanese invasion of the textile market continues to move from one victory to another through the American market with success never attained by the fanatic "Banzai" charges made by the Japanese Army 15 years ago.

Today plans are being made to close a textile mill in High Point employing 295 people who paid taxes to help restore Japan. This is the third Burlington Mills plant closed because of cheap foreign goods in the last 2 years. The millhand seeks another job to feed his family. The Japanese cry "American murderer, go home."

About 18½ years ago the American people were filled with hate after learning of the "Death March." Today the Japanese have devised another death march, the "Textile Death March."

This death march does not have the Japanese soldier prodding the victims with bayonets and the captured do not scream out in anguish. But this march is to the employment office accompanied by the screams of children crying out in want and hunger.

Who will join this death march other than the textile people? The merchant who

marks up Japanese goods from 50 to 100 percent? Bankrupt people buy no goods, no matter how cheap. The automobile manufacturer who is competing with foreign cars from rehabilitated Europe? Unemployed people walk. They do not buy cars, gasoline or other goods, except food, and perhaps they will not have to buy this when the breadlines of the thirties reappear.

War is much like poker. It's the man who wins the big pots who walks away from the game with the money. Perhaps World War II was the ante and economic stability the "big pot."

Now is the time for the American manufacturer to "Remember Pearl Harbor," gather his fighting forces, and meet the enemy in the big battle—the battle for economic stability.

He should bear down until the defiant cry of "American murderer, go home," becomes a plea of "Uncle Sam, come back."

BOB CLOANINGER.

Southern Students Oppose Civil Wrongs

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 16, 1960

Mr. COLMER. Mr. Speaker, in these days of unrest, with the conflict of ideologies throughout the world, the press is full of reports of rebellion, revolution, and attacks upon the existing order, particularly among the students of the world. While it is true that the modern isms appear to be making headway in certain areas for the capture of the minds of the youths of the world, I am sure that this is by no means to be construed as uniform.

However, because of the prominence given to these incidents, like the Communist agitations by Japanese students and the sit-in lunch counter demonstrations, it is refreshing to those of us who believe in the constitutional and traditional philosophy which has made this country the envy of the world to note that there are still untold thousands—yes, millions, who still believe in the traditional and constitutional American system.

As an instance of this, Mr. Speaker, I submit herewith a resolution which was adopted by the students of Mississippi Southern College located in my own congressional district at Hattiesburg, Miss. As one who is dedicated to the southern way of life which, after all, is the American way of life, I am proud of these young people and of the institution which they attend.

The resolution follows:

A BILL TO COMMEND THE UNITED STATES CONGRESSMEN IN THEIR EFFORTS TO DEFEAT CIVIL RIGHTS LEGISLATION

PURPOSE: TO SHOW THE SOUTHERN CONGRESSMEN THAT THE YOUTH OF THE SOUTH SUPPORT THEIR EFFORTS TO PRESERVE THE TRADITIONAL SOUTHERN WAY OF LIFE

Whereas there is a current effort by certain factions in the United States and abroad to disrupt the peaceful coexistence of all people in the United States; and

Whereas political pressures have forced action to be taken by the U.S. Congress to further the cause and actions of these agitant groups; and

Whereas certain Congressmen, especially from southern United States, have fought this legislative action known as civil rights in every possible way available to them despite ridicule and discrimination from other parts of the United States and the world, and have proven themselves to be working in the best interests of the South and the southern way of life; and

Whereas the young citizens of the South should voice their support and approval of the efforts of these Congressmen: Therefore be it

Resolved by the Mississippi Southern College Student Senate, That these Congressmen be commended for their efforts and endeavors to preserve this traditional characteristic of our society. Be it further

Resolved, That a copy of this resolution be sent to each Congressman who cooperated and worked to achieve this goal.

Adopted April 25, 1960.

LARRY E. BRADLEY,
President, Student Government Association.

Adlai Must Be Heard

EXTENSION OF REMARKS
OF
HON. JOHN A. CARROLL
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Thursday, June 16, 1960

Mr. CARROLL. Mr. President, earlier this week one of America's wisest, ablest, and most experienced statesmen, Adlai Stevenson, of Illinois, issued a statement concerning his candidacy for the Democratic nomination for President of the United States.

While Governor Stevenson made it clear that he was not seeking the nomination as an active candidate, he made it equally clear that he was willing to accept the nomination if the convention should choose him.

It has become increasingly evident in recent months that while he is not an active candidate himself, Adlai Stevenson, is nonetheless, the candidate of millions of Americans who believe that he is best equipped to lead our Nation, and, indeed, the entire free world, in these troubled times.

Despite his reluctance to once again campaign for nomination to this high office, a tremendous and widespread grassroots support for Adlai Stevenson has grown to amazing proportions throughout the land. This support is, in my opinion, a phenomenon in American politics. It is surely a healthy sign that Democrats at least are gravely concerned that our Nation should settle for nothing less than the most capable and best qualified of all Americans as our national leader.

Hundreds of thousands of American citizens are each day giving their time and energy to the task of placing Adlai E. Stevenson in the White House. They are making this effort despite the fact that they know they will receive no encouragement from that great man in whose behalf they are working.

They are making this effort because they recognize as rare indeed a man who already sees with great vision the shape and the problems of the New World and whose mind and wisdom they know is equal to the terrible task of bringing our Nation to a safe passage through these troubled times.

A number of America's leading newspapers have given editorial voice to the need for Adlai Stevenson's qualities of leadership, joining with the growing chorus for the Democratic National Convention to nominate this great and this good man as its presidential nominee once more.

I ask unanimous consent that certain editorials be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Anniston (Ala.) Star, June 3, 1960]

ADLAI MUST BE HEARD

The future of the American Republic is in the making. We as a great Nation do not face "a critical hour"; we do face a critical period; it may be for months, it may be for years.

Whatever the length of time, we cannot submit our destiny to the partisan emotionalisms which for selfish interests ignore the serious elements of destiny.

For that reason it is now a positive requirement on every citizen to reflect with critical, not with a party emotional mind, on what sober, patriotic, intelligent leaders have to say. It matters not whether those leaders are Democrats or Republicans.

One of those leaders is Adlai Stevenson. By political creed he is a Democrat. By and in personal character and intelligence he is a patriotic citizen who in the convictions of his mind is first of all an American.

No self-respecting citizen can laugh off, nor dismiss for partisan reasons, nor charge to political softness toward communism these words by that genuinely distinguished citizen:

"There is no question of national unity in a time of crisis. But errors must be corrected, and we must not forget that the opposition also had an obligation to our country and to our allies whose security is also involved.

"It is the duty of a responsible opposition in a democracy to expose and to criticize carelessness and mistakes, especially in a case of such national and world importance as this. We must see to it that we profit from such grave mistakes."

Language does not mean anything which attempts to conceal the plain fact that even unnecessarily President Eisenhower and his advisers gave Khrushchev a propagandist advantage. That only is what the Anniston Star has charged.

It remains still that Khrushchev broke up the Paris Conference. We gave him the immediate means for doing that. The Western leaders were left confused and distracted by our contradictory confessions. The American people are in confusion now.

But the very confusions have at once been turned into an attack on the Democratic Party, and especially on Adlai Stevenson. Luncheon club resolutions, and Republican Senators like DIRKSEN, and outmoded Democrats like James Farley are all united.

They are by partisanship, by provincial outlook, and affectations of patriotism, the historical name for which is chauvinism.

The American people are united and they can only be divided by a leadership which is soft on responsibility and complacent with departmental mistakes and errors.

Real patriotism needs real and honest intelligence and forthrightness—that is what Adlai Stevenson has, not as a Democrat nor as a Democratic politician, but as a thoughtful citizen.

[From Newsday, Garden City, L.I., N.Y., May 31, 1960]

NOMINATE STEVENSON

At this critical time in world history, the Democrats owe it to all Americans to stop their feuding and fussing and nominate the best possible candidate for President of the United States. By virtue of his experience, his wisdom, and his ability, that man is Adlai E. Stevenson.

He is qualified for many reasons but the one overriding reason is that he would be able to deal with the totalitarian powers. He knows and understands the suspicion, the deviltry, the ruthlessness of the Russian bear with his smile and his smite. The formidable opponent must be handled with skill if ever we are to lift the clouds of terror that lie low over the world. There is no other issue so important as the one of peace or destruction. Wars are no longer fought by chivalrous knights on white chargers. The Four Horsemen of the next war ride from the Apocalypse and their names are War, Famine, Death, Pestilence.

The present administration has tried to quiet our fears of a nuclear holocaust with reassuring words and optimistic predictions. But this is no time for tranquilizers; this is the time for vision or we perish.

If we have made mistakes we should speak out instead of mesmerizing ourselves that all is for the best in the best of all possible worlds. Stevenson did speak out on the summit collapse and was immediately set upon by Senators DIRKSEN and SCOTT. It took fortitude to say "We cannot sweep this whole sorry mess under the rug in the name of national unity. We cannot and must not. Too much is at stake." But Stevenson has always spoken out. In 1952 he told the American Legion that "surely intolerance and public irresponsibility cannot be cloaked in the shining armor of rectitude and righteousness. Nor can the denial of the right to hold ideas that are different—the freedom of man to think as he pleases. To strike freedom of the mind with the fist of patriotism is an old and ugly subtlety."

We need a fist now to strike a blow for freedom. We also need the intelligence to deal with the Russians and to combat the serious problems created by mounting international unrest (i.e., Turkey, Japan, Korea). Stevenson can provide us with both. As he said: "I think the trouble is not in the Nation's energy, its will or its nerve * * *. The root of the trouble lies in this: The Nation faces a series of massive changes in the world scene; they call for new ways of looking at the world; for new policies; for increased efforts."

"But he is a two-time loser" will cry those who oppose him. This is fallacious reasoning. Stevenson lost not because of what he was but what Eisenhower seemed to be. Americans like heroes and father images. Eisenhower supplied both, packaged in ribbons of peace and prosperity. Unfortunately today our peace is precarious and our prosperity perches dizzily on the mountain of inflation.

There is still time for Americans to choose the right man to cope with these and other pressing problems in the world's biggest battle, the battle of ideas. This is a time to call for greatness. It is the grave responsibility of the Democratic Party to nominate the man who measures up to such a call.

He is Adlai E. Stevenson.

KENNEDY FOR VICE PRESIDENT

Next to Stevenson, Senator JOHN KENNEDY is the ablest Democratic candidate. He has shown a remarkable vote-getting ability in the primaries; his energy and forthrightness have won the hearts of many Americans. But his youth and relative inexperience in dealing with world leaders could be a handicap at a time when we must have the best possible man—or else. He would make a strong running mate in the second spot on the ticket. For the sake of this country, the Democrats should choose a Stevenson-Kennedy slate in July.

[From the Greensboro (N.C.) News, June 3, 1960]

STEVENSON'S "GRAND STRATEGY"

Adlai Stevenson may keep on insisting he's no candidate for the Democratic presidential nomination, but his recent speech setting forth "a grand strategy for peace" belies all denials.

The Nation ever appreciates suggestions from its finest minds; but Mr. Stevenson's speech, coming when it does and replete with criticism of the Eisenhower administration, reveals a man with an eye still on the glittering prize.

Yet his sixth speech in 7 weeks, delivered to the Textile Workers Union of America, an organization which has already endorsed Senator Kennedy, is clearly a thoughtful blueprint for international action. His 5-point program includes these:

1. Build up a deterrent power and a limited war capability with NATO allies that does not depend on budget penny-pinching.

2. Strengthen the Western alliance by "building a stronger political and economic community in the free world" and setting up an Atlantic Council.

3. Engage with our allies in planning a long-range aid program for underdeveloped countries.

4. Assert that general and complete disarmament under international control is "an imperative for all of us."

5. Demonstrate the effectiveness of freedom in the United States by meeting needs for schooling, research, health, housing and all forms of public services.

Mr. Stevenson's "grand strategy" contains little in the way of new proposals, except perhaps creation of an Atlantic Council. But it has the value of being put together in coherent form.

Our trouble is not that no one seems to know what to do. Most of Mr. Stevenson's admirable suggestions have been made before. Each one is probably lying around on somebody's desk in Washington. No doubt different individuals on lower levels of Government have forwarded such proposals.

The difficulty is that vision and imagination are lacking at the very top. President Eisenhower has never been able to take these ideas and tie them into a unified, clearly understandable whole. Worse, there has been little disposition to push even those excellent objectives which have been enunciated.

Adlai Stevenson's "grand strategy for peace" is not unassailable. Nor is it completely definitive. But it demonstrates what happens when a brilliant mind looks over the world scene and attempts to come up with a program that fits our needs in the 20th century.

[From the Sacramento (Calif.) Bee, June 8, 1960]

STATE'S DEMOCRATIC DELEGATION SHOULD VOTE FOR STEVENSON

Adlai Stevenson for President.

That should be the unanimous choice of the Gov. Edmund G. Brown headed California delegation to the Democratic National Convention which won handsomely at yesterday's presidential primary.

There is every reason why the 81 votes of the State's delegation should go to the former Governor of Illinois, not a single logical reason why they should not.

This is a time of crisis in the affairs of our Nation and of the entire world. The future of the country and the fate of the world will be the paramount issue in the 1960 presidential campaign. Leadership is the prime need of the hour.

To cope with this crisis, to meet the issue headon and to present it to the people in a forthright, truthful and convincing manner, one man in the Democratic Party stands head and shoulders above all seekers after the nomination.

That man is Adlai Stevenson.

Stevenson is a man of mature wisdom, of ability, of great intellectual capacity, of sound judgment and vision. He is a man who has firsthand knowledge of world conditions. And he is a man who has gained the respect and admiration of people throughout the civilized world.

He is a man of experience in the business world as well as in the field of government. He would be the answer to the need for an administration in Washington that would talk sense to the people and work diligently at the complex business of government.

And he would be the answer too for what he himself describes as the need for a "grand strategy for peace" to restore confidence in America's leadership and to take the initiative in the cold war.

Stevenson would make peace and disarmament the key goals of our foreign policy, for as he said last week "peace and general and complete disarmament under international control have become an imperative for all nations."

Stevenson is a profound thinker, a prolific originator of ideas and he has the courage and the ability to project his opinions to the Nation in a clear and forceful English.

In the 1956 presidential campaign, for instance, he fearlessly and eloquently advocated the suspension of nuclear bomb testings. For this he was violently denounced by the Republican opposition. He virtually was called a traitor.

Yet a few months later the Eisenhower administration adopted this very policy but conveniently neglected to give any credit to Stevenson.

Another compelling reason why the California delegation to the Democratic convention should vote for Stevenson is that he is a native son, having been born in Los Angeles, February 5, 1900.

And there is every reason to believe Stevenson would carry California in the general election as he most certainly would many other States.

In fact, Stevenson's nationwide popularity never has been higher even though he is not an announced candidate for the Democratic nomination. This is a tribute to his appeal to the rank and file voters who know Stevenson to be a man who understands that government in the United States is designed to serve the people, not to make them its lackeys. He has the human touch.

Vacillation is a noun that is not in Stevenson's vocabulary.

There is no fluctuation of mind or unsteadiness in the former Governor's makeup. He is a man of action, a straight from the shoulder puncher.

As he has demonstrated in his brilliant speeches and in his writings, Stevenson talks sense to the American people.

And as the nominee of the Democratic Party he would be a dynamic and courageous leader in what he has termed the "long and continuing struggle for peace and freedom which is the destiny of this generation of Americans."

[From the Charleston (W. Va.) Gazette, May 21, 1960]

NO MAN BETTER EQUIPPED TO LEAD U.S. THAN ADLAI

As a refreshing sort of gentleman-politician, Adlai Stevenson has refrained from thrusting himself upon the Democrats.

He feels, obviously, that it would be unseemly, as a double loser, to make a third bid for the Presidency by frontal assault upon the convention. He is hardly in a position to ask immodestly for its third endorsement.

Yet, as it is generally conceded even by Republicans, no Democrat could have won in 1952 or 1956 against the enormously popular Gen. Ike Eisenhower. It was unfortunate that a man of Stevenson's stature should have been chosen by fate to oppose a glamorous war leader.

These facts aren't entirely lost upon the Democrats. There are signs, here and there, that Stevenson's hard-core supporters are attracting large groups of sympathizers. Stevenson-for-President committees are springing up in first one State and then another.

While this is encouraging to the man in the street who believes only a Stevenson can properly represent him in today's tangled world negotiations, the rather amateurish Stevenson committees, substituting emotion in many cases for practical politics, had no great effect on the professionals.

That was changed Thursday night when Stevenson's Chicago speech made it clear that he'll not shy from the nomination if it is offered to him. This was one area in which the professionals had been left in doubt. Having made his position clear on that score, Stevenson went further to indicate that he has strong and definite conclusions on the proper management of American affairs, especially in connection with the Russian question.

Obviously disturbed by bungling attempts at diplomacy on the part of the Eisenhower administration, Stevenson was the old campaigner. Forcefully and effectively, he drew an indictment bound to impress Americans with his concern for them.

Having heard Stevenson, it is disturbing to contemplate the complete trust the Nation placed in the competence of a war hero. Teetering on first one brink, then another, the administration has dealt clumsily with crisis after crisis. Lacking Stevenson's background in government and untouched by Stevenson's understanding, the President has permitted himself to be guided by the profit-conscious businessmen who have advised him during two terms. These men simply aren't equipped to deal with the shrewd negotiators for Russia.

Stevenson is. During his visit here, Khrushchev himself appeared to be a trifle awed by the Stevenson intellect. We noted with interest that Khrushchev dominated all meetings except the one with Stevenson. On that occasion, Stevenson took polite and diplomatic charge.

Stevenson's Thursday speech indicated that, if asked, he is willing to take charge of American affairs as President. We can't think of a better equipped man for the job.

The Mexican Labor Program

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 16, 1960

Mr. CANFIELD. Mr. Speaker, I present to the House a letter that I received today from Labor Secretary James P. Mitchell regarding H.R. 12176, to extend the Mexican labor program:

U.S. DEPARTMENT OF LABOR,
Washington, June 15, 1960.

Hon. GORDON CANFIELD,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN CANFIELD: I am informed that a vote may soon come up on a bill to extend the Mexican labor program, commonly referred to as Public Law 78. The bill for this purpose is H.R. 12176. I understand also that some question may exist as to the position of the Department of Labor and of the administration with respect to this bill.

In order to dispel any possible uncertainty on this score, I am writing to make it clear that the administration and the Department of Labor are opposed to passage of H.R. 12176. After mature consideration, the administration has concluded that improvements in the Mexican labor program are necessary, and that legislation should be delayed until the administration's proposals for improvement can be made available. The highly controversial problems in this field may be made even more difficult by undue haste in consideration and decision.

Since the existing law does not expire until June 30, 1961, there will be ample time for consideration of the administration's recommendations in the next session of the Congress. Please let me know of any further assistance that I may be able to offer.

Sincerely yours,

JAMES P. MITCHELL,
Secretary of Labor.

Private Affluence and Public Poverty

EXTENSION OF REMARKS
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 16, 1960

Mr. DOOLEY. Mr. Speaker, Mr. William White, one of the leading citizens of my constitutency, has shown a very penetrating interest in the affairs of our Government. He is concerned, and properly so, over the manner in which the government is directing funds to certain segments of the populace which I might call pressure groups.

I enclose an article which Mr. White feels—and I agree with him—is very trenchant and worthwhile in the light of our present fiscal position and the future well-being of the country.

The article follows:

[From First National City Bank Monthly Letter, New York, June 1960]

PRIVATE AFFLUENCE AND PUBLIC POVERTY

In recent years it has become fashionable to say that the United States presents a shocking contrast between private wealth and public poverty. Private citizens are pictured as so affluent that they really don't need all the money they have. On the other hand, it is argued that Government is "poverty-stricken" and urgently needs more money. Prof. John Kenneth Galbraith's presentation of these views in "The Affluent Society" made the best-seller lists and became a provocative topic for conversation. Now the issue has been taken to Washington.

A recent New York Times dispatch by Edwin L. Dale reported that: "More and more people in the Capital are convinced that the most important continuing issue of American policy and politics over the next decade will be the issue of public spending—what share of America's total resources should be devoted to public as distinct from private purposes." Mr. Dale summed up the view on "private affluence and public poverty" as follows:

"Our society has reached a level of private wealth never before seen on this earth.

"Yet at the same time there is poverty in the public sector of the economy. Education is underfinanced. Streams are polluted. There remains a shortage of hospital beds. Slums proliferate, and there is a gap in middle-income housing. We could use more and better parks, streets, detention facilities, water supply. The very quality of American life is suffering from these lacks—much more than from any lack of purely private goods and services. The share of Government in the total economy has been stable or even declining, while private affluence grows."

This is quite an indictment of the free society that has given the masses of the American people wealth and living standards admired the world over.

ANTI-GOVERNMENT FIXATION?

Senator JOSEPH CLARK, of Pennsylvania, addressing a distinguished group of citizens at Arden House last month, expressed the fear that an anti-Government fixation in America might lead to a new anarchy. This is a rather shocking thought. Most people have had the impression that Government was taking on a bigger and bigger role in their lives, digging more deeply into their pockets for taxes, spending so much as to inflate prices, and offering more and more Federal funds for free about the countryside.

The idea that the role of Government should be limited is the central underpinning of American democracy; it grew out of the rebellion in 1775 against kingly power and led to the writing of a Constitution of limited powers designed to protect the freedom and sovereignty of the citizens. This was, perhaps, the old anarchy, under which, fired by individual enterprise in a land of opportunity, a group of agricultural colonies clustered along the eastern seaboard expanded into the most prosperous Nation on earth.

Senator CLARK's fears seem rather farfetched. The trend of events has been in the other direction, toward assumption by Government of more and more responsibilities. If there is anything that could be called anti-Government fixation today it is only a small voice in the wilderness protesting against burgeoning Federal bureaucracy and the tax confiscation of the greater part of the fruits of enterprise. In April 1957 we presented a calculation that if total Government civilian employment continued to expand at the same rate as in the preceding 25 years we would all be working for Government by the year 2069.

It is hard to see evidences of the alleged shriveling of the share of Government in the total economy. Such evidences do not appear in statistics of Government employment, tax revenues collected, or funds disbursed. As the table shows, there has been no lack of spectacular increases in outlays for social welfare, highways, sanitation facilities, jails, and the rest.

If we are headed for a "new anarchy," symptoms might be expected to appear in refusals of people to pay what they might regard as unconscionable tax levies. It is true there has been talk that some $8 billion of income is not reported for tax purposes; nevertheless the fact remains that, with voluntary filing and reporting by tens of millions of individuals and hundreds of thousands of employers, the Federal Government is enjoying a bigger flow of cash income than any other government on earth, a cool $100 billion a year. If the Federal Government is indeed impoverished, the

cause must be profligacy of expenditures rather than stinginess of the citizen. The amazing thing is how so much money can be disposed of so fast.

	Mid-1920's	1940	Late 1950's
Government expenditures and gross national product (in billions of dollars unless otherwise noted):			
Federal cash expenditures	2.8	9.6	94.8
State and local government expenditures	7.7	10.3	48.8
Gross national product	97.6	95.6	463.8
Percent: Government expenditures to gross national product	10.8	20.8	31.0
Selected public expenditures (in millions of dollars):			
Social insurance benefits	----	1,215	15,975
Highway expenditures	1,819	2,177	8,702
Aid to other transportation	257	377	1,629
Public welfare and assistance	161	1,314	3,777
Police	290	386	1,769
Fire protection	203	235	873
Sanitation	312	207	1,505
Local parks and recreation	153	162	685
Jails and other correctional	68	105	573
Health	84	195	806
Hospitals	347	537	3,849
Education	2,243	2,827	16,836
Other measures (in millions unless otherwise noted):			
Number of personal income tax returns [1]	4.2	14.8	59.8
Government employment	2.8	4.2	8.1
Educational enrollment [2]	30.7	32.1	46.3
High school graduates, total number	(3)	25.7	51.6
College graduates, total number	(3)	3.9	8.1
Paved rural roads (miles)	.5	1.3	2.1
National park acreage	9.6	21.6	24.4
Visitors to national parks	2.1	16.8	65.5
Social security coverage as percent of paid employment	0	64.5	90.5
Public housing units (thousands)	0	60.9	444.7

[1] Includes returns of estates and trusts which numbered less than one percent of individual returns in 1940 and 1957.
[2] Includes public and private schools from elementary to university level.
[3] Not available.

Sources: Figures are taken from U.S. Census Bureau's Surveys of Governmental Finances in the United States; U.S. Department of Health, Education, and Welfare's Health, Education, and Welfare Trends; and other official publications.

NO STINGINESS HERE

How generous the citizen has been with government, compared with what he has kept for himself, is shown in the chart. [Not printed in RECORD]. There has been a 20 times multiplication of the Federal Government's cash intake in the past generation. Personal disposable income—the money people have left after income taxes to support themselves and pay other taxes—is not much more than four times the level of 1927. The rise for corporate profits (after taxes) would parallel the retarded gain for personal disposable income.

One excuse given for enlarging programs of financial assistance from the Federal Government to States and municipalities is that people cannot or will not provide the latter with enough money. No doubt the weight of Federal income taxation leads many people to vote against costly State and local government projects involving still more taxes; nevertheless, State and local government income has risen to more than five times the level of 1927.

THE SANTA CLAUS SCHOOL

It is difficult to see in any figures such as these support for the idea that government is poverty stricken. Nevertheless, it is a fact of record that the Federal Government has had a lot of trouble keeping its budget balanced. The reason emerges when one looks around at the bewildering variety of spending programs. Washington is the natural destination of people and local communities wanting money, as it has been since the advent of what the late Jesse Jones, former RFC Chairman, characterized as the "free-spending, Santa Claus school of Government reformers." Meanwhile, the purposes for which funds are sought have come a long way from the emergency relief programs of the 1930's. Encouraged by Federal help and example, the States open their purse strings. Only a few months ago, a New York State Supreme Court decision held that public housing projects open to individuals and families with annual incomes of as much as $6,200 to $14,000 were legally entitled to be built under New York State's low-income housing program.

It might be asked on what principle government should subsidize normal living expenses for people with incomes double the national average. Who but themselves will pay the bill—with freight charges to and from Washington tacked on. A good deal of manpower gets wasted, collecting taxes and doling out benefits in the paradoxically poverty-stricken affluent society.

The truth seems to be that we are caught in a vicious circle in which people's abilities to take care of their own needs are hampered by the burden of taxes. Paying so much in taxes, the citizen is tempted to think it only right to get something back. Hence the needs government sees for more and bigger subsidy programs which in turn require to be financed by still higher taxes or inflation. And inflation, hitting the weak and helpless hardest, creates still more needs.

MATTER OF TAIL FINS

The preachers of the affluent society doctrine are fond of using tail fins on automobiles as the ultimate symbol of unnecessary private extravagance. They are not so apt to mention the wheat bins holding surplus grain for which taxpayers have put up more than $3 billion and which, converted into bread, would provide 450 loaves for every man, woman, and child in this country. They say nothing about misconceived public works projects and the common abuses of social welfare programs. On May 16, Budget Director Maurice H. Stans found it necessary to revise Federal travel regulations to encourage more flying by coach or tourist class instead of first class by Government employees:

"These revisions are issued to call attention to the fact that the use of first-class air travel by Government employees far exceeds in proportion its use by the general public, and to urge greater consideration of less costly facilities."

Tail fins on automobiles are supposed to prove that people are foolish in their spending decisions and cannot be trusted with their own money. There are two schools of thought about tail fins but it is quite clear that millions of people have preferred them; otherwise the finned vehicle would not be so common. Perhaps the surrey with the fringe on top was similarly condemned in the Gay Nineties, as a symbol of "conspicuous consumption."

Yet it is one of the proud distinguishing marks of a classless democratic society that any citizen with enough money or credit can have a car, suit, dress, or home with some seemingly useless ornamentation; he does not have to be somebody in an official sense. People work hard so that they can enjoy these things and be individuals rather than the drones of a master state.

The New York World-Telegram & Sun, on May 23, commented editorially on the subject:

"There is much scornful talk of "luxury living," the implication being that people are so stupid they throw their money away on gadgets instead of essentials. Actually, this national growth has been widely spread. The significant effect has been to raise millions in America from a level of bare subsistence to modest comfort that remains far short of luxury.

"Older citizens can remember when the "full dinner pail" was an effective political slogan, meaning the worker should have enough to eat. Today's trade unionist is no "simple working man" to be patronized with a few beers at election time. He's a substantial citizen who probably owns his own home, auto and TV set, with children in college.

"It seems obvious to us that it would be the height of national irresponsibility to trade a system which has worked so well for a Socialist-inspired experiment, especially at a time when the early European sponsors of socialism are abandoning it for free enterprise."

The author of "The Affluent Society" has been characterized as an iconoclast although nothing has become more common and conventional than asking government to take over more powers and responsibilities from the citizen. It is notable that another member of this school of thought, Mr. Adlai Stevenson, does pause to recognize that:

"Without individual decision and inventiveness, without widely dispersed centers of authority and responsibility, the social order grows rigid and centralized. Spontaneity withers before the killing frost of public conformity. Individual citizens with all their varied relationships, as parents, neighbors, churchgoers, workers, businessmen, are reduced to the single loyalties of party and state."

THE SCHOOL PROBLEM

Perhaps the most widely used illustration of alleged public poverty is our school system. We are told that while the American people drive around in mauve and cerise, air-conditioned, power-steered, and power-braked automobiles, their children's schools are old and overcrowded. The charge is that the States and local communities, which in the United States are responsible for education, just haven't been doing their job. What is needed, the critics say, is Federal money for education, with some proposals running to $4 billion a year. As a speaker at the convention of the American Association of School Administrators put it: "The Federal Government, that's where the money is. And that's where the money must come from."

No country comes close to rivaling American spending on education. Total public and private expenditures for education in the United States reached $22 billion in 1959, almost triple their level 10 years earlier.

To say that the Nation's schools are old and overcrowed collides with the fact that the States and local communities have built 680,000 classrooms since World War II, more than half the 1,330,000 now in use. The classroom shortage, supposed to justify Federal intervention, has been shrinking steadily. Back in 1955 predictions were heard that we would be 600,000 classrooms short by 1958. When 1958 arrived, the U.S. Office of Education estimated the shortage at 141,900. Although the peak demands for high school and college facilities lie ahead, we have passed over the hump of elementary school enrollments. The job of building to make up for the deferral of school construction during the war, and the bulge in births immediately after the war, is largely past.

Some educators suggest that the trouble with U.S. education is excess emphasis on money and too little emphasis on what we are getting for the money; excess emphasis on elaborate new plant and to many idle hours for existing plant; excess emphasis on quantity of education and too little on quality. Schools which slight subjects with intellectual content in favor of "life adjust-

ment" type courses are not going to be improved by more money. The problem is one of purpose, as Dr. Grayson Kirk, president of Columbia University, indicated in January: "Our public schools and far too many of our colleges have virtually abdicated their functions in society because they are content to give their students little more than an opportunity to have pleasurable social experiences." Prof. Richard M. Weaver, of the University of Chicago, has put the same point even more strongly:

"Education here today suffers from an unprecedented amount of aimlessness and confusion. This is not to suggest that education in the United States, as compared with other countries, fails to command attention and support. In our laws we have endorsed it without qualification, and our provision for it, despite some claims to the contrary, has been on a lavish scale. But we behold a situation in which, as the educational plants become larger and more finely appointed, what goes on in them becomes more diluted, less serious, less effective in training mind and character; and correspondingly what comes out of them becomes less equipped for the rigorous tasks of carrying forward an advanced civilization."

SOME FUNDAMENTAL ISSUES

One trouble with the idea of turning our affairs over to the dictates of wise men sitting in Government offices is that it clashes with the traditional beliefs of our people. The right to be different, the right to live according to our own lights is rooted too deeply in the American soil to be passively given up. The citizen has no reason to believe that public officials are exempt from human frailties. As Mr. Stans, speaking before the U.S. Chamber of Commerce, said last month: "We must not be charmed by the notion that Government is a wiser manager of our economic fortunes than is private enterprise."

It is hard to see how political freedom can survive if economic freedom is denied. When people spend their money they are casting ballots for what ought to be produced. They all make mistakes, as Government does in its procurement, but they may be a bit more careful because, after all, the money they are spending is their own. Moreover, the mistakes of individuals are small mistakes, never the billion-dollar variety.

Tens of thousands in graduating classes this month, going out into the world, inevitably will make mistakes and profit thereby. This is an essential part of education, building wise and responsible citizens. As we all should know, the best remembered lessons are those learned in the school of experience.

Life would get very dull if we had to conform to some fixed pattern and deny ourselves the precious possessions that distinguish life in the free society. Surely, effort would wane and with it the means for supporting the vast Government Establishment.

There are beyond doubt some Government programs suffering from lack of sufficient funds. If this is so, it is hardly because the people are too rich, or inadequately taxed, but because Government is trying to do more things than it can handle with real competence. The real point at issue is how much further—if at all—we can safely go toward discouraging individual initiative, self-reliance, and industrious habits. The barrage of complaints over inadequate economic growth would seem to suggest that we need to concern ourselves more, rather than less, with the human aspirations that make the economy go.

A Sensible Public Policy for the Employment of Older Workers

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 9, 1960

Mr. DONOHUE. Mr. Speaker, there is still time and I most earnestly hope we will be granted the opportunity to act before adjournment on one of the many bills, including my own, H.R. 12106, which have been introduced and are designed to eliminate discriminatory employment practices on account of age by contractors and subcontractors in the performance of contracts with the United States and the District of Columbia.

I would like to extend my own appreciation to the Fraternal Order of Eagles, who have certainly earned the gratitude of the Nation, for their original and persevering projection of the basic purpose of this proposed legislation, which is to set forth a public policy, in one vital area of the country's economy with respect to discrimination in employment because of age, where the reasonable demands of such employment do not require this age distinction.

A brief summary of the facts and the statistics involved distinctly reveals the national importance of the problem.

According to the Department of Labor our population, by 1970, will total 220 million. They estimate that during this time the number of people now between 25 and 44, totaling 46 million, will increase only to about 48.2 million. Their further estimate is that in this same period, the total number of people over 45, now 50.2 million, will increase to approximately 61.8 million.

The problem becomes quite obvious when we realize that while the national economy must be kept expanding to meet the needs of our increasing population, the preferred working group, between 25 and 44, will become relatively scarcer. Although the present and growing need, in such an economy, for the services of the older workers is self-evident, it is equally apparent they are not getting their fair share of employment opportunities.

The reluctance or refusal of employers to engage older workers is a national handicap. The report by the U.S. Department of Labor, conducted in 1956, disclosed that 58 percent of job openings had some upper age restriction; 52 percent barred workers 55 and over; 41 percent barred those 45 and over; and 20 percent barred those 35 and over.

The practical commonsense and the economic wisdom of this employer attitude is certainly open to question when we examine the figures developed from studies made by the Department of Labor in the matter.

For example, they found, in 1951, that of 3,000 employers interviewed 93 percent rated the work performance of older employees as equal to or superior to younger workers. They further found that older workers have a 20 percent better attendance record than younger employees; that employees 45 and over had 2.5 percent fewer disabling injuries, and 25 percent fewer nondisabling injuries than the younger workers; that voluntary turnover rates are less among older employees; that the older worker is very likely to possess more skills, training, and all-around knowledge than younger people. Even further than that, a recognized group of experts reported that under pension and insurance plans most prevalent today, there is no significant increase in costs for new employment of older workers.

In summary, with admission of certain exceptions, study and experience has demonstrated the economic wisdom of hiring older workers, not to mention the great contribution that would thus be given to the national welfare and the personal health and happiness of the individuals concerned.

There is then, Mr. Speaker, the obvious need for the establishment, now, of this public policy, and approval of this legislation ought not to be further delayed.

All of the measures proposed are in full accord with our basic American tradition; they are all economically feasible, and they are all in the best national interest. The impact of this proposed legislation is entirely reasonable and includes provision for formal hearings, judicial appeal, and the exercise of Presidential discretion.

In patriotic consideration of the national welfare and in Christian concern for our older workers, I sincerely hope that this proposed legislation will soon be placed before the Congress for action.

Postponement of President's Visit to Japan

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, June 16, 1960

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a telegram I have received from the executive secretary of the American Committee on Japan, in regard to the postponement of the President's scheduled visit to Japan.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

WASHINGTON, D.C., *June 16, 1960.*
Senator ALEXANDER WILEY
U.S. Senator from Wisconsin, U.S. Senate, Washington, D.C.:

While deploring reasons that forced Kishi government to request President postpone scheduled visit to Japan, we believe such action necessary and proper under circumstances to protect President and preserve

Japanese-American relations. At same time, we continue in our conviction overwhelming majority of Japanese people favor continued close relations with United States and ratification of treaty mutual cooperation and security. Most Japanese, we feel, will be ashamed of what their government had to do regarding presidential visit after 15 years of American help and friendship. We anticipate revulsion and reaction by most Japanese against Communist-inspired violence. Therefore, we urge Senate ratify treaty overwhelmingly this afternoon to demonstrate that neither Congress, nor Government, or people of United States will be intimidated by mobs and demonstrations directed by Red China and Soviet masterminds, that we support representative government and constituted authority, that regardless of what the Japanese may now do we will at least live up to our solemn commitment and ratify bilateral agreement for mutual benefit both nations to replace current unilateral arrangement promulgated prior effective date of peace treaty. To do less would add to victory of anti-American elements in Japan, increase prestige of Sino-Soviet agitators, and further embarrass our friends in Japan who believe in future of democracy and representative government.

AMERICAN COMMITTEE ON JAPAN,
MIKE MASAOKA, *Executive Secretary.*

The Strongest Tickets

EXTENSION OF REMARKS
OF
HON. JOHN A. CARROLL
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Thursday, June 16, 1960

Mr. CARROLL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Strongest Tickets" from the magazine, the Nation.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Nation, Apr. 23, 1960]

THE STRONGEST TICKETS

All the palaver about polls and primaries is diverting public attention from a point of cardinal importance in the preconvention phase of this year's election. The point is this: The national interest would best be served if both parties were to nominate the strongest ticket each can name. To the extent that either party fails to do so, for whatever reason, the greater will be the likelihood that the campaign will be fought on minor, divisive, or extraneous issues. Fortunately, it is within the power of both parties to name tickets that would be so evenly matched that the nominees could do nothing but stand there, toe-to-toe, and fight it out—squarely, fiercely, directly—on the main issues.

These ideal tickets are easy to name. Everyone agrees that NIXON and Rockefeller, in either order, would be the strongest ticket the Republicans could field. It is almost as widely conceded—by everyone, that is, except the candidates—that the strongest Democratic ticket would be Stevenson and KENNEDY in that order. Rockefeller and KENNEDY are, so to speak, political twins: rich, attractive, knowledgeable, charismatic; both are excellent campaigners and fine public servants. For the Vice Presidency, Senator KENNEDY would be an ideal nominee; that he would not be the Democrats' strongest Presidential nominee is most convincingly attested, perhaps, by the consistent, highly suspicious efforts of Vice President NIXON to give him a leg-up for the nomination. In 1952 and 1956, Stevenson faced insurmountable difficulties not merely in the fact that his opponent was General Eisenhower, but also in the temper of the times and the unavoidable inheritance of the Truman-Acheson cold-war policies and their consequences. But in 1960, and against NIXON, all of Stevenson's finest qualities would shine to advantage; his special strength, for example, is with independent voters, few of whom admire the Vice President.

In the key States—California, Pennsylvania, Illinois, New York—Stevenson and Kennedy versus Nixon and Rockefeller would be a battle royal between evenly matched antagonists. Apart from individual ambitions and petty vested interests, all that delays widespread recognition of the strength of these tickets is the popular assumption that neither KENNEDY nor Rockefeller could ever be induced to accept nomination for the Vice Presidency. But there is really little basis for this assumption. Both are honorable men, devoted to the public interest, with a keen sense of their political and personal responsibilities. The Vice Presidency, after all, is the second highest elective honor within the power of the American people to bestow; it is not to be declined lightly or out of personal preference or pique—particularly by men who can well afford to serve the public interest. Let both parties name their strongest tickets and this year's campaign could turn out to be a dramatic and meaningful debate on the major issues.

Next in Line

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 1, 1960

Mr. IRWIN. Mr. Speaker, pursuant to permission previously granted, I include an editorial from this morning's edition of the Washington Post. This commentary is particularly interesting in view of the recent action by the Inter-American Peace Committee with regard to the Dominican Republic. When regarded against the background of tension attributable to activities of the Castro government, this account of Castro's latest executions should leave little doubt about which nation is next in line for scrutiny by the peace committee.

The editorial follows:

FULL CIRCLE

The drumhead trial and execution of three rebels in Cuba signify that the island is only a half step from rule by terror. Capt. Manuel Beaton and his two companions were not Batista war criminals. Instead, they were the first of Fidel Castro's original supporters to be put to death for supposedly counterrevolutionary activities. The trial was a mockery of justice; the five-man military court took only 17 minutes to find Beaton and his comrades guilty of treason. And all this took place only 4 days after Beaton was captured in the Sierra Maestra, where his insurgent group had been hiding out.

It is instructive to compare the treatment of Beaton with that given Castro himself in 1953 by the "monster," Fulgencio Batisto. On July 26 of that year, Castro led an armed attack on the Moncada barracks in Santiago de Cuba. Caught, imprisoned, and subsequently tried, Castro received an opportunity to defend himself—a right wholly denied Beaton. The Havana Bar Association offered legal assistance, and in court Castro was able to speak for hours and make his case before the Cuban people.

Even so, Castro was outraged by the procedure. "Never, against an accused, has there been committed so many overwhelming irregularities," Castro charged. Though he urged revolutionary opposition to Batista, Castro was sentenced to 15 years in prison and subsequently released in a general amnesty.

One wonders what the old Fidel Castro would have said about the kangaroo court that doomed Manuel Beaton. In 1953, Castro justified his armed onslaught because the government then was unconstitutional. "We have promoted rebellion against a single illegitimate power that has usurped and united into one man the legislative and executive powers of the nation," he cried.

No doubt this is precisely the case that would now be made against Castro—if his victims had any opportunity to speak in their own defense.

Adlai E. Stevenson Would Serve

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Thursday, June 16, 1960

Mr. MONRONEY. Mr. President, following the endorsement of Adlai Stevenson for the Democratic nomination by Mrs. Roosevelt on Friday, June 10, 1960, Governor Stevenson issued a statement concerning his willingness to run once again for the highest office in our land.

I should like to quote from Mr. Stevenson's statement as follows:

I think I have made it clear in my public life that I will serve my country and my party when called upon.

The complete text of Governor Stevenson's statement was printed in Mrs. Roosevelt's column of Monday, June 13, 1960, and I ask unanimous consent that Mrs. Roosevelt's column of that date be printed in the Appendix of the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

STEVENSON EXPLAINS AVAILABILITY—MRS. ROOSEVELT RELEASES ANSWER TO QUERY

(By Eleanor Roosevelt)

On Friday of last week I telephoned Mr. Stevenson because of a misunderstanding which seemed to exist, both on the part of Professor Schlesinger and Professor Commager and of Chairman Butler of the National Democratic Committee as to whether he would be a candidate or not, and I asked him to clarify his position for me. I quote his statement:

"I am deeply affected by what you have said of me but I do confess that your request that I clarify my position presents some difficulty. I realize that under present circumstances even a restatement of what has been said before may be given unintended and unwarranted interpretation.

"I have, as you know, taken no part in presidential politics for the past 3 years. And I do not now intend to try to influence

the nomination in any way by endorsing anyone, or trying to stop anyone, or seeking it myself.

"I have not made and will not make any deals with anyone.

"I am not, as you recognize in your statement, a declared candidate. This leaves only the question, again in your terms, of shirking public responsibility.

"I have declined repeatedly to comment on questions about a draft. I think I have made it clear in my public life, however, that I will serve my country and my party whenever called upon.

"I believe the Democratic Convention will select a man fully competent to lead the country in these dangerous times; I expect to support its decision with all my heart and energy."

From this statement, I think you will find it clear that Mr. Stevenson is a candidate, since there is a sizable number of people who are asking him to accept the responsibility of being the candidate for the Democratic Party in the next convention.

After all, in 1952 he was not a candidate either, but he did not refuse when the convention and President Truman asked him to run as a candidate. To many of us this seemed an impossible situation, for we knew that a war hero, particularly one who told the women of the country that he would bring the war in Korea to an end, was going to be elected by the vote of the women and the young people in the country. The glamour of the war hero plus the feeling that many women have had that President Eisenhower, because he was a general, would somehow keep us out of war more easily than a civilian would, gave them a greater sense of security. I think Eisenhower won the 1956 election because of this feeling before the votes were even cast.

Now we have an entirely different situation, and I think there is a ground swell in the country. People feel the need of maturity and have confidence in Adlai Stevenson, and are asking him to run again. I will have to confess that I personally would not ask him to run because I think being defeated twice and now running in all probability against a man who will make the campaign as disagreeable as possible, is something no one can ask a person to do. But Mr. Stevenson has answered my query for clarification of his position in exactly the way I thought he would, and stress again his words: "I think I have made it clear in my public life, however, that I would serve my country and my party whenever called upon."

Mr. MONRONEY. Mr. President, within hours after Mrs. Roosevelt's column appeared in the Nation's newspapers stating that "Mr. Stevenson is a candidate," Governor Stevenson issued another statement in which he said that he said that he was not a candidate.

This exchange between Mrs. Roosevelt and Governor Stevenson caused a great deal of speculation in the country. Many people felt that perhaps the Governor had withdrawn himself from the possibility of accepting a draft at the Democratic National Convention. Such an assumption is simply not the case.

There is no question that, while he is not an active candidate traveling around the country seeking delegate votes, Governor Stevenson if called upon by the convention would nonetheless accept the Democratic nomination.

On Tuesday, June 14, 1960, the Washington Post carried an editorial entitled "Barkis Is Willin' " which clarified this situation. I ask unanimous consent that it also be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Post, June 14, 1960]

BARKIS IS WILLIN'

The little controversy between Adlai Stevenson and Mrs. Roosevelt over whether or not he is a candidate for the Presidency is more amusing than confusing. It all depends, of course, on what is meant by the word "candidate." Webster says that a candidate is "one who offers himself, or is put forward by others, as a suitable person or an aspirant or contestant for an office." Mr. Stevenson is certainly not a formal candidate; he is not going about asking people to vote for him. But his name is being put forward by others who believe him well qualified for the Presidency, and he has not closed the door to these efforts on his behalf.

In his letter to Mrs. Roosevelt the other day, Mr. Stevenson left no doubt about his intention, regardless of how much controversy there may be over the meaning of the word "candidate." He wrote: "I will serve my country and my party whenever called upon." In other words, Mr. Stevenson, though not a declared candidate, is and always has been available if the Democratic convention in Los Angeles next month should want him.

Mr. MONRONEY. Mr. President, last Sunday one of America's most respected, alert newspapers, the St. Louis Post-Dispatch, announced its editorial endorsement of Adlai Stevenson for the Democratic nomination.

The editorial was entitled "The Democrats' Best Candidate."

I ask unanimous consent that this editorial be printed in the Appendix.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the St. Louis Post-Dispatch, June 12, 1960]

THE DEMOCRATS' BEST CANDIDATE

The consequences of the summit crisis have posed an imperative for both political parties. Now, more than ever, the national welfare demands the best from Republicans and Democrats alike. We welcome, therefore, Governor Rockefeller's challenge to Vice President NIXON, and hope it develops into a serious contest at the Republican convention. We believe the Democrats, who already have a healthy contest going, can choose their best candidate by nominating Adlai E. Stevenson.

Of all the Democratic candidates, in our opinion, Adlai Stevenson is the ablest and best fitted. He possesses the firmest grasp of a world situation that confronts our nation with the supreme challenge of its history. He has had successful executive experience as the Governor of an important State. He has undergone rigorous training in Democratic leadership by heading his party for 8 years and in two national campaigns. To buttress his valuable experience in the United Nations, he has traveled widely and studied at firsthand every part of the world. Beyond doubt he is the one Democratic candidate who commands the deepest confidence of our allies. He is mature, tested, responsible, intelligent, and creative.

Mr. Stevenson's superior qualifications are, in fact, generally conceded among Democrats. The principal argument against him is that, because he lost to President Eisenhower twice, he could not win against another opponent. This is a myth of expediency which has no basis in history or logic.

William Jennings Bryan ran for President three times—1896, 1900, and 1908—and was defeated three times. But the circumstances of his era cannot be compared with ours; and in any case one precedent does not establish a law of politics. It is now quite evident that no Democrat could have prevailed over the personal popularity of Dwight Eisenhower in 1952 and 1956. Authoritative studies, such as the recent one by Louis H. Bean which is being circulated by Senator MONRONEY, suggest that Mr. Stevenson lost, not because of any voter dissatisfaction with him, but because of the impressive stature of a military hero who seemed above politics.

Thus the argument of political expediency so often heard against Mr. Stevenson is unsound. But even if it were sound, the Democratic convention could not justify making this the criterion of its choice. The party faces a more solemn responsibility than merely trying to calculate the safest way to win an election.

A presidential campaign is a national educational experience. This year above all, both parties have a duty to nominate candidates who will face the issues and debate them. For the Nation, illuminating the issues could be more important than who wins. And it is the people, in the end, who alone decide which candidate can or cannot win. All the polls and all the soothsayers cannot take the ultimate choice away from the voter in the voting booth.

We do not take seriously Harry Truman's criticism of Mr. Stevenson as "indecisive." Mr. Stevenson has demonstrated ample capacity for decision, both as a successful Governor and as a presidential candidate who dared to grapple with great issues as few candidates do. We suspect that what Mr. Truman mistook for indecisiveness in 1952 was a healthy unwillingness by Mr. Stevenson to run as the President's captive candidate. Mr. Truman has never forgiven him that independence, but millions of voters respect him for it.

Much of Mr. Stevenson's popular strength today, in fact, arises from the striking resemblance between the present political situation and that of 1952. Now, as then, Mr. Stevenson refuses to campaign for the nomination. Now, as then, if it comes to him it will come with a minimum of political obligations. As a drafted nominee he would need to grant few of those concessions to the political managers which made his 1956 campaign in some ways a disappointment. Naturally the political managers do not like this. We suspect the voters do.

The Post-Dispatch believes that foreign policy should be the central issue of the campaign. After the fiasco at the summit, America faces the hard task of deciding how best to renew the search begun by President Eisenhower for disarmament and a peaceful accommodation with the Soviet Union. That the search must go on is beyond question; it is the inescapable alternative to an arms race which nobody can win. Where lies the path to a secure peace? The decision cannot be made by sloganeering, by appeals to emotion, by demogogy, by campaigning against Khrushchev. It requires of the candidates patient exploration of alternatives, steady clarity of mind, a capacity to probe beneath the surface for the controlling realities of international life.

Mr. Stevenson has demonstrated, at some political risk, his readiness to draw the issues sharply on foreign policy. While President Eisenhower was in Paris, Mr. Stevenson loyally supported him, but when the conference had ended he spoke his mind boldly. We think he was right in his criticism, but whether one agrees or disagrees it is highly important that those who differ from the administration should say so. To blur the issues, to envelop debate in a fog of misplaced calls for unity, to equivocate on problems which might determine the very future of mankind, would be a grave disservice to the American people.

In 1956, Mr. Stevenson was attacked for advocating a voluntary suspension of detectable H-bomb tests coupled with serious efforts to negotiate an internationally inspected ban on all tests. That is precisely the policy the Eisenhower administration is now following—but following in response to Soviet initiative rather than our own, as Mr. Stevenson advocated. This kind of farsighted and constructive contribution to foreign policy is needed this year as never before.

It is needed, of course, from Republicans as well as Democrats. This is why we welcomed Governor Rockefeller's statement last week, which we hope will be supplemented by further development of his foreign policy views. Though the political facts just now appear to work against an open contest for the Republican nomination, we believe the Nation would be well served by one. If a contest develops, we will express our opinion on it as we now express an opinion on the Democratic contest. As an independent newspaper, the Post-Dispatch is not committed to support either party's nominee in the fall.

Not until the candidates of both parties are known, not until they have drawn the main lines of their campaigns and all the implications of the choice are visible, will it be possible to state a preference for the November election. That choice must be made strictly on the basis of the alternatives and conditions confronting the Nation at the time. On the basis of the alternatives and conditions today, our choice for the Democratic nomination is Adlai E. Stevenson.

Smear Against Congressman Flynt Exploded

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 16, 1960

Mr. DAVIS of Georgia. Mr. Speaker, Congressman JOHN J. FLYNT, JR., who ably represents Georgia's Fourth Congressional District, is recognized throughout Georgia as a man of character, integrity, and ability. Before he came to Congress, the people of his judicial circuit expressed their confidence in him by electing him solicitor general of the circuit, a position which he filled with honor and credit. His fellow members of the bar elected him president of the Georgia Bar Association, which position he likewise filled with honor and credit.

In his service in Congress he has continued to merit the confidence of the people. An editorial in the June 8 issue of the Metropolitan Herald, published in Atlanta, is indicative of the high regard the people of Georgia have for Congressman FLYNT, and I have asked unanimous consent that it be included in these remarks. The editorial follows:

SMEAR AGAINST CONGRESSMAN FLYNT EXPLODED

The efforts of liberal reporters, cartoonists and a slick magazine to smear Georgia's conservative Congressman JACK FLYNT on charges of using public funds for his own entertainment on a congressional investigation trip have blown up in their face.

Those of us in Georgia who know and respect Congressman FLYNT knew that the charges were false. FLYNT is a man of character, ability and honesty. He is a conservative who believes in economy in government and votes that way. He certainly would not be guilty of using Federal funds for his own enjoyment.

Taking to the floor of the House, after publication of the charges, Congressman FLYNT produced canceled checks and receipts to show that he personally paid for his own entertainment. He won a standing and prolonged ovation from the entire House membership at the close of his speech.

Georgia is fortunate to have in its outstanding congressional delegation JACK FLYNT, representing the Fourth District. For the good of the State and the Nation we hope that the good citizens of the Fourth District keep Mr. FLYNT in the Congress for many years to come.

Sylvester V. McMahon

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 16, 1960

Mr. FEIGHAN. Mr. Speaker, today one of Cleveland's most distinguished and esteemed citizens marks his 87th birthday.

Sylvester V. McMahon was born on June 16, 1873, in Cleveland, Ohio. He was admitted to the Ohio bar in 1899 and actively practiced law with honor and distinction for 52 years in Cleveland. As a young man he served as chief police prosecutor for the city of Cleveland. He was active in Democratic politics and a disciple of the late Tom L. Johnson, one of the greatest mayors Cleveland ever had. Johnson, though a man of wealth, dedicated most of his life to fighting for social justice and standing for the rights of the common people against entrenched power. His statue stands today in the Public Square of Cleveland.

While still a young man, Sylvester V. McMahon was elected county prosecutor for Cuyahoga County. He was the first Democrat elected to that office from the time of the Civil War. He was former president of the Cleveland Bar Association and an outstanding trial lawyer. In his early years he excelled in the trial of criminal cases. He tried many murder cases and never lost a man to the chair. Later he was a leading member of the bar in the trial of personal injury cases.

Sylvester V. McMahon, seeking few public offices himself, has nevertheless been active in politics all of his life. He has always been interested in honest and efficient government and social justice. He has actively supported those candidates whom he believed would make honest, conscientious, public servants. His standards for public office are high and exacting. He has always believed that public office is a sacred public trust.

Sylvester V. McMahon is honored in Cleveland on his 87th birthday. I offer his name to the Nation as one who is worthy of our attention and our esteem.

President's Address Before the Philippine Congress

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 13, 1960

Mr. DERWINSKI. Mr. Speaker, yesterday, in Manila, President Eisenhower delivered a historic statement, the results of which caused great impact throughout those portions of the world that were free to hear it. I take this opportunity to call the particular attention of the House to certain portions of this address relative to the constructive force of honest and rightful nationalism, as it relates to our current international conditions. Living as we and our allies do in lands of freedom, we often fail to recognize the real loss suffered by peoples behind the Iron Curtain in the rightly labeled "captive nations."

To point out this issue, may I, first, quote from the President's address before the Philippine Congress as it appeared in the press today:

This spirit was described by your great leader and my personal friend, Manual Quezon, when he with great eloquence said:

"Rightly conceived, felt, and practiced, nationalism is a tremendous force for good. It strengthens and solidifies a nation. It preserves the best traditions of the past and adds zest to the ambition of enlarging the inheritance of the people. It is, therefore, a dynamic urge for continuous self-improvement. In time, it enriches the sum total of mankind's cultural, moral, and material possessions through the individual and characteristic contribution of each people."

A NOTE OF CAUTION

Significantly, President Quezon had this caution to offer: "So long as the nationalist sentiment is not fostered to the point where a people forgets that it forms a part of the human family, that the good of mankind should be the ultimate aim of each and every nation, and that conflicting national interests are only temporary, and that there is always a just formula for adjusting them—nationalism is a noble, elevating, and most beneficial sentiment."

In these words of clarity and timeless wisdom, President Quezon spoke a message forever applicable to human affairs, particularly to the circumstances of this era.

In addition to the immediate impact, the following words in the President's message as reported by the press will have particular significance during Captive Nations Week, July 12 to 23 of this year, when we reaffirm in behalf of the peoples presently oppressed behind the Soviet Iron Curtain the cherished hope that true freedom will once again be theirs:

Nationalism is a mighty and relentless force. No conspiracy of power, no compulsion of arms can stifle it forever. The constructive nationalism defined by President Quezon is a noble, persistent, fiery inspiration, essential to the development of a young nation. Within its ideal my own country since its earliest days has striven to achieve the American dream and destiny. We respect this quality in our sister nation.

Communist leaders fear constructive nationalism as a mortal foe. This fear is evident in the continuing efforts of the Com-

munist conspiracy to penetrate nationalist movements, to pervert them, and to pirate them for their own evil objectives.

To dominate—if they can—the eternal impulse of national patriotism, they use force and threats of force, subversion and bribery, propaganda and spurious promises. They deny the dignity of men and have subjected many millions to the execution of master plans dictated in faraway places.

Communism demands subservience to a single ideology, to a straitjacket of ideas and approaches and methods. Freedom of individuals or nations to them is intolerable.

Mr. Speaker, in studying recent history, it is well for us to note that in the last 8 years the Soviet monster has been prevented by our effective foreign policy from seizing control of any free nation whereas in the preceding 8 years, 1944–52, the following nations and their brave peoples lost their freedom: Lithuania, Latvia, Estonia, Poland, Czechoslovakia, Roumania, Hungary, and Bulgaria.

We must keep them in mind at all times especially, as I indicated above, in our commemorative occasions in Captive Nations Week. While we have arrested the spread of communism, and have rededicated ourselves to rolling back the Iron Curtain, the nations of the free world have been granting freedom to lands once subject to their control. President Eisenhower, in addressing the Philippine Congress aptly described this as follows:

Since 1945, 33 lands that were once subject to Western control have peaceably achieved self-determination. These 33 countries have a population of almost a billion people. During the same period, 12 countries in the Sino-Soviet sphere have been forcibly deprived of their independence. The question might be asked: Who are today the colonialists?

Certainly, though we may disagree in detail, we are all united in the fundamental principle that the torch of freedom must be carried to the remotest corners of the earth. In these days of increased international tension, the people of the United States are giving their wholehearted support to a Chief Executive who is effectively dedicating himself to true world peace, and who, by his actions and affirmative pronouncements, has carried to millions of people in the nations he recently has visited the true story of the love of freedom and the heart of humanity that is so symbolic of our national foreign policy.

Granting Representation in the Electoral College to the District of Columbia

SPEECH

OF

HON. PETER F. MACK, JR.

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1960

The House in Committee of the Whole House on the State of the Union had under consideration of the joint resolution (H.J. Res. 757) proposing an amendment to the Constitution of the United States granting representation in the electoral college to the District of Columbia.

Mr. MACK. Mr. Chairman, I strongly support House Joint Resolution 757 which proposes and amendment to the Constitution of the United States to provide voting rights for the residents of the District of Columbia by granting representation in the electoral college.

Mr. Chairman, the framers of the Constitution did a magnificent job in providing guidelines and protecting individual rights of the citizens of this great Republic. It is a true charter for freemen living with one another in peace and harmony. No other Constitution has stood such rigid tests or served as well so many men. This Constitution has served this Nation throughout its history with few major amendments. It has been used as a model by our many States and many independent countries. Therefore, I have no criticism to offer about the work of our Founding Fathers in the drafting of this important document. It is possible that the failure to provide a vote for the residents of the District of Columbia was an oversight but it is also possible that the Founding Fathers assumed that anyone working in the Federal city would have permanent residence in some other State. Regardless of the reason for this omission it is time that we take affirmative action in granting the right to vote to the residents of the District of Columbia.

Mr. Chairman, I strongly support the proposed constitutional amendment and hope that favorable action will be taken before this Congress adjourns.

Salary Increases for Postal and Other Federal Employees

SPEECH

OF

HON. KATHRYN E. GRANAHAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill H.R. 9883, to adjust the rates of basic compensation of certain officers and employees of the Federal Government, and for other purposes.

Mrs. GRANAHAN. Mr. Chairman, I strongly support and urge favorable action on H.R. 9883, a bill to reaffirm the historic policy of Congress that employees of the Government of the United States shall receive fair compensation for the great public service they perform.

To state the objective differently, the bill recognizes that the high quality of service which is required for the conduct of the Government's business warrants recognition, in terms of salaries and wage rates, at least equal to that which is given to comparable services in private enterprise which is protected and supported by the Government.

As originally reported by the Committee on Post Office and Civil Service, this bill would provide fair and reasonable compensation comparable to that enjoyed by employees in private industry by giving a 9-percent across-the-board pay increase to those categories of Federal employees consistently included in salary legislation. As now amended, it provides a somewhat lesser raise of 7½ percent, which is certainly not excessive in any event and represents a sincere effort to make sure that this legislation does not end in a stalemate between Congress and the Executive. If this bill is vetoed and the veto is not overridden, then it will be obvious to all that no compromise could possibly have been effected, since those of us concerned with this legislation have more than leaned over backward to try to pass a bill which can become law.

The evidence presented during the hearings on H.R. 9883 establishes beyond a doubt that a pay increase is warranted. During its consideration of the various pay bills, the committee was faced with the difficult problem of deciding what rate of increase should be proposed. It is my conviction that this decision should be based on a determination of the amount required to provide Federal employees with pay comparable to that in private enterprise. This view recognizes that all that postal and other Federal employees have ever asked of their Government is fair and timely salary provisions.

My motion in committee to amend H.R. 9883 to provide for a 9-percent across-the-board increase was approved by the committee on a conclusion that this amount of increase would achieve reasonable comparability.

The proposed pay increases would apply to slightly more than 1½ million employees of the Federal Government. The 9-percent raise would have meant an estimated cost of approximately $846 million. The lesser raise will cost about $680 million. It must be recognized that these 1½ million employees are the people responsible for performing the tasks incident to an annual Federal expenditure of well over $70 billion. It seems to me that the estimated cost is a completely reasonable price to pay to assure fair compensation to a group of employees who, in the aggregate, bear so great a responsibility.

The opposition to a pay increase has been based primarily on two arguments, neither of which, to me, is persuasive.

In the first place, the administration has argued that a pay increase at this time would have an unfavorable effect on its anticipated $4.2 billion budget surplus for next year. Certainly, there can be no argument against economical government or against the achievement of a budget surplus by legitimate economies. At the same time, reasonable people will agree, I think, that withholding pay from its work force is too high a price to pay for a budget surplus. This argument against pay increases raises a serious question whether the administration may be seeking to achieve personal objectives and political advantage at the expense of its civilian employees, who are clearly entitled to a salary increase at this time.

The second major argument has been that all efforts to adjust Federal salaries should await the results of a comparative study of Federal and private industry salaries, which has been recently undertaken by the Bureau of Labor Statistics.

This argument, it seems to me, is completely specious in the light of the overwhelming evidence which shows that Federal employees generally are now far below the levels of comparable salaries in private enterprise. Administration representatives who now oppose pay increases have themselves consistently maintained that the Government has extreme difficulty in recruiting and retaining competent employees in the Government because of disparities in pay. In this connection, the Chairman of the Civil Service Commission, in testimony before the Subcommittee on Manpower Utilization on December 4, 1959, stated:

> In contrast, statutory increases in the Classification Act pay schedules have been much less frequent and have usually trailed far behind such changes in industry. The result has been an almost continuing unfavorable competitive position in the labor market for the kinds and quality of white collar employees needed to staff the varied and complex activities of our Government.

It is difficult to understand what purpose, other than mere delay, would be accomplished by awaiting the results of the Bureau of Labor Statistics' survey in the face of the clear evidence we have before us.

The evidence presented during the hearings on H.R. 9883 and a number of companion bills establishes without any doubt that immediate and substantial Federal employee salary adjustments are necessary in the interest of efficiency in the Government and fairness to Government employees. The evidence clearly shows that (a) Federal employees are substantially below the level of the national economy; (b) that the salaries paid Federal employees do not compare favorably to salaries paid for comparable work in private enterprise; and (c) that the rates of salary increases for Federal employees have lagged far behind the rates of increases in private enterprise over a period of years.

The following are only a few of the many comparisons which were presented during the Committee hearings and which convince me that pay increases are justified at this time.

The largest single group of employees in the postal service are the clerks and letter carriers. The responsibilities of their jobs have been compared to those of policemen and firemen. Postal clerks and carriers are paid in a salary range of from $4,035 to $4,875 per year. This is generally about $1,000 a year below the pay ranges of policemen and firemen in 60 large metropolitan centers. In one of the largest cities, for example, policemen and firemen are paid in a range of $6,393 to $6,828, roughly $2,000 more per year than postal clerks and carriers.

The average weekly earnings of postal letter carriers is $89.23. A recent Department of Labor publication shows that the average weekly earnings of production workers in various industrial groups ranges from a low of $91.30 to a high of $118.13. In other words, in January 1960 the lowest paid group of industrial workers earned $2 per week more on the average than did the postal employees. The highest paid group of industrial workers earned approximately 30 percent more than the average postal employee.

The same unfavorable comparison is shown between Federal employees in the classified service and employees on comparable jobs in private enterprise. For example, evidence has been presented to show that in 10 selected cities in the country tabulating machine operators earn an average of from $4,487 to $5,321 per year. Federal employees doing the same kind of work are paid $3,814 per year. Draftsmen in private industry earn from $5,686 to $6,443 per annum as compared to Federal pay for the same work of $4,560 per year.

A recent Bureau of Labor Statistics survey shows that guards in private industry in various cities are paid at rates ranging from $1.80 per hour to $2.45 per hour. The entrance pay for guards in the civilian service in the Government is $1.57 per hour and the maximum rate a guard can earn is $1.84 per hour.

I think these few examples of comparable salary rates are sufficient to show without any doubt that the current rates of pay for Federal employees are substantially below those of comparable workers in private enterprise. Equally conclusive evidence has been presented to show that the salaries paid to Federal workers have not kept pace with the increases and cost of living and as a result it is now necessary for far too many Federal employees to accept outside spare time employment in order to provide their families with the necessities of life.

It has also been shown, and this is admitted by administration representatives, that a great deal of the turnover of technical and professional people in the Government results from the Government's inability under existing salary scales to successfully compete with private industry for the services of those capable and well qualified necessary to perform many of the Government's functions.

I urge favorable action on this bill in order to recognize fairly and equitably the loyal, devoted service of the Government's civilian employees by giving them pay more nearly comparable to that enjoyed by their counterparts in private enterprise. Favorable action would further assure the Government's ability to recruit and retain the employees who have the qualifications and abilities to carry out the important responsibilities necessary to the preservation of the Government.

As the CONGRESSIONAL RECORD will show, I was the first Member of the House to join our colleague, Representative THOMPSON, in signing the discharge petition which succeeded in bringing this bill before us, a discharge petition I am glad to say that I persuaded many other Members of the House also to sign. It is unfortunate that we had to take this unusual means of obtaining signatures from a majority of the membership in order to overcome obstructions to the orderly consideration of this bill under normal procedures.

Those of us who favor fair treatment for Uncle Sam's rank-and-file employees have had to wage a constant battle against an unsympathetic administration which flatly opposes pay raises for the average worker. This has been the policy from President Eisenhower on down. Week after week, we sat in Committee listening to the pros and cons on this legislation, and throughout the period of the hearings there was a constant drumbeat of administration propaganda against any pay increase whatsoever.

At this moment, we are being told that if we reduce the size of the proposed increase even further—say to 5 percent—and perhaps add higher postal rates to it, there is a possibility, or a remote outside chance, that the President may sign such a bill. It is all very nebulous. Yet, all of the time we were considering this legislation in Committee, the administration laid down a flat rule of no raise at all for the rank-and-file of employees.

On the other hand, no administration has ever worked harder at trying to obtain pay increases for the policymakers of the Government—particularly those in politically appointive offices. The top level of Civil Service, in these recent years of the Eisenhower administration, has been changed almost entirely into a patronage pool for the Republican National Committee. Career Government employees are given to understand that it helps to have Republican ties if they expect to obtain promotion to the top posts in what is supposed to be the career service. I am sure if it could find a way to provide pay increases only for Government employees in so-called policymaking jobs—and under this administration that covers a multitude of employees with political sponsorship—the administration would gladly support such a bill. But this bill—to reward the entire classified and postal services—is bitterly opposed on grounds that the cost of living has not risen enough since the last pay raise to justify the proposed increases so why enable any Government worker to get ahead?

When organized labor was fighting for the principle of wage escalation to meet increases in living costs, many of the same people now deciding policy for this administration bitterly opposed the idea as something right out of Moscow. Actually, of course, collective bargaining as we know it is the farthest thing away from the Russian system, but you would not think so to hear some of the complaints about unions—all unions.

It is now an accepted part of our industrial economic structure, of course, that cost-of-living increases should be reflected in wage settlements. But that is by no means the only measure of justifiable wage settlements in industry. Industry and labor also agree on increases reflecting increased productivity, on increases based on increased complexity of the work, on increases based on higher educational requirements or longer periods of training and so forth.

Now why should none of these things be taken into consideration in determining the wages of our Government employees? According to the adminis-

tration, the only gauge should be living costs. I disagree. I do not believe we must have a static wage structure in Government since we certainly do not have one in any other field. It is not enough, under the American system, that a worker stay even with his earning power of 10 or 20 years ago in terms of real income. Our economy has prospered because most workers steadily, over the years, have been able to improve their standard of living—which requires increase over and beyond living cost increases.

In the postal system, I can say from firsthand knowledge that low wages are a major cause of poor employee morale and much turnover in personnel. We are forcing out good people who had intended to make their careers in the postal service. They cannot afford to remain. Those who take pride in the service, who have long years of seniority, and who grew up in the post office and have developed a dedication to the public service, have suffered real financial hardship in recent years as workers in other fields obtained, through collective bargaining, far better pay scales than the postal employee. Many postal workers are on double duty, taking other off-hour jobs in order to make ends meet. This is not fair to them or to their families, and it is not fair to the taxpayer who wants and expects alert and wide awake and conscientious service from the post office.

This is not the time, perhaps, to go into the other problems of the postal people under the weird operational policies now in effect, but the combination of low pay in comparison to other workers plus the aggravations of trying to keep up with the razzle-dazzle of post office directive and guidelines and experimentation in mail routing policies—policies which seem to be based on a program of change merely for the sake of change—make the postal service a most unhappy place these days. A wage raise will help, at least, to make it a little pleasanter until we can get rid of bungling and chaos in the Department.

For the career classified employee, the situation has not been quite as unhappy as it has been for the postal employee in recent years. The people brought in by the Eisenhower administration to run the other Government departments nearly all started out on the assumption that Government workers were drones and morons, but gradually changed their opinions after discovering to their surprise the quality of work done by the career employees and their conscientious devotion to duty. So it has not been fashionable lately in most agencies—as it has been during the past 7 years in the Post Office Department—to regard the Government employee as a brainless, slipshod, disinterested worker. Nevertheless, Government employment has not yet been restored to the professional prestige it enjoyed prior to this administration, and pay scales have not kept pace with the rates paid to people with similar skills in industry and the professions. This bill now before us will help t ocorrect some of the inequality.

It is on the whole a good bill. We on the committee worked long and hard on it. It deserves not only the votes it will receive to assure its passage here today but sufficient additional votes to show we can overcome a veto. I hope every Member who sincerely believes in the importance of the work done by our classified and postal employees will make his convictions meaningful by supporting this bill. Regardless of our politics, we all know how devoted our postal employees have been in the past—how careful and conscientious and dedicated to service. That spirit is now unfortunately going out of the postal service—has been going out of the service—because of the way the career people have been treated by their top bosses in Washington. Many postal workers more and more take the attitude of "What's the use?" This trend must be reversed. The place to start is on pay scales—right now. I hope with new leadership in the Department in Washington we can take care of the other side of this problem—the operational chaos and bungling. Congress cannot solve that problem right now—the voters must act first. But we will solve it, I hope, next year.

Thank you.

Medical Payments for Elderly Citizens Legislation Must Be Enacted by the 86th Congress

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 16, 1960

Mr. BOLAND. Mr. Speaker, the distinguished columnist, Mr. Walter Lippmann, points out in his article in the Washington Post today that there is nothing un-American in the principle that Americans shall be compelled to save "so that they can meet the needs of their old age with the self-respect which comes from being entitled to the benefits because they have paid the cost out of their own earnings."

In my opinion, this statement goes to the heart of the issue of medical payments for the elderly. The Ways and Means Committee has recommended a plan under which elderly persons will be given medical benefits coverage under the social security system. I certainly hope that this legislation is soon brought to the floor for debate and that it is enacted by Congress this year.

Mr. Speaker, at this time I would like to call to the attention of my colleagues an article entitled "A Challenge That Can't Be Ducked" which appeared in the April 16, 1960, issue of Business Week. The article points out:

The problem basically is that the aged are high-cost, high-risk, low-income customers. Their health needs can be met only by themselves when they are young, or by other younger people who are still working. The only way to handle their health problem, therefore, is to spread the risk and costs widely. And that can best be done through the social security system to which employers and employees contribute regularly. By comparison with the heavily subsidized schemes, this approach has the advantage of keeping old people from feeling that they are beggars living off society's handouts.

Mr. Speaker, there are hundreds of elderly citizens in my congressional district who have written to me or talked to me personally about their concern over the costs of possible hospitalization. They worry about the day when they might suffer from an injury or require an operation, the cost of which would wipe out their savings of a lifetime, or place them deeply in debt. The Congress must fact up to the realities of this problem facing our senior citizens.

Lame Duck "Lameducks"

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 16, 1960

Mr. DORN of South Carolina. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following articles:

[From the Palm Beach Post, June 3, 1960]

COLLINS POOR CHOICE TO HEAD CONVENTION

(By Drew Pearson)

If Paul Butler, the "lameduck" chairman of the Democratic National Committee, wanted to curry favor with the South by naming Gov. LeRoy Collins, of Florida, as the permanent chairman of the Democratic National Convention, he failed badly.

Governor Collins, delightful and charming as he is, does not rate as compared with Congressman HALE BOGGS, of Louisiana.

In fact, many southerners are describing the action of Butler in putting across Governor Collins as the appointment of a lame duck by the "lameduck" chairman of a "lameduck" committee.

Here is the lineup of the lame ducks:

Governor Collins himself is soon retiring as Governor of Florida and failed to elect his choice as his successor.

Chairman Butler has just been made a lame duck by the Democrats of Indiana, who have elected Alex Campbell, former assistant attorney general, to be national committeeman from Indiana.

Peggy Ehrmann, the Democratic committeewoman from Florida who nominated Governor Collins, was defeated for reelection to the Democratic National Committee the same day.

Camille Gravel, Jr., Democratic national committeeman from Louisiana, who failed to back Boggs, was defeated a few days later by the Louisiana State Democratic Committee at Baton Rouge by a vote of 100 to 1. The only vote cast for his reelection was that of Gravel himself.

The irony of the situation lies in the fact that in 1954, when Butler was first made chairman of the Democratic National Committee in New Orleans, he was nominated by Congressman Boggs. Two years later Adlai Stevenson was determined to kick Butler out as chairman. He came to Boggs with fire in his eyes and some unprintable

things in his language regarding Butler. Boggs at that time stepped in and saved Butler. He got Speaker SAM RAYBURN to help him.

But the other day it was Butler who swung the Democratic committee against Boggs for permanent chairman. As a sop to Gravel, who failed to support Boggs, Butler turned around and made Gravel chairman of the credentials committee to decide on what Democratic delegation shall be seated in Los Angeles.

[From the Birmingham News, June 4, 1960]

BUTLERIAN BOO-BOOS

Several moves of Paul Butler stand sharply revealed. They do him no credit and indicate further that the national Democratic Party is in sore need of somebody with a good political head on his shoulders.

Butler was instrumental in throwing the permanent chairmanship of the convention to Governor Collins of Florida at almost the same time that Collins' "moderate" candidate for Governor of Florida was being voted down; Collins himself goes out of office soon and his future political weight in his home State could be in doubt.

Butler himself after the current term ending with the convention's close is being replaced as national committeeman by Indiana Democrats.

Peggy Ehrmann, Democratic committeewoman from Florida, who placed Collins in nomination for the permanent chairmanship, the same day she made the formal Collins nomination was defeated for the post she has held.

Camille Gravel, of Louisiana, previously booted out of national committee status by his fellow Louisianians but kept on by Butler, was made cochairman of the national convention credentials committee. This man who is to help run the meeting deciding who gets convention seats a few days later was thrown out once more by the Louisiana State Democratic Committee by a vote of 100 to 1.

A wide variety of Democrats—and not just southerners—from time to time over the past year or two have openly expressed disgust with the Butler approach, maneuver, and decision. It seems to us, and not just from a Deep South point of view, that national rank and file Democrats would have done the party a service to have replaced Butler with some middle-road political thinker of capacity quite a while ago. Butler just doesn't seem very smart.

With a Stevenson, a Kennedy, a Symington, a Humphrey seemingly key Democratic policymakers on a campaign basis, enough national Democrats apparently felt Butler would be in step.

Evidence grows that the whole situation may have resulted from a misconstruction of the true national Democratic temper, and the temper of the people.

Hon. Henry J. Latham

EXTENSION OF REMARKS

OF

HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1960

Mr. BOSCH. Mr. Speaker, it gives me great pleasure to advise my colleagues of an honor bestowed upon a former Member of this body, and a very dear friend of mine, Hon. Henry J. Latham. On Sunday, June 12, 1960, St. John's University, New York, conferred upon Henry J. Latham, justice of the Supreme Court of the State of New York, the honorary degree of doctor of laws. The citation reads as follows:

"A wise man," wrote Bacon, "will make more opportunities than he finds." Fortunately for us Americans the existing ones suffice. In the field of education, for instance, how fruitful are the opportunities for professional education available in our evening schools. Those who take advantage of such opportunities are to be commended for their preceptiveness, perseverance, and intellectual energy. Exemplifying these qualities is Henry J. Latham, who completed his preprofessional and professional education in the evening: he studied prelaw at St. John's University and obtained two law degrees—the LL.B. and LL.M.—at Brooklyn Law School of St. Lawrence University. For more than 25 years thereafter he has practiced law and gained a broad experience in all fields of law. In 1940 he was elected a member of the State legislature, a position he left to enlist in the U.S. Navy during World War II. While still serving overseas, he was elected to Congress in 1944, and was reelected for a total of seven terms. This fact alone is ample evidence of his effective and conscientious performance of duty. As further testimony to his ability, proven character, and the high regard he inspires, he was elected in 1958 a justice of the supreme court on a bipartisan slate. Esteemed American, Congressman, and jurist, Henry J. Latham merits honoris causa the degree of doctor of laws, because he illustrates the achievement of one who, in passing through life's pilgrimage, has converted the common dust of servile opportunity to gold.

Salem, Mass., Captain Nicknamed "Old Glory"

EXTENSION OF REMARKS

OF

HON. WILLIAM H. BATES

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1960

Mr. BATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a newspaper article by Hedrick Smith of UPI and which appeared in the Beverly Evening Times of Beverly, Mass., under the heading of "Originator of 'Old Glory' Nickname Captain Driver of Salem, Courageous Seadog." The article follows:

NASHVILLE, TENN.—The man who nicknamed the American flag "Old Glory" was a salty skipper from Salem, Mass., who once had his pet flag sewn into a quilt to keep it hidden from Confederate soldiers.

A few years before that, the skipper, Capt. William Driver, outfoxed a British ship captain who ordered him to lower his flat ("take down them duds") while his crew was celebrating July 4 in a British-held port in India.

On a third occasion, he threatened to blow down his house with cannon shot if anyone dared lower his original "Old Glory" from a window of his home in the Confederate city of Nashville.

Captain Driver was a man of physical and moral courage those unswerving loyalty to the Union developed at sea.

Born March 17, 1803, he was only 13 when he ran away to the sea one morning on his way to Sunday school. At 21, he became a master mariner of a ship and later circled the world twice.

NAME COINED AT SEA

It was during his rugged seafaring days that Driver named a ship's flag "Old Glory." Legend is hazy on when he actually first coined the nickname. But most historians think it was in 1831 when Driver was master of the brig *Charles Doggett*.

The flag was christened at a special shipboard flag-raising, but the nickname "Old Glory" didn't gain much currency until the Civil War.

Driver moved to Nashville in 1837. His flag was hung from a locust tree outside his home on special occasions—July 4, Washington's birthday, St. Patrick's Day and during presidential campaigns—and became the source of good natured kidding.

Secession made his well-known Unionist sentiments unpopular in this city and Driver, fearing for his proudest possession—"I love it as a mother loves a child"—had the original "Old Glory" concealed in a quilt. Twice Confederate parties came looking for it.

Once Driver turned a group away simply by asking for a search warrant. The second time, approached by a band of rebel guerrillas headed by an old neighbor, Driver paced the porch with worry after their demand for the flag.

Finally, he spun and faced the men. "Dick," he said to the leader, "I have known you all your life. If you want my flag, you'll have to take it over my dead body."

The guerrillas left and the flag remained hidden in the quilt until Union troops captured Nashville February 25, 1862. It was a black day for the rebels but a day of glory for Driver and his pent-up Union sentiments.

Pandemonium greeted the Yankee arrival. Driver rushed home, ripped the flag from the quilt, and, escorted by a squad of Yankee soldiers, took "Old Glory" to the State capitol.

The old ship flag was raised amidst cheers of soldiers and a sprinkling of citizens. From those who knew the flag there were cries of "Old Glory."

Baltic States Freedom Council's Town Hall Rally

EXTENSION OF REMARKS

OF

HON. JOHN V. LINDSAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1960

Mr. LINDSAY. Mr. Speaker, on Sunday, June 12, 1960, it was my privilege to address the Baltic States Freedom Committee's Town Hall Rally in New York City, marking the 20th anniversary of Soviet invasion of Estonia, Latvia, and Lithuania. Under unanimous consent I include in the RECORD a copy of my statement and the manifesto of the 20th anniversary of Soviet aggression against the Baltic States issued by the free Estonians, Latvians, and Lithuanians:

ADDRESS BY REPRESENTATIVE JOHN V. LINDSAY, REPUBLICAN, OF NEW YORK, AT THE BALTIC STATES FREEDOM COUNCIL'S TOWN HALL RALLY IN NEW YORK CITY, MARKING THE 20TH ANNIVERSARY OF SOVIET INVASION OF ESTONIA, LATVIA, AND LITHUANIA, JUNE 12, 1960

We meet here both in sorrow and in hope. In sorrow we commemorate the anniversary of the darkness that engulfed the Baltic countries in June 1940; in hope we rekindle

the torch of liberty to light the way out of darkness.

The enormity of the tragedy which befell Estonia, Lithuania, and Latvia by unprovoked Soviet aggression, can only be fully realized by an awareness of the remarkable contributions made to the world by the peoples of these sovereign nations during their years of independence and freedom.

By their culture, arts and crafts, science and education, literature and the theater, and an ever-rising standard of living, these countries made their lasting mark on the world community. Expanding travel and commerce established deep and lasting links with the Western world. Between these countries and the United States there existed the bonds of mutual respect and love of freedom.

When the hammer struck it corrupted all human dignity. In violation of a series of nonaggression treaties, the Soviet Armies engulfed three sovereign states, purged their governments, rigged their elections and forcibly incorporated them into the Soviet Union itself. Not even nominal sovereignty was retained. The economies became subject to the central Soviet plan and their institutions came under Soviet ministries. There followed the usual reign of terror in the pattern of dictators—mass deportations, mass arrests, conviction without trial, collectivization of agriculture, industry and the like.

Many of you here tonight lived through these events and there is little that I can tell you that you do not know far better than I from personal experience.

Let me say this much, however, about personal experience. When Hungary rose and struck back in the glorious October revolt of 1956, I had the opportunity and the moving experience, as the representative of the Attorney General of the United States, of witnessing the events from the edge of freedom. In the course of helping to establish our Government's participation in the relief of Hungarian freedom fighters and their loved ones, I stood night after night at the Andau Bridge and other key points along that dark border and saw the faces of those who marched from darkness to light. It is one thing to discuss a blood-letting in the abstract; it is another to see it in the faces of women and children, with the rumble of tank treads and the rattle of machineguns echoing out of the morning mist.

So these things bear restating. Let us remind ourselves that our friends and allies, your mothers and fathers, brothers and children, remain under the oppressor's boot and cry to us for help. As an American and as a Representative, I wish to tell you that your cause is our cause. It is a cause close to our minds and hearts. But we may not rest on this. What is needed is a restatement by the free world of our determination to achieve freedom and independence for each person and each nation. The pressure of organized public opinion is a powerful weapon, but like the fight for freedom everywhere, it is not self-sustaining. It requires recognition, leadership, and restatement. Free countries everywhere must articulate their obligation toward those who died for the cause of freedom or who hold on to life only in the hope of freedom. Their cause must be highly placed on the agenda of international convocations. Otherwise the statesmen of the free world negotiate on a basis of expediency rather than principle.

The United States must adhere to principle. In 1892, both the Republican and Democratic Party platforms saw fit to condemn the Russian Czarist Government for the mistreatment and oppression of its non-Russian peoples and asked for equal rights for all. The principles of self-determination by all peoples were proclaimed by President Woodrow Wilson in 1917 and the Baltic Republics were welcomed into the family of nations shortly thereafter. The United States gave its enthusiastic welcome. There followed the Sumner Wells declaration on July 23, 1940, on the occasion of the Soviet aggression in June 1940. This declaration condemned predatory activities of one state against another. It condemned the use of force or the threat of force by nations against each other. It condemned the interference of one sovereign power into the domestic affairs of another. The declaration said in conclusion that unless these principles are followed, law and justice cannot be preserved and, indeed, the basis of modern civilization cannot prevail. Thereafter, the United States consistently refused to recognize the present absorption of Estonia, Latvia and Lithuania into the Soviet Union. We refuse to recognize the regimes that the Communists have established and maintained by force and by fraud in these countries. We recognize only the representatives of the independent Republics of Estonia, Latvia and Lithuania, and that is how it will remain.

All Americans should read the report of the Kersten committee—a select committee of the Congress under the chairmanship of Charles J. Kersten—which in 1953 and 1954 took evidence in two continents of the international crimes that had been committed by the Soviet Union against the Baltic States. The final report of and the documents assembled by the Kersten committee constitute the most definitive record that we have of a history of Soviet perfidy and of Soviet offenses against mankind.

Finally last year by congressional resolution and Presidential proclamation—the Captive Nations Resolution and Declaration—we restated our demand for the restoration of independence to these nations of Europe. This is our goal.

The United States must rekindle the fires of freedom. On the international scene everywhere we must be the image of enlightened concern for the principles of freedom and human dignity upon which our own country was founded and for which we have fought.

We must do this by demonstrating our concern for human worth in every community, at home and abroad. Let us not, as Americans, neglect our own institutions or fail to recognize our own problems and shortcomings where they exist. Where, and to the extent that, we ourselves fail to accord full rights to every man in our own Nation, so we fail in our own effort to stop the spread of communism abroad. Where we face up to our shortcomings, so we strengthen ourselves in the battle for the freedom of other peoples. We do nothing in a vacuum. Everything is interrelated. And so it will be, more and more, in the challenging years to come.

Thank you very much.

MANIFESTO OF THE 20TH ANNIVERSARY OF SOVIET AGGRESSION AGAINST THE BALTIC STATES BY FREE ESTONIANS, LATVIANS, AND LITHUANIANS

Twenty years ago, the Soviet Union attacked the Baltic States. Some 300,000 Red army troops poured into Lithuania on June 15, 1940, and into Latvia and Estonia, on June 17, 1940. With the protection of this occupation army, the emissaries of the Kremlin—Dekanozov, Vishinsky, Zhdanov—unseated the legitimate governments of the Baltic nations. The Baltic countries were robbed of their independence and transformed into colonies of the Soviet Union.

The Soviet Union's assault against its Baltic neighbors initiated the Soviet westward march against Europe. Thus, the beginning of today's international tension and threat to peace may be found in the Soviet aggression against the Baltic States in 1940.

By its aggressive acts against Estonia, Latvia, and Lithuania, the U.S.S.R. broke the peace and nonaggression treaties it had signed with those states as well as other international agreements.

Expropriation, exploitation, pauperization, slave labor, suppression of human rights and fundamental freedoms, Russification, terror, murder, mass deportations—these are the marks of the Soviet occupation in the Baltic States. In committing these acts, the Soviets violated the United Nations Declaration embodying the Atlantic Charter, the United Nations Charter, the Convention on the Suppression of Crimes of Genocide, and the Universal Declaration of Human Rights—all these documents bearing the signatures of the U.S.S.R.

The Estonian, Latvian, and Lithuanian peoples, historically and traditionally Western in orientation and outlook, placed their hopes in the Western world. Their trust and reliance in the West was strengthened by the declaration of the U.S. Department of State of July 23, 1940; the statement of the President of the United States of October 15, 1941; the Atlantic Charter; the Yalta Declaration on Liberated Europe; the repeated statements by the U.S. Government about nonrecognition of the Soviet annexation of the Baltic States and continued recognition of their diplomatic representatives; and the proclaimed aims and principles of the United Nations.

The Baltic peoples have given active expression to their determination to regain freedom, and have resisted their oppressors, thus contributing greatly to the still continuing struggle for freedom and justice being waged by all captive peoples enslaved by the Soviet Union. Despite heavy setbacks and trials, our people smaintain their faith in the restoration of their freedom and independence.

This summer the Soviet occupant will unveil a macabre spectacle—a festive celebration of the 20th anniversary of the enslavement of the Baltic States during which the captive Baltic peoples will be pressed to appear grateful to their conquerors.

We—free Estonians, Latvians, and Lithuanians—are conscious of our responsibility toward our nations and toward history. At this 20th anniversary of Soviet aggression, we feel dutybound to give voice to the aspirations of our captive peoples:

We accuse the Soviet Union of committing and continuing an international crime against the Baltic States;

We demand that the Soviet Union withdraw its military, police, and administrative personnel from the Baltic countries;

We request that the governments of the free world, especially those of the great powers, undertake all peaceful ways and means to restore the exercise of the right of self-determination in the Baltic countries and in the rest of east-central Europe;

We appeal to the conscience of all mankind to perceive the magnitude of the injustice perpetrated upon the Baltic countries and to support the efforts toward the restoration of the liberty of these countries;

We convey to our people at home our pride in their resolute resistance against the endeavors of the oppressor to destroy their national and personal identity;

We express to our peoples behind the Iron Curtain our deep conviction that the Soviet system—as all tyrannies throughout history—carries within it the seeds of its own destruction; that it cannot and shall not prevail;

We pledge to intensify our joint organized activity in the free world to promote the cause of liberty for the Baltic countries;

We, finally, declare to the free world and the Communist-dominated world, including the U.S.S.R., that, once free again, the Baltic nations will do all in their power to ensure

the best possible relations with their neighbors on the basis of mutual respect for national sovereignty and territorial integrity.

Vaclovas Sidzikauskas, Chairman, Lithuania; Alfreds Berzins, Deputy Chairman, Latvia; Leonhard Vahter, Deputy Chairman, Estonia; Jaan Tiivel, Estonia; Eduard Vallaste, Estonia; Adolfs Blodnieks, Latvia; Vilis Hazners, Latvia; Dr. Vilis Masens, Latvia; Juris Siesers, Latvia; Msgr. Jonas Balkunas, Lithuania; Col. Jonas Slepetys, Lithuania; Dr. Antanas Trimakas, Lithuania, Members.

The Social Security Inverted Pyramid—No. 3

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1960

Mr. ALGER. Mr. Speaker, following are additional remarks on the social security system by W. Rulon Williamson, original actuary of the Social Security Board. Mr. Williamson's discussion here is a further exploration of some of the dogmas which have grown up around the social system:

SOCIAL SECURITY AND THE CONGRESS

(By W. Rulon Williamson, Research Actuary)

These dogmas have been voiced with some hesitation, "actuarially," but quoted and requoted they have been successively applied to:

1. The retired old age of workers.

2. The deferred greater dependence of family dependents of workers, after the worker retires.

3. The deferred greater dependence of family dependents of workers, following the death of the unretired worker.

4. The deferred premature old age—called permanent total disability—of workers between the ages of 50 and the minimum age of "age retirement," 62 for a woman, 65 for a man.

5. The deferred greater dependence of family dependents of workers, following the disablement of the worker, between age 50 and ages 62 and 65.

6. The current congresional discussion of the addition of further benefits to the first category above for certain special "potential needs" within the field of medical care.

The succession of designations for the systems runs: 1935, old-age benefits; 1939, old-age and survivors insurance; 1956, old-age survivors and disability insurance; 1958, old-age survivors and disability insurance; 1960, (?) old-age survivors disability and medicare insurance.

Mr. Ray M. Peterson, pension actuary, examining this evolution and commenting on the blithe assertion that the system is "a blend of equity and adequacy," remarks "the blend is so bland as to blind us to blunders." He uses the subtitle "Actuarial Anesthesia" to supplement the mouth-filling title "Misconceptions and Missing Perceptions of Our Social Security System." This 1959 paper to the Society of Actuaries had discussions from 12 other actuaries. It marked a break in the long overtolerance on the part of the profession.

DISCUSSING THE DOGMAS

1. Insurance: Bismark, the British, and other European "social engineers" by prefixing the word "social" to insurance, had developed a new blend that attempted to make the liabilities of an open-end account that never balanced, seem to be the assets that had made so effective the business of individual life insurance, when the individual expected to meet his share of the costs. The prudence of the citizen who was trying to be self-sufficient was even claimed for the citizen who was to be subsidized as an essential part of the scheme.

Hayek called the German system the "Road to Serfdom." Cecil Palmer called Britain's experiment "The British Socialist Illfare State."

Individual life insurance, looking ahead for the lifetime of an age cohort accepted by cautious underwriters to care for extending family care beyond death and personal provisions beyond the termination of earned income has been a remarkable invention (H. H. Jackson). I agree with the late Senator Taft's reply when told that OASI was different from "private insurance" that it was "social insurance." Taft said "It isn't any kind of insurance and you know it."

2. Assumptions: Marx made assumptions, too. He assumed "negation" and "the negation of the negation," and then a "new synthesis." A lot of his negations have been adopted (see Admiral Moreell's "To Communism Via Majority Vote") putting new chains upon the citizens. But the "new synthesis" was never clarified.

Some 50 actuarial studies have been made in the division of the actuary in the Social Security Administration. Over 100 "Analytic Notes" have been issued by the Division of Program Analysis within the Bureau of Old-Age and Survivors Insurance. A large number of studies and reports have evolved within the Division of Program Research of the Social Security Administration as well as a monthly social security bulletin (dating back to 1938). Other reports from fund trustees, from special advisory bodies or commissions, and sporadic additional studies for congressional information from the Department of Health, Education, and Welfare bring this material well beyond the compass of a 5-foot shelf. Much of this material can be called "anesthetic" in its unwarranted assumption that all is well, and that the various members of the bureaucracy see matters eye-to-eye.

As Ludwig von Mises has so comprehensively demonstrated, when "the free market of free men" is left behind, the accounting sense of profit and loss is apt to disappear. He demonstrates that generally the planned economy is but planned chaos.

The 5-foot shelf is available, but men without professional apprenticeship, are usually lost when they enter it. They are like the unfamiliar chap—ignorant of birds—who takes a walk hoping to see the 30 varieties his Audubon Society neighbor sees on his trip. He comes back with a score of four—robin, cardinal, bluebird, and grackle. In OASI prediction the number of assumptions on separate factors might run to scores—some of them in demography, birth rates and immigration, death rates and emigration, some in the labor market, involving obsolescence and imagination, women's work, men's second jobs, date and age of entering the market, time of leaving it, wages, family size and stability, the tempo of mortality improvement, and so on and on.

Projections can be forced into the far-distant future as an academic exercise—but they cannot be dependable guides to the actual course of events. Currently we are paying out some eight times the amount shown in the projection of 1935 for 1960. The psychology of collectivism we are learning all too slowly.

Bard of the Wallowas

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, June 6, 1960

Mr. ULLMAN. Mr. Speaker, Wallowa County, Oreg., recently honored one of its most beloved and outstanding citizens, Mr. Ben Weathers, known to east Oregonians as "the bard of the Wallowas." In tribute to Mr. Weathers and to his long record of service, I consider it a privilege to insert at this point in the RECORD the following news item from the Wallowa County Chieftain and an editorial reprinted from the Portland Oregonian.

[From the Wallowa County Chieftain]

TESTIMONIAL DINNER PLANNED TO HONOR BEN WEATHERS

The many friends of Ben Weathers will gather to pay tribute to his services to Wallowa County at a testimonial potluck dinner sponsored by the Joseph Chamber of Commerce at the Joseph Civic Center Monday, June 6, at 7 o'clock. Ben is considered to be one of the best informed historians on Wallowa County where he has been active in business, civic, and fraternal organizations for 58 years.

Ben, as he is affectionately known by most of the people in this area, came to Enterprise in May 1902 and went to work for Carl Roe, publisher of the Wallowa Chieftain taking subscriptions and traveling around the county writing stories about its people and events. He purchased the paper in 1904 when Roe sold out and went to Baker. From 1904 to 1908 he was editor and publisher of the Chieftain, and in the latter year took in a partner after receiving an appointment as postmaster of the post office at Enterprise.

The partnership resulted in a consolidation of two local papers under the name of the Record Chieftain which continued to be the name of the paper until it was changed to the Wallowa County Chieftain in 1942. Ben and his partner sold out to George Cheney in 1911, and the Chieftain was published by Cheney until the present publisher, Gwen Coffin, took over the paper in 1941.

Ben served as postmaster for 25 years—from 1908 until 1934. Upon leaving the postoffice he went into the insurance business which he still manages.

About 1924 Ben started milking cows and sold bottled milk around town and in the stores until 1942.

In 1936 Ben ran for the office of county judge and was elected for a 6-year term. He was reelected in 1942 and served another 6-year term, retiring from this office in January 1949.

Over these many years Ben has served as secretary of the Enterprise Chamber of Commerce, president of the local sportsman's association and president of the Enterprise Chamber of Commerce. He has been a member of the Elks Lodge since 1920 and the Knights of Pythias for 56 years. He was given a 50-year jewel and a life membership in the latter organization in 1954.

Ben recalls that Wallowa County was a quarter of a million dollars in debt when he took office as county judge in 1937 but was out of debt when he completed his first term. This achievement and the graveling of many miles of county roads he considers his principal achievements while serving as

head of the county government. "We got a lot of people out of the mud," Ben reflects.

Ben was married on June 21, 1908, to Alta Haggerty. He had purchased a house on west Main Street in Enterprise shortly before they were married, and they have made their home in this same place for 52 years. Ben doubts whether any other couple in Enterprise have lived in the same house this long. Mr. and Mrs. Weathers had no children of their own but raised their niece, Pearl Justice, from infancy and regard her as their own.

Ben has written hundreds of poems, jingles, and rhymes during the last half century and has been called upon at most of the important civic functions to compose poems about individuals and events on the local scene to enliven public meetings. Many of these poems have ben assembled in book form and have just been published under the title of "Fellers and Things."

Mayor Ab Daisley has proclaimed Monday, June 6, 1960, as Ben Weather's Day.

[From the Oregonian]

BARD OF THE WALLOWAS

We are told that Wallowa County is turning out June 6 to do honor to its first citizen, Ben Weathers. There is a moral in the Weathers story.

A native of LaGrande, Ben moved into the lush valley of the Wallowa when it was still in its pioneer era and the tortuous Minam grade took its tolls of horses and wagons. For almost 60 years, since he joined the staff of the Wallowa Chieftain in 1902, Ben has been one of the men who saw to it that wheels turned in Wallowa County. He has been editor of the Chieftain, postmaster of Enterprise, county judge, president of the Enterprise Chamber of Commerce and of the Wallowa County Chapter of the Izaak Walton League, and a directing force in virtually every community endeavor. He was 78 in February, and he's still running things. Moreover, he is the bard of the Wallowas, having published hundreds of ballads, among them Snake River Steve.

The marvel of it is that Ben Weathers' loaded career is exceptional but not without a match in other communities over the State. In several of them, large and small, there are or have been men who, like Ben Weathers, have carried the burden of community leadership in a wide range of activity for a lifetime. Their character has been stamped on the community, which, itself, is their memorial. A community is fortunate to have such dedicated leadership and scarcely a community at all is without it.

U.S. Army

EXTENSION OF REMARKS

OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1960

Mr. DORN of South Carolina. Mr. Speaker, it was my pleasure, at the invitation of the Secretary of the Army, the Honorable Wilber M. Brucker, to attend a most memorable ceremony in honor of the Army veterans in the 86th Congress on June 12, 1960, at the Washington Monument grounds, at which the U.S. Army presented the 1st Battle Group of the 3d Infantry—"The Old Guard" in a retreat parade.

An Army retreat ceremony, for the benefit of those Members of Congress who have not been privileged to attend, is a most moving and traditional display from the furling of the U.S. flag to the "pass in review." It portrays the symbolic "all is well" as another day closes.

Under Secretary of the Army, the Honorable Hugh M. Milton II, acting as host for the occasion paid tribute to those Members of Congress who have served in the Army.

Senator THEODORE F. GREEN of Rhode Island acting as spokesman for the many Members of Congress present was most eloquent in expressing his appreciation for the honor paid. He was on the reviewing stand with Senators THOMAS E. MARTIN of Iowa and RALPH YARBOROUGH of Texas, and Representatives CARL ALBERT of Oklahoma and DANIEL K. INOUYE of Hawaii.

This ceremony has become something of an annual tradition in this Capital of the United States and I want to express my appreciation on behalf of the Army veterans of the 86th Congress for the honor paid us by the U.S. Army.

The Military Assistance Program

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1960

Mr. VAN ZANDT. Mr. Speaker, the action taken by the House Appropriations Committee in reducing by 20 percent the President's request of $2 billion for military assistance has caused grave concern to Secretary of Defense Thomas S. Gates, Jr.

Secretary Gates on June 15 issued an urgent appeal that the cut in the appropriation be restored when the House debates the appropriation measure on June 16. The Secretary reviewed brefly in a news release the importance of military assistance, stating that Department of Defense witnesses appeared and testified before the House Appropriations Committee as to the soundness of the President's request for $2 billion to finance a necessary and effective program.

We have a sensible, sound, well administered program. Yet the House Appropriations Committee recommends that the appropriation be reduced by 20 percent.

Said Secretary Gates.

At this point I wish to incorporate in my remarks the news release issued June 15, 1960, by the Department of Defense which I have mentioned in quoting Secretary of Defense Thomas S. Gates, Jr.

I am deeply concerned over the fate of the military assistance program.

The President requested a $2 billion appropriation for military assistance for fiscal year 1961, to provide weapons and military equipment to strengthen our alliances and to promote our own national security. The Joint Chiefs of Staff all stated that they would not take $1 away from the military assistance program in order to augment the funds for their own services. Military assistance is just as much a part of our own national defense as are the appropriations for our Army, Navy, Air Force, Central Intelligence Agency, and the Atomic Energy Commission.

I have testified before the Congress, as have other Defense Department witnesses, in support of the $2 billion request. We have discussed frankly every aspect of the program. We have responded to every question and criticism. We have a sensible, sound, well-administered program. Yet the House Appropriations Committee recommends that the appropriation be reduced by 20 percent.

In spending military assistance funds, it is necessary first to maintain existing allied forces in good working order and conserve the investment already made. Therefore the proposed reduction must come from cutting down on force improvement; that is, postponing indefinitely the newer weapons. Eighty percent of any cut below the budget request must be absorbed in equipment for force improvement, which includes missiles, electronic equipment, modern aircraft and ships, modernized tanks, and combat vehicles and the like.

The impact of the proposed cuts would fall most heavily on NATO, which also bore the greatest weight of last year's appropriation cut.

We must lead the free world without hesitation.

We must contain the Communists, but we cannot do it with imaginary weapons.

We must continue to sustain the capability and determination of our allies to defeat both aggression and internal subversion.

We must provide for the military assistance program as an integral part of our national defense required by our national interest.

Before departing for the Far East, the President said in telegrams to House leaders: "This (cut) cannot but jeopardize our own security and the defense of the free world."

I urge the House of Representatives, when it debates this appropriation on Thursday, to restore the full $2 billion intact.

Annual Father and Son Communion Breakfast

EXTENSION OF REMARKS

OF

HON. CORNELIUS E. GALLAGHER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1960

Mr. GALLAGHER. Mr. Speaker, it was my pleasure to be guest speaker at the annual father and son Communion Breakfast of Our Lady of the Lake Church, Lake Mohawk, N.J.

Our Lady of the Lake was established in 1935 as a result of the creation of Lake Mohawk. From a very small parish it has now grown to over 425 families. Our Lady of the Lake has served Lake Mohawk area for 25 years.

The great growth of this area with its many problems has had the fortunate guidance of a wonderful priest and an outstanding man, Msgr. John F. McKenna. He worked as a longshoreman and freight checker so he could earn a Catholic education that led to his ordination as a priest in 1935. Monsignor McKenna served in World War II and was awarded the Purple Heart along with several other medals. He has supervised the construction of the

parochial and high school of Our Lady of the Lake. Monsignor McKenna is deserving of much praise because of his splendid efforts on behalf of the youngsters. He has won the high esteem of all who know him. He has done this with a humility that has endeared him to people of every religious faith.

I would like to include as part of my remarks the article which appeared in the Newark Sunday News June 5, 1960, commemorating Monsignor and our Lady of the Lake Church in their common bond—that of 25 years of religious service keyed toward success. I would like to add my very best wishes for continued success and for the good health of Monsignor McKenna.

The article follows:

PRIEST, CHURCH SHARE BOND—LAKE MOHAWK PASTOR AND PARISH HAVE ANNIVERSARY

(By Bob Mitchell)

LAKE MOHAWK.—Msgr. John F. McKenna and his church, Our Lady of the Lake, Upper Lake Mohawk, share a common bond, 25 years of religious service keyed toward success because of the waterfront.

For Monsignor McKenna, it was the rough New York waterfront that provided work as a longshoreman and freight checker so he could earn a Catholic education that led to his ordination as a priest in 1935.

Our Lady of the Lake, his church for the last 6 years, was established in 1935 as a result of the creation of Lake Mohawk. In fact, lake dwellers paced Sparta Township's growth so steadily that the small church, overcrowded and destined for renovation or replacement, became the hub for Sussex County's first parochial grade and high schools.

BEGAN AS MISSION

The 346-seat church, which began with 77 families, was originally operated as a mission of Immaculate Conception Church of Franklin and later of St. Thomas of Aquinas Church of Ogdensburg. It wasn't until 1949 that Our Lady of the Lake was made a self-sustaining parish by Bishop Thomas A. Boland of Paterson, who named the late Reverend George A. Brown as its first and only pastor prior to Monsignor McKenna.

The parish now has 425 families and swells to more than twice that number each summer.

But the extra summer load is nothing new to Monsignor McKenna. The 52-year-old prelate recalled that he spent many summer hours working on the New York docks "to earn money to put myself and my sister (Mrs. Edmund Duffy of Flushing, Long Island) through school.

"I wanted a Catholic education and I had to work for the tuition or go to public school," Monsignor McKenna said. "The tuition was $120 a year and that was a whole lot of money then. I took the jobs on the docks because it was better pay."

WORKED FOR EDUCATION

Monsignor McKenna worked his way through St. Patrick's and St. Peter's Preparatory Schools in Jersey City and Seton Hall College, where he was graduated in 1931. He studied for the priesthood at Immaculate Conception Seminary, Darlington.

Upon his ordination, Father McKenna served 5 years at St. Anthony's Church, Hawthorne, and then 2 years at Sacred Heart Church, Dover. At the outset of World War II, he volunteered as a chaplain and won the Purple Heart, Bronze Star, and three battle stars with the 29th Division in Europe.

Monsignor McKenna recalled that things sometimes got so hectic that he was "afraid a lot of non-Catholics got the last rites too." He said chaplains "didn't have time to look for their dog tags."

After the war, Father McKenna was assigned as pastor of St. Simon the Apostle Church at Green Pond. During his tenure there, he helped build a new church and another, St. Thomas the Apostle, at Milton.

At Our Lady of the Lake, he helped finish the parochial grade school and convent started by Father Brown and supervised the construction of Our Lady of the Lake Regional High School. He was elevated to monsignor in 1958.

"It gives me a great deal of satisfaction to be able to put education in the path of so many of these youngsters after having to get mine the hard way," Father McKenna said. "Everything is laid in these kids' laps but I'm afraid their appreciation is lessened by the fact that they don't have to work for it."

Transcript of Questions and Answers Submitted to Vice President Nixon on Television Program "Open End"

EXTENSION OF REMARKS

OF

HON. JOHN SHERMAN COOPER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Thursday, June 16, 1960

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a transcript of questions submitted to Vice President NIXON and his answers, on a television program "Open End" broadcast May 15, by WNTA–TV in New York City as reported by U. S. News & World Report.

Mr. President, the interview is another example of the full and free discussion of issues by the Vice President of the United States and as always it discloses his comprehension of national and international issues, his wisdom and judgment.

There being no objection, the transcript was ordered to be printed in the RECORD, as follows:

[From U.S. News & World Report, May 30, 1960]

WHAT VICE PRESIDENT NIXON SAYS

(Vice President RICHARD M. NIXON was interviewed on a television program, "Open End," broadcast May 15 by WNTA–TV in New York City, with David Susskind as moderator. Following, from a transcribed recording of that interview, are excerpts of Mr. NIXON's comments:)

RED CHINA AND THE U.N.

"Should Red China be admitted to the United Nations? Should it be recognized by the United States?"

Mr. NIXON. In my opinion, admission of Red China to the U.N. at this point, and its recognition by the United States, could well set in motion a chain of events in Southeast Asia which would result in the communization of that area.

DICTATORSHIPS

"Should United States sever diplomatic relations with governments headed by dictators?"

Mr. NIXON. No. I feel that we have to have diplomatic relations with dictatorships. For example, we have to continue to have diplomatic relationships with Mr. Khrushchev. We have to continue to have diplomatic relations with Mr. Gomulka in Poland. They are dictatorships—dictatorships as rigid, as totalitarian as any in the world. • • • But we have to have diplomatic relations with them. • • •

The United States should make clear that we favor the development in the Americas toward democratic forms. • • •

But to break relations with countries because they had dictators would mean that we'd have to break relations with about half the world today.

LATIN AMERICA

"On Mr. NIXON's trip to South America—was it well advised and constructive?"

Mr. NIXON. From a personal standpoint, probably not. It's not very easy to sit in the car and be stoned. It isn't easy to see your wife's new pretty red suit completely covered with spit, or to see a man spit directly into her face and not be able to do anything about it. But I would say, from the standpoint of the country, probably on balance it was good, because it served to bring forcibly home to the American people, to our Congress and to our Government the fact that there was a lot of discontent in Latin America with some of our economic and political policies. And so we have taken steps to deal with those policies.

"What about Cuba and Fidel Castro?"

Mr. NIXON. Obviously, sometimes in cases like this a person in my position, particularly in an election year, might be tempted to make a flag-waving statement about the terrible things that Mr. Castro is saying about the United States, his threats at Guantanamo (U.S. Navy base in Cuba), the fact that one of his gunboats fired on a submarine, and the like.

But I think that there are times when • • • it's best to have the statements that are made come from the responsible people in the State Department or from the President himself. I can only say this in general: I've been to Cuba on two occasions officially. The Cuban people are basically pro-American. I think that Mr. Castro, of course, has tended to turn some of them—many of them, perhaps—against us.

But I will say that, as far as those people are concerned, they certainly needed a revolution. They were not getting an adequate share of the tremendous wealth of that lush island. And so, as far as the objectives of Castro's revolution—providing, for example, a better life for his people, a better division of the land and the like, and particularly that objective which he also stood for at the beginning but since has completely departed from, of freedom—freedom of press, freedom in every respect, freedom of assembly and the like—as far as the objectives of the revolution, we certainly can support them.

And we would hope that Mr. Castro and the Cuban people themselves would change the present direction of the Castro government back to the objectives of the original revolution from which it has grievously departed, particularly with regard to freedom.

CONSERVATISM AND LIBERALISM

"In regard to Mr. NIXON's description of his political philosophy as one of progressive conservatism: Is this a political contradiction in terms?"

Mr. NIXON. No, I don't think so. I believe that, historically, conservatism at its best has always been progressive. And may I say, incidentally, that the use of the words "conservative" and "liberal" I think generally should be avoided these days because the two words have been distorted by definition through the years. Some people have attached the word "liberal" to themselves that perhaps are reactionary in the extreme, and others who call themselves "conservatives" certainly don't deserve that appellation as well. • • •

I believe that a conservative is an individual who opposes bad change but who favor good change. He favors that kind of change which will conserve the best of the past and build on that.

Now, the difficulty with those who do not take a conservative point of view in the sense that I have referred to is that they see a problem and they look at the present system and they want to scrap everything that we're presently doing in order to solve the problem. I think that (1) this is inefficient, and (2) it isn't the best way to solve the problem.

WELFARE STATE

"Should such things as social security, the Tennessee Valley Authority and Federal deposit insurance be regarded as 'welfare state-ism'?"

Mr. NIXON. No. I regard these programs which you have referred to as consistent with the kind of dynamic economy private—enterprise economy—which I believe will provide the most goods and services for the American people.

My point of demarcation is this: Whenever the individual, acting alone or with other people, either in a partnership or a corporation or some other group activity, can do a particular job or render a particular service more efficiently and less expensively than Government can do it or render it, then I believe that should be the course of action we should follow. Whenever the individual, acting alone or with others, is unable or refuses to render the kind of services that the people need or want, then—and only then—should Government step in. And I believe that, as far as Government is concerned, we should start at the lowest level and work upward to the highest rather than start at the highest and work down. We should first see if the local government can do it, then the State government, and finally, and only as a last resort, the Federal Government.

FEDERAL AID TO SCHOOLS

"Should Federal aid be given toward paying teachers' salaries? Why did Mr. NIXON vote against the Clark amendment which would have provided such aid?"

Mr. NIXON. Because I believe there is a better approach, and that's the approach that the administration has supported and continues to support—of Federal aid for school construction, $2 billion worth of schools to be built over a period of 4 years, financed over a period of 20 years, with the Federal Government paying half of the debt-retirement costs and the State governments assuming the last half. * * *

Because I am convinced that, when the Federal Government aids in the construction of schools, there is no possibility whatever of Federal control. If the Federal Government gets into the business of subsidizing generally throughout the country the operation of our schools, including the payment of teachers' salaries, inevitably we will move into greater and greater programs in this area.

INFLATION

"To control inflation, will some control of wages and prices be necessary?"

Mr. NIXON. I would hope not, and I would certainly resist any attempt legislatively to go to controls. That is one of the reasons why, for example, when the recent steel strike was going on, I completely disagreed with many leaders in this country who said that we had to have compulsory arbitration—compulsory arbitration of labor disputes affecting the national interest. * * *

If you go to compulsory arbitration, this means wage fixing. If you have wage fixing by Government, you have Government price fixing. If you have Government wage and price fixing, the stimulus to the free-enterprise economy—and many think that's a bad word, but I do not—the stimulus to the free-enterprise economy, which has made the American productive machine the wonder of the world, will have been destroyed. We will have taken exactly the wrong step, and I think we should resist it at all possible times.

TAX REFORM

"How would Mr. NIXON cut taxes?"

Mr. NIXON. Well, now, let me say first of all that, with regard to tax reform or reduction, I emphasize that, throughout this campaign, I do not intend to promise the people that if elected they can have either categorically, because, in my opinion, before we can talk about either tax reduction or tax reform, both of which will result—even in the second case as well—in a reduction of revenue, we have to be sure that we have met our national-security responsibilities adequately. * * *

Now, in the event, after meeting all of our national-security responsibilities adequately, there is a surplus which will enable us to have a tax bill, I believe that that tax bill should emphasize tax reform—tax reform which would have as its purpose stimulating economic growth. Now how do you stimulate economic growth? You stimulate it by encouraging people to invest their savings in industrial plant, and to encourage them—one of the ways that we do that is through our tax system.

Now, I cannot on this program, and will not until the campaign comes along indicate specifically what ought to be done, but you move on the depreciation front, for example. Accelerated depreciation can be most constructive in stimulating economic growth. You move on the area of what I would call the counterproductive higher income bracket taxes—counterproductive because, at the present time, we have what I would call an expense account economy. I think you know what I am talking about here where people, because the tax rates are so high, live in effect off of expense accounts, and companies, of course, have to pay their top officials in terms of expense accounts as well as in terms of their adequate income.

Now this, I say, is counterproductive and inefficient.

By reducing these rates you lose relatively little revenue. And, by reducing these rates, you release capital for investment in industrial plant. That investment in industrial plant produces progress, it produces more jobs, it produces economic growth.

Now may I say finally in this connection that what I have just suggested has no political sex appeal in it whatever. I'm aware of this. The British were aware of it when they did the same thing a couple of years ago. But I feel that economic growth is essential in this country, and I think the way to economic growth is through expanding primarily the private sector of the economy rather than the Government sector. I think Government has a responsibility, a proper climate, seeing to it that our economy remains competitive through enforcement of the antitrust laws. But, also, we can do a great deal through reforming our tax system and thereby encouraging and stimulating maximum investment in the new plant which produces more progress and more jobs for Americans.

LABOR LEGISLATION

"What about the Landrum-Griffin law as a way to deal with labor abuses?"

Mr. NIXON. This is a terribly complex area and it's very difficult to develop labor legislation which will deal with an abuse without injuring the organization itself. Nobody wants to damage legitimate organized labor in this country—at least I don't, I want to make that clear. What we want to do is to get all unions to follow the good unions and the honest practices that many unions follow today.

The Landrum-Griffin bill was designed to do exactly that. And I believe that, as far as it goes, it did a fairly adequate job. But we aren't going to solve the problems entirely with legislation. In the final analysis, the problem of control of abuses within unions will be solved only when union members themselves recognize that it's their responsibility to assert a fact which they should be aware of, that they run the unions.

"Should wages be geared to the cost of living?"

Mr. NIXON. I think that the gearing of wages to the cost-of-living index has, of course, obvious appeal because it puts it in terms of the need of the workers rather than in terms of productivity. On the other hand, I think we also have to recognize that, over a long period of time, wages must also be geared to increases in productivity as well as what may be the increase in the cost-of-living index.

Now, as far as the guaranteed annual wage is concerned, I think it's been very constructive that many enlightened firms throughout the country are now moving toward that objective as well, and certainly it is an objective to which, I think, both labor and management should strive.

MEDICAL AID TO AGED

"Why does Mr. NIXON prefer the administration bill dealing with medical care for older people to the Forand bill?"

Mr. NIXON. I have several reasons: One, because the administration bill covers all of those who need the coverage—are over 65—and the Forand bill does not. The Forand bill covers only those over 65 who happen to have social security. It provides no coverage whatever for 4.5 million people who aren't on social security, and those are among those who need it the most.

The second reason I favor the administration bill is because it is voluntary in its character. It forces nobody to have health insurance against his will, whereas the Forand bill is compulsory in character. All those on social security are brought in under the system.

A third point that I would make is that the administration bill, leaving as it does this choice in the people over 65 to buy private group insurance if they want or to buy no insurance whatever, I think is more consistent with our ultimate objective of keeping the medical profession—which at the present time provides the best medical care in the world for the American people—of keeping it free of Federal control.

AGRICULTURE AND MR. BENSON

"What about Ezra Taft Benson as Secretary of Agriculture?"

Mr. NIXON. I think that Secretary Benson has been as dedicated a man in working for the interests of the farmers as he saw it as any Secretary we've ever had. I can say that—I think Secretary Benson's critics would agree with that.

As far as the success of the Secretary in getting his program through is concerned, it is here that he has had his difficulty * * * and, at the present time, we are still saddled with a program which all agree is not in the best interest of the farmer or the American people.

"The Vice President was asked about his own farm program."

Mr. NIXON. Well, this is not the time to announce it. I say, first of all, that the Congress has in its committees at the present time a message from the President giving the Congress a great deal of discretion in this area of the farm program, indicating what the President would favor, but also indicating that, within certain guidelines, the President would sign a bill which did not conform with his specific recommendations.

If the Congress fails to act on this bill, I believe that it is then the responsibility of both candidates for the Presidency to present to the American people farm programs which will break the present stalemate.

CIVIL RIGHTS AND DESEGREGATION

"What about the lunchcounter sit-in strikes in the South?"

Mr. NIXON. I would say that these strikes should not be looked at as primarily constituting a legal problem. * * * To me, the problem is not legal. The problem is essentially moral. * * *

Now, what does this mean? Since it is a moral problem, it means that we've got to develop leadership from the very highest level down through the community level which will deal with the problem. * * *

Let me say this—I think it (the strike movement) is very understandable. I think, on the other hand, that we must recognize that the Negroes and others concerned about making progress in this field do avoid, and should avoid, when they can, activities which could prove to be counterproductive—counterproductive by going to extremes, which might set the cause back.

"Is Mr. NIXON satisfied with the civil-rights bill passed recently by Congress?"

Mr. NIXON. The administration favored a bill that would have contained one specific provision that I felt very deeply about, and that the Congress rejected. And that was the one that would have given statutory authority to the committee on equality of opportunity on jobs involving Government contracts. This provision was included in the administration bill, and the Congress rejected it. In addition to that, there was another provision in the administration bill dealing with the matter of schools on Government property, involving this area in which the administration did not get the provision it wanted from the Congress.

But I would say that, as far as the bill which was passed was concerned, that it was a historic bill of great importance, and it was as important a bill as it was and effective as it was because the Attorney General developed the voting-referee proposal which will provide a historic breakthrough in voting rights for Negroes, provided they move in key States—and I mean the Negroes themselves—move in key States to assert those rights.

AID TO DEPRESSED AREAS

"What about the President's veto of a bill to provide Federal aid for depressed areas?"

Mr. NIXON. The difficulty with the bill was that it was a very bad method for meeting an urgent need, and would not, unfortunately, have provided as much and as effective aid to the real distressed areas of West Virginia—western Pennsylvania particularly—that the administration bill would have provided.

This is clearly apart from the cost. The difference in cost was 50 million for the Eisenhower bill—the Eisenhower administration's bill—and approximately 250 million for this one. The difficulty with this bill is that it included a number of areas in this country—because of a very bad and weak standard of what a depressed area was—that would have made it a political grab bag, in effect, rather than, again, using the rifle to deal with the specific problems.

May I say that there is a real problem in these distressed areas and it has not been met, but the Congress can meet it by passing the bill that the President sent down, or one closer to it than the one they did pass. And I hope they do.

POLITICS AND THE PRESIDENTIAL CAMPAIGN

"Why is the Republican Party the minority party in this country?"

Mr. NIXON. Because the Republican Party has not effectively identified itself with the policies of this administration, and because the Republican Party, in addition, I think, has failed at the local and State level, in many instances, to develop the organization and the attractive candidates that are needed in this 20th century when politics has become a science—although many could call it much worse names.

"Is there any validity to the description of the Republican Party as the party of 'big business'?"

Mr. NIXON. I would say that no administration has a more effective record in the field of antitrust enforcement than this administration, which indicates that our interest is not in big business or little business but in good business—good, competitive, American business.

And may I say that, as far as business is concerned—just as I feel about labor—that I feel that any administration should not be either antibusiness or antilabor. You should be "pro" good business, "pro" good labor, and "anti" bad business, and "anti" bad labor.

"About Mr. NIXON's campaign methods in the past—would he change those methods?"

Mr. NIXON. Every man obviously changes through the years, and I would not say, certainly, that, through the years, I have not made mistakes. But let me emphasize my philosophy with regard to politics generally.

I believe that, in campaigns, you must have hard-hitting discussion of the issues. I believe, also, that a candidate must expect his opponents to examine his record—as mine has been examined time and time again with a microscope—and he must expect to be attacked on his record—everything that he says, every vote that he has cast, every deed that might affect his conduct of the office. It's fair to discuss it, and discuss it vigorously and in a way that will bring it home to the people. Now, I would say that, when we get into personalities, there is where the line should be drawn.

"What about Governor Rockefeller as Republican nominee for Vice President?"

Mr. NIXON. Well, let me say first of all that the agreements that Governor Rockefeller and I have far outweigh the disagreements—and, as far as foreign policy is concerned, that is particularly the case. * * *

Now, what you have raised, of course, is a hypothetical question, because Governor Rockefeller has indicated that (1) he does not want the nomination for Vice President, and (2) he has said that he will not attend the Republican Convention.

May I say that I think that that statement on his part is one which is responsible and a proper statement. * * * So I think this decision by the Governor is one that should be respected. * * *

"If Senator Kennedy is the Democratic choice for the Presidency, will it be a political necessity for the Republican Party to nominate a Catholic as Vice President?"

Mr. NIXON. I would say that ticket balancing of that type, for that reason, would be such an obviously cynical act that it would be resented, and properly so, by people throughout the country. It happens that there are people of the Catholic faith in our party who are eminently qualified, may I say, to serve in the highest offices in this country. But those people, if they are to be considered, should be considered on their merits and not on the basis simply of balancing the ticket because the other party might have selected somebody of that faith.

An Index to Conservatives

EXTENSION OF REMARKS

OF

HON. JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Thursday, June 16, 1960

Mr. WILLIAMS of Delaware. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial which appeared in the Richmond News Leader on Tuesday, May 31, 1960, entitled "An Index to Conservatives."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AN INDEX TO CONSERVATIVES

In the course of the past 8 or 10 years, many of us in the pundit business have fallen into errors of political hypothesis that now are happily subject to some revision and correction. An Index has just come to hand, prepared by Americans for Constitutional Action, that provides for the first time a truly significant insight into the political philosophy of Members of Congress.

One of the errors we had come to accept was an impression that there really isn't much difference between Democrats and Republicans. There is in fact a great difference, capable of being objectively measured. Our thinking on this score will have to be sharply recast.

We also had imagined that Senators KENNEDY, HUMPHREY, and SYMINGTON were like Winken, Blinken and Nod, all identically at sea in the same Liberal boat; and we had supposed that LYNDON JOHNSON was, relatively speaking, considerably more conservative than the others. It isn't so. On the ACA Index, KENNEDY scores 11, JOHNSON 10, SYMINGTON 4, and HUMPHREY 1. These compare with an index of 92 for Senator BYRD. On 38 key questions on which both JOHNSON and BYRD voted, they voted alike four times only.

This index, published by Human Events at 408 First Street SE., in Washington, is a remarkable labor in behalf of political understanding. The ACA editors began by studying 963 votes in the Senate between 1955 and 1959, and 280 votes in the House between 1957 and 1959. After prolonged study, they reduced this mass of material to 77 Senate votes and 40 House votes that seemed to offer clear-cut questions of a conservative point of view as opposed to a liberal point of view.

Doubtless no two political observers would agree that these 117 Senate and House votes are the exact 117 that should have been chosen for a study of this sort. Reasonably minded men, regarding themselves as conservatives, might well object to the minus charged against their spokesmen on a few issues. But in a study as large in scope as this one, such objections cancel out. In broad outline, the ACA's dispassionate brush paints a picture too clear to be denied. And the index is just as valuable, of course, in rating liberals as in rating conservatives; the percentages need only to be turned upside down.

One popular impression is abundantly supported by the ACA's study: The South is indeed a bulwark of conservatism. Of the 15 most conservative Democrats in the Senate, 13 are from the South; the others are LAUSCHE of Ohio, with a rating of 81, and FREAR of Delaware, who scores 62. But Republicans, as a group, are far more conservative than even the southerners, as a group. The most liberal Republican is COOPER, of Kentucky, who nevertheless scores 27 on the ACA Index; no fewer than 44 Democrats are more liberal than he.

Substantially the same picture obtains in the House. If it were not for their unfortunate predilection for accepting Federal handouts, southern Representatives would rank up top on the conservative index. When it comes to questions of States rights, individual liberty, private property, and sound money, southern Democrats scarcely can be

distinguished from typical stanch Republicans.

Among Virginians in the House, Congressman POFF, Republican, of the Sixth District, is the most consistent conservative, with a rating of 98. His 10th District colleague, Mr. BROYHILL, Republican, is in second place with 86. Then come the State's eight Democratic Representatives, led by Richmond's J. VAUGHAN GARY, at 78; others are TUCK 77, HARRISON 75, ABBITT 75, SMITH 73, DOWNING 47, HARDY 45, and JENNINGS 25. Remarkably, New York's Congressman, ADAM CLAYTON POWELL rates 32.

The ACA study helps to clarify the dilemma that faces southerners in terms of the presidential election. Every one of the potential Democratic candidates appraised in this study is, on the record, a liberal. Messrs. KENNEDY, JOHNSON, HUMPHREY, and SYMINGTON have almost nothing in common with their southern colleagues; they share a party label, that is all. If an opportunity were presented for southerners to vote their political convictions (as these convictions are represented by their own Congressmen), southerners would support BARRY GOLDWATER, of Arizona (98); or JOHN WILLIAMS, of Delaware (99); or BRIDGES, of New Hampshire (92). Trouble is, GOLDWATER, WILLIAMS, and BRIDGES bear the label of "Republicans."

These gentlemen are, of course, conservatives, and if the Republic ever comes to its political senses, we will choose up sides all over again so that the national political weight reflected in 30 Republican Senators and 14 Democratic Senators, each with an ACA rating of 40 or better, could be put to more effective use.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

The Crisis of the "Golden Sixties"

EXTENSION OF REMARKS
OF

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, June 17, 1960

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that an address I delivered before the 21st general convention of the System Federation No. 41 of the Chesapeake & Ohio Railway on Wednesday, June 15, 1960, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE CRISIS OF THE "GOLDEN SIXTIES"

I appreciate the honor of being with you here this morning. I appreciate the opportunity, too, of being able to discuss with you some of the major issues facing America today.

You undoubtedly remember that on January 1 of this year the newspapers were full of predictions that we were entering what they called the "golden sixties"—that this decade was one of glorious promise for the people of the United States. Less than 6 months have passed. But I wonder how many Americans are finding things so golden right now. Our position in world affairs is more precarious and more dangerous than it has been since the days of Korea. Here at home the problems of unemployment, the welfare of our aged, the education of our children, and other problems equally pressing, are going unsolved.

You have a right—and a duty—to ask why this is so. The answer is that we have a Government in Washington that, in the down-to-earth phrase coined nearly five centuries ago, is following a penny wise pound foolish approach to America's problems. To save a dollar today it is sacrificing America's promise for the future. It is sacrificing our most important resource—the strength and well-being of our people.

As a Senator, and as a member of the Democratic Party, I am disturbed by this. I can assure you that I and many of my colleagues on Capitol Hill are trying hard to do something about it. As you know, constructive action has been difficult because of the ever-present threat of—and the use of—the Presidential veto.

This is a time of crisis for America, both at home and abroad. The issue is not just how to get a chicken in every pot, but how we are going to win the struggle for survival.

There can be no question, the peace issue is predominant. No sane man, regardless of party, advocates the horrors of war. But peace cannot be secured through wishful thinking.

Last December the Democratic Advisory Committee issued its own "State of the Union" message for 1960, in which it observed: "The legitimate debate is not over ends but mesans—the policies which will produce the conditions most likely to secure the just and lasting peace which all Americans seek. The record of the Republican administration in foreign policy reveals erratic policy switches which have sadly damaged America's strength and prestige."

"Our foreign policy," the message continued, "should be far more than slogans, speeches and reassurances. Our foreign policy is basically a matter of our national strength, our national effort and our national will and ideals of human justice."

The conduct of our foreign policy is constitutionally vested in the hands of the executive branch of Government. There is little Congress can do to forestall the blunders. We can, however, urge, investigate and otherwise endeavor to persuade the President to conduct a responsible foreign policy.

I believe the leadership of my party is to be commended for its own responsible attitude and actions on foreign policy questions. It has urged the administration not to rely only on good-will trips, summit conferences and dollars to pave the road to peace. All of these things have their place. But, singly or collectively, they are not a substitute for a well-thought-out, well-executed foreign policy.

Whether we like it or not, the state of our defenses is a basic consideration in determining our position in the world today. Soviet strides in missiles and their successes with space satellites and moon shots have convinced nearly everyone that we should take a close look into how our defense money is being spent—everyone, that is, except the administration. But the Democrats in Washington are asking some searching questions, and the answers have not always been so satisfactory. It is, in fact, because of Democratic action in Congress that our defense posture is as good as it it.

I believe with Mr. Eisenhower that God is on the side of right. But I also believe that God helps those who help themselves. We cannot afford to let our military forces deteriorate while Mr. Khrushchev gloats. We need strength to match strength.

Even on the domestic front we are lagging behind. Look at education. The experts are warning that our children are not getting an education they will some day need to lead our country in its competition with the Russians. There are not enough classrooms. Teachers are underpaid. In higher education, we shall need in the next 10 years a number of new buildings equal to the total number built in the last 200 years. If we are going to meet these needs, the Federal Government must act. Many of us in Congress have long waged a vigorous battle for appropriate legislation. Right now we are fighting, and fighting hard, to get through a bill to aid in school construction.

The administration has finally come around to sponsoring a proposal, too. But this proposal, calling for expenditures carried out over a long period of years instead of meeting costs now, would in the long run be unnecessarily expensive and would still fail to meet the need. It is another example of the penny wise pound foolish attitude which is sapping the strength of our country.

A Presidential veto may be in the offing. But short of that, I promise you we are going to have this school issue resolved before Congress adjourns. We need more and better schools for our children—and we are going to have them.

One of the most serious problems confronting this country is that of creeping unemployment. I have heard a great deal from administration spokesmen about the dangers of creeping inflation. I, for one, certainly do not minimize the problems caused by the rising cost of living. But we rarely hear a word from the administration about the problem caused by rising unemployment. According to the statisticians, 2 years have passed since the start of the recovery from the disastrous 1958 recession. But there are a lot of people around here who do not know that the recession is over, and the economists are already talking about the beginning of the next one.

The facts are blatantly clear, and no amount of hiding can minimize their impact. Unemployment is a growing problem. We have had three recessions since the end of World War II. After the first recession, unemployment dropped nationally to a 3 percent level; after the second recession unemployment remained at the 4 percent level. And now at least 5 percent of the working people of the Nation remain unemployed.

It is little consolation for the unemployed to know that we have reached a half-billion dollar economy. Certainly this is a great achievement, but it does not make hunger and suffering any easier to bear.

All kinds of excuses have been made for the persistence of unemployment. At first it was blamed on the steel strike. When the steel strike was over, the blame was placed on the snow and the rain. Now that summer is here and the snow has melted all we hear is the expression of hope that by and by it will all be better.

Meanwhile, the economy is operating way below capacity, the average duration of unemployment continues to rise, and the number of depressed areas is increasing. We have been warned by leading economists that if our rate of economic growth is not stepped up, we face the prospect of being outstripped by the Soviet Union.

And the administration refuses to do anything. Its only preoccupation seems to be to gather a budget surplus. But I say to you that inaction is the best way to get a budget deficit.

If this were a time for niceties, I would hesitate to say this. But we cannot afford the luxury of smiling pleasantries. I must say that the present administration reminds me of the old Bourbon king: "After me the deluge." Instead of offering a positive program to meet the needs of America, the administration is satisfied with the slogan of "one-third and one." As we have been reminded, this is all that is needed in order to sustain the vetoes of the positive program that the majority party is trying to enact in the present Congress.

Take, for example, the presidential veto stopping aid to depressed areas. To the administration this legislation, so vital to America and to my State of West Virginia, is a squandering of money. This was the excuse given in the veto message.

I find this incredible. The President can talk all day about the necessity of giving aid to underdeveloped and needy areas abroad. This will strengthen democracy, he says. Well, I say it is high time we started strengthening our own democracy here at home.

We have more than a hundred communities in the United States, some of the worst ones being in my own State, which are suffering from chronic and persistent unemployment. In some of these areas unemployment has reached depression proportions.

There are no labor shortage areas anywhere within the United States where these unemployed can migrate and find jobs. Your neighbors can tell you this. The only solution, then, is to try to create additional jobs and bring them to these communities. This is what the depressed areas bill would have achieved. Its major aim was to establish credit funds at reasonable rates of interest to encourage expanding business to locate in depressed areas. The bill would have helped to improve the public facilities in these communities to make them more attractive to new industry. It would also have provided for the retraining of workers, and in some cases it would have paid workers who have exhausted unemployment insurance subsistence payments while they would be undergoing these periods of training.

This, it seems to me, is a constructive approach to some important economic problems, not a wasteful one. Nothing, in fact, could be more wasteful than losing the productivity of a good part of our working force. But the administration has spoken. And there are not enough votes to override the veto.

One major piece of legislation which we were able to get through during the last session of Congress was an amendment to the Railroad Retirement and Unemployment Insurance Acts. The most important part of this legislation was that it increased retirement and survivor benefits in general by about 10 percent. This is a measure that is of enormous importance to the country and to my State of West Virginia. In 1958–1959 a total of more than $1 billion in benefit payments was paid to people throughout the country. The amount for West Virginia was more than $22 million. Because of this legislation, the amount for the future should be even greater.

But I know, and you know, that this does not solve the problems of the railroad employee. Total employment on American railroads has dropped sharply since World War II. Only 2 years have not seen a decline. In 1956, employment on class 1 railroads averaged just over 1 million; in 1957 it dropped to 985,000; in the recession year of 1958 it dropped further to 840,000. Railway employment declined throughout 1959, and averaged just 816,000 for the year. The November 1959 railway employment figure of 783,995 was the lowest monthly figure in this century.

The Railway Labor Executives' Association has backed a number of proposals which should help to relieve the crisis. One of these is the Passenger Train Service Act of 1960, which would require the railroads, as part of their public responsibility, "to provide reasonably frequent, safe, clean, and convenient passenger service" and to make every reasonable effort to serve the public adequately in their passenger train operations. This legislation, railroad labor believes, would not prevent the elimination of unneeded passenger services, but it would protect the public from the wholesale abandonment of passenger trains even though these trains are still needed to meet our country's transportation requirements.

Other bills of importance to railroad employees are the railroad accident reports bill, the railroad track motor car safety bill, and the railroad track and bridge safety inspection bill. These bills, and others, represent the responsible way in which the railroad employees are trying to improve railroad operation.

The railroad workers, the Democratic Party, and labor in general have joined forces in trying to get through a medical insurance program for the aged. We all know that the problem of how to finance medical care is a critical—almost impossible one—for most of our 16 million citizens age 65 and over. There has been a lot of delay in meeting the issues, but the Democratic leadership in the House and Senate is working hard to resolve them.

Time is running out, and I have not yet had the opportunity to discuss a lot of issues which our Democrats in Congress have been trying to solve. Let me mention some of them briefly.

There is a crying need for a realistic urban redevelopment and public facilities program. Congress enacted excellent legislation in these areas last year, but two vetoes forced the Congress to trim down the program and settle on one which is less adequate. The antipollution bill passed by Congress was also vetoed. Thus our cities continue to decay and our rivers and streams remain polluted.

A lot of us have been asking the administration to undertake studies which would help solve some basic economic problems. Automation, one of our greatest blessings and greatest curses, has created terrible problems in many areas. I myself have strongly urged the creation of a Coal Research and Development Commission, which would have opened new vistas for the use of our important coal resources. A bill which would have done this was vetoed last year.

This Congress is not yet over. If I have painted a black picture, I join you in hoping that it will be brightened before Congress adjourns. I can assure you that I and my colleagues are doing everything we can to push through positive legislation.

What the Democratic Party has stood for during this Congress can be summarized in the famous words spoken by Franklin Delano Roosevelt, at a time when America was still fighting its way out of the throes of the great depression. You know these words, but I hope you will bear with me while I recall them now. The President was discussing the differences between the Democratic, or liberal party, and the conservatives, and he said:

"One great difference which has characterized this division has been that the liberal party—no matter what its particular name was at the time—believed in the wisdom and the efficacy of the will of the great majority of the people, as distinguished from the judgment of a small minority. • • • The other great difference between the two parties has been this: The liberal party is a party which believes that, as new conditions and problems arise beyond the power of men and women to meet as individuals, it becomes the duty of the Government itself to find new remedies with which to meet them. The liberal party insists that the Government has the definite duty to use all its power and resources to meet new social problems with new social controls—to insure to the average person the right to his own economic and political life, liberty, and to the pursuit of happiness."

Salary Increases for Postal and Other Federal Employees

SPEECH
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 15, 1960

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 9883) to adjust the rates of basic compensation for certain officers and employees of the Federal Government, and for other purposes.

Mr. ROOSEVELT. Mr. Chairman, I add my voice to those who have spoken in support of H.R. 9883, which would bring a long needed and necessary pay increase to postal and other Federal employees.

I also take this occasion to commend most sincerely the sponsor of this bill, the gentleman from Louisiana [Mr. MORRISON], and those members of the House Committee on Post Office and Civil Service for their effective work in achieving a breakthrough in a most important area of legislation.

As a cosponsor of the Morrison proposal and as a signer of the discharge petition, I join those who point out that a reasonable increase of 9 percent is preferable to that of 7½ percent. However, although the facts are not on the side of the administration, I certainly realize that the original increase of 9 percent would without doubt incur a Presidential veto.

Additionally, I realize that the amendment calling for a 7½-percent increase should make the bill less vulnerable to a Presidential veto. This amendment has been offered in good faith by reasonable men so that such Presidential action may be stayed, and that the issue may be clarified should a veto unhappily occur.

It may well be that the administration will not assume its responsibility in approving the amended bill. I do not think this possibility should deter us from approval of the bill. Our responsibility is to act affirmatively since we must not lose sight of the fact that the provisions of H.R. 9883 are needed and needed now.

It would be "carrying coals to Newcastle" to repeat the extensive documentation, made in committee and on this floor during discussion of the sum and substance of the issue, on the practical need to improve the wage standard of our postal and other Federal employees, and the economic feasibility of doing it at this time.

I not only urge passage of this bill, but I urge that it pass so overwhelmingly—in both Houses—that a Presidential veto, if still forthcoming—can be readily overridden, as it should be.

Mr. Chairman, I would hope that the President would like to see the employees of the U.S. Government on a wage level in line with that prevailing in private industry. I would also hope that he join with the supporters of the increase in realizing that the wage structure of our Federal Government is closely related to the maintenance and attraction of competent personnel. This is sound budget thinking.

Our duty in Congress is clear. Let the record show that the duty of the administration is also clear.

Portsmouth Naval Shipyard New Control System Under Attack by Technicians

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Friday, June 17, 1960

Mr. BRIDGES. Mr. President, the Department of the Navy, by a directive issued last October which is now being implemented, proposed a basic reorgani-

zation of production planning and control for the country's 11 naval shipyards. Whereas we all desire and constantly seek more efficiency and economy in Government, considerable question has been raised as to whether or not the hoped for savings will be realized by the new control plan. Mr. President, there has been little discussion on this subject and, for that reason, I ask unanimous consent to have printed in the Appendix of the RECORD an article appearing in the June 7, 1960, edition of the Concord, N.H., Daily Monitor by its Washington correspondent, Lawrence Fernsworth. This article is one of the best informed discussions of the pros and cons of the control plan and should be helpful to all who have the plan under consideration.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PORTSMOUTH NEW CONTROL SYSTEM UNDER ATTACK BY TECHNICIANS

(By Lawrence Fernsworth)

WASHINGTON, June 7.—The top technical personnel at Portsmouth Naval Shipyard are seriously concerned over a new production planning and control "guideline," issued by the Navy which they say will create chaos at the yard, lower its efficiency and result in the loss of 450 to 600 jobs.

The question was threshed out in Washington a few days ago at a conference participated in by yard technicians, Bureau of Ships officials, Senator BRIDGES and COTTON, Representative CHESTER E. MERROW, Senators MARGARET SMITH and EDMUND MUSKIE of Maine, Senator SALTONSTALL of Massachusetts, and other Members of Congress from Maine and Massachusetts.

The Navy directive, issued last November and now being implemented in the country's 11 naval shipyards, is a basic reorganization of production planning and control. The Bureau of Ships asserts that it is made in the interests of economy and of the increased production of ships. The Bureau estimates it will save about $9 million.

WANT REVERSAL

The civilian technical personnel, including supervisory analysts and schedulers, supervisors, and other technicians, assert it will work out in the reverse order and at the same time strike a serious blow at shop morale.

Among the things it will do, they say, is to eliminate shop level planning, disestablish supporting shops and farm out to private industry work now done at the yard shops.

They also fear that it will mean the downgrading and easing out of many civilian technicians in favor of replacing them with naval officers.

The Portsmouth Naval Shop Analysts and Schedulers' Association, in a review of the directive and its effects, stated:

"Among other things the directive authorizes the establishment of a production engineering division headed by the production officer.

"It also authorizes the transfer of the analyst function of shop level planning to the shopping and estimating division, which abolishes the rating of shop analyst and scheduler. The planning functions remaining in the shop office will be accomplished by the shop planner."

The association also says that last December, "foreseeing the chaos that would be created" by implementing the directive, it approached the Bureau of Ships to ask for a reconsideration, with negative results.

At the Washington conference, just held, attended by Rear Adm. R. K. James, Chief of the Bureau of Ships, and others of his staff, the naval group showed small inclination to revise their directive.

PRAISED BY BRIDGES

Senator BRIDGES pointed out that the Portsmouth yard was one of the best in the country and cautioned the naval men to go slow about putting their directive into force. He wanted to be satisfied that a real and substantial economy was involved, and that there would be no downgrading of the establishment.

"We will need to build many more ships in the future, including nuclear-powered submarines and Polaris-type ships," he said. "It will never do to allow the Portsmouth yard to become unprepared for such tasks. It is now eminently fitted by equipment, experience, and personnel training to do such things."

One of the points brought out by Thomas J. McLin, president of the Supervisory Analysts & Schedulers Association, is that the Electric Boat Co., which has become the biggest private shipyard engaged in nuclear submarine and other naval construction, has recently adopted the very kind of planning system which the Navy seeks to replace in its own yards.

John Devereaux, president of the Analysts & Schedulers Association said that all employee groups in all naval shipyards were in accord with a statement in which the Chief of the Bureau of Ships said:

"Production planning and control must work if the naval shipyards are to have any place in the future building of ships. It must work if we are going to be able, without present funds, to build more ships. I sincerely believe that unless we are able to get more ships with the dollars we are granted, we will have a second-class Navy within the next decade, which, to my mind, means we will be on the road to becoming a second-class nation."

CALLED EFFECTIVE

The Portsmouth analysts and schedulers told the naval men that the existing production planning and control system was "an effective tool which, if properly and sensibly applied, provided the leading man with a complete work package, suitable for assignment to the productive worker. In addition it provided the naval shipyards with a tool by which cost could be controlled."

By contrast, they said, the new instructions, "when fully implemented, will destroy most of the gains made during the last 10 years in production planning; the control also will be lost.

"Planners and estimators, whether former mechanics, analysts or supervisors, because of their physical and mental detchment from the shops, cannot efficiently plan jobs suitable for assignment to the productive worker."

The stand taken by the Portsmouth groups is backed by the National Association of Naval Shop Analysts & Schedulers; the Association of Supervisors, Department of Defense; the East Coast Metal Trades Council.

Maurice J. Murphy, Governor Powell's administrative assistant, also attended the conference.

Among other Congressmen present were EDITH NOURSE ROGERS, THOMAS J. LANE, and WILLIAM H. BATES, of Massachusetts, and JAMES C. OLIVER and FRANK M. COFFIN, of Maine.

Others in the Portsmouth group representing variously analysts, schedulers, quartermen, and leadermen, and personnel advisers, were: Wilfred G. Arnold, Roger C. King, George Pope, William Connell, Fred DeRochemont, Harold Rollins, Edward Duffy, Kenneth Robertson, Tom Van Arsdale, and Attorney Donald Murtha.

Ed Pauley Addresses Graduating Class at University of Santa Clara

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Friday, June 17, 1960

Mr. ENGLE. Mr. President, I take pleasure in bringing to the attention of my colleagues an address by Mr. Edwin W. Pauley at the recent commencement exercises of the University of Santa Clara. Mr. Pauley is a well-known California industrialist and public figure, and a member of the University of California's board of regents.

In his address Mr. Pauley wisely observed that "America's educational responsibility to a free world, in the face of the challenge of communism—is not limited just to the fields of international politics or the race for space. It also involves—and perhaps more importantly—competition for men's minds."

I ask unanimous consent to have the full text of Mr. Pauley's speech be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

COMMENCEMENT ADDRESS AT UNIVERSITY OF SANTA CLARA BY EDWIN W. PAULEY, LOS ANGELES, MEMBER OF BOARD OF REGENTS, UNIVERSITY OF CALIFORNIA, JUNE 4, 1960

Your Excellency, Very Reverend Father Rector, Right Reverend and Very Reverend Monsignori, members of the board of trustees, faculty, honored guests, members of the graduating class, their families and friends, let me say, simply and sincerely, that I am deeply grateful—grateful for that most generous introduction—grateful to Santa Clara University for its honorary degree. I am proud to be one of your adopted sons. As I join you in your 109th commencement I am beginning to feel that I and my alma mater—the University of California—are indeed Johnnies-come-lately on the scene of California education. As I looked into the record, I found that your institution can—in a fashion—trace its roots back to a technological school founded by the Franciscan Fathers in 1777. Then, I looked at your Jesuit faculty and found that they are in their fifth century in the business of education—with experience on five continents and in 74 countries.

My dear graduates, a number of semesters have gone by since my own college days, but I feel rather close to you at this commencement because in the past few years I have returned to university work. This time it has not been as a student in the strict sense of the word—however, as I think of it I have been a student; a student in a rather strange school. And I have been learning lessons something like this Jesuit University has been teaching you. It has been my privilege these past few years to serve as a member and as chairman of the board of regents of the University of California. My experience in the school of university administration has been instructive and challenging. Today I should like to compare notes and review with you some of the lessons I have learned as a regent. But what interests you and me most, and all the friends of Santa Clara, is the challenge of the future.

The challenge of the future confronts Santa Clara, the University of California

and every single other college and university in the State. California's exploding population has produced a crisis in higher education which we all must accept and work out together. The University of California is considering the Santa Clara-Santa Cruz Counties area as the location of one of its new major campuses; consequently, I am happy indeed to be welcomed at Santa Clara as a guest and teammate rather than as a potential competitor in the business of education. There is a massive job to be done and I am very happy to have the Jesuits on our team. The problem which forces the University of California into further expansion is one that can never be met by public education alone. It demands the combined and enthusiastic efforts of all higher educational institutions in the State. And be sure, this means private as well as public schools. The population of the United States is not only growing but on the go, and to me it seems as if everybody is moving to California. This, plus our own steadily increasing birth rate, is confronting us with more and more young men and women wanting a college education. Without carefully planned expansion of physical facilities and of teaching staffs at strategic points throughout the State, every collegiate-level school will be under serious pressure, and the quality of the education it offers will be directly impaired.

But we cannot think solely of the reputations of our educational insttiutions, or even of the personal benefit which each individual should achieve from a college education. We must also think of the solid growth and development of California and the entire West. The future of civilization will be shaped not by growth in population alone, but by what is done to create new opportunities through the best training that we can provide. It is basic in our concept of higher education that every youth should be able to get an education up to his capacity. With this as the norm, the massiveness of the problem, the complexity of the solution and the astronomical cost of any adequate solution are obvious.

Recent events such as the U–2 plane incident and the collapse of the summit conference make us ever mindful of the seriousness of the Communist menace and the critical world situation which confronts the graduates of this day.

We should remember though, that when we as Americans condemn actions of the Soviets—we should make it clear that we are condemning Soviet communism and certainly not all Russian people. I've been behind the Iron Curtain and visited with the Russian people. I know first hand that there are countless Russians—many of them Orthodox Catholics—who are hoping for the day when they can live and worship without restriction and fear. We must never do anything that would prompt these unfortunate peoples behind the Iron Curtain to give up hope for a future life of freedom and dignity.

This leads me to another major point—that of America's educational responsibility to a free world in the face of the challenge of communism. This challenge is not limited just to the fields of international politics or the race for space. It also involves—and perhaps more importantly—competition for men's minds.

That is why it is so vital that we plan today to meet the educational requirements of the future. Because the future will be shaped by those who best train and prepare their young people.

This is an area in which the Jesuits have long excelled.

Your own university is a good example of a truly outstanding liberal arts institution. But the Jesuits are also experts in the scientific and technological areas.

In the field of research, the Jesuits have been particularly conspicuous—especially in astronomy and geophysics. As "space technologists" several Jesuits have distinguished themselves. In the United States alone, the seismological stations at Georgetown, St. Louis, Fordham, Cleveland, and Weston College have contributed much to world knowledge and understanding of earthquakes. The recent events in Chile are evidence that we still have a lot to learn in this area. In meteorology, the observations and inventions of Father Algue were of invaluable service in forecasting typhoons and hurricanes in the Philippines and the West Indies.

Jesuits have also distinguished themselves in physics, psychology, and biology.

It is obvious with this background, the Jesuits are well prepared to do their part in meeting the educational challenges of the space age.

The staggering task of providing sufficient educational opportunities for our young people in the years to come will certainly require maximum cooperation and teamwork of all public and private institutions.

The University of California alone will have to take care of 100,000 young men and women by the year 1970. That is more than twice the youths we are educating now. With that in mind, the State legislature in 1959 passed a resolution requesting the State board of education and the regents of the University of California to review the situation and submit a master plan for higher education in California. The State board and the regents recognizing, as I have already indicated, that the future of higher education in California is as much a concern of the private colleges and universities as it is of public education, created a master plan survey team. President Arthur G. Coons of Occidental College was named chairman, with Vice Provost Robert G. Wert of Stanford University and Father Charles Casassa of Loyola University at Los Angeles representing independent colleges and universities.

In brief, the master plan survey showed that California's present population of 15 million persons will be increased to at least 25 million by 1975 and more than 45 million by the year 2000.

The effect of this population explosion on our school systems is staggering. It means that public and private colleges and universities will be expected to expand their combined enrollments from 225,000 to at least 661,000 students in 1975 alone.

Perhaps I should apologize to the graduating class of 1960 for introducing such a worrisome topic into this traditionally happy day. However, I am sure that you must know there is a silver lining in this dark cloud. You may count yourself fortunate in having had less competition in your struggle for a degree than your younger brothers and sisters and your children may have when they knock at the doors of Santa Clara or any other major center of higher education.

I recently had an opportunity to hear the noted author and educator—C. Northcote Parkinson—author of "Parkinson's Law"—expound his latest whimsical extensions of that law in the field of economics. He was speaking to students at the University of California.

According to Mr. Parkinson, it seems we are now entering an age when each employed individual establishes what he should earn by adding up what he thinks he needs to spend. His budget will include funds for such necessities as a new wing on the house, an annual holiday in Europe, a flying saucer for the children and, of course, a rocketship for weekend trips to play on the moon, a fishing cruiser, a Cadillac convertible, and the like. Dr. Parkinson is reported to have said that, of course, no man will actually be worth the salary he will need to buy all of these things but that in the years ahead it will be impossible to live decently on what one is worth.

I have my serious doubts about this version of Parkinson's theory—but I hesitate to be too positive about it. I remember all too well that Jules Verne wrote "20,000 Leagues Under the Sea" nearly 100 years ago. It is quite possible that if Jules Verne were alive today he would see little to worry about—looking into the future—in the problem of educating ever-increasing thousands of young people in an ever more complex and demanding society. Quite possibly he would look at the problem with great interest and enthusiasm. Perhaps he would predict that television is the answer to improving communication between teachers and students.

While I make no pretense of being a Jules Verne, nor a C. Northcote Parkinson, I do hold the conviction that we will find through television an additional means of meeting our educational commitments of the future and that we can bridge whatever voids may exist in physical facilities.

I would like to refer to the recent activities of the University of California in the area of educational TV. As a result of past experimentation and testing as well as participation on NBC's early morning show, "Continental Classroom," we foresee a bright future for television in meeting the problems of rapidly increasing enrollments. Television offers offers the following:

1. Better utilization of faculty resources. Qualified faculty are becoming more difficult to find all the time. Consequently if one can lecture to 400 students at one time and do a good job by using television, it is obvious this is more efficient than making two lectures to 200 students at a time.

2. More efficient use of facilities. If we have an enrollment of 500 students in a course and a lecture hall which holds 400, we have to either cut down enrollment or use the same lecture hall twice. Television would enable us to handle the overflow by televising the lecture to another room.

3. Accelerate the education process. If 100 medical students can watch a patient at one time instead of having to do it in groups of five—we might decrease the time for a course which involved this type of activity.

4. Encourage the improvement of instructional quality in large classes. In large classes, the instruction might be improved in some lectures by providing better visibility via TV, by providing every student with a "front row seat."

Finally, and most important, through television we can make available to large numbers of students—the great scholars—our famous men of the arts and sciences. Students who might never have an opportunity to benefit from the teachings of men like your own Father Patrick Donohoe—Harvard's Nathan M. Pusey—Stanford's Wallace Sterling and California's Edward Teller—could have this exhilarating experience through television.

Just imagine the possibilities of such an arrangemene where the greatest teaching minds of our time are made available to students everywhere.

I must be the first to admit that educational television has some drawbacks. NBC's "Continental Classroom," for instance, appears at 6:30 in the morning. Now, that's awfully early for students under any circumstances, but especially to listen to a physics lecture by Dr. Teller. I've tried it a few times but usually ended up by going back to bed to pursue my morning newspaper.

Although I doubt if Dr. Teller's TV physics lectures attracted many students, I understand that they were extremely popular with college and high school physics instructors. These instructors found that televised lec-

tures by one of our foremost experts kept them up-to-date in a complex and rapidly changing field and helped them to do a better job with their own students.

During the past year, in conjunction with NBC's network show, the University of California's Extension Department offered a two-semester physics course for home study, taught by California's Prof. Harvey White. In the judgment of the instructors, performance of television students was equal to that of resident students.

Television is not the answer to all of our educational problems, but it is one of the many tools which may be applied in the process of finding an answer. The essential point is that we may need every tool we can find if the answer is to be the best that human ingenuity can devise.

One of the gravest dangers of this program of necessary educational expansion is the depersonalizing of the individual student; treating him as a number instead of a person; making him a function of the mass. You at Santa Clara will have an easier time of it than ourselves in this regard, with your manageable numbers matriculating each year. The best we can do in the University of California is to dedicate ourselves to making our university look and feel smaller. Neither of us, big or small, must let that concept of the person escape us or escape the individual student himself. This concept of the individual is the key to our American Constitution and Bill of Rights. It is at the center of our capitalistic system of economics. It is, I think, at the center of Christianity. And we must keep it at the center of our education, the purpose of which is to help each person to realize the full powers of his personality.

If there is one thing America needs even more than scientists today, it is men of integrated personalities, who can see life steadily and see it wholly; men who understand what is happening in the world; men who know enough about the past to understand the present. If Santa Clara and our other colleges and universities deliver such men of wisdom and vision, we may consider ourselves successful. If we do not we shall have failed. I have every confidence in success.

In concluding, I feel I have an obligation to warn you graduates of 1960 that these Jesuits who have been educating you for the past 4 years, are described in the dictionary as a crafty, scheming lot. Certainly it must have taken a lot of craft and scheming to establish 28 universities and colleges and 42 high schools in this country alone. And you might as well be warned that there are 35,000 of these crafty schemers abroad in the world, distributed over 74 countries. I think it might be safely said, even by a regent of the University of California, that the Jesuits are in education to stay and that California is certainly benefiting from the experience.

Finally, I commend to you graduates, a lively interest and continuing loyalty in a distinguished institution—the University of Santa Clara.

Thank you.

A Proposed Series of American Flag Stamps

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 23, 1960

Mr. DULSKI. Mr. Speaker, yesterday I introduced a bill, based upon a suggestion made by Mr. Carl P. Reuth, editor of Linn's Weekly Stamp News, which would provide for the continued issuance of the American flag series stamps on each July 4, subsequent to the 1960 flag issue—50-star—by the Post Office Department.

Since it appears that no more States will be added within the foreseeable future, I feel that this stamp series should be continued by honoring flags used since the beginning of our Nation, such as the following: National Flag, 1777; Bennington Flag, 1777; Navy Jack, 1775—Don't Tread on Me; Cambridge Flag, 1775; Continental Flag, 1775; Bunker Hill Flag; Pine Tree Flag, 1775; Taunton Flag, 1774; Gadsen Flag, 1775; Fort Moultrie Flag.

Stamps subsequent to July 4, 1970, would be issued as determined appropriate by the Postmaster General with the advice of the Citizens' Advisory Committee.

Portuguese Honor Basil Brewer With Pedro Francisco Decoration

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Friday, June 17, 1960

Mr. BRIDGES. Mr. President, one of the outstanding newspaper publishers of the country is Basil Brewer of New Bedford, Mass. He and his newspaper are known far and wide, beyond the limits of its normal circulation area, because of Mr. Brewer's outspoken policy of candor on the great issues of the day. Because of his outstanding work as a newspaper publisher and as a defender of minority groups, it was most fitting that he should recently have received the second annual Pedro Francisco Award from the Portuguese Continental Union of the United States, an organization of over 10,000 members of Portuguese descent.

Pedro Francisco will always be remembered for his service with Gen. George Washington's army, a service so distinguished that Washington described him as, "the greatest individual soldier of the Revolutionary War."

In making this award to Mr. Brewer, the Portuguese Continental Union of the United States has fittingly honored one of America's outstanding men. Mr. President, at this point in the body of the RECORD, I ask unanimous consent to have printed in the Appendix of the RECORD the account of the presentation as reported in the Standard Times of June 13, 1960.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PORTUGUESE HONOR BASIL BREWER WITH PEDRO FRANCISCO DECORATION—PUBLISHER IS ACCLAIMED BY U.S., LISBON LEADERS

(By Elmer Rodrigues)

Scaling a new pinnacle of honor in a long, distinguished career, Basil Brewer—"a stalwart patriot" and "a true friend"—yesterday was venerated and extolled as "the American who did the most last year to advance Portugal and the Purtuguese."

In a munificent display of gratitude and esteem, the Portuguese Continental Union of the United States—representing 10,000 members in six States—conferred the second annual Pedro Francisco Award and scroll on the publisher of the Standard-Times.

A cross-section audience of approximately 800 persons joined in the acclaim at a banquet in his honor at Lincoln Park.

CONVEY APPRECIATION

Numerous dignitaries in the business, political, and international government fields, clergymen, and plain citizens conveyed their appreciation with laudatory remarks and applause.

Mr. Brewer was selected for the honor by the Portuguese Continental Union, which is concerned with the health and welfare of Portuguese-Americans, for "encouraging Portugal, her culture and traditions" in this country.

Senator KENNEDY, Democrat, of Massachusetts, received the first annual award at a luncheon last July in Washington.

The award is named for the Portuguese soldier-hero who served with Gen. George Washington's Continental Army. Francisco is permanently enshrined in New Bedford with a square named for him at Weld and Purchase Streets; by statute the Governor of Massachusetts proclaims March 15 as Pedro Francisco Day annually.

PROPOSES STATUE

Audience response was enthusiastic when Mr. Brewer said, "May I suggest on this occasion that a statue be erected in Washington to that great American of Portuguese descent, whom General Washington described as 'the greatest individual soldier of the Revolutionary War,' Pedro Francisco."

The Portuguese Continental Union medal is described as the Cross of Christ, a red and white cross with the Portuguese escutcheon in the center.

Twice decorated by foreign governments—Portugal and Brazil—Mr. Brewer received a standing ovation when the medal was bestowed on him. Earlier, Senator SALTONSTALL, Republican, of Massachusetts, Representative JOSEPH W. MARTIN, JR., Republican, of Massachusetts, and HASTINGS KEITH, Republican, of Massachusetts, Portuguese consuls in four eastern cities and other dignitaries joined in lauding the publisher.

Attorney Joseph F. Francis of Fairhaven, renowned afterdinner speaker, was master of ceremonies and introduced the speakers and many guests.

Luis Gomes of New York City, supreme president of the Portuguese Continental Union, before draping the multicolor ribboned Pedro Francisco Cross of Christ Medal around the publisher's neck, observed:

"On the occasion of bestowing due homage to a great American, a journalist and renowned publisher—a man who through the columns of his newspaper, the Standard-Times, has time and again honored Portugal and her sons, residing in and serving this country, with extreme loyalty and deep gratitude, the Portuguese Continental Union adds another page to its resplendent history."

In fervent response, Mr. Brewer's remarks equated the tributes he received.

The publisher, in an analogy, described Browning's "two soul sides," saying that one he had attempted to show was the "hard, uncompromising position I chose against communism.

"The other (side) I choose to present to the Portuguese, present and not present, and to their leaders and their guests; for they have been so kind to me, and for so long, as today. I speak no word of Portuguese, but it was as if I looked into their hearts and they into mine almost from the beginning.

"Therefore, I present to the Portuguese, present and not present, to their leaders and

their guests, who have honored me in their name, the 'face of love' * * *"

Preceding the publisher's remarks, a formidable array of distinguished speakers, such as is hardly ever seen at Lincoln Park or other banquets here, extolled the virtues of Mr. Brewer, his works, and his services.

Senator SALTONSTALL commended the "high-spirited friendship for America and devotion to free world solidarity of Portuguese people at this time of stress and challenge."

The Senator characterized Mr. Brewer as "a stalwart patriot, a dedicated journalist, and a deep believer in the American way of life."

Expressing the appreciation of the Commonwealth for the publisher's dedication to civic progress, the Senator added, "The effects of Basil Brewer's persistent promotion of the social, economic, and industrial interests of New Bedford and Cape Cod long will be felt."

HONOR WELL DESERVED

Representative MARTIN told the gathering that "America needs men of the character of Basil Brewer, the kind that can stand up and be counted when the counting is good.

"This honor is well deserved. He is worthy of it. In the tense years ahead, when there might be doubts as to where America is going, as long as we have men like Basil Brewer the ship will be on an even keel."

Continuing, the veteran legislator said that "countless barriers will be pushed aside and we'll see new horizons with men like Basil Brewer. It's not in Washington, but men like him who make America great—great because the true American is building for a better community and stronger Nation in the villages and towns."

Saying the publisher had "molded an ethnic group in New Bedford" and referring to the major numerical strength of the Portuguese in the city, Mayor Lawler described Mr. Brewer further as "one of the leading, most valued citizens in the community.

"He has molded a vibrant force for the success of the community. His dispensing of news is given in the power of good, not evil, and unlike communism, which dispenses news in the spirit of hatred."

KEITH SPEAKS

Mr. Keith referred to the "outstanding service" the publisher has performed.

"He believes more than any other publisher in States rights and the rights of individuals," the Congressman declared.

Rabbi Bernard H. Ziskind of Tifereth Israel Synagogue described Mr. Brewer as "a craftsman of the written word. It is our prayer and hope that word and the power of the pen will continue. It is more powerful than the sword.

"That word has been spoken fearlessly and courageously on every issue," the rabbi added:

To the Portuguese, for honoring the publisher, Rabbi Ziskind gave praise for their "gifts and contribution. You have laid your offering on the altar of America, which appreciates your gifts—to the dream of America—making it the hope of the world."

BREWER DESCRIBES HEROES

Mr. Brewer bountifully illustrated the progress of civilization, by the deeds and heroic achievements of outstanding men. In sequence, he described some of those who set the pace of history—"direction signs in a confusing world"—from Francisco to Sergeant York, the American hero of World War I.

"What is the meaning of these stories of courage, of deathless devotion to duty?

"1. That all civilized nations, in defense of country, liberty, and duty, share in these moments which belong to history.

"2. That we here now and hereafter must rise to these heroic standards and be willing to follow in the footsteps of the great of the past if we wish to save our freedom and our civilization.

"3. That he who insists on being 'sure to win' is certain to lose; that the only certainty is that we had rather die than not be free."

CITIES DANGERS

The publisher examined the dangers of communism, alluding to his stand against the impossible coexistence with that "land of antifreedom and anti-God, the land of no return—and to all other enemies of our country and our liberty."

Referring to the indomitable determination of the Portuguese, Mr. Brewer observed that the country—in the 450th anniversary of its oversea possessions—has stated it will fight if necessary to retain them.

"In the face of this determination. Nehru has subsided and Communist China also stopped demanding the Portuguese leave Macao," Mr. Brewer noted.

"It has been said about Portugal, 'The Portuguese live in a little country, but they have had all the world in which to die.'

"This example of Portuguese fortitude is in sharp contrast with the supine yielding of their possessions by other European countries, only to have them taken over by communism. Personally, I would like our own country to say more, as we did at Quemoy and Matsu, 'Stop or we will fight,' which often is the best way to prevent war."

ETHEREAL QUALITY

After documenting the armipotence of Portugal in her world-girding discovery age, Mr. Brewer said a determining character of the people is their ethereal quality.

"The strength and endurance of the Portuguese oversea empire came from the fact that, more than any other adventurous, colonial people, the Portuguese took religion with them. Theirs was a spiritual as well as commercial empire," he noted.

District Attorney Dinis, through whose research efforts and initiative the Commonwealth proclaimed March 15 as Pedro Francisco Day, said he was inspired "to have Pedro Francisco's story told, particularly to the children.

"There is no one more worthy than Basil Brewer to be honored with this award," he declared. "Through the years he has demonstrated kindness and generosity to Portuguese-Americans. He has told the story of Portugal and the Portuguese."

FRIEND OF PORTUGUESE

"He is a real friend of the Portuguese, I hope that our government, in sending a representative to Portugal, someday will send Basil Brewer as Ambassador to that country," the district attorney said to much applause.

"I'm sure that because of his close relationships with Portuguese-Americans, he would give that post background and qualifications far superior to any other man this country could choose to send," Mr. Dinis said.

Describing the gathering as American democracy at its best, the Reverend James V. Claypool, pastor of Trinity Methodist Church, said "we are extolling that which means most to us."

The Reverend Jose M. B. Avila of East Falmouth, extended greetings and congratulatiosn to Mr. Brewer on behalf of the Most Reverend James L. Connolly, D.D., bishop of the Fall River Diocese.

COURAGE FOR TRUTH

He cited the publisher for having "the courage to tell the truth about Portugal. Mr. Brewer is a friend of Portugal and is a friend of the truth. Portugal has nothing to fear about the truth."

Father Avila wryly observed that Mr. Brewer does more than "propagate," because the word connotes propaganda, which in turn may connote "untruths, but that is far from the truth as far as Mr. Brewer is concerned."

Bringing greetings from Dr. Luis Esteves Fernandes, Ambassador of Portugal to the United States, the consuls general, and the diplomatic corps, Dr. Jose Manuel Fragoso, consul general of Portugal in New York, said he was impressed with the prestige of the Portuguese Continental Union. He congratulated Mr. Brewer in behalf of his colleagues, noting that he "is a good friend of Portugal" and that the country, its people, and Portuguese Americans "are your good friends."

Daniel O'Connell, chief secretary of Governor Furcolo, brought greetings from the Governor and the Commonwealth.

"There are too few Basil Brewers in our midst," he reflected, who is "by character and by preference a publisher, in addition to a great humanitarian and gentleman.

"GREAT PUBLIC SERVANT"

"To a great publisher and a great public servant, and to a sterling group that saw fit to recognize the sterling qualities of Basil Brewer, congratulations," Mr. O'Connell concluded.

Describing his recent trip to Portugal, where he witnessed the "enthusiastic response of the Portuguese to President Eisenhower in Lisbon," Mayor John M. Arruda, of Fall River, spoke of their love for Americans.

He spoke also of the esteem in which Mr. Brewer is held there, telling how a Standard-Times editorial gained much favor.

"That is why this honor to Mr. Brewer is most deserving. It means more than just an expression of good will. It is an expression of goodness from the hearts of Portuguese in America to a person who has been a true friend of theirs," the mayor said.

J. Freire D'Andrade, director of the House of Portugal, trade and tourist promotion agency for the Portuguese Government in New York, commented that Mr. Brewer "indeed is a worthy friend of the Portuguese. Not once has he faltered in his friendship.

"People do not gain friends without being worthy * * * without having virtues which others admire. And you have in this country many who have gained that respect. As a Portuguese, I am very proud of this and that among so many friends you have Mr. Brewer—it is because he is the best," the governmental representative said.

GIVES INVOCATION

The Right Reverend Monsignor Antonio P. Vieira, pastor of Our Lady of Mount Carmel Church, gave the invocation. Benediction was by Father Avila.

Head table guests, besides the speakers, included Charles J. Lewin, editor and general manager of the Standard-Times, and Mrs. Lewin; Vasco A. Villela, consul in New Bedford, and Mrs. Villela; Jose B. Henriques, consul in Philadelphia; Mrs. Fragoso, Dr. Antonio M. Colaco, consul in Boston, and Mrs. Colaco, and Comdr. Jose Cabral of the House of Portugal.

Also, Mrs. D'Andrade, Vasco S. Jardim, publisher of Luso-Americano of Newark, and Joao R. Rocha, publisher of the Portuguese Daily News, who was in charge of the banquet committee, and Mrs. Rocha, and William D. Forrester, of the magazine Portugal Today.

Other guests introduced included Superior Court Judges August C. Taveira and Frank E. Smith, of Massachusetts, and Arthur B. Carrellas, of Rhode Island, and their wives.

OTHERS INTRODUCED

Anibal S. Branco of Boston, and Arthur Belao, of Brockton, supreme secretary and treasurer of the Portuguese Continental Union, respectively, and their wives, also were introduced. Mr. Branco assisted Mr. Gomes in the medal presentation to Mr. Brewer, reading the scroll inscription.

Numerous other dignitaries were seated throughout the audience at special tables.

Included were representative Portuguese Continental Union groups of 60 lodges from throughout Massachusetts, Rhode Island, Connecticut, New York, New Jersey, and Pennsylvania.

Delegates from various Portuguese-American civic, fraternal, and veterans' groups were represented.

Mr. Rocha was honorary president for the central banquet committee, and president of the local committee. Also on the New Bedford committee were Fernando P. Cruz, as the president's assistant; Antonio Alberto Costa, secretary; Emidio F. Conde, treasurer and ticket chairman, and Jose F. Conde, contact man between the New Bedford committee and the supreme lodge.

The executive committee included Mr. Gomes, Antonio J. Pereira, Mr. Branco, Mr. Belao, and Jose F. Conde.

Also present were Francisco Mendes, president of lodge 4; Manuel P. Silva, president of Lodge 47; Tome P. Cruz of lodge 4, all of New Bedford; Manuel Vaz Morais of Cambridge, representing lodge 2 in Cambridge; Manuel Calado and Francisco Oliveira, both of New Bedford; Afonso Ferreira Mendes of Taunton and Mrs. Mercedes Branco, wife of the secretary general.

The Power and the Glory

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, June 17, 1960

Mr. CANFIELD. Mr. Speaker, Jersey Boys State, a most inspiring and productive program held each summer by the New Jersey State Department of the American Legion for selected boys interested in Government, is this year celebrating its 15th anniversary.

My good Paterson friend and constituent, Mr. Morris Shimshak, a leader in the field of public education, is editor of "The Statesman" published by Jersey Boys State. In its spring issue, Mr. Shimshak speaks to Boy Staters on "The Power and the Glory of American Citizenship" in the following most interesting article:

THE POWER AND THE GLORY

The American citizen appears as a minute individual among the millions in our country who have the power of the vote. So he is loath sometimes—too many times—to exercise his voice in our political system, even though he must realize that his social and economic welfare very often stems or depends upon the political actions of our legislative councils on the local, State or national levels. Yet, frequently and repeatedly, it can be read about in our history that an aroused group of individuals has changed the course of history and government in its city, county, and nation. Every independent movement, every aroused intraparty opposition, every group espousing a new cause has begun with only a small group of individuals, themselves in turn spurred on by only one man.

There is in America a great deal of power in the individual vote. The outcome of every election in every hamlet of every State is the sum total of all the individual votes. In our own New Jersey, in the recent primaries, we had examples of the power of individual votes upsetting planned schemes of organized political groups. The individual who avoids the ballot box on the presumption that his individual vote matters too little is either ignorant of his country's history or exercising the natural characteristics of laziness, carelessness or disinterestedness. When we miss an opportunity to vote, the default is ours. We are ignoring our responsibilities as citizens.

As statesmen we must never miss the opportunity to vote. Besides, every statesman should pay important attention to his right and obligation to influence others, in whatever way he can, and as every responsibile citizen should, the policies under which he lives in this free society of ours. This means an aggressive and intelligent concern for who is elected, for the issues before the voters, and for the decisions that are made by government at every level. Make the problems of government the basis for public discussion, especially this decisive year.

The glory? It is a simple thing when you analyze your personal feelings. It is not a great miracle that has to be wrought. It is simply the feeling that you as an individual played a part in an important decision, win or lose. It is a feeling of self-satisfaction that you participated and shared in a great undertaking—the making of a city, a State or a President. You have a share in the making of American history when you cast an official ballot. This is a tremendous power, and the glory of it is a self-satisfied conscience.

Threat to Retention of Oversea Bases

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Friday, June 17, 1960

Mr. BRIDGES. Mr. President, there appeared in the Wall Street Journal on Friday, June 17, a profound analysis of the situation in which this country finds itself regarding our structure of oversea bases. In view of recent international events, particularly the incident in Tokyo, it would appear to be most important that we examine our position as regards the defense of the nations of the free world.

This examination is most pertinent as regards the threat to the continued retention of our oversea bases. Immediately, and of paramount importance, is the use of the oceans in the interests of security. Warfare, as with everything else today, is moving through an era of sweeping changes. Soon no place on earth will be safe from attack by missiles and modern jet aircraft launched from the seas. The mobility and concealment offered by the oceans emphasize the increasing importance of the aircraft carrier and the Polaris submarine.

Mr. President, I think this article deserves the attention of my colleagues and the public, and I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ERODING ALLIANCES—U.S. FEARS A FURTHER WEAKENING OF GLOBAL NET OF PACTS, BASES—JAPAN'S CRISIS MAY BE BLOW TO ALL FAR EAST DEFENSES; NEW AID DEMANDS LIKELY—TROUBLE IN TURKEY, ICELAND

(This analysis of the threat to America's alliances and foreign military installations is based on dispatches from Staff Reporter Louis Kraar, reporting from Washington, and Tokyo Bureau Chief Igor Oganesoff, accompanying President Eisenhower in the Far East.)

American diplomats and military leaders fear the Nation faces grave erosion of its system of foreign alliances and bases—not just in Japan but across great stretches of the globe.

This pessimism deepened yesterday after leftist Japanese mobs succeeded in blocking the President's trip to Tokyo—but it extends far beyond the shock of that event. Many officials predict the new Japanese-United States security treaty, which stirred the islands' furor, eventually will be ratified. But they fear the value of that piece of paper is diminishing with extreme rapidity. They now rate Japan and other nations scattered through the Orient as more dubious defense partners. And official concern for the months and years ahead is broad enough to include such distant points as Iceland and Turkey.

"We simply can't depend on all these foreign bases anymore," warns a Pentagon official who considers them vital.

Much of this erosion may come slowly, as has been happening up to now. The Strategic Air Command, for example, already is committed to being squeezed out of its great Moroccan airfields by 1963. But authorities are aware the losses could now be accelerated enormously if, as they believe, is quite possible, the Japanese crisis sets off a chain reaction.

In Tokyo, the estimate is that Prime Minister Kishi will soon be out of office, whether by violence, vote or intraparty maneuver. He hopes to be able to put the defense pact with the United States into legal form before his exit, and the parliamentary situation is such he may well do this. But even if this happens, any treaty will depend on the next government of Japan for enforcement. The document provides that specific Japanese assent must be gained whenever American forces stationed on the island are required for military operations in other parts of Asia.

Thus, unless the Japanese public registers a major revulsion against the mob and passions of recent days—and that, too, is thought to be a possibility—the effective U.S. use of Japanese bases may have to be written off, and almost certainly will have to be downgraded.

"Certainly there's fear the treaty will be discredited by a new government, even if legally passed," comments a high-ranking American military man in Washington. "And that would be pretty terrible."

HEAVIER RELIANCE ON OKINAWA?

If Japanese bases are lost, the United States will need to place far heavier reliance on a tiny Pacific island base, Okinawa, located about 350 miles south of Japan. But that could be leaning on a weakening reed. Another Pentagon officer contends, "Friction over Okinawa will be inevitable. It's old Japanese territory; the leftists and nationalists already are demanding we hand it back." He also claims that South Korea, too, is heavily dependent on U.S. forces based in Japan for its supply pipeline and air defense.

While it's hard to find authorities who are unworried about U.S. troubles in the Far East, some are much less pessimistic than others. It's argued a loss in one place can often be offset by a gain in another. In the Philippines, it is noted, President Eisenhower got a rousing reception. More than that, he got down to some fairly hard talk about joint action in case of war, and the possibility that U.S. bases on these islands may be equipped with nuclear warhead missiles.

But it's expected any improved cooperation by Filipinos—as has happened elsewhere—will have its price: A call on the United

States for greater military and economic aid. Comments one military officer: "The price we're going to have to pay for any oversea installation is going to get larger and larger."

This way come as a shock to Congress. House Appropriations Committee members, following the habit of recent years, this week knocked $400 million off a $2 billion request by Mr. Eisenhower for foreign military assistance funds for the fiscal year about to begin; they've whacked $390 million off a $2.2 billion Presidential request for other foreign aid.

SPENDING POSSIBILITIES FORESEEN

The gloomier element among diplomats sees plenty of spending possibilities in the future. One foreign affairs authority in Washington pokes his finger at a wall map, showing Pakistan's widely separated halves. "All the enthusiasm for American bases and alliance is here in West Pakistan, where the hill people are natural fighters," he says. He then moves his finger. "Over here in steamy East Pakistan all the sentiment is against any military involvement. With the pressure that's on now, it is entirely possible East Pakistan, sooner or later, may split off and go neutral. Maybe that's all right; our bases are in West Pakistan. But it's the East Pakistanis who have the nation's money, from their jute exports. The West Pakistanis would need some stiff U.S. subsidies to keep running without them."

The threatened erosion of America's system of bases and alliances can be attributed largely to Communist agitation. Prime Minister Kishi and Presidential Press Secretary James Hagerty specifically blame Red agitators for the violence in Japan. Communist money reportedly poured into the islands to finance the trouble-making; Moscow and Peiping radio broadcasts threatened Japan with dire consequences if it received the American President.

But this begs an important question. Russia and Red China have been hotly opposed to American bases for years—years during which the United States has created and expanded its foreign footholds of power. Why is this the moment of history when that system seems to face decay or disintegration?

Some Washington officials who spend their time pondering this question hang their answers on two 1960 dates: April 27 and May 1.

On April 27 Syngman Rhee was forced to resign as President of Korea. He was heaved out not by Communists but by anti-Communists. He was booted not over any opposition from the U.S. Government but with the quiet encouragement of American diplomatic and military representatives on the scene. In Washington, this Yankee "lubrication" of revolt is viewed as having been decent and honorable. Its results within Korea are still viewed as moderately satisfactory, offering the prospect of popular freedom and bureaucratic honesty. But officials plainly say it opened a Pandora's box throughout the world.

BUZZING IN COFFEEHOUSES

"Word got around that governments could be defied and even overthrown," says a top Washington analyst. "The coffeehouses in nation after nation began buzzing with the excited talk of opposition politicians who had previously thought the U.S. marines would storm in to block any assault on the established government. Newspapers which had been docile turned inflammatory. University students, having seen the power of massed kids in Korea, decided to have a go."

Certainly in some countries the crusades of revolt have genuine merit, in the assessment of American officials. "In Turkey, dictator Menderes was drunk on 10 years of power and a decade of American aid," wryly comments one. "And there are other countries whose rulers have been riding along on lots of U.S. money in exchange for bases—finally losing touch with reality."

By this reasoning, some authorities will be expecting trouble, nobody knows exactly when, in such key spots as Iran, Spain, and Saudi Arabia. Even in democratic Japan, some contend, Mr. Kishi had lost touch—underestimating pacifism and nationalism, and making a tactical fumble in linking the scheduled Eisenhower visit to the revision of the defense alliance.

In proportion to their strength in various allied lands, the Communists are doing their bit to stir the spirit of April 27. As for the other factor now moving the world, the mood of May 1, the initiative is entirely in their hands.

May 1 was, of course, the date America's U–2 spy plane was shot down over Russia. It gave the Soviets a pretext for reversing the "Spirit of Camp David," scuttling the summit, and launching a character assassination campaign against the American President. This in itself was a consequential change; it can be measured by the fact that when Mr. Eisenhower had visited Italy before the switch in the Red line, local Communists lined the curbs to help cheer him.

But more than that was involved. The illicit nature of the U–2's mission was an embarassment to the alliance. The plane's asserted flight course, from Turkey to Pakistan to Norway, directly involved the airbases of the Yankee alliance. The flights led to Red threats to obliterate any bases from which future spy flights were made. Before the eyes of many allies there suddenly emerged a new picture of effective Soviet military power versus effective Yankee power.

As a glance at the map shows, most of the lands associated with the United States in defense pacts or base arrangements lie far closer to Russia or to Red China than to America—Canada being the notable exception. The Communists have had that big advantage all along. The nations of the European NATO alliance are perhaps on the U.S. team from real conviction, but most of the others joined up because they figured American strength was vast enough to stand off the Reds close at hand. And now that impression of effective power has suddenly dimmed, say U.S. officials.

RED ROCKET RATTLING

On one hand, the advance of Russian missile technology has brought America's foreign allies within 10 or 15 minutes of possible extinction. Dim awareness of this had been growing; Red rocket rattling since May 1 has made it glaring.

On the other hand, the picture of effective Yankee power has blurred. Logically, perhaps this should not be so. At the Pentagon, generals keep saying that the prolonged success of U–2 flights before the final failure proves that the Soviet—and Red China, too, of course—lack effective defense against U.S. air assault. But civilian analysts say this has been obscured by the foreign impression that America's military power simply cannot be counted on.

The record of contradictory statements out of Washington concerning the U–2, the American humilitation at the Paris summit, and now the abortive Eisenhower expedition to Japan, have in the opinion of some top officials conveyed to multitudes of foreigners the feeling that America is impotent.

KHRUSHCHEV'S SWITCH

This idea of Yankee power incompetently managed is also being fanned by the Communists. "Did you notice how Khrushchev switched his whole method of demolishing Eisenhower's image?" asks one analyst who spends full-time watching the Soviet. "At first he was depicting Ike as dangerous and perfidious. Then he suddenly gave us a different Ike—the bumbling fellow always off the job and on the golf links, the peaceable old gent too incompetent to do anything but run a children's home."

One expectation in Washington—as yet advanced only by a minority of the experts—is that Russia may soon put a reverse spin on the game of foreign bases. Specifically, they suggest Khrushchev and Castro may sign up for Soviet bases in Cuba, perhaps when the bald one makes his scheduled visit to the bearded one. Missile bases, aircraft bases, submarine bases; all these are mentioned as possibilities.

Most officials doubt, however, that Cuba is in fact tabbed for much beyond use as a propaganda and subversion base, which it already is. Russia is too deeply committed to telling the world, "Look, we got no foreign bases," says one expert on the Soviet. One counterargument: Russia would not have to be inconsistent; it would not even have to build bases in Cuba. It could simply sign up for the right to put them there—and then try to barter, offering to stay out of Cuba if the United States will get out of its bases abroad.

IMPACT OF TECHNOLOGY

According to one school of thought—sponsored by some of America's top military leaders—the trend of armament technology will sharply reduce U.S. need for many foreign bases within a few years. The intercontinental missile, the Polaris missile-firing submarine, the prospective B–70 bomber which could reach Red targets without refueling, the nuclear-powered aircraft carrier which requires no foreign supply depots, the anticipated reconnaissance satellites: All these are cited as offensive or defensive tools which will tend to make America self-sufficient.

Nobody would be happier than Yank diplomats and military brass if large numbers of our uniformed personnel could be pulled back home. Friction between servicemen and natives of host countries is inevitable and chronic. Even in such a thoroughly Westernized land as Iceland, the local government forces U.S. retrenchments; 1,300 Army troops have been pulled out recently yet there's pressure for further reduction. "In countries with more divergent cultures, the trouble is worse," declares an official. "Some GI is always climbing up a Mosleum minaret and calling the faithful to cocktail hour."

But a great segment of Pentagon and State Department opinion holds that bases will remain essential for the foreseeable future.

To thwart localized Communist attacks, the U.S. needs capacity to wage "limited wars" with conventional non-atomic weapons, it is argued. And this demands land, ground and sea forces in the neighborhood of the possible conflicts. Even the Strategic Air Command contends it needs globally scattered plane and missile bases, to make it more difficult for the Reds to wipe out our retaliatory strength in one coordinated assault.

SUSTAINING UNITY

Beyond that, diplomats contend, a military network abroad has immense psychological importance—helping to sustain the political and economic unity of the Western camp.

In Japan, to be specific, the American businessman and farmer has a stake. Dozens of U.S. firms with subsidiaries on the islands, dozens more thinking of coming in, hundreds engaged in trade, thousands of farms supplying food and fiber, will be affected if Japan switches its allegiance toward Communist Asia—or even, to a lesser degree, if the conservative regime is replaced by a socialist one.

Though a leftist minority has dominated Japan in recent days, and its mob action continues to rage, this doesn't necessarily mean it is close to seizing permanent control. The government has by no means exhausted its resources for quelling rioters;

police can get tougher and the 210,000-man self-defense force (army) can be called into action.

If Mr. Kishi attempts to resolve matters by dissolving the Diet and calling new elections, the outcome is difficult to predict. Judging by past voting patterns, his conservative Liberal Democrats should retain power (they hold 63 percent of Diet seats now).

But the emotions evoked by current chaos may make past voting patterns meaningless.

To the extent that voters prove offended by the American security treaty and by the Kishi administration's "autocratic" political tactics, the opposition socialists could pick up strength. But to the degree that voters are repelled by leftist violence, ballots could switch to the conservatives or to a third party, the moderate Democratic Socialists. One possibility is that none of the three parties would emerge with a clear majority. That would require a coalition of two of them to rule—with a consequent weakening of Japan's anti-Communist position.

Report of National Projects Committee to the National Rivers and Harbors Congress

EXTENSION OF REMARKS
OF
HON. PHIL WEAVER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1960

Mr. WEAVER. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD the report of the national projects committee, which was unanimously adopted by the recent 47th National Convention of the National Rivers and Harbors Congress held in Washington on May 24–27, 1960.

The permanent national projects committee of the congress consists of an outstanding expert on water-resource problems from each of the major drainage basins of the United States. They serve without compensation of any kind whatsoever and bear all of their own expenses when coming to Washington and while here serving on this committee.

The committee's purpose is to assist the sponsors of projects in preparing and presenting their data, so that they may be placed in line for approval. The projects recommended by the committee and endorsed by the Congress are vigorously pressed for inclusion in the Government's public works program, and appropriations or allocation of funds sought therefor.

We are grateful to the members of this committee for their public spirited service in an effort to assist the Congress of the United States and the governmental agencies charged with the responsibility for these public works, as well as the people in the areas to be served thereby.

The members of the committee who served at its recent session are as follows:

PROJECTS COMMITTEE

Representative PHIL WEAVER, Falls City, Nebr., chairman.

New England division: William S. Wise, executive secretary, Flood and Water Policy Commission, State of Connecticut, Hartford, Conn.

North Atlantic division: Brig. Gen. James H. Stratton, U.S. Army (retired), consulting engineer, New York, N.Y.; alternate: Edward K. Bryant, consulting engineer, New York, N.Y.

South Atlantic division: Rear Adm. R. Malcolm Fortson, U.S. Navy (retired), managing director, the Ship Canal Authority of the State of Florida, Jacksonville, Fla.; vice chairman.

Southwestern division: Dale Miller, executive vice president, Intracoastal Canal Association of Louisiana and Texas, Houston, Tex.

Lower Mississippi Valley division: Hu B. Myers, chief engineer, Department of Public Works, State of Louisiana, Baton Rouge, La.

North Central division: Al. Hansen, comptroller, city of Minneapolis, Minneapolis, Minn.

Missouri River division: John B. Quinn, executive director, Missouri Valley Development Association, Inc., Lincoln, Nebr.

Alternate: Robert B. Crosby, former Governor of Nebraska, Lincoln, Nebr.

Ohio River division: J. I. Perrey, chief engineer, Indiana Flood Control and Water Resources Commission, Indianapolis, Ind.

North Pacific division: Herbert G. West, executive vice president, Inland Empire Waterways Association, Walla Walla, Wash.

South Pacific and Pacific Ocean divisions: Vice Adm. Murrey L. Royar, U.S. Navy (retired), Washington representative, Oakland, Calif., Chamber of Commerce.

Alternate: Col. Thomas J. Weed, U.S. Army (retired), transportation consultant, Washington, D.C.

Western intermountain region: E. W. Rising, Washington representative, State Water Conservation Board of Montana, Helena, Mont.

REPORT OF THE PROJECTS COMMITTEE TO THE 47TH NATIONAL CONVENTION OF THE NATIONAL RIVERS AND HARBORS CONGRESS MAY 26, 1960

Mr. HENRY H. BUCKMAN,
President, National Rivers and Harbors Congress, Washington, D.C.

DEAR MR. PRESIDENT: In pursuance of the call of the President, your projects committee met on May 24, 1960, to consider the projects submitted since the last session of the National Rivers and Harbors Congress. Hearings were afforded all who made appearance.

The committee at this session has examined 69 proposals embracing all resource improvements with which this Congress is concerned, including navigable waterways, harbors, flood control, hurricane protection, soil conservation, reclamation and water conservation.

Of the proposals examined, this committee is convinced that 21 constitute projects sound in conception, needful, and sufficiently advanced in status to warrant endorsement, involving a total estimated cost of $284,440,400. Thirteen proposals appear to be without sufficiently advanced development to warrant project endorsement at this time, but are believed to be meritorious and entitled to further consideration by this committee, if and when additional information may be adequate to warrant an endorsed status. We find that on 30 proposals, surveys have been authorized but the reports of said surveys have not been completed and we therefore recommend in these cases that the Congress request the appropriate authority to complete reports of its investigations and surveys as soon as practicable in order that action may be taken toward classification by this Congress. We find five proposals which on preliminary examination appear to be desirable and needful, and we accordingly recommend that engineering and economic investigations of survey scope be made in these cases with a view to developing projects for subsequent authorization.

Appendix A of this report sets forth in detail a list of all proposals and projects examined and the action taken thereon.

At the present time, the Congress of the United States is considering enactment of an omnibus river and harbor and flood control bill. The Committee on Public Works of the House of Representatives held public hearings on various river and harbor and flood control projects previously submitted to the Congress by the Secretary of the Army. At the conclusion of the hearings on omnibus bill, H.R. 7634, was favorably reported by the committee on June 12, 1959, and passed by the House of Representatives on July 16, 1959. A summary of the authorization contained in the bill as it passed the House is as follows:

TITLE I. RIVERS AND HARBORS

Sec. 101:	
36 navigation projects	$86,851,000
2 Beach erosion control projects	371,300
1 monetary authorization (Barkeley Dam, Ky.)	146,000,000
Total, title I	232,952,800

TITLE II. FLOOD CONTROL

Sec. 201:	
10 new projects or project modifications	$45,357,700
7 increased basin authorizations	379,000,000
Total, title II	424,357,700
Grand total	657,310,500

The Committee on Public Works of the U.S. Senate held public hearings on August 4 and 21, 1959. Additional public hearings were held on April 19, 20, 21, 25, and 26, 1960. Approximately 60 projects not included in the House-passed version of the bill were heard by the Senate committee. Also, increases in river basin monetary authorizations are being considered. It is expected that action on the bill will be taken by the Senate in the near future.

The projects included in the pending bill are of great important to the Nation's expanding economy and should be provided at the earliest practicable date. Your projects committee recommends that the Congress of the United States be requested to take early action on the bill and that consideration be given to early appropriation of funds for construction of these proposed projects.

Since our meeting a year ago, serious floods have occurred throughout the Nation, most notably in the Missouri and upper Mississippi River basins, and on major streams in New England, Georgia, Alabama, and Florida. The human suffering and costly damages caused by these floods are dreadful reminders that much needs to be done to control the waters of our rivers.

While the regulation of the high flows of rivers to prevent floods is urgent at the present time, the need for regulating rivers for all purposes becomes more and more evident as time goes on. The recent succession of drought years in the Southwest, the crowding of industry to river banks in search of

water and economic bulk transportation and the increasing pollution of our rivers indicate the soundness of developing our water resources for all purposes. Your committee notes the trend in this direction indicated by actions of the Congress of the United States, and endorses this concept.

Much also needs to be done to improve our inland waterways, so that the needs of our increasing population and the resulting expanding economy can be adequately fulfilled. New industries are constantly in search of sites offering economical bulk transportation, and the most promising sites are consequently those located on improved waterways. The St. Lawrence Seaway, recently opened to deep-draft navigation, is producing great benefits to both local and national economies; similar benefits can also be realized elsewhere, on a smaller scale perhaps, but none the less important. We must not relax our efforts to have our waterways improved to the end that the industrial growth necessary to our economy can take place in a steady and orderly manner.

Your committee notes that the backlog of investigations authorized by Congress for prosecution by agencies of the Federal Government is at least as large this year as it was last year. These investigation programs are important first steps toward the authorization and construction of urgently needed improvements. We urge that the appropriations for this purpose be increased substantially.

Respectfully submitted.

PHIL WEAVER,
Chairman.

NOTE A.—A project which has been placed in class II, III, IV or V by the committee may be reexamined from time to time upon due application and the submission of material supplementary information, with a view to advancing its classification; but no project will be reported upon by the committee more than once in each year.

NOTE B.—Attention is called to the fact that when a project is once put in class I—endorsed, such status continues and it is unnecessary to follow up at subsequent sessions with new application. All projects endorsed by the Congress, upon the recommendations of the committee, retain their status until finally constructed, unless such action is rescinded by the Congress, and the Congress stands pledged to do everything possible to assist in reaching that goal.

APPLICATIONS FOR APPROVAL OF PROJECTS RECEIVED BY THE PROJECTS COMMITTEE

APPENDIX A

Division I—Endorsed

["Endorsed": This means that it is the judgment of the committee that the project is sound, needful, and sufficiently advanced in status and that its construction is justified by the public interest it will serve]

[Letter "R" following the project number indicates revision of a previous application]

Docket No.	Name of project	State or States	Division
981-R	Huntington Reservoir	Indiana	Ohio River.
1063-R	Monroe Reservoir	do	Do.
1090-R	Hurricane flood protection of Pawcatuck	Connecticut	Northeast.
1107-R	Abatement works for the District of Columbia, project C	District of Columbia	North Atlantic.
1138-R	Mississinewa Reservoir	Indiana	Ohio River.
1139	Municipal commercial harbor at Dubuque on upper Mississippi River (dredging).	Iowa	North central.
1140	North Branch Park River watershed protection and flood prevention project	Connecticut	Northeast.
1141	Matagorda ship cannel	Texas	Southwest.
1142	Little Dell Reservoir-Jordan River Basin-Salt Lake City streams	Utah	South Pacific.
1143	Flood control project on the Mississippi River at St. Paul and South St. Paul	Minnesota	North central.
1144	Fairport Harbor	Ohio	Do.
1145	Curwensville Reservoir, West Branch, Susquehanna River	Pennsylvania	North Atlantic.
1147	Millers Ferry multiple-purpose dam, Alabama-Coosa River system	Alabama	South Atlantic.
1148	Salamonie Reservoir	Indiana	Ohio River.
1149	Trinity River, West Fork watershed, flood protection, Fort Worth area	Texas	Southwest.
1150	Big Fossil watershed, Trinity River and tributaries	do	Do.
1151	Richland, Chambers, and Cedar Creeks (Waxahachie Creek watershed), Bardwell Reservoir.	do	Do.
1152	Levee unit 5, Wabash and Patoka Rivers	Indiana	Ohio River.
1153	Mississippi River-Gulf outlet, crossing for State Highway No. 47 (Paris Rd.) high-level fixed bridge.	Louisiana	Lower Mississippi Valley.
1176	Stamford hurricane protection	Connecticut	Northeast.
1178	Trinity River and tributaries (Wallinsville Reservoir)	Texas	Southwest.

Division II—Meritorious

["Meritorious": This means that the committee believes that although the project is not sufficiently advanced in status to warrant its present endorsement, it is meritorious and that the committee is willing to consider in due course, its advancement to division I upon presentation by its sponsors of additional evidence justifying such action.]

Docket No.	Name of project	State or States	Division
793-R-7	Flood protection, Cleves	Ohio	Ohio River.
1094-R-1	Rend Lake	Illinois	Lower Mississippi Valley.
1100-R-2	Wilmington Harbor	North Carolina	South Atlantic.
1109-R	Columbia and Lower Willamette River deep draft ship channel	Oregon and Washington	North Pacific.
1114-R-2	Flint River Channelization, flood control, hydroelectric	Georgia	South Atlantic.
1154	St. Marks River project	Florida	Do.
1164	Rouge River flood control	Michigan	North Central.
1166	Las Vegas Wash and tributaries, Las Vegas and vicinity, flood control	Nevada	South Pacific.
1183	Trexler Dam and Reservoir	Pennsylvania	North Atlantic.
1184	Tocks Island Dam and Reservoir	Pennsylvania and New Jersey	Do.
1185	Prompton Dam and Reservoir	Pennsylvania	Do.
1186	Beltzville Dam and Reservoir	do	Do.
1187	Blue Marsh Dam and Reservoir	do	Do.

Division III—Expeditious report on authorized survey requested

["Expeditious report on authorized survey requested": This means that the committee believes that the National Rivers and Harbors Congress should request the engineering authority to expedite any report on any authorized investigation or survey of the project to the end that appropriate further action may be had thereon in regard to its classification]

Docket No.	Name of project	State or States	Division
876-R-5	Whitewater River, West Fork, Brookville	Indiana	Ohio River.
1092-R	Passaic River Basin, flood control	New Jersey	North Atlantic
1096-R-2	Harbor development, Port San Luis	California	South Pacific.
1126-R	Norfolk Harbor and channel to Newport News	Virginia	North Atlantic.
1128-R	Imperial Beach small-craft harbor (Oneonta Lagoon)	California	South Pacific.
1134-R	East Fork Reservoir; East Fork, Little Miami River	Ohio	Ohio River.
1140-A	Shelter Cove Harbor	California	South Pacific.
1146	Duwamish development project	Washington	North Pacific.
1155	East Pass Channel at Destin	Florida	South Atlantic.
1156	Small-boat channel from the port of Panacea into Apalachee Bay	do	Do.
1157	Waikiki Beach improvement (Kuhio Beach improvement and widening of sidewalks).	Hawaii	Pacific Ocean.

APPLICATIONS FOR APPROVAL OF PROJECTS RECEIVED BY THE PROJECTS COMMITTEE—Continued

APPENDIX A

Division III—Expeditious report on authorized survey requested—Continued

Docket No.	Name of project	State or States	Division
1158	Iao Stream flood control project	Hawaii	Pacific Ocean.
1159	Wailoa Stream	do	Do.
1160	Waimea River, Kauai	do	Do.
1162	Kihei district, Maui	do	Do.
1163	Palolo and Manoa Valleys	do	Do.
1165	Trenton Channel extension (to deep water in Lake Erie), commonly referred to as All-American Channel.	Michigan	North Central.
1167	Rouge River harbor development	do	Do.
1168	Haleiwa Beach erosion project	Hawaii	Pacific Ocean.
1169	Honolulu Harbor, deepening and widening of harbor and channel	do	Do.
1170	Harbors for light-draft vessels, coasts of Hawaiian Islands	do	Do.
1171	Hilo Harbor modification, island of Hawaii	do	Do.
1172	Port Allen Harbor modification, Kauai	do	Do.
1175	Port Jefferson Harbor	New York	North Atlantic.
1177	Hydroelectric dam at Rampart on the Yukon River	Alaska	North Pacific.
1180	Boat basins in the Apalachicola River in the vicinity of Briston and in the vicinity of Blountstown.	Florida	South Atlantic.
1181	Channel from Lynn Haven Bayou, to North Bay	do	Do.
1182	Gulf Intracoastal Waterway from St. Marks to the Anclote	do	Do.
1188	Intracoastal Waterway, St. Marks River to Tampa Bay	do	Do.
1189	Ogdensburg West Channel dredging	New York	North Central.

Division IV—Projects recommended for survey

["Recommended for survey": This means that the committee believes that sufficient showing on behalf of the project has been made to warrant further examination in the form of an adequate survey by an appropriate agency of the Federal Government]

Docket No.	Name of project	State or States	Division
1127-R	Southern Branch of Elizabeth River, Norfolk Harbor	Virginia	North Atlantic.
1161	Kamuela Flood Control	Hawaii	Pacific Ocean.
1173	Kahului Harbor, Oahu	do	Do.
1174	Explosives handling facilities within Hawaii harbors	do	Do.
1179	Examination and survey, Edwards underground reservoir and contributing drainage area.	Texas	Southwest.

Operation Crossroads—American-African Student Cooperation

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, June 17, 1960

Mr. HUMPHREY. Mr. President, earlier this week I introduced a proposal for a peace corps of American young men to provide a new spirit of youthful enthusiasm and dedication in our technical assistance programs abroad—working directly with young people of other nations and sharing their way of life.

In this morning's Washington Post and Times Herald, Marquis Childs describes one of the many private, voluntary organizations which is carrying on such a program of people-to-people technical assistance—Operation Crossroads in Africa.

Emphasizing how strikingly Operation Crossroads students illustrate for their African counterparts the role of the people's initiative in a democratic society, Mr. Childs reviews the thrilling and vital fraction of our oversea cooperation program carried on by voluntary groups.

It is this inventive, imaginative, enthusiastic spirit of our American young people which my Peace Corps proposal would channel into our official governmental overseas assistance programs.

In a recent report the Operation Crossroads organizers said:

The problem of the impact of communism upon Africa was not our primary concern. We did not begin by being against something; we were rather motivated by the democratic concepts within ourselves * * * by the firm conviction that the United States has a moral responsibility to develop a positive relationship and to create a large, capable, intelligent and devoted body of experts who would understand and interpret to the American people every area of African life.

Mr. President, I believe this is the firm conviction of all Americans who have had the needs of the peoples of the developing nations explained to them honestly and acurately. The American people not only are generous to those in great need of food, clothing, and shelter, but also I know that they can understand fully and deeply sympathize with the struggle of those men and women around the world seeking independence and recognition for their national aspirations.

Mr. President, I ask unanimous consent that a column entitled "A Student Safari Heads for Africa" by Marquis Childs which appeared in the Washington Post and Times Herald for June 17, 1960, be printed in the Appendix of the RECORD.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

A STUDENT SAFARI HEADS FOR AFRICA

(By Marquis Childs)

Within a few days 180 college students will be flying to Africa to take part in an experiment that owes something to America's pioneering spirit and to the deep strain of idealism that is a part of the American character.

Once there, they will divide into groups and go back into the bush in 10 West African countries to join with African students in working on particular projects such as schools and community halls in new settlements. Living under rugged conditions, asking no favors, they will work long hours alongside Africans of their own age.

In a time of cynicism and the realism of avowed espionage and more and more nuclear arms, Operation Crossroads—Africa has certain simple, direct objectives. One is to spread an idea of what newly developing Africa means through intelligent young people who will come home to lecture as widely as possible about what they themselves have learned. Another is to show that Americans are deeply and immediately concerned with the future of those who are struggling to achieve independence and nationhood.

Crossroads Africa is a wholly voluntary organization. It illustrates one of the great advantages of a free society in which, in contrast to a dictatorship, people themselves may take the initiative and do what government could not or would not do.

The International Cooperation Agency lists 58 voluntary agencies at work in every corner of the globe. It includes the Friends Service Committee, which has sent student work groups to many European and Latin-American countries. Technicial assistance, refugees, feeding the hungry, distributing books—al these and many other functions the voluntary agencies carry on.

The big foundations, Ford, Rockefeller, and the others which are not listed among these agencies, do a great deal of work overseas. The Ford Foundation of India has provided invaluable assistance and advice in helping to formulate India's program of village reform. The voluntary agencies do not suffer from the inhibitions that handicap the Government in its oversea activities.

This is the second year that Crossroads Africa has sent students to work with Afri-

cans. Although the project has had little publicity, more than 700 young men and women applied for 180 places. Represented in the group now undergoing a week's indoctrination in New York are students from 100 colleges across the country representing every religious faith and racial background.

"The problem of the impact of communism upon Africa was not our primary concern," a report by the organizing group states. "We did not begin by being against something; we were rather motivated by the democratic concepts within ourselves.

"Our initiative was not provided by the role of communism, but rather by the firm conviction that the United States has a moral responsibility to develop a positive relationship and to create a large, capable, intelligent and devoted body of experts who would understand and interpret to the American people every area of African life."

In 1958, the first year for Crossroads Africa, one group of 13 students went to the impoverished village of Buel in French Cameroons to help build a two-room cement-block elementary school and a stone chapel with seats for 400 worshippers. Another group went to Ghana and took part in the construction of a seven-room school in the remote Ashantiland village of Safo.

In Sierra Leone, the work project at Gbendembu was to build a village water supply in rugged, hilly bush country. Working without sufficient or proper tools with the ever-present danger of cobras and black mambas—the students killed six during their 6 weeks on the project—they were able to accomplish the greater part of their project.

Long and serious discussions went on, with the African students and the Americans speaking with complete frankness about every subject under the sun. The Americans discovered that Little Rock loomed large, and they set out to convince their friends that this was only one small part of America and that there was an earnest effort in almost every section of the country to find a way for the races to live together in equality of opportunity.

Voluntary help such as Crossroads Africa can be no more than a tiny fraction of the total foreign aid America sends abroad. But it is a thrilling and a vital fraction.

The Sixties—A Decade of Decision

EXTENSION OF REMARKS

OF

HON. JOHN J. FLYNT, JR.

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 17, 1960

Mr. FLYNT. Mr. Speaker, on yesterday, June 16, 1960, I had the pleasure of attending the graduation exercise of the U.S. Army War College at Carlisle Barracks, Pa.

The principal address was delivered by Gen. Matthew B. Ridgway, retired Chief of Staff of the U.S. Army.

General Ridgway stands in the forefront of the distinguished American military leaders. During World War II, General Ridgway commanded the 82d Airborne Division in north Africa, Sicily, and Italy. In 1944, he led the division in parachuting into Normandy with the leading elements in the invasion of France.

At the outbreak of the Korean war, General Ridgway commanded the 8th Army in Korea. In 1951 he was appointed supreme commander for Allied Powers as well as the commander in chief of the United Nations Command in the Far East.

In May 1952, he was named supreme commander, Allied Powers, Europe, with headquarters in Paris, where he served until August 1953 when he was appointed Chief of Staff of the Army.

General Ridgway's address was a very inspirational one for the 1960 graduating class of the Army War College and to all of us who were privileged to hear him. It was a dynamic and challenging one which I believe worthy of being read by all Members of Congress and by all citizens of the United States.

It is with personal pleasure to me, and with the express permission of General Ridgway that I include the text of his address, "The Sixties—A Decade of Decision":

THE SIXTIES—A DECADE OF DECISION

General Ennis, distinguished guests, members of the Army War College, their families, and friends, it is a high honor to speak before this audience on this occasion, and a very great personal pleasure for me to have had this invitation extended by General Ennis. I first knew him when he was a small boy and I a first classman at West Point in 1916. I have watched with deepening satisfaction as the richly merited recognition of his character and talent over the years has carried this famous soldier son of a famous soldier father to posts of successively heavier responsibilities. He has discharged them all in a conspicuously superior fashion. Bill, I am proud to be here and appreciate all the honor you have done me.

Here was a problem of decision, and I must admit, momentarily at least a perplexing one. What should I say? That was my problem in selecting a topic for this morning.

So out of semicomplexity I chose to speak this morning on "The Sixties—A Decade of Decision," a decade which may well confront our people, our civilian authorities, and our diplomatic and military leaders with problems of decision of vastly greater significance than even the fateful decisions of the 1860's.

This is neither the time nor the place for dogmatism, declamation, or exhortation. I intend none of these, but rather earnestly and briefly to express some personal convictions concerning one central problem, which, dependent on the way we seek to attack it, may well determine whether or not we survive as an independent free leader of free peoples.

That central problem is to decide upon a general course of action by which to shape our destiny in accordance with our fundamental values, our moral principles, and our basic faith. It is a problem not limited to our elected officials, but one for our people—for an overwhelming majority of our people. For in this great new historical era, the threshold of which we have barely crossed, the power of public opinion will be the determining factor. So it was under Washington. So it was under Lincoln. Public opinion was slow of growth and confused with contrary currents during its formative period. But it congealed as the counsels of great men of integrity and selfless devotion to country brought the issues into focus and illuminated them with the light of their wisdom and inspired leadership.

That, it seems to me, was our form of democracy at its best. It resorted to no authoritarian dictation as to the course to be taken. It relied on the searching of men's hearts through prolonged public debate and earnest examination of all alternatives. It was bulwarked by an unshakable faith that by such processes, and with divine guidance, we would see and choose right from wrong—and having chosen our course with wisdom and intelligence, would pursue it with courage, regardless of the sacrifices involved.

Yet it does seem obvious, if we are wisely to choose a general course of future action, that there must be a goal, an objective toward which that course leads. There must be a great national purpose, clearly recognized as such, and so clearly stated that it will stimulate and sustain our people through whatever trials may lie ahead.

Do we have such an objective? Are our people agreed on what it is we want, what we should try to achieve?

I have long sought satisfying answers to these questions, as no doubt you have.

Let's look at a few facts and the opinions of a few selected nationally known individuals. These opinions were all uttered within the past few months. They are articulate evidence of the growing volume of concern with which thoughtful men and women are viewing this problem.

Walter Lippmann in the Pittsburgh Post-Gazette, in September 1959, wrote: "The critical weakness of our society is that for the time being our people do not have great purposes which they are united in wanting to achieve."

Max Ways, in Life magazine, in October 1959, wrote: "The United States fumbles its job as world leader because it forgets its own principles of freedom and order—it is up to the people to rediscover and reaffirm them."

Eric Sevareid wrote in Esquire magazine in October last: "Truly there is a quiet desperation among those Americans sensitively aware of what is happening in the world today and of what is happening in America. A great nation cannot stand still, it either moves forward, or it moves backward. It is my belief that we are losing touch with the world; indeed with ourselves. Not only do we not know what we want any more, we do not know what we are. Like old women touching their beads, we endlessly count and recount our blessings in the form of our gross national product, our per capita income, and our production units, whether babies or block long automobiles; and we call to the gods of economy, prudence, and the middle way, trying to believe that this will save us, knowing in our hearts that it will not."

Dr. Grayson Kirk, president of Columbia University, in the New York Times in January of this year, was quoted: "This country will not maintain its position in the world solely by possessing nuclear destructive power. Such power must be held by a people united in purpose."

Dr. James B. Conant in the New York Times last November: "Our existence and our freedom are both in danger. This seems to me an obvious if highly unpleasant fact. Yet, as I have traveled around the country, with few exceptions I have sensed no awareness of our peril. For the most part I have encountered little but complacency."

Then last February, as you will recall, the President created a Commission on National Goals, of which Dr. Henry Wriston, president of the American Assembly, is chairman. In commenting on this action the New York Times of February 8, last, editorialized in part as follows: "In what could be a historic step in the development of our free institutions, President Eisenhower has named a distinguished group of private citizens to a Commission on National Goals * * * to identify the great issues of our generation and to describe our objectives in these various areas."

Next, a quote from "Basic Aims on U.S. Foreign Policy," written for the use of the Senate Committee on Foreign Relations, U.S. Government Printing Office, November 25, 1959: "Only with a sense of purpose which holds deep meaning for the American people,

but which must be given voice by their elected leaders, can the Government of the United States set the goals of foreign policy and work out the means of attaining them. * * * The responsibility rests above all on the President, who, alone, can command the respect of the entire Nation and marshal nationwide support for the sacrifices which the situation may demand. Preserving and protecting our freedom and interests are at the very heart of the national purpose."

And last, I want to quote from the May 23, 1960, issue of Life magazine: "The words, 'the national purpose,' have begun to sound increasingly throughout the country, stirring up uneasy questions, forcing Americans to examine themselves and their aspirations."

"The debate, of course, cannot be left to the country's leaders. Life invites all Americans to join in. For upon the Nation's purpose depend the lives of all—not in some comfortably remote future, but right now and in the years just ahead."

So much for quotes. Now may I comment on the answers to these basic questions. First on the negative side. What our purposes should not be—what it is we do not want. On this side, there is, I believe, widespread agreement.

We do not seek to dominate other peoples.

We have no liking for world conquest as an objective.

We find the idea of withdrawal to this continent and abandonment of our leadership repugnant to our ideals.

We do not choose to live in selfish blindness on an elevated plateau of relative abundance, if not luxury, while leaving more than half the world's peoples to continue to exist in a morass of misery, ill fed, ill clothed and sheltered, largely illiterate and with scarcely any of the benefits which modern sanitation and medicine could provide.

On the positive side, we want as we so clearly show by our actions, to reduce, not to further increase these enormous imbalances in the world's standards of living.

We intend to discharge in full our responsibilities for leadership among free peoples.

But most important of all, we should want, it seems to me, to single out one simple, positive, and unchanging objective; to describe it clearly; and to set it up as a goal which our people could accept and toward which, with high leadership, they would willingly work.

Admittedly this is an extremely difficult thing to do. In the first place, we need a large admixture of the ideal with the practical, and the ideal is rarely popular. Then before agreement can be expected upon any basic objective or purpose—that is upon an abstract idea—the idea will have to be put in such unambiguous language that it can be readily understood by every reasonably intelligent person.

But even these are only first steps. If the phrasing of our objective is to fire the imagination of our people, and ultimately of others, it must have a tremendous spiritual appeal. It must represent something for which mankind has an ineradicable yearning. Only for such an objective are people willing to work and, if need be, to sacrifice.

Now there is one thing you cannot uproot from the human heart. It is the love of freedom. It transcends self-preservation, the so-called first law of nature. History provides overwhelming proof that under proper leadership men and women value freedom more than life. Not only is the record of every war replete with proof of this assertion but so, too, are the peacetime records of humble men and women in every walk of life, of every color and creed, in every land and age. Barehanded Hungarians against Soviet tanks is a recent illustration, as is Tibet; the history of Christianity, an ancient one.

So, I suggest we take human freedom as our objective. I believe it is the objective included in all the courses we have so far chosen, though often not so stated, and therefore lost to view in the overburden of secondary ideas. It is our first and prime objective now and for however many centuries may be required to extend it throughout this world of ours. Many of our people have said this many times in many ways, but it has yet to be set up as the overriding purpose of a united people.

It has been obscured with statements of other proper but lesser objectives, so that its challenging primal significance is often unperceived.

Peace is an example. It is a noble objective, a worldwide aspiration. But peace could be had in slavery, and must therefore be secondary. Only with freedom does peace take on its full and acceptable meaning and make life worth living.

So why not emphasize freedom above all other objectives, and continue to emphasize it as the objective until it shall have become a worldwide reality, or until God reveals some other and better purpose for mankind?

Why not openly accept as the national purpose, the preservation and extension of freedom, openly relegating all other goals, objectives or purposes, important as they are, to lower priorities?

Now may I address a brief closing remark to you gentlemen of the graduating class, to the faculty who so ably guided you through this academic year, and to your wives who have fully shared, I am sure, all your hearaches and rewards. You will all have the privileged opportunity of participating in the decisions of this decade, some in roles of greater prominence than others, some perhaps in devisive roles.

I wish for each of you a full measure of effective influence in helping to form that sound public opinion which will, we trust, guide our people to choose the right goals; and a full measure of success in assisting our civilian authorities to gain the Nation's support in a determined effort to reach those goals.

Finally, and most earnestly, I wish you success in maintaining the integrity of the military profession, for I firmly believe, that up to the moment of decision by proper authority, your fearlessness in expressing your convictions before the highest councils of the Nation; your honesty in openly adhering to your convictions, regardless of pressures from whatever sources emanating will be of vital value to the Nation.

And now Godspeed.

Len Hall Writes of the Revolution in Politics

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Friday, June 17, 1960

Mr. KEATING. Mr. President, I believe it is safe to say that the techniques of political campaigning are particularly germane to the pattern of life of the Members of the Senate. Interest in this subject is only the more pronounced with the approach of national elections and the renewal of political struggles for supremacy. In the light of these facts, I find it timely to draw the attention of the Members of the Senate to a most pertinent and informative article published in Life magazine.

The article is entitled, "An Old Pro Describes How Politics in the United States Has Changed," and was written by a true and masterful political professional, our former colleague in the other body, Leonard W. Hall. Mr. Hall speaks from an impressive background of experience, a background which gives added weight and significance to the observations detailed in the article.

Indeed, Len Hall is recognized by both friend and foe as one of this generation's most outstandingly able and successful politicians. He commands the friendship and respect of members of both parties.

A former State legislator and U.S. Representative, he served as a top aid to Governor Dewey in 1944 and in 1948. Subsequently, as the Republican national chairman from 1953 to 1957, Len Hall was a prime mover both in the Eisenhower decision to run, and in the masterminding of the successful 1956 campaign.

In this electronic age, when new techniques and new opportunities combine to introduce a quasi-revolution in the art of politiking, the present commentary by Mr. Hall is both stimulating and significant. In view, therefore, of the timeliness and general interest of the article, I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Life magazine, Apr. 25, 1960]

AN OLD PRO DESCRIBES HOW POLITICS IN UNITED STATES HAS CHANGED

(By Leonard Hall)

(The following article is an excerpt from a book entitled "Politics U.S.A." which Doubleday will publish in June. Edited by James M. Cannon, the book consists of comments and recollections by a number of well-known political figures, including Mr. Hall, who were interviewed and then given an opportunity to correct or enlarge upon their tape-recorded, transcribed remarks.)

In the 35 years since I joined the Republican Club in my hometown of Oyster Bay, Long Island, I have seen a tremendous change take place in American politics. The change has come about because people everywhere are up to date about what goes on in politics. Today people make up their own minds. Nobody takes them by the hand and leads them to the polls. I think television and radio have made the biggest impact on the voter's mind, but the newspapers and magazines also deserve a major share of the credit. Newspaper coverage of politics is far better than it used to be. Magazines do much to explain the important people and issues of the day. The overall effect is to give people the facts they need to make their own political decisions. Today you don't even know how your wife is going to vote. She makes up her own mind from reading, from listening to the radio and from seeing the candidates on television. Because people are now thinking for themselves, there is no longer any place for the traditional political boss. He was killed by modern communications.

At the same time television has brought about another drastic change in American political life. It has weakened the local political club, once the rallying point for precinct workers and a training ground for aspiring young candidates. In the old days

you could attract a good audience to the local club just to talk politics. For many people that was good entertainment in itself. But now the club cannot compete with good programs on television, and so it has had to become a social club. You never have a meeting now unless you serve refreshments or put on some sort of a show, or both. And still you don't get the audiences you did years ago.

It is no exaggeration to say that television has brought about a revolution in the country's political life. There is a story about Maine that explains my point. Maine always was a Republican State. People were born Republican, and so they went to the polls and voted Republican. Then suddenly they voted for some Democrats up there—too many from my viewpoint. One day I asked an old Maine man what happened up in his State. "Well," he said, "we can't do anything with this television. Our children were brought up to think that Democrats had horns. Now they see them on television and realize some of them don't have horns a'tall."

Even though we have by now had considerable experience with television in politics, we still have much to learn about how best to use it in a national campaign. In late 1955, when we were talking to President Eisenhower about running for a second term, I told the President that he wouldn't have to travel as much as he had in 1952. I maintained that four or five nationwide telecasts would be all that he would have to do. With the proper advertising and buildup for these programs, I pointed out that he would get the same impact as if he were out meeting people face to face.

As it turned out, we had a chance to try out this theory for him. On January 20, 1956, after the President had recovered from his heart attack, we put on a $100-a-plate Republican dinner in 53 cities with Mr. Eisenhower speaking over closed-circuit television and radio. At each of the dinners we had spotters assigned to examine the effect on the audience of the President speaking from Washington. These spotters reported the response was excellent. A number of them told us that many women at the dinners were moved to tears. The reports helped prove our point: President Eisenhower had the same impact over television as he did in person. So we went ahead with our plans to limit his appearances in the 1956 campaign and to make each one a major event, not only for the party but for the Nation.

WEAR AND TEAR OF CAMPAIGN TRAINS

Another big change has involved transportation. There will still be some campaigning by train in selected areas in the future, but to my mind the great cross-country campaign trains are done. The train wastes a candidate's energy. What we make a presidential candidate do is almost inhuman to begin with, but it is especially tough when he has to campaign cross-country by train.

I think the candidate should move from city to city by air and appear before enthusiastic live audiences to make his national telecasts. Studios lack the proper atmosphere for memorable political occasions. President Eisenhower made his first campaign talk in 1956 in a studio, but after that we decided to present him before audiences. Like many other candidates, he reacts to an audience with buoyant good cheer and visibly draws confidence from the fact that so many people obviously have confidence in him.

There are many advantages in flying from city to city. If the candidate stays in Washington, for example, you can't expect to get 10,000 people out for each of 5 speeches. But if you move around the country and build up each visit, you can get 15,000 people and more in Los Angeles and Chicago and Philadelphia every time. It isn't just the speech that attracts attention to your candidate; it's the film of him leaving one airport, arriving at another, 20 miles of motorcade, an audience of 15,000 people shouting and cheering, and all the other added advantages.

Important as television and new transportation methods are, they don't replace the local organization. There is no substitute for this vital element, and there is no substitute for doorbell ringing and shoe leather. If you want to win an election—national, State, or local—you still must reach the individual voter through your local worker. There have been many changes in politics in recent decades, but one thing will not change: the voter still likes to be asked. He is still responsive to the fact that you think enough of him and his vote to ask him to be for your man.

At Republican meetings I often criticize my fellow members of the party because they are always damning some labor leader who has too many workers in their area. I tell them that instead of cussing the labor leadership we should be doing what they are doing: organizing. That is what we Republicans used to do, but we have got out of the habit.

Yet the conservatives are no more to blame for not voting than anyone else. As people become better informed about politics, you would expect more of them to vote. But the percentage of Americans who actually take the trouble to vote has gone up very little over recent years, if at all. The figures are still discouraging. Even in a presidential election, we get only 60-odd percent to the polls. There is nothing to indicate this percentage will rise. We still have to drag people to the polls.

Though patterns and percentages of voting have not changed much during recent years, I believe that candidates are changing. When I first became a New York State assemblyman in 1927, most of the State legislators were successful businessmen. One would be a big druggist, another a big grocer, and so on—and they had been elected because they were successful in business. But in the late twenties and early thirties candidates began to change. The young lawyer began to take the place of the druggist and the grocer. After radio came in, and much more after television, the fellow who was articulate became the big winner. Personally, I sometimes think being articulate has begun to count for too much, but it is there.

As candidates have changed in local and State elections, they have also changed on the national scene, and the change is for the better. That is not to say that the quality of Congress years ago wasn't high; it was. The point is that everybody is better informed today, and so Congressmen are, too.

President Coolidge wouldn't be a good candidate today. Nowadays a candidate must be able to get through to the people, to the individual voter, and I don't believe that Calvin Coolidge would get through.

Al Smith, on the other hand, would be terrific. Al was very articulate. Maybe he would use "ain't," but that gave him color. It was part of his personality and background. Al always pronounced it "raddio," and people remembered this. It won him more votes than it cost him.

Herbert Hoover would get through to the people as a man of sincerity and dignity. Franklin D. Roosevelt, of course, would probably have been even better on television than he was on radio, and on radio he was certainly one of the greatest. With his smile, his manner and his voice, F.D.R. would have been great political drama on TV.

IKE VERSUS NIXON AS CANDIDATES

For the 1950's it is hard to imagine a better candidate than President Eisenhower. He does the natural political thing as well as any man I've ever seen. With most candidates you tell them to do things that will help them. This fellow Ike will do them naturally. It is instinct with him. He's a natural candidate simply because he's a great fellow. Everybody likes him, and he does, without having to think about it, the things you want a candidate to do.

Vice President NIXON is vastly different from President Eisenhower, but, all things considered, NIXON is the best prepared candidate I've ever come in contact with. For one thing, he has met all the challenges on the way up in politics, and he understands, better than anyone else I know, the part that practical politics plays in our form of Government. NIXON, moreover, has a great mind. He reads prodigiously—history, State papers, philosophy, sociology, law, everything relating to domestic and world affairs. Politically he is the best equipped candidate the party has ever had, and my guess is that he will have more to say about the operation of his campaign than any other candidate in my lifetime.

All presidential candidates are alike in one respect, however. You often wonder why a man will become a candidate for President. They all say, "You're killing me with what you're asking me to do," and yet the next day they are willing to go out and do more than you ask. This was especially true of President Eisenhower. The 1952 campaign train, for example, was rough. It was rough for everybody, but it was particularly rough for the candidate. He would talk six or seven times during the day. The local political VIP's would get aboard at each stop, and Ike would go back to shake hands with them. No sooner had he finished that when another stop would come up. Then Ike usually made a major speech in the evening. Every time the schedule became especially wearing, we would sit down with Ike and say, "All right, it's getting tough. Tomorrow, instead of speaking 15 minutes at each stop, you'll speak only 8 minutes."

"All right," he would say.

Next day, at the first stop, he would be out there talking, and we would, as agreed, start the train in 8 minutes. We would no sooner get under way than Ike would come back and say, "Who started that train?"

A lot of people are going to miss the campaign trains, but the Wright brothers and Henry Ford made a lasting imprint on American political life. The car and good roads, for example, made a difference in voting patterns. It used to be said that wet weather was Democratic weather, because the Democrats, mostly city dwellers, would come out to vote regardless of the weather, while the Republicans in rural areas would stay home because of bad roads. But now that we have good highways and modern automobiles, weather doesn't affect elections much any more.

YOU NEED SPECIALISTS NOW

With better communications, both vehicular and electronic, the management of the campaign has undergone great changes. Politics is like a business now, and you have to get the same kind of specialists that you have in business. I don't think there is anyone in the country today who could manage a major campaign alone. You need advertising experts, research men, financial advisers and public relations men, to name but a few. You need polls and surveys.

Sometimes I think political pools are overrated. I can say that, even though I probably ordered more polls and surveys than any other national chairman did. Polls have a place as long as you run the polls and don't let them run you. They are particularly useful in narrowing issues.

Most of the major plans for a campaign today are really group decisions. When I was chairman of the Republican National

Committee in Washington, I had Lou Guylay to advise on public relations, Bob Humphreys on planning, Fred Scribner and Hugh Scott on legal and legislative matters, and similar top-flight advisers on other specialties. I would call in these men and we would talk out what we wanted to do. Maybe we would not reach unanimous agreement, but out of our talk would come a plan of action. When we got into the 1956 presidential campaign we had Sherman Adams with us too, and sometimes Herb Brownell would join in. We approached our problems just as a board of directors does in business, trying to get all the facts and bringing all our brainpower to bear on the problem. The recommendations we presented to President Eisenhower usually represented group decisions.

On the other hand, there are inevitably occasions when someone, usually the chairman, must make decisions on his own, and alone. I did this right after President Eisenhower's heart attack when I said he would run again.

Two days after Ike had his attack, I had to speak before the Union League Club in New York City. Lou Guylay came along with me and when we got there at noon the television cameras were on the sidewalk waiting. They wanted a statement from me immediately. I said, "Give me 5 minutes."

Lou and I went into the Union League Club, and the only place I could see that was both near and private was the men's room. Lou and I went in there, and that's where we worked out the pronouncement. Five minutes later we came out, and I threw away my earlier spech and talked about Ike and said he would run again.

I will never forget that after the press conference Dick Lee, an old friend and a good reporter for the New York Daily News, followed me out and said, "Len, are you completely nuts?" I said no, and I argued that many people I knew had gone through heart attacks and resumed a normal life. At that time I had nothing to go on, of course, except my own judgment. I had no inside information on the President's condition. I had no way of knowing whether he would ever return to the White House. But I also knew that if he did recover, there would be no reason he shouldn't run for a second term. And for his sake, the party's sake and the country's sake, the best assumption to make was that he would get well and would run.

Generally speaking, the chairmanship of the Republican Party is what the person holding the office wants to make of it. The National Committee itself has lost most of the power it once had. One reason is that the Democrats were in the White House for 20 years. During that time the Republicans elected many Governors, but we were unable to do anything in a national election. In each State, as a result, the State chairman, who worked with the Governor, replaced the national committeeman as the dominant political power.

Another reason is that Federal patronage is controlled from Capitol Hill. The Congressmen insist on handling all postal appointments, and the Senators control the other patronage. The biggest fights I had to settle in Washington were over which of two Republican Senators in a State would get to name someone to a job.

The curious thing about Federal appointments is that the only areas where the Republican national committeeman has any say are where we don't elect any Republicans. It is a ridiculous situation: the Republican national committeeman in Alabama or Georgia is quite a fellow when you're selecting people for appointments, but in New York the selection is made not by the national committeeman but by Senators JAVITS and KEATING.

In some States local patronage is still useful in holding an organization together. In Nassau County where I live, I would guess that 75 percent of our precinct committeemen and workers have town or county jobs of some sort. This means that at election time they are not only working to save the Republican Party, they are working to save their jobs.

As patronage has become scarcer and as people have fallen out of the habit of joining political clubs and attending political meetings, the local organizations have found some compensation in the growing role of women in politics. The women have really taken over. I would trade two ordinary men workers for a woman worker any day. Women have a capacity for ringing doorbells and talking to housewives that men will never have. When they go for a candidate they really work for him. The women were one of the biggest factors behind the tremendous vote given President Eisenhower.

THE RISE OF THE AMATEURS

Another phenomenon of recent years is the independent group—the Citizens for Ike, the amateurs in politics. The Willkie clubs were really the beginning of these independent movements, and I think they are here to stay. With the trend to independent thinking on the part of voters, and with the broader knowledge that everyone now has about politics, there is less respect for professional political leaders. The amateur or independent organizations are useful in getting to the polls those independent votes you must have to win elections.

Personally I don't think it's a good trend. I would rather see two strong, growing political parties. But it appears that the independent groups will be with us for a long time to come. They were a distinct advantage in the Eisenhower campaigns. What you get out of them is enthusiasm. There is nothing wrong with fanfare, confetti, and enthusiasm. In politics, commotion looks good, and the amateurs create it.

In any examination of the changing face of American politics, the national conventions themselves must be included. We built our 1956 convention around television, and we learned a lot from the Democrats. I watched the Democratic convention to learn, and I thought the long, dreary speeches, with the intermittent dead spaces where the chairman would be talking on the platform for 10 minutes, meant that the Democrats were losing their audiences. We planned our convention so that we had no breaks. We set a good pace, and we kept things moving.

When I was out in California getting ready for the convention, I got a memo from the President. He wrote me: "Len, I presume you're getting 1,000 suggestions as to how to run a convention, and perhaps most of them get in the wastepaper basket, and maybe these will, too, but here they are: No. 1. No long, dreary speeches." He then went on with other suggestions, and when he got to No. 14, he said: "I repeat the first. No long, dreary speeches."

Ike had been watching the Democratic convention, too, and he ended up with the same impression I had: too much dull talk and dead space. I think television has compelled parties to tighten up their conventions and to keep something going on at all times. I believe you will never see the time come again when it takes 30 ballots to select a candidate. You just can't bore a nationwide television audience that much.

Television is primarily responsible for another great change in politics, the cost of campaigning. In 1956 the Republicans and the Citizens for Eisenhower spent about $2 million for television and radio alone. While campaign costs have been constantly going up, the traditional sources of campaign funds have been disappearing. At campaign time before the depression we would call about five people along the "Gold Coast" of the North Shore of Long Island, and from these five people we would get all the campaign funds we needed for Nassau County. That ended when the depression came.

During the depression you would go to a farmer for a campaign contribution, and he might give you a bushel of potatoes. You would raffle off the potatoes, and whatever you got would go into the campaign fund. Ever since 1937 we have raised campaign money in Nassau County just as if we were conducting a drive for the Red Cross or the community chest. We give each election district or precinct a quota. Sometimes workers go from house to house to solicit funds, and we will collect, in donations of no more than $2 or $3 each, a total of $175,000. The result is that today in Nassau County every precinct supports itself financially.

THE GIVER BECOMES A STOCKHOLDER

We found out an interesting thing about these political fund drives. If you can get someone to give you a dollar, he becomes a stockholder and will often be a more diligent supporter of your candidate. Without exception, where our campaign workers went after the individual donation and got it, that is where our vote increased. So the decline of big contributions has actually been a blessing in disguise for us. We have broadened the base of our financial appeal, and we have gained new party members and supporters in the process.

The base of political contributions has been broadened not only on the local but on the national level. For instance, Jim Farley initiated the $100-a-plate dinner, but we improved on it. That night in January 1956 when we staged the 53-city closed-circuit TV dinner, we raised about $6 million. The recent trend has been to charge only $10 or $25 a plate just to increase the number of people who donate to the party.

By broadening our base all over the country, we Republicans will be able to meet another major political change, the growth in the political power of organized labor. There is nothing mysterious about why some unions have been so effective for the Democrats. They have simply put more workers and more cars in the precincts. If we are to defend our party and our candidates from the inroads made by the Democratic union groups, then we should learn something from how they operate. We should match them worker for worker and organization for organization.

In my 32 years in politics I have seen many sweeping political changes come about—the disappearance of the boss, the entry of presidential candidates into the living room, the emergence of the average man as a financial angel, and many others. But of all the changes I have seen, none has meant more to me personally than what has happened to my own party. When I first set foot inside a clubhouse door, the Republicans were the majority party. Now the Democrats hold that favored position. So, of course, there is one more great change that I want to see in my lifetime, and that is a resurgence of the Republican Party.

Protest Proposed Extension of the National Sugar Act

EXTENSION OF REMARKS

OF

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1960

Mr. BERRY. Mr. Speaker, under leave to extend my remarks I protest the proposed 1-year extension of the

present National Sugar Act which would give to Cuba an unnecessary and an unfair windfall of some $15 or $16 million worth of sugar.

The House Agriculture Committee on almost a straight party line vote has passed a provision which would extend the National Sugar Act in its present form for an additional year.

Under terms of the act, Cuba is authorized to import into this country 3,119,655 short tons of sugar. This is bad enough, Mr. Speaker, when it is considered that the price Cuba will receive for this sugar imported into the United States is almost twice the world price, but this is only half of the story.

Under the existing law when offshore islands and American possessions are unable to meet their quotas, the quota that is thus unfilled is redistributed. Because of a shortage in Hawaii, Puerto Rico and the Philippine Islands, these countries will have a deficit of some 500,000 tons. Under the law 156,000 tons of this deficit would be assigned to Cuba, and under the law there is nothing this country could do except to assign this additional tonnage to Cuba. It would mean a windfall to Cuba of some $15 to $16 million.

Mr. Speaker, it may not be possible to rewrite the National Sugar Act this year and reduce the Cuban quota, but certainly it is not necessary for this Congress to extend the existing law and give to Cuba 156,000 tons, or a subsidy above the world price of some $6,800,000 at a time when Cuba will be spending that money to propagandize the balance of the Latin American countries against the United States and in favor of communism.

Keynote Speech of Congressman Jim Wright, Texas State Democratic Convention, June 14, 1960

EXTENSION OF REMARKS
OF
HON. HOMER THORNBERRY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 17, 1960

Mr. THORNBERRY. Mr. Speaker, on Tuesday, June 14, Texas Democrats in Austin, Tex., held the most harmonious and unified convention which has been held in our State in many years. The convention selected a strong delegation of distinguished Texas Democrats who are dedicated to work for the nomination and election as President of the United States the great majority and Democratic leader of the U.S. Senate, Hon. LYNDON B. JOHNSON.

Congressman JIM WRIGHT, our colleague, delivered a splendid keynote address to the delegates assembled at our State Democratic convention. It was enthusiastically received and acclaimed as one of the finest addresses of its kind delivered at any convention.

Under leave to extend my remarks, I am including a copy of that speech:

REMARKS OF CONGRESSMAN JIM WRIGHT, KEYNOTE SPEAKER, TEXAS STATE DEMOCRATIC CONVENTION, AUSTIN, TEX., JUNE 14, 1960

One only has to attend a Democratic convention to know what Will Rogers meant when he said, "I don't belong to any organized political party: I'm a Democrat."

A Democratic convention is a spirited affair, any way you look at it.

I can just imagine what confusion such a convention as the one we shall soon have in Los Angeles with its only partially organized bedlam would produce in the mind of the comfortable and fully adjusted Republican, accustomed as he is to the idea of a convention run on the precise schedule of a television commercial, and just about as exciting, with about as much suspense as a recitation of the alphabet and its nominee no more in doubt than the identity of the body in Grant's tomb.

We Democrats, by contrast, must appear to be a weird and motley crew.

STRENGTH FROM DIVERSITY

Yet the more I see of Democratic Party politics, the more convinced I become that out of our disorganization, our diversity, and even our disagreements, comes our strength.

For ours is the party of all the people. We are neither enchained by labor, nor enslaved by business, nor captive of the farmer. We are the party of no one be cause we are the party of everyone.

All are welcome within our gates—the New England fisherman with the salty tang of the Atlantic in his speech, the southern cotton planter with the scent of magnolias in his manner, the midwestern shopkeeper, the western mountain rancher, the wheat farmer from the Great Plains, the stevedore, the coal miner, the factory worker, the teacher, the preacher, the oil driller and the housewife—tinker, tailor, toiler, sailor: it takes no pedigree and very few credentials to be a Democrat.

Here there are no barricades erected against ideas, no fences against individual aspirations. We want no hobbles on the mind, no shackles on the spirit. We impose no thought control, demand no particular orthodoxy and expect no iron conformity.

Occasionally someone may walk out of one of our conventions, but he isn't thrown out. He just leaves when he discovers that he's come to the wrong place by mistake.

When we disagree in convention, we fight with the ferocity of a pack of strange bobcats thrown together in a telephone booth. But it's a family fight—and by November after we've all had our say we shall have joined ranks behind the nominee selected by the majority of us (and at least among those of us assembled here today, I think there's no disagreement as to who we want that nominee to be).

THE PARTY OF INNOVATION

It's a strange and wonderful thing that out of this mixed and heterogeneous group of people who call themselves Democrats have come the great innovations of our Nation's history—the raw, bold and imaginative ideas which have inspired the Nation to new bursts of creative activity and charted the path of our Nation's progress.

And yet it isn't so strange in another sense. Our party is the great shock absorber of American life—the fermenting cauldron in which the clashes and conflicts of individual ideas are distilled and refined.

Composed of so many divergent strands, we offer the Nation a certain cohesiveness that only a party of diversification can—and a certain tough durability that can come only in the alloy of different metals.

It was the party of Jefferson that believed enough in the average man to let him vote, that had the vision to see an expanding future stretching across the broad, untamed frontier for the little nation clustered along the eastern seaboard and to insure that future by the Louisiana Purchase.

It was the party of Jackson that had the courage to assert the power of the Nation and all its people as greater than that of any one financial interest and to break the stranglehold of a little group of men upon the economic windpipe of the Nation.

It was the party of Cleveland that faced the issues of the complex era of our industrial expansion—the party of Wilson that enunciated the "New Freedom," took the children from the mines and mills and put them in the schools, and dreamed a dream of peace on earth.

It was the party of Roosevelt that had the heart to hear the cry of the dispossessed, the disinherited, the disenchanted, the distressed and to lift a desperate people out of the throes of disaster, and his party which generated the dynamic leadership to save the freedom of man in the world.

It was the party of Harry Truman, that tough, plainspoken, fearless man who had the capacity to make decisions and who will be treated with far greater kindness by the historic chroniclers of the future than he was treated by the hysterical chronics of his time.

And it is the party that produced that man of abiding honor and towering patriotism whose dedicated years of inspired and responsible service to his Nation have earned for him a place unique in history and unrivalled in the hearts of his countrymen, SAM RAYBURN of Bonham, Tex.

GREATER TOMORROWS

We could go on and on with a recitation of the programs and personalities produced by this party of innovation. But you did not come here today to hear a recital of past achievements and faded glories. We are not here to dwell upon the imperishable pages of our past, for ours is the party of hope and not of memory. Rather than looking back to great yesterdays, we must look forward to greater tomorrows.

We are here today to choose delegates to our National Convention and to play our part in the selection of the next President of the United States.

It is a great moment, and an awesome moment. New problems call for new solutions. Complex challenges call for creative thinking. The problems and the challenges dwarf the concepts of the stereotyped past.

Gone forever are the days of which William McKinley spoke when he said that every town of 10,000 people in America had at least 10 men who could serve creditably as President.

For the Presidency today is not merely a ceremonial office nor an empty honor to be awarded in the manner of a popularity prize. It is not a place for a campaign pitchman whose only original thought is to question the patriotism of his opponents. It is an office of fateful decision.

In an age of danger and opportunity, when yesterday's dream is today's reality and tomorrow's history, the decisions of the Presidency can quite literally mean the difference between life and death for millions of people. This is what makes our responsibility so great and so grave.

I have the faith to believe that when the Democratic National Convention meets in Los Angeles, it will be not only nominating a candidate but choosing a President.

I feel certain that this will be true if we demonstrate the good judgment to articulate a constructive program for the whole Nation and not just a part of it, and to nominate a standard bearer with the demonstrated capacity to lead our whole party and not just a segment of it * * * and perhaps more importantly still, to set forth a program and

personality that can attract the confidence and enthusiastic support of that great bulk of plain vanilla Americans who are not actively affiliated with either major political party but upon whose decision the results of the election will unavoidably rest.

LYNDON B. JOHNSON

There are many of us—and a rapidly growing number of us in every part of the country—who are devotedly convinced that the highly developed skills and deeply dedicated leadership necessary to a truly great President as well as the national stature and universal respect, the organizational prowess and qualities of personality necessary to lead us to an overwhelming victory in November are preeminently present in the person of the great Majority Leader of the U.S. Senate, LYNDON B. JOHNSON of Texas and of America.

I invite you to look with me at the truly unusual qualifications of LYNDON B. JOHNSON.

To serve as a Member of the U.S. Senate is a great honor and an awesome responsibility. This select group of 100 men has been called the world's most exclusive club. Certainly it is the world's most powerful legislative body. But LYNDON JOHNSON is much more than merely another Member of the Senate.

To be chosen by one's colleagues as their leader is an even greater honor and an even more overpowering responsibility. SAM RAYBURN has a saying that the Members of Congress are the most critical jury in the world, that each Member's qualities are shrewdly judged by those who work with him day in and day out. But LYNDON JOHNSON has been much more than just another Senate majority leader.

When elevated to this position of respect and responsibility at the age of 44, he was the youngest man ever so honored by his colleagues in either party. And I think no serious student of history will quarrel with me when I say that LYNDON JOHNSON, by the uncontestable proof of his record of accomplishment, has been the most effective majority leader certainly in the past 50 years, and probably in the entire history of the United States. But LYNDON JOHNSON is more than this.

In a party known for its divergent interests, LYNDON JOHNSON has demonstrated a historically unrivalled capacity to weld together the divergent factions into one united and fairly harmonious whole. He alone with his extraordinary gifts of leadership and conciliation has drawn together in the Senate the forces of city and of farm, of north and south and east and west, and led them together up a constructive path of solid achievement.

This is the unique JOHNSON characteristic, his incredible ability to find solutions to great problems which have baffled others and remained unsolved often for decades.

Here is a man who has placed achievement above argument, solutions above strife, action above oratory, service above sectional discord, and his Nation's interests first and last and above every other consideration.

Is his the kind of leadership the American people want? He, along with Speaker RAYBURN, has authored and directed the record of the Democrats in Congress upon which our Nation's public have three times in the past three congressional elections placed the stamp of their wholehearted approval, electing ever-increasing Democratic majorities each successive time.

And they will crown our efforts with approval if jointly we behave as responsibly in Los Angeles.

DEMANDS OF THE TIMES

The times are demanding the best that we have. They are demanding leadership that can stand up to Khrushchev either in negotiation or in the arena of world opinion, and not come off second best.

They are demanding leadership which can keep our own country from being split into bitterly hostile camps upon the thorns of wicked controversy.

Dangerous times when our very survival is at stake are demanding leadership in whose sinews is the steel of firm resolve, to promise no slick and easy way but to call us to sacrifice if need be.

Unaccustomed times are demanding the imaginative leadership to use our burgeoning surpluses of agricultural commodities to feed the hungry and clothe the naked and serve as an effective instrument of friendship and peace rather than accumulating huge storage bills in the Nation's warehouses.

Careless times where shiny suburbs sprawl into congeries of congestion and cities of skyscrapers neglectfully decay into sickening slums of smog, soot, and urban ugliness.

Contradictory times where behind the angel in the advertisement and the convertible on the screen are concealed the bitter dilemma of the broken home and the stark futility of the unemployed.

Restless times in the world where the underfed, the underprivileged, the underdeveloped explode in emergence, hysterical in their quest for opportunity, humble in their search for decency.

Enlightened times when education becomes not just a school or a book but the essence, the soul, and the spirit of human values.

Tenacious times where the economic fallacies of restricted growth and tight money foolishly prevent the energetic enterprise necessary to enter the new decade.

These times are demanding leadership which can inspire a renewed sense of national vision, of national purpose, and of national effort.

The times are calling to this office a man of height and a man of depth, a man of brilliantly youthful imagination but steeped in mature and seasoned judgment, a man capable both of hardened steel and of gentle velvet, a man of action and a man of reason.

No longer can we think in the old outworn cliches of blocs and groups and factions and sections. America has outgrown this threadbare approach. The Nation's future is one. Its potential is indivisible. It cries out for leadership of a broader vision.

The office is indeed seeking the man. Impressive support is rallying from every part of the country. For we are seeking a President to serve all of America and all the people of America. It is no longer a question of where a man lives, but where he stands. The American people are not concerned about where a man comes from; they want to know where he is going.

And with your help, I have the feeling that LYNDON JOHNSON and a Democratic administration, on a ticket bought and purchased by the American people, are going to the White House next January.

If you should feel slightly cheated in having listened through a Democratic keynote speech that did not beat the bones of Calvin Coolidge and berate the memory of Herbert Hoover: these omissions have occurred because I've felt that there were more important things to talk about.

If you should think it strange that I have not excoriated the so-called modern Republicans for their lack of vision, their lack of direction, their lack of compassion, the loss of momentum we have suffered in the national product, the loss of initiative we have suffered in world affairs, the failures of the present Republican administration: it is because I did not come to speak of failures.

It is not a time for frantic denunciations or superficial solutions or intemperate boasting. It is a time for dedication.

May we think not alone upon how bad they are * * * but upon how good we need to be. Let us not merely pray that we shall win, but let us pray that we may deserve to win.

For in performance only can there be reward; in vision can there be fulfillment; and in service to our fellow men come the victories of life.

Resolutions Adopted by the National Rivers and Harbors Congress

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Friday, June 17, 1960

Mr. ROGERS of Florida. Mr. Speaker, under authority granted to extend my remarks in the RECORD, I wish to submit the report of the resolutions committee which was adopted by the 47th Convention of the National Rivers and Harbors Congress held in Washington, D.C., recently.

The resolutions committee, of which I had the honor and pleasure of again serving as chairman, consisted of one delegate from each State, insular possession, and the District of Columbia. The members gave careful and painstaking consideration to the matters before them, made many constructive suggestions, proposed numerous changes in the draft of the resolutions presented to them, and reached agreement thereon.

The convention was attended by registered delegates from 49 States, including Alaska and Hawaii, the Commonwealth of Puerto Rico, the Virgin Islands, and the District of Columbia, in addition to many guests, visitors, representatives of the press, and so forth. Michigan and Texas were tied with 29 delegates each; Florida was in second place with 21; while Louisiana and North Carolina were tied with 13 each; and New York sent 12.

These delegates were from all sections of the country, representing both legislative and executive branches of the Federal Government; State, city, county, and other local governmental agencies and interested groups; commercial, waterway, flood control, and reclamation associations; agricultural, labor, industrial, and trade organizations; and transportation interests; with memberships totaling several million.

We believe this expression of representatives of such different interests and pursuits is strong evidence of the general sentiment of the people of the United States concerning the matters dealt with in these resolutions:

REPORT OF THE RESOLUTIONS COMMITTEE TO THE 47TH NATIONAL CONVENTION OF THE NATIONAL RIVERS AND HARBORS CONGRESS, MAY 26, 1960

FOREWORD

The National Rivers and Harbors Congress assembled in its 47th annual convention

hereby rededicates its entire effort to the continued development of our great Nation through the development of our two major resources—our land and water. We intend to do our utmost now while it is appropriate and thereby help to strengthen our Nation to enable it to better meet adverse conditions should they ever return. In fact the strength so gained will go far toward avoiding such adverse conditions.

POLLUTION OF INLAND WATERS

This congress for some time has recognized the problem of pollution of our inland interstate waterways and impoundments by boats, municipalities, and industries. Millions are spent to improve the waters only to have them used by improperly equipped marine craft which cause pollution by disposal of sewage and other wastes and also such waters are polluted by improper disposal of industrial waste by industries and sewage by municipalities. We urge the Surgeon General of the U.S. Public Health Service and his interagency study group concerned with this major problem to make an early and appropriate report to the National Congress to form a basis for remedial legislation.

DOCK AND MOORAGE STANDARDS AS AIDS TO NAVIGATION

For some time now restrictions to navigation occasioned by structures along our navigable channels have been on the increase. Larger and faster vessels will make the problem more serious in the years ahead if some equitable solution is not found. While it would appear that Federal regulation might provide protection to operating vessels and shoreside facilities, it may well be that local zoning ordinances may provide standards of construction and location to insure that such facilities withstand normal vessel passages without damage. This congress will dedicate its efforts to a resolution of this serious problem.

FLOOD PLAIN ZONING

This congress recognizes the need for some form of regulation to avoid the creation of flood hazards in the future in the flood plains of the rivers of our country. In this connection we strongly support the view of the Chief of Engineers as expressed in his opening statement concerning the fiscal year 1961 appropriation for civil functions. The action proposed by him is appropriate and this congress will support legislation which would authorize the Corps of Engineers to provide flood plain information and advice to communities, to aid them in their planning for regulation of flood plain use. We share his belief that such information will serve as a guide to local development and as a means of avoiding future flood hazards.

LOSS OF RESERVOIR SITES

Consistent with long-range planning for the orderly development of our water resources we subscribe to the principle that definite action is indicated to preserve reservoir sites for that purpose. Major housing developments, industrial expansion, and the highway system have already exacted their toll on the remaining reservoir sites. Natural reservoir sites are a natural resource that should be preserved. Advance acquisition of appropriate estates in land or options therefor will be objected to. However, we urge the committees of Congress to continue to pursue the problem before these necessary sites as preempted for other uses.

THE NEW MAINTENANCE PLAN OF THE CORPS OF ENGINEERS

We are impressed with the plan for improving the maintenance program of the Corps of Engineers which has been devised by the Corps of Engineers in cooperation with the Bureau of the Budget. This plan, presented to the congressional Appropriations Committees by the Chief of Engineers in his opening statement in 1960 is an indication that an effort has been and is being made to reduce the backlog of maintenance on flood control and navigation improvements in which the Nation has a large investment. We strongly urge the Congress to implement the program by adequate appropriations. This plan of funding rehabilitation of major rehabilitation projects separately and small projects in a lump sum should give the committees a much better understanding of the problem and the urgent need for such appropriations.

TOLLS ON WATERWAYS

We are convinced that our continuing opposition to user charges on tolls on waterways is correct. There can be no doubt that such charges will result in a higher cost for water transportation and will produce a shift of such transportation from water to land. The investment already made for waterways warrants their continued full use. User charges will decrease that use and consequently they will provide a lesser return upon this extensive development.

RECREATION

Recreation at completed projects of the Corps of Engineers and the Bureau of Reclamation has become an important asset of these major investments. However, the Congress has not yet defined the extent of the Federal interest in such assets as a function of water resource development. We feel that it is now appropriate for the Congress to do so. In so doing it should establish guidelines for evaluating these benefits and allocating their costs.

OBSTRUCTIONS TO NAVIGABLE CHANNELS

This Congress strongly urges against the construction or erection of any fixed structure on or over any waterway which might possibly result in an unreasonable obstruction to navigation. We further urge that no permit for the construction or erection of such a structure be issued until a showing has been made by the applicant that such structure will not, in fact, result in an unreasonable obstruction to navigation and/or will not operate to deprive waterway users of the protection and safety afforded by such waterway.

FUNDS FOR PUBLIC WORKS PROJECTS

The navigable waterways and the water supplies of the rivers and lakes of America are the greatest natural resource of this Nation.

Full and comprehensive development and maintenance of these resources is necessary to insure our national security and future economic welfare. This is a responsibility which must in large part be borne by the Federal Government.

The Congress authorizes navigation and water conservation projects only when the benefits exceed the costs. There are billions of dollars of worthwhile authorized projects patiently awaiting budgeting and appropriation of funds to begin their construction. There are many important projects now under construction suffering from "stretchout" procedures, which means insufficient funds budgeted and appropriated each year to make possible early completion.

This congress is of the opinion:

1. That is to the general benefit of the Nation that a greater percentage of the national income be devoted to development of these natural resources.

2. That a much greater number of authorized projects be budgeted and appropriations made for beginning of their construction.

3. That the agencies of the Federal Government and the Bureau of the Budget should initiate a policy, and make every effort to carry it through, of scheduling completion of projects on the basis of sound construction practice and not on the basis of pessimistic anticipation of low annual allocation and appropriation of funds for such projects.

Such a practice would decrease the cost of interest during construction and hasten the day when the benefits of the project would begin to return to the Government and local interests.

That a copy of this resolution be forwarded to the Chief of Engineers, the Bureau of Reclamation, the Bureau of the Budget and the Appropriations Committees of the House and Senate.

ACQUISITION AND USE OF LANDS BY THE UNITED STATES

It has been called to the attention of the National Rivers and Harbors Congress that problems exist in various parts of the country concerning the policies and procedures involved in the acquisition and utilization of land by the United States of America and particularly in connection with water resource development projects or Government installations adjacent to such projects.

It is the desire of the congress to assure:

1. Equitable treatment to those displaced by water resource development projects; and

2. Full exploitation of the recreation potential of water resource development projects by providing ready access to the surface of the water; Therefore

I. The Congress of the United States should enact legislation to establish a commission to inquire into the policies and procedures employed in establishing just compensation for the taking of property for public use as guaranteed by the fifth amendment to the Constitution of the United States and to make recommendations for further legislation, if any, that may be necessary to assure equitable payments to owners and tenants displaced by public works projects of the United States and reimburse them for their actual losses.

II. The Congress of the United States and the heads of the executive departments and agencies involved should cooperate to establish a land acquisition schedule that will provide for the acquisition of required lands at the earliest possible date after authorization of a project in order to assist those affected in minimizing their losses and in obtaining available relocation sites.

III. The heads of the executive departments and agencies controlling lands along the shoreline of Federal water-resource development projects should provide ready access to the public of water areas thereof, either directly or through arrangement with State and local agencies for recreational development, whenever such use is determined by the head of the Department or agency involved to be compatible with the Government's use of the water area and adjacent lands.

Msgr. Milos K. Mlynarovich

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 17, 1960

Mr. MADDEN. Mr. Speaker, last Sunday, a host of friends and well wishers paid tribute to the Right Reverend Monsignor Milos K. Mlynarovich, nationally known American Slovak priest, author and poet, in observance of his Golden Jubilee of his ordination to the priesthood.

In 1914, Monsignor Mlynarovich came to East Chicago, Ind., and organized the Parish of the Assumption. Later on he organized the Sacred Heart Parish and built two beautiful churches and a parochial school.

Monsignor Mlynarovich is a celebrated poet and writer and his name and talents are known and revered by thousands outside of the Calumet district of Indiana. I have known the Monsignor personally for about 30 years and have always admired his devotion for religious, civic and charity work which he has accomplished for his people, church, community, State, and Nation.

I am herewith submitting an article from the Bethlehem Bulletin, written by Editor John C. Sciranka who outlines in detail the chronological course of the Monsignor's attainments and accomplishments:

MONSIGNOR MLYNAROVICH CELEBRATES GOLDEN JUBILEE OF PRIESTHOOD

(By John C. Sciranka)

Few people are gifted by the Almighty with rich talents like the Right Reverend Monsignor Milos K. Mlynarovich, noted American Slovak author and poet, who will observe the golden jubilee of his ordination to priesthood on Sunday, June 12, at the Monastery of Slovak Franciscan Fathers, known as the Seven Dolors Shrine, Valparaiso, Ind.

Monsignor Mlynarovich is a talented preacher, popular public speaker, humorist, and above all a prolific author and poet. He excells in all these talents, talking to him or observing his actions even for a little while, you will agree with Wordsworth who wrote that the poet is chiefly distinguished from other men by a greater promptness to think and feel without immediate external excitement, and a greater power in expressing such thoughts and feelings.

Of course, Monsignor Mlynarovich has a lot of fire and excitement especially in his oratory. Although the Gallery of Catholic Living Authors honored him with membership as the first author from his American Slovak countrymen, poetry still fits best his description, for according to a definition of a poet, it is from a Greek poietes, which means "a maker or creator." Poet practices that one of the fine arts which exhibits its special character and powers by means of language; or according to Aytoun, the art which has for its object the creation of intellectual pleasures by means of imaginative and passionate language, and of language generally. It has also been defined as the concrete and artistic expression of the human mind in emotional and rhythmical language.

POET LAUREATE

Knowing Monsignor Mlynarovich and his poetry, he belongs to the latter category of poets, for he possesses that artistic expression of human mind in emotional and rhythmical language which qualifies him to be the poet laureate of the American Slovaks without any question or doubt.

Monsignor Mlynarovich was born on October 11, 1887 in the village of Hasprunk, county of Bratislava, Slovakia. He was ordained to priesthood on May 21, 1910 in the historical city of Bratislava after completing his studies in various historical colleges in Slovakia. After his ordination he was a professor of theology. He also began to write poetry.

In his writings he dreamed about coming to America. In 1912 a well known Slovenian American missionary, the Very Reverend Casimer Zajkrajsek, OFM., visited Slovakia recruiting students and seminarians for missionary work in America. Father Mlynarovich was impressed by his talks of the land of Columbia. On August 2, 1914 he landed on Long Island on the SS *Washington*, which was the last ship to land from Germany as the World War I broke out over the assassination of Archduke Ferdinand in Serajeve, Serbia.

BUILT TWO CHURCHES

After a brief stop in Brooklyn, N.Y., he proceeded to Indiana, where he was accepted by the late Bishop Herman Alerding to labor in the Fort Wayne diocese. He became assistant pastor of St. John the Baptist Slovak parish in Whiting, Ind., and assisted the late Father Benedict Rajcany. On November 29, 1914 Bishop sent him to East Chicago, Ind., where he organized a Parish of the Assumption. From this parish he organized a Sacred Heart Parish and built two beautifuf churches and a parochial school.

Writing books and poems, however, never ceased to be his chief hobby. In spite of heavy duties as pastor and organizer, he had a novel about the American Slovaks published in 1926 by the St. Adalbert (Vojtech) Cultural Slovak Society. He also visited Rome and his native Slovakia, where he established contacts with literary people, many of whom visited him in Indiana.

Fraternalism interested him right from the day he landed in Indiana. There he met Mrs. Helen Kocan, the leading American Slovak fraternalist and the supreme president of the First Catholic Slovak Ladies Union in Indiana, which organization published some of his literary works. Other works were published by the late Father John J. Lach, who died suddenly on May 9 of this year and was a pastor in Whiting for over 30 years.

SUPREME CHAPLAIN

In 1939 Monsignor Mlynarovich was elected president of the supreme court of the Slovak Catholic Sokol at the national convention in Trenton, N.J. Three years later he was chosen as supreme chaplain of this the largest Slovak gymnastic and athletic youth fraternity. At the same time he was elected supreme president of the Slovak Catholic Federation of America, an affiliate of the National Catholic Welfare Conference, which position he held for 5 years during the hard days of depression. He was again elected to the supreme presidency of the federation in 1950 and still holds the office.

In 1931 during the popularity contest held by the Daily Slovak American, he was chosen to the top position. But he kept on writing his books and poetry and his poems "Slavia," also novels, "The Great God of Small," "In the Shadow of Skyscrapers," "The Birds in the Storm," in which he writes about his life in Indiana, especially near the Notre Dame University and visits to Chicago, received much praise in the Slovak literary circles. "The Struggle With Fate," a 160-page novel, is a masterpiece. But his book of poems, "Testament of the King of Hearts," won him the highest award.

Monsignor Mlynarovich was elected to the membership in the Gallery of Catholic Living Authors and also to the International Marianist Academy.

ELEVATED BY PIUS XII

On June 8, 1945, the late Pope Pius XII elevated him to the dignity of papal chamberlain with the title of the Very Reverend Monsignore and on December 21, 1955, the same reigning Pontiff elevated him to the Domestic Prelacy with a title of the Right Reverend Monsignore. During that year he visited the Eternal City with his dear friend, the late Father John J. Lach, of Whiting, Ind., where they established a scholarship for the students for priesthood who would work later in Slovakia, where the Communists are preventing the education of students for priesthood.

In spite of a large parish, he resigned his pastorate and retired to a quiet life in the Valparaiso Franciscan Monastery to devote his life to writing, preaching, and lecturing.

His recent work is a beautiful book devoted to the Mother of our Lord with the introduction and imprimatur by his bishop, the Most Reverend Andrew G. Grutka, D.D., of Gary, Ind., his close friend, who will preside at the solemn golden jubilee mass on Sunday, June 12, at the monastery of the Slovak Franciscan Fathers, at Valparaiso, Ind., and preach the sermon.

Monsignor Mlynarovich is a noted American Slovak fraternalist. He is a member of all the leading Slovak fraternal organizations in America and served as chairman of the literary committee of the National Slovak Society and on other committees during the national conventions of other leading organizations.

The American Slovaks and their brethren in various countries will honor Monsignor Mlynarovich as an outstanding author and poet laureate as they already did in a beautiful biography, which depicts his interesting and fruitful life of half century in priesthood. His countless friends and admirers including ourselves wish him a long and healthy life with a proverbial ad multos annos.

Keeping Grain Storage Costs Down

EXTENSION OF REMARKS

OF

HON. SIDNEY R. YATES

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 17, 1960

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following from the Des Moines Register, June 15, 1960:

KEEPING GRAIN STORAGE COSTS DOWN

We reprinted in the Register Monday an editorial from the Wall Street Journal which raised objections to what it said was a Department of Agriculture proposal to store more surplus grain in Government bins. It said there was no acceptable proof that it is cheaper to store the grain in Government bins.

Now Agriculture Secretary Benson has written a letter to the Journal saying that this was not a Department of Agriculture proposal. He says the Department agrees that private storage facilities should have preference and that it is bending its efforts in this direction.

Benson also agrees with the Journal that the difficulties in agriculture are a result of "too much Government involvement."

It is true that Congress wants the Department of Agriculture to give preference to private warehousers wherever practicable. However, the Department's own figures have shown the cost to be considerably less when the surplus grain is stored in Government bins. A survey by the Department last January showed the average cost of storing grain in Government bins in 1959 was about 5 cents a bushel. This compared with the rate paid private storage companies of 16.5 cents a bushel.

The Government bin cost figure did not include an allowance for insurance nor, of course, for taxes. But if about 1.5 cents were allowed for these charges paid by private warehousers, the Government bin cost still would be far lower.

The rate paid private warehousers is being dropped to about 13.5 cents per bushel. But it seems that the Government could save some additional money on storage costs by making full use of its own bins. The Department of Agriculture reported that

more than one-fourth of its available grain bin space was not used last year.

Even if the calculated cost of storage in Government bins were as high as for commerical storage, we should think it would be more economical to keep full the bins the Government now owns rather than to let them stand empty. The cost of owning the bins will go on regardless of whether they are used or not. If the commercial storage rate can be brought down to make Government storage impractical, then, the Government ought to sell its bins.

The cost to the taxpayer of Government farm programs has been rising sharply in recent years. Most of this is the consequence of the upsurge in farm production and the decline in market prices. Even though price supports have been lowered considerably, the total cost of farm programs has climbed.

However, some of this increase has been a result of inefficient management of the programs and abandonment of acreage limitations for corn. And another part of the increase is the lack of prudence in keeping grain storage costs down.

The Department of Agriculture has a responsibility to carry out the laws of Congress fully but at as low a cost as possible. The congressional preference for private industry does not require the Department to ignore the cost factor.

Heart Association, Tuberculosis Association Issue Warnings on Smoking

EXTENSION OF REMARKS
OF
HON. DAVID S. KING
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Friday, June 17, 1960

Mr. KING of Utah. Mr. Speaker, two national health organizations have recently issued warnings to the American public about the hazards of cigarette smoking.

These historic statements—the first by the National Tuberculosis Association, the second by the American Heart Association—emphasize the need for impressing upon the Nation's young people the seriousness of these hazards.

I point out that this need would be met by the program of matching educational grants which the late Senator from Oregon, the Honorable Richard L. Neuberger, and I proposed in bills now before this Congress.

The Tuberculosis Association statement, endorsed by the distinguished chest specialists in its medical section, the American Trudeau Society, minces no words. It flatly asserts that "cigarette smoking is a major cause of lung cancer." It also concludes that parents, teachers, and physicians have "a duty to warn our youth of these facts before the cigarette smoking habit has become established."

While the Heart Association warns that death rates from coronary heart disease, the greatest killer in our society, are much higher for heavy cigarette smokers than for nonsmokers—50 to 150 percent higher in middle-aged men—it, too, recognizes the need for educating the public about the seriousness of these hazards. It concludes, in part, that "these studies concerning cigarette smoking and coronary heart disease should be called to the attention of the medical profession, allied health professions, health educators, and the general public."

These statements once more illustrate the folly of Federal subsidies which support the production of a crop that medical science has clearly shown undermines the general health of the Nation. I commend these statements to the attention of my colleagues. The statement issued by the board of directors of the Tuberculosis Association is followed by a brief documentation which the association drew from key scientific reports to support its statement; this in turn is followed by the Heart Association statement:

STATEMENT ON CIGARETTE SMOKING AND HEALTH, APPROVED BY THE NATIONAL TUBERCULOSIS ASSOCIATION BOARD OF DIRECTORS

The National Tuberculosis Association warns all persons that there is an alarming increase in deaths from lung cancer; cigarette smoking is a major cause of lung cancer; the risk of lung cancer increases with the number of cigarettes smoked.

Giving up smoking reduces the risk of lung cancer.

Recent studies show that cigarette smoking is a factor in such crippling lung diseases as chronic bronchitis and emphysema.

There is no single cause for all lung cancers. Breathing polluted city air may also add to the risk of lung cancer.

No present method of treating tobacco or filtering the smoke has been proved to reduce the harmful effects of cigarette smoking; up to now, these harmful effects can be avoided only by not smoking cigarettes.

All persons should be given these facts. Parents, teachers, and physicians have a special opportunity and a duty to warn our youth of these facts before the cigarette smoking habit has become established.

BRIEF DOCUMENTATION ON RELATION BETWEEN CIGARETTE SMOKING AND HEALTH

Many scientific reports in the medical literature of recent years deal with the relation between cigarette smoking and health.

Two recent summaries have brought together the most important findings.

I. "Smoking and Lung Cancer—A Statement of the Public Health Service" by Leroy E. Burney, M.D., Surgeon General,[1] includes a bibliography of 49 items covering statistical, pathological, epidemiological, and experimental studies of lung cancer and tobacco smoking. Dr. Burney's article includes some important but simple graphs in its 7 pages.

The conclusions of this article are as follows:

"It is a statutory responsibility of the Public Health Service to inform members of the medical profession and the public on all matters relating to important public health issues. The relationship between smoking and lung cancer constitutes such an issue and falls within this responsibility of the Public Health Service.

"The Public Health Service believes that the following statements are justified by studies to date. (1) The weight of evidence at present implicates smoking as the principal etiological factor in the increased incidence of lung cancer. (2) Cigarette smoking particularly is associated with an increased chance of developing lung cancer. (3) Stopping cigarette smoking even after long exposure is beneficial. (4) No method of treating tobacco or filtering the smoke has been demonstrated to be effective in materially reducing or eliminating the hazard of lung cancer. (5) The nonsmoker has a lower incidence of lung cancer than the smoker in all controlled studies, whether analyzed in terms of rural areas, urban regions, industrial occupations, or sex. (6) Persons who have never smoked at all (cigarettes, cigars, or pipe) have the best chance of escaping lung cancer. (7) Unless the use of tobacco can be made safe, the individual person's risk of lung cancer can best be reduced by the elimination of smoking."

II. The Bureau of Cancer Control of the New York State Department of Health issued a brochure in 1959 entitled, "Cigarette Smoking and Lung Cancer."[2] It summarizes recent articles and discusses the evidence for the cigarette-lung cancer relationship. This booklet contains 24 references to the medical literature.

One of the most quoted studies in this field is that of E. C. Hammond, Sc. D., and D. Horne, Ph. D.[3] Another important recent article is by Harold F. Dorn, Ph. D., of the Public Health Service, and is titled, "Tobacco Consumption and Mortality From Cancer and Other Diseases."[4] This is a comprehensive analysis of causes of death in smokers and nonsmokers among 249,000 Government life insurance holders.

Most students of the tobacco risk problem are entirely convinced as to the cigarette smoking lung cancer cause and effect relationship. Several studies including Dorn's indicate a probable association between cigarette smoking and other pulmonary diseases such as chronic bronchitis and emphysema.[5] [6] Finally, the possibility exists that tobacco smoking may increase disability and mortality from cardiovascular and other diseases.

There also appears to be a relation between air pollution and lung cancer.[7] [8] A recent comment by Dr. Burney is pertinent in this regard. He stated[9] that, although circum-

[9] Proceedings, National Conference on Air Pollution. Washington, D.C., Government Printing Office, 1959, pp. 4–5.

stantial evidence relates cancer to atmospheric pollution, the case has not yet been proved. "This legal metaphor is frequently used," Dr. Burney added. "I submit to you that it is misleading. In law the suspect is innocent until his guilt has been proved beyond reasonable doubt. In the protection of human health such absolute proof often comes too late."

A great deal of research is needed to illuminate the dark corners of this complicated problem. There is, however, sufficient convincing evidence to compel action. The increasing U.S. annual death toll (now at 35,000) caused by cancer of the lung permits no more delay. Our population must be informed, especially the youth who have not yet become steady smokers.

CIGARETTE SMOKING AND CARDIOVASCULAR DISEASES

(A report by the American Heart Association)

In 1953 the American Heart Association issued a statement on smoking and cardiovascular diseases. Among other things, this statement indicated that the available evidence at that time was not sufficient to justify conclusions concerning a cause-and-effect relationship between cigarette smoking and increased death rates from coronary heart disease. Since then, sufficient additional knowledge has accumulated to warrant a new report on cigarette smoking and its possible relationship to cardiovascular diseases.

Up to the present, a number of medical studies have been made, nearly all demonstrating a statistical association between heavy cigarette smoking and mortality (death) and morbidity (illness) from coronary heart disease. In these studies, death rates from coronary heart disease (heart attacks) in middle-aged men were found to be from 50 to 150 percent higher among heavy cigarette smokers than among those who do not smoke. This statistical association does not prove that heavy cigarette smoking causes coronary heart disease, but the data strongly suggest that heavy cigarette smoking may contribute to or accelerate the development of coronary heart disease or its complications.

Because coronary heart disease is the leading cause of death and a major cause of disability in the American population, the American Heart Association believes that these studies concerning cigarette smoking and coronary heart disease should be called to the attention of the medical profession, allied health professions, health educators, and the general public. The association recognizes the need for more knowledge and will continue to encourage a systematic biological and medical research in order to determine whether a causal relationship exists between cigarette smoking and coronary heart disease and also to determine the effects of smoking in relation to strokes and other important aspects of cardiovascular diseases.

Some Cold, Hard Figures on the Extent of Foreign Glove Imports—Still No Threat?

EXTENSION OF REMARKS

OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, June 17, 1960

Mr. STRATTON. Mr. Speaker, I have taken the floor of this House frequently in the past 2 years to try to point out to my colleagues the increasing economic threat posed by foreign glove imports to our own domestic glove industry and the fine men and women employed in it. But figures often speak louder than words. And nothing, I think, could demonstrate more clearly than some figures recently compiled by the National Association of Leather Glove Manufacturers and the American Fabric Glove Associates just how serious this threat of increased imports has become. I find it hard, Mr. Speaker, to see how any reasonable person can read these figures and still maintain, as the U.S. Tariff Commission recently held, that foreign glove imports are not coming into this country in an amount sufficient to cause severe harm or injury to the domestic glove industry.

The figures referred to follow:

MAY 18, 1960.

To Members of the Association:

Annual import figures for 1959 have just been released, and we are listing various breakdowns, together with comparisons with previous years.

WOMEN'S LEATHER GLOVES

Chart No. 1

Chart No. 1 shows the growth of the import market from 1952 on. You will notice that we show almost a 50 percent increase in dozens over a year ago. At the same time, we point out to you that during this period the unit value has decreased. If the imports for the first few months are any indication of the volume that is ahead, we can expect another 50 percent increase, or approximately 350,000 dozens, for 1960.

Year	Dozens	Unit value
1952	76,296	$28.15
1953	91,662	26.4
1954	89,189	25.9
1955	94,152	25.95
1956	115,142	26.22
1957	151,329	26.11
1958	173,423	24.90
1959	255,399	24.59

Chart No. 2

This chart shows the exporting countries, the dozens exported, and the unit value for the year 1959:

Country	Dozens	Unit value
Italy	97,037	$19.87
France	93,472	30.35
West Germany	30,465	24.39
Philippine Republic	15,236	21.18
Belgium	6,742	24.91
United Kingdom	5,624	23.90
Czechoslovakia	3,487	17.11
Spain	1,443	18.94
Netherlands	709	26.49
Canada	384	25.75
Japan	282	14.42
Austria	159	25.94
Greece	108	22.67
Switzerland	67	21.63
Peru	41	24.39
Yugoslavia	17	17.41
Sweden	5	62.60
Norway	3	65.33
Rumania	3	15.00

Chart No. 3

This chart is most interesting, because it gives you a 3-year comparison. You will note from it that Italy has now replaced France as the major exporting country. This, of course, was predicted a year ago.

In analyzing the chart, you will notice there is a certain amount of stability in prices over the past 3 years. The top four, namely, Italy, France, West Germany, and the Philippines, retain their positions and account for practically all the gloves that are imported. The volume of the other countries shows very little fluctuation, and it is doubtful if they will ever become important factors in the women's glove market.

Country	Dozens	Unit value
1959		
Italy	97,037	$19.87
France	93,472	30.35
West Germany	30,465	24.39
Philippines	15,236	21.18
Belgium	6,742	24.91
United Kingdom	5,624	23.90
Czechoslovakia	3,487	17.11
Spain	1,443	18.94
Netherlands	709	26.49
Canada	381	25.75
Japan	282	14.42
Austria	159	25.94
Greece	108	22.67
Switzerland	67	21.63
Peru	41	24.39
Yugoslavia	17	17.41
Sweden	5	62.60
Norway	3	65.33
Rumania	3	15.00
Total dozens and average unit value	255,399	24.55
1958		
Italy	52,798	20.40
France	74,339	30.48
West Germany	20,923	24.17
Philippines	12,371	18.83
Belgium	4,270	25.43
United Kingdom	4,180	24.68
Czechoslovakia	2,388	15.94
Spain	1,477	16.54
Netherlands	157	20.81
Canada	38	35.79
Japan	168	21.20
Austria	34	29.00
Greece	148	26.09
Switzerland	13	40.00
Peru	16	29.75
Yugoslavia		
Sweden	5	64.02
Norway		
Rumania		
Total dozens and average unit value	173,423	24.90
1957		
Italy	35,966	20.30
France	73,911	29.80
West Germany	22,733	22.60
Philippines	7,483	18.40
Belgium	2,232	26.00
United Kingdom	4,446	22.50
Czechoslovakia	236	14.10
Spain		
Netherlands	527	25.40
Canada	67	22.20
Japan	350	22.20
Austria	444	22.25
Greece	310	24.40
Switzerland		
Peru		
Yugoslavia		
Sweden	11	40.00
Norway		
Rumania		
Total dozens and average unit value	150,411	25.42

The big volume in the women's glove field is in gloves under 12 inches in length, with PK gloves out in front, overseem second, and lined gloves also making strong inroads in the domestic field. In the longer lengths, the 16 inch glove was the volume leader.

MEN'S GLOVES

Chart No. 1

This chart clearly outlines the progress that has been made in the men's field in the past 8 years and, at the same time, shows the decrease in unit value that has taken place during the same period:

Year	Dozens	Unit value
1952	8,124	$36.00
1953	7,784	35.00
1954	5,820	36.00
1955	8,825	30.27
1956	18,249	31.08
1957	22,654	28.30
1958	30,072	25.61
1959	80,964	24.88

Chart No. 2

Chart No. 2 gives the various countries exporting, together with the dozens exported and the unit value:

Country	Dozens	Unit value
Philippine Republic	40,589	$23.15
Italy	24,946	24.39
United Kingdom	5,118	27.84
Spain	1,703	23.45
West Germany	1,660	40.65
Netherlands	1,561	23.76
Austria	301	6.92
Sweden	249	52.08
Canada	152	26.11
Greece	99	12.30
Japan	68	19.63
Denmark	60	57.61
Norway	48	30.15
Switzerland	40	26.80
Belgium	35	34.40
Argentina	4	33.75

Chart No. 3

The following chart gives you the comparison of the various countries during the past 3 years, including dozens and unit value:

Country	Dozens	Unit value
1959		
Philippines	40,589	$23.15
Italy	24,946	24.39
United Kingdom	5,118	27.84
Spain	1,703	23.45
West Germany	1,660	40.65
Netherlands	1,561	23.76
Austria	301	6.92
Sweden	249	52.08
Canada	152	26.11

MAY 19, 1960.

To Members of the Association:

Annual import figures for 1959 have been received, and we are forwarding them to you, divided into various categories, so that you will be able to understand the extent of the import market.

No comparisons with domestic production figures for 1959 are made, due to the fact that the domestic figures are not available at this time.

The overall picture indicates that Japan is by far the leading supplier, accounting for better than 50 percent of all imports—and in some instances the charts will indicate even higher. The balance of production is distributed mainly among the Philippine Republic, West Germany, Hong Kong, and Italy.

Chart No. 1

Single and double woven cotton, of fabric knit on warp knitting machines. Tariff paragraph 915. Commodity schedules 3090–100–110. Duty 30 percent, established September 1, 1955.

Country	Dozens	Unit value	Total value
Japan	428,464	$4.38	$1,880,166
West Germany	152,112	9.37	1,425,624
Philippine Republic	134,212	8.59	1,154,433
Hong Kong	118,621	5.24	622,557
Italy	89,850	7.68	690,627
France	10,103	13.60	137,459
United Kingdom	4,720	7.67	36,228
Portugal	1,678	12.23	20,529
Austria	1,350	17.99	24,292
Malta	850	10.39	8,837

United Kingdom	3,838	15.07
Portugal	268	15.30
Austria	170	10.79
Malta	----------	----------
Switzerland	70	11.14
Belgium	735	9.78
Spain	2,080	13.50
Madeira	842	11.24
Netherlands	117	13.67
Canada	469	14.00
Total:		
1959	943,361	6.36
1958	857,634	7.87
1957	891,782	6.82

In the next category, we are considering woven cotton gloves. Japan accounts for approximately 80 percent of the volume, Hong Kong for 10 percent; and the balance is divided among other countries.

Also included in chart No. 3 is a special category "Other Vegetable Fibers," a woven fabric, but not cotton. To date we have not been able to identify this fiber.

Chart No. 3

Cotton, woven. Tariff paragraph 915. Commodity schedules 3090–800. As of July 1, 1959, the commodity schedule was divided as follows: 3090.810 includes gloves of chief value cotton and 3090.820 of chief value vegetable fiber, other than cotton. Duty 25 percent.

	Dozens	Unit value	Total value
Cotton, woven:			
1959	57,536	$3.68	$211,785
1958	40,507	3.56	144,588
Other vegetable fibers (not cotton), woven:			
1959 [1]	27,375	3.10	85,113

[1] Above figures are reported for last 6 months of 1959.

Chart No. 4

Cotton—in part handmade lace. Tariff paragraph 1529(a)(12)(13). Duty 45 percent, established June 1, 1951. Commodity schedule 3090.850.

Year	Dozens	Unit value	Total value
1959	15,370	$4.52	$69,200
1958	7,890	3.34	26,392
1957	5,394	5.74	30,972

In the cotton knit or crocheted classification, which is identified as chart No. 5, Japan accounts for 75 percent of the volume, the Philippines for approximately 10 percent, Italy 13 percent, and what remains is divided among a few other countries.

Chart No. 5

Cotton, knit or crocheted. Tariff paragraph 917. Commodity schedule 3090.900. Duty 40 percent, established September 1, 1955. As of July 1, 1959, the commodity schedule was divided as follows: 3090.910 includes gloves of chief value cotton, and 3090.920 includes gloves of chief value vegetable fiber other than cotton.

Cotton

Year	Dozens	Unit value	Total value
1959	80,282	$2.93	$235,404
1958	73,462	2.70	205,489
1957	119,976	2.94	353,057

Other vegetable fiber (not cotton). None reported.

Chart No. 6 merely gives you a quick rundown of the volume increase, both in units and in dollars, of cotton gloves during the year 1959 over 1958.

Chart No. 6

Cotton

1959		*1958*	
Dozens	*Total value*	*Dozens*	*Total value*
948,361	$6,015,724	857,634	$5,590,164
57,536	211,785	40,507	144,588
15,370	69,200	7,890	26,392
80,282	285,404	73,462	205,489
1,096,548	6,532,113	979,493	5,966,633

NOTE.—Unit increase 1959 over 1958: 117,055 dozens, or 10 percent. Dollar increase 1959 over 1958: $565,480, or 10 percent.

SYNTHETICS

The synthetic glove market shows some extreme fluctuations and a very definite change in areas of production. Japan maintains its commanding lead, Italy takes the second spot in 1959. Hong Kong has made tremendous progress, while West Germany shows an increase over 1958 but a substan-

tial loss from 1957. The Philippine Republic is down from 192,000 dozen in 1957 to 16,000 dozen in 1959. Chart No. 7 gives the imports by countries during 1959.

Chart No. 7

Synthetic seamed gloves. Commodity Code 3840003. Tariff paragraph 1309. Duty 25 cents per pound, plus 32½ percent. This schedule was discontinued as of January 1, 1960.

Country	Total dozens	Unit value	Total value
Japan	611,144	$3.42	$2,091,861
Italy	192,241	3.76	724,203
Hong Kong	144,280	3.23	467,031
West Germany	89,568	5.36	480,131
Philippine Republic	16,373	6.59	107,742
France	2,275	11.64	26,484
Canada	1,150	2.47	2,842
Austria	701	7.90	5,544
Belgium	577	6.52	3,766
Switzerland	316	9.68	3,062
United Kingdom	96	9.75	936
Panama	65	3.30	215
Israel	50	5.88	294
Netherlands	25	12.08	302
Total	1,058,821		3,914,413
Average unit value		3.69	

Chart No. 8

Comparison of synthetic seamed gloves for 1959, 1958, and 1957. Commodity Code 3840003. Tariff paragraph 1309. Duty 25 cents per pound plus 32½ percent.

Country	1959	1958	1957
Japan	611,144	356,059	466,270

National Captive Nations Week Committee

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Friday, June 17, 1960

Mr. JAVITS. Mr. President, in accordance with Public Law 86–90, private citizens from every section of the country have recently formed the National Captive Nations Week Committee, with headquarters at 917 15th Street NW., Washington, D.C. This committee of over 250 leading citizens has as its sole purpose the observance by all Americans of Captive Nations Week which commences on July 17. Along with many of my colleagues in the Congress, I am happy to be an honorary member of this committee.

In preparation for the nationwide observance of the first anniversary of Captive Nations Week, the national committee is currently distributing a brochure entitled, "Captive Nations Week, July 17–23, 1960." I hope that copies of this brochure reach every community in this Nation. The guideposts of the National Captive Nations Week Committee are peace with honor founded on a policy of justice and freedom for peace and friendship among all nations, including the many captive and occupied non-Russian nations within the Soviet Union.

The need for this type of organization is described by its chairman, Dr. Lev E. Dobriansky, professor of economics at Georgetown University in an address delivered before the 1960 women's forum on national security, entitled "Peace With Honor."

I ask unanimous consent to have printed in the Appendix of the RECORD an excerpt from this address which was published in the April issue of Vital Speeches.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

THE INTELLECTUAL GAP RE U.S.S.R.

When I authorized the Captive Nations Week resolution last year, little did I anticipate that its able sponsorship and passage in our Congress would provoke Khrushchev to think that this intellectual gap in our country has been spontaneously closed. His actions showed that he fears this deeply, and with good reason. Once this gap is filled, in our eyes and the eyes of the free world, Russia will dwindle to proper size. Russian propaganda, which exaggerates the Potemkin Village achievements of science, technology, economics, and education in the U.S.S.R., would suffer irreparable losses. Our added knowledge, understanding, and perception of the Soviet Union, if skillfully used, could render Moscow indefinitely insecure within the Soviet Union itself. They would eliminate, too, many of our baseless fears.

It is not a stroke of superpatriotic rhetoric to declare that, on the basis of projected current trends, easily within the next 50 years no nation could be compared in total power and capability with the United States. The Soviet Union, factually and historically, is not a nation. In addition to Russia and its approximately 96 million people, the Soviet Union consists of many non-Russian nations which, significantly, make up the majority of capitive nations in the entire Red empire. One of them, Ukraine, with its 40 million people, is the largest non-Russian nation behind the Iron Curtain. Moscow has its internal satellites as well as its external ones. If the external ones, like Poland and Hungary, are deemed unreliable for Moscow's global purposes, the record of the past 38 years shows that the internal satellites, like Ukraine and Turkestan, are equally unreliable. Without the rich capitive resources of these internal satellites, Russia would be a power no greater than an integrated Germany. Most of us are even unaware of the fact that about 35 million Moslems, many with strong ties with Turkey and Pakistan, are held captive in this primary empire of Moscow.

Give some thought to these fundamental facts and what they signify. These facts are expressed in the captive nations resolution and Khrushchev recognized well their significance and their portent. Unfortunately, many of us still do not. Our economic and military comparisons are drawn on the basis of false and misleading concepts and definitions. There is no more a gross national product in the Soviet Union than there is a gross global product here. A gross imperial product, with phonetic emphasis upon the GIP, is truer to fact. We approach a far more accurate and different picture of relative economic strength by only comparing the total output of Moscow's entire empire, which includes mainland China, with that of the free world alliances. The difference is staggering. Comparing the United States, which is a nation, with the Soviet Union, which is an empire of many subjugated nations, cannot suit Moscow's propaganda mill better. It conceals all the facts of economic colonialism within the U.S.S.R. itself.

For the same basic reasons, our military comparisons are askewed. If we deem the armed forces of the external satellites as being unreliable for Moscow, there are firm grounds for a similar evaluation of the armed forces in the U.S.S.R. About 45 percent of these forces consist of captive non-Russians, and these, by basic policy, are largely dispersed from their respective homelands in this substrate empire. Our memories are short, and our perspectives are narrow. Only in the past world war, millions of these non-Russians deserted to take up arms against Moscow. In the Hungarian Revolution, Ukrainians, Russians and others joined with the Hungarian patriots. In Napoleonic times, Alexander I threatened Europe with his armed might; before World War I, Czar Nicholas II scared Europe with the "steamroller," his imperial armed forces; and now Czar Nikita engages in nuclear blackmail. In three major wars in this century, the multinational forces controlled by Moscow disintegrated early in the deadly game. On the basis of these facts and more, one can understand why at the end of the recent 2-day session of the Supreme Soviet, the delegates were whisked away to see a performance of Tolstoy's "War and Peace." Their self-assuring theme song was that "no conqueror will ever again march through Moscow." Contrary to popular myth, both Napoleon and Hitler were defeated not by the empire's forces but by the emptiness of their ideologies. Both had nothing but continued slavery to offer to the Russian and non-Russian nations in Moscow's empire.

We, of course, seek to conquer no one. But we richly possess an ideology which emphasizes that freedom is indivisible. And in the permanent cold war it is the

deadliest weapon against Moscow's totalitarian empire, the Soviet Union. Terms like "the Soviets," "the Soviet people," "the Soviet nation," or Russia as an equivalent for U.S.S.R. are marks of our intellectual lag regarding this basic empire. This lag is shown, too, by the fact that nowhere in our Government is there any continuous study made of the sensitive relations between Moscow and its internal satellites. Our ignorance along this fundamental line is appalling. We're like a football team facing an opponent without the advantage of a scout's briefing on his basic weaknesses. You wouldn't believe it, but two years ago an obtuse attempt was made to eliminate the non-Russian languages beamed by our Voice of America to the U.S.S.R. Thanks to a few alert Congressmen, the peoples there were spared listening to our programs in the language of their Russian captor.

THE WILL FOR FREEDOM

Now, finally, the why of our position on peace with honor. Principles and know-how are mute without the human will to enforce them. Our will for freedom is not just an emotion; it is a certitude, a vision with a rational outlook. On the basis of our principles and the capabilities set by our know-how, this will works creatively to mold that world order allowing for the free and maximum fruition of individual and national potentialities. Our conception of world order, based on rights and law, is the very negation of Moscow's colonial and imperialist totalitarianism. This will for freedom creates, not just preserves; it moves forward, not just rests; it is determined to see things through on the time-honored principle that the best defense is the offense. We are so growth-conscious today about our economy, foreign trade, the underdeveloped counties, space exploration and other fields: the one area we should be most growth-conscious is the state of world freedom.

In this eventful year, you and your organizations can do much to further this will for freedom:

(1) 1960 is a Lincolnian year, the centennial of a Presidency whose immortal words on the impossibility of half free and half slave applies on a global basis today. 1976 will be the 200th anniversary of our Declaration of Independence for which we should prepare with clean consciences and firm hearts. Instead of long-run economic plans, let us initiate in the spirit of our living revolution a 16 year freedom plan for spiritual rededication and a politico-psychological force that would stir the hearts and minds of people throughout the world;

(2) More than anything else, Khrushchev wants our acquiescence and consent to the permanent captivity of the over 20 nations in his vast empire. His sputniks, lunicks, and missilnicks are all diversionary means for attaining this crucial objective. Unless we are bent upon suicide, this we could never allow to happen. In terms of our principles, not to say national strategy, such an accommodation is unthinkable. Your organizations can give full expression to this by preparing now for the first anniversary of Captive Nations Week this July;

(3) The record shows that all recent summits have resulted in grave disadvantages for us. Two years of clever propaganda by Moscow has sucked us into another summit and perhaps a series of diversionary talkfests. Even now Khrushchev is reviving pressure on West Berlin. You and I can urge our President that the summit agenda include the basic issues of the captive nations and an integrated Germany and that our stand on West Berlin, which is only the tail of these issues, be firm and uncompromising. Before long we shall learn that the only self-respecting way to treat a totalitarian Russion is by firmness and confident resolve;

(4) To close the serious cold war gap, your organizations can help immensely in this by supporting the important bills in Congress (H.R. 3880 and S. 1689) proposing the creation of a Freedom Commission and a Freedom Academy; and

(5) We are constantly told to learn about and understand other peoples and nations. By all means. From the viewpoint of our own national security, I believe you will agree that a working knowledge and understanding of the many non-Russian nations in the U.S.S.R. ranks high in priority. You can develop this important interest which basically is in the interest of our own national security.

By doing what you believe in is the true exercise of the will for freedom. Our will for freedom is the backbone of the will to freedom among the enslaved. This will is at the core of peace with honor. This will is ably represented by you.

The Social Security Inverted Pyramid—No. 4

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Friday, June 17, 1960

Mr. ALGER. Mr. Speaker, under leave to extend my remarks I am including a continuation of the discussion of the social security program by W. Rulon Williamson, original actuary of the Social Security Board:

SOCIAL SECURITY AND THE CONGRESS

(By W. Rulon Williamson, research actuary)

4. THE INFINITE—THE PERPETUITY

Each generation fights the influence of the "dead hand" of the past, with varying degrees of success. Perpetual trusts have been established for certain purposes. The custodians of these funds often find it harder and harder to carry out the terms of the trust. Andrew Carnegie established the Carnegie Foundation for the Advancement of Teaching, as a perpetual trust. And while he still lived, within 5 years of the founding, the flaws in the system showed up. After 13 years no more entrants into the "century of colleges" were to have the prospect of a pension from the system—but in spite of this curtate coverage, the system is apt to last a hundred years to do all that may be possible to maintain equity. The capacity "to do harm" is tremendous. The OASI system has many of the vagaries of that unfortunate Carnegie impulse to bribe unsuspecting students into a poorly paid profession by the apparent promise of a free pension at the end.

I see no justification whatever for assuming that any system could carry on forever. I believe that nature abhors a perpetuity even as nature abhors a vacuum.

5. WELL-ESTABLISHED ACTUARIAL METHODS

There have been actuarial methods developed for the ordinary level-premium life business and the level-premium annuity business. They go back for 2 centuries at least in their evolution. Industrial insurance—that enterprise of very small policy issuance in tremendous numbers—goes back in England over a century. Our group life insurance has a 50-year history, but in 1935 it had had only a quarter-century of experimentation—with little growth during the final 5 years. The group annuity business and the noninsurance company pension plans are largely an evolution of the last 20 years. To some extent the large growth of these 20 years followed hard upon the punitive rates of taxation on persons and on corporations, with large tax exemptions for approved pension plans. World War I had a similar influence along with the flu epidemic of 1918 in triggering the small start of group life insurance into vigorous growth through the emphasis upon the precariousness of life. In World War II there was also heavy taxation, the feel of inflation, and the underscoring of the rigors of old age to help build all sorts of pension plans. These new plans have not yet proved themselves over the span of a business cycle. There is, as run by private enterprise, a greater sense of costs than has been the case with the Federal Government. The unhealthy labor monopoly affects both systems—but fortunately there is more competition among the separate companies than can be felt in big Government. The know-how in private pension plans is still accumulating, and the techniques are still evolving.

The airy attitude that 2 centuries of step-by-step development of life insurance within closely limited experiments, while mortality rates were steadily improving, could be transferred to open-end accounts of the annuity type with continuous increase of potential burden is completely unjustified.

Social insurance or security has come croppers in country after country. It has helped to develop inflation. It has robbed citizens of basic responsibilities and choices. It has been tried and tested, all right—and found wanting.

6. ACTUARIAL BALANCE

This is pure fiction. The OASI is never in balance, and concern for balance seems never to have kept expansion down. Instead, that favorite budgetary trick of asking twice what one expects and then getting half what is asked and all one expects is treated as cost consciousness, and hats are thrown in the air in celebration. Each temporary reprieve to solvency is promptly celebrated by additional prospective outlay, frequently with no visible hiatus.

7. SELF-SUPPORT

After three decades of deriding the personal desire to be self-sufficient, it is frequently said that a large part of labor has double the real wages of the unlamented past—the pre-New-Deal past. If this is true, the normal expectation of larger self-support is that men should meet their own bills from their increased earnings. The appetite for subsidy seems, on the contrary, to have grown.

The denial of the individual's capacity for self-support, the affirmation that he more and more needs subsidy, leads to the claim that the system has to be self-supporting, to a constant increase in personal taxes, and to employer's taxes without regard to his capacity to pay them. All this has a hollow ring. To add a second income tax to the first, and to call the imposition equity, probably does delude him. Under section 1104, the taxpayer is far from sure of his support from the system. So far the OASI taxes he has paid are merely a gesture toward meeting his individual benefits. If he doesn't know it, he should be told.

Career Key Awards Competition

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Friday, June 17, 1960

Mr. JAVITS. Mr. President, the future strength and progress of the coun-

try depend upon how well the youth of today learn and accept the important responsibilities of enlightened citizenship. In planning for a meaningful future, a young person must give careful consideration to the set of values by which he or she will be guided during adult life.

The meaning of a chosen career and the feeling of worth that must accompany this individual choice are indeed crucial for a fuller and more satisfying existence. The Girls Clubs of America and the Reader's Digest Foundation, cosponsors of the Career Key Awards essay competition, realized the importance of this subject when they based this year's content on the topic "What a Career Will Mean to Me."

I am most happy to announce the names of the nine teenage girls who were designated as regional scholarship winners: From my own State of New York, Marcia Czyzewsk, of Schenectady, N.Y.; Margaret Ann Smith of New York City; and Judy Ann Davenport of Birmingham, Ala.; Maryka Ruth Matthews of Franklin, Ind.; Bonnie Nelson of Norfolk, Va.; Catherine Callahan of Wilmington, Del.; Daryl Hymoff of Worcester, Mass.; Maureen Lucille Connolly of Pittsfield, Mass.; and Gloria Olsen of National City, Calif.

These young women have made a great contribution to the building of a more significant future and we recognize and thank them for that contribution. Only through thoughts similar to those expressed in the prize-winning essays which follow can we be sure of strengthening and securing that future.

I ask unanimous consent that the nine essays relating to the subject "What a Career Will Mean to Me," written by the aforementioned girls, be printed in the Appendix of the RECORD.

There being no objection, the essays were ordered to be printed in the RECORD, as follows:

WHAT A CAREER WILL MEAN TO ME

(By Maryka Ruth Matthews)

A career, to me, is a chance to make a contribution to humanity. It is my responsibility to mankind. I owe a debt for the privilege of being alive—for the sheer joy of living. It is as though I took out an I O U in order to be born. This document would say, "For the loan of one life and its talents, I owe you (humanity) a contribution."

Career comes from the word to run, as to run a race. I will be running that race and my goal will be to pay my debt. With this in mind I can never give up and say, "So what?" For I have been given the supreme gift—the gift of life—and though I can never hope to stamp my I O U and mark it paid in full, I must push on toward the goal.

I can't just work at any job. This career must be the particular thing for which I have a talent and for which I feel a call. As someone once said, "A call is seeing a need and feeling within oneself the ability to answer it." For that I must be prepared—prepared by an education which makes me aware of the world and its ideas.

My career won't be important because of the classes I teach or the lectures I give, but because of the lives I help to mold; it won't be important because of the papers I type, but because of the influence those papers have on people; it won't be important because I give vitamin A, or vitamin B, or prescribe penicillin, but because by giving these I help to rebuild life. It will be the total of my life, my debt, my responsibility—my career.

WHAT A CAREER WILL MEAN TO ME

(By Judy Ann Davenport)

My career, as a legal secretary, will mean to me the fulfillment of a dream. This dream was so real and vital to me that I made a definite promise to myself to inquire and investigate its requirements and possibilities. This I pursued on and my course was begun in high school. I sought the best that I could to further this innermost desire that I not only had promised myself but likewise my parents, teachers, and friends, and lastly but not least, my God. Therefore, my career is in response to a promise that is sacred to me.

Services will be rendered through my career. It will be work carefully given, with determination to render efficient services. There are innumerable ways in which a secretary may make herself indispensable and further study through college courses would help me find these ways. The full import is in the word confidential; a secretary, in the executive's vocabulary, is his alter ego or other self, a person who commands his complete confidence and can be trusted with the secrets of the business.

A legal secretary must know good etiquette in business life. Good business manners help to open the doors of opportunity, gain the respect and liking of both superiors and associates.

It would not be amiss for me to admit that my career will mean security to me.

My career will be a life of dedication and determination to gain the nearest thing to perfection in finding the answers to all the ways and means of legal secretarial service.

WHAT A CAREER WILL MEAN TO ME

(By Bonnie Nelson)

I would like to be a social worker and work with people. Preparing for this type of career would better prepare me to serve my fellowman. Further education would better prepare me in giving guidance and help to others. There also seems to be a great future in social work. I am particularly interested in girls club work. Having spent several years in a girls club and enjoying it, I know how much a worker in this field can do for others.

In the changing world of today so many homemakers who used to have only the job of keeping the house, now work in public places. Jobs that only men once could hold are now occupied by women as well. Statistics show that at the present rate of employment, within 5 years, 75 percent of the American homemakers and young women will hold positions in public places. I feel it is necessary to choose a career and prepare for this new role of the American woman. It only stands to reason that if one is prepared she will not only be able to be of greater service but will also receive better living wages.

I feel that higher education for the career I have chosen is necessary. A division of college is not too far from my home. I hope to be able to enter the division and begin my college work in September 1960. However, my father and mother will find it hard to pay for very much of my expense so I hope to be able to work part time. A scholarship such as this would certainly be a blessing to help me get my first year of college work.

WHAT A CAREER WILL MEAN TO ME

(By Catherine Rita Callahan)

A career to me will be an opportunity to serve my community to the best of my ability and, at the same time, to suuport myself financially.

I have chosen the teaching profession as the career which will be most desirable to me. In this career I can further my own development and growth while I am serving my community by helping others to grow in character and mind.

I will be given the opportunity to help teenagers through the most difficult years of their lives. In doing this, I hope to make school as beneficial and enjoyable for teenagers then as it is for me now.

WHAT A CAREER WILL MEAN TO ME

(By Marcia Czyzewski)

A career is a dream, an aspiration which lies in the hearts of many. A career is one of my major goals. What will it be? The fulfillment of many hopes and efforts, a product of arduous work and spent energy, yet a proud facet of my personality and a broadened horizon in my immediate environment.

What will a career mean to me? It will mean stability in the busy world. It will be security. A career will be psychological security in that it will provide me with a feeling of being needed. It will be material security founded in the fact that I will receive remuneration for the services my career renders. The career for which I would like to train involves an opportunity to help people to better their lives. In this way I would make myself a useful member of society.

WHAT A CAREER WILL MEAN TO ME

(By Margaret Ann Smith)

"Climb every mountain, cross every stream, follow your rainbow till you find your dream." The words of this song express my ambition for the future. The mountain represents years of learning and experience. The stream is a steady flow from knowledge to greater wisdom. The rainbow is the azure blue sky visioned through windows of the girls club, the red is the laughter and gaiety on the children's faces, and the gold is the dignity and pride won through development of their character. The dream is the opportunity and privilege of making the world a better place in which to live by guiding and counseling the girl youth of our Nation.

A career in social work presents a challenge in gaining the faith and respect of these children. This, I think, can be accomplished through a genuine liking and enthusiasm for these youngsters and by a generous capacity for caring about their well-being.

During previous years, the girl's club has given me some place to go other than a tenement stoop or a lonely room. It has provided me with the opportunity to participate with old and new friends in a variety of activities. For the past 6 months, I have been employed at my local girls club. Through my work here, I have become more aware of the energy, intelligence, and patience it takes to be a staff worker, as well as, the sincere love the staff have for the girls. This has strengthened my desire to pursue a career in social work. It has also served as a beacon, for I now realize the necessity of a college education in fulfilling my dream. Through the courses offered in social work, I hope to learn more about what motivates children's behavior, and also learn leadership methods to guide me in my work with them. Through an expanded education, the knowledge which I acquire will give me a better understanding of society, and thus, a greater capacity to be of assistance to the children with whom I shall work.

The attainment of my goal will be reached only when I know that I have instilled in girls the principles of good citizenship, sound values, and respect for humanity. I am sure there is no greater gift than the deep satisfaction acquired in helping people to give fuller, richer, and happier lives as mature and self-sufficient individuals.

WHAT A CAREER WILL MEAN TO ME

(By Gloria Olsen)

Time is an element which has changed many factors in life. Not many years ago, a woman was not seen behind a desk nor in a factory, but in a home as a housewife.

As time progressed, women were accepted into the world and took on many roles. They found a need, as I have, to gain knowledge through education.

My life's dream has always been focused on children. My experiences as a summer staff member at the girls' club have definitely proven to me that I want to succeed in a related field of social work. But today this cannot be accomplished without a higher education.

To me, education means a gain in knowledge which can never be lost, and a step forward to my life's work.

"There is gold, and a multitude of jewels: But the lips of knowledge are a precious vessel."

A gambler can win a million dollars and lose it by a spin of the wheel. A student, however, gains knowledge through education and never loses it regardless of how successful.

I have worked as a cashier, a salesgirl and have done office work in school. I learned many interesting things in these jobs, yet when I worked as a counselor with children, I found that service to others was my choice.

I plan to work for an associate in arts degree in social studies. This curriculum is a basic preparation for students going into public service. It feel that it will undoubtedly motivate me on to higher education.

I am earning my way through college to fulfill a desire to gain knowledge through education. To apply myself to helping children is the goal which I hope to attain successfully. Therefore, I feel that it is a privilege to compete for this scholarship.

WHAT A CAREER WILL MEAN TO ME

(By Maureen Lucille Connolly)

When the word "career" is mentioned, most people immediately think of a means of earning a living. Nevertheless, to me it has a much more involved connotation. A career is my way of serving the people of my community. I have been presented the basic tools, my public education and training; now it's up to me to pay them back in worthwhile service.

My career, physical education, is one of the best ways I know of serving my community. There will soon be much leisure time in the working world due to automation. If I can prepare young people to derive pleasure and health from physical activity in this world of tomorrow, I will be helping, in my small way, to solve a problem of paramount importance. Therefore, at this time, it is necessary that I work as hard as I can at school, and take advantage of every available opportunity in school and in my community.

My girls club has offered me many of these opportunities. By working with the children, I was able to ascertain my aptitude in my chosen field of physical education. If these girls gain so many benefits and derive such enjoyment from their club activities, why shouldn't all girls do likewise? My ambition is to plant this desire in the younger generation, so that in following it through, they may become well-rounded, happy citizens, when they have to take on the responsibility of their adulthood. If, in any small way, I can feel that I'm helping someone reach this goal, I, in turn, will have reached mine.

I have not decided yet exactly where I wish to teach upon completing my education, but if it is in a school, rather than a girls club, I would still be able to give volunteer service to such an organization. Not only would I be able, but it would be a privilege to repay the club for all it has done for me.

WHAT A CAREER WILL MEAN TO ME

(By Daryl Hymoff)

All over the world people are interested in the conquest of space. While they aim for the moon, I gaze about the earth for a suitable position, my place in this universe. Many of my contemporaries have had, since elementary school days, aspirations for a definite career. One has hopes of becoming a geologist; another expects to startle the world with her paintings; and a third wishes to become a dental hyglenist. For me, however, there has been no particular dream. It is not that I have never considered my future. At the age of 7, I wanted to be a nurse; at 10, I had visions of being a fashion designer; and at 13, I was content to be a medical secretary. I have taken every opportunity to investigate vocational fields. In school I have noted the various positions in education. Through religious group activities, Girl Scout camp training, and active participation in the girls' club program, I have obtained a broad view of social service work. My latest endeavor, a part-time office job, will give me a picture of the business world.

With this background, I shall enter the 1960 class at a university. Here, after one year of broad subject matter, I hope to see which door beckons me. Once I have completed my college education, I shall be ready to venture forth. Whatever my work, I shall look for intellectual stimulation as much as for social and financial advantages. I hope to be able to make some return for all I have received: the patient, understanding helpfulness of my family, the encouragement of my friends, the inspiration of my teachers. Settled at last in my position in this world, I hope my abilities will prove to be an asset to my country.

Flag Day Program Sponsored by the Altoona Little League, Inc., Altoona, Pa., June 15, 1960

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 17, 1960

Mr. VAN ZANDT. Mr. Speaker, one of the many Flag Day observances in Pennsylvania was that sponsored by the Altoona Little League, Inc., at the Little League baseball field located in Altoona, Pa., on Wednesday, June 15, 1960, at 6 p.m.

The officials of the Little League headed by Joseph J. Riley are doing a tremendous job in fathering the six-team little baseball league which has the interest of some 90 little leaguers. The league schedule involves 40 games during the months of May, June and July after which an all-star team takes part in State competition among little leaguers.

It was my privilege to present the Altoona Little League with a 50-star flag at which time I delivered the following address:

ADDRESS BY REPRESENTATIVE JAMES E. VAN ZANDT, MEMBER OF CONGRESS, 20TH DISTRICT OF PENNSYLVANIA, AT FLAG DAY PROGRAM, SPONSORED BY ALTOONA LITTLE LEAGUE INC., LITTLE LEAGUE BASEBALL FIELD, JAGGARD STREET AND LOGAN AVENUE, ALTOONA, PA., WEDNESDAY, JUNE 15, 1960

It is a pleasure to participate in the observance of National Little League Week and to appear on this special Flag Day program sponsored by Altoona Little League Baseball, Inc.

The flag of our country provides one of the most dramatic chapters in U.S. history.

The emblem of the Stars and Stripes has always been a colorful reflection of American progress—yesterday, today and tomorrow.

That is why this is a very special occasion.

It marks the presentation of a new 50-star flag which may be officially flown for the first time at 12:01 a.m. on July 4, 1960.

It is my hope that each one of you will remember for a long time the significance of this occasion and what is done and said here.

History tells us that Betsy Ross, an expert needlewoman living in Philadelphia, made the first stars and stripes flag.

According to the popular story, in June 1776, shortly before the Declaration of Independence was signed, Betsy Ross received a call from three American leaders—George Washington, Col. George Ross and Robert Morris.

Those men told Betsy Ross that they were a committee from Congress and that they wanted her to make an American flag for them.

She replied: "I don't know whether I can, but I'll try."

George Washington then showed her a rough sketch for a flag.

After some changes were made Betsy Ross began sewing together some bright colored red, white and blue coth.

When she finished it the flag had 13 stripes—7 red and 6 white stripes—and a circle of 13 white stars on a field of blue in the upper lefthand corner.

George Washington and his committee approved the flag and Congress adopted it as the first official emblem of the United States on June 14, 1777.

Now, not all historians agree on the details of the Betsy Ross story but the fact remains that the Stars and Stripes flag is more than 180 years old.

The flag has changed as our country grew.

At one time it had 15 stripes instead of 13.

And as each new State came into the Union a new star was added to the flag.

Today the flag has 49 stars—and 13 stripes.

Within a few weeks or on July 4, 1960, the flag will have 50 stars denoting the latest new State—Hawaii.

Every detail and every color in the United States flag has a meaning.

Our flag tells a stirring story.

Each star is an emblem of struggles and toil, danger and hardship, suffering and privation to win a new State from the wilderness.

The 13 stripes, representing the Thirteen Original States, recall the history of the bitter 6-year struggle in the Revolutionary War during which the Colonies stood side by side and fought for freedom.

They won that war, so the 13 stripes tell us that in union there is strength.

There have been many interpretations for the colors in our flag.

Some people say that the red stands for the courage with which Americans have always defended the United States—our way of life.

The white in the flag has been likened to the purity of our ideals—freedom, liberty, justice, and the right of every American

to worship God according to that person's own convictions.

And the blue color has been described as symbolizing our loyalty and strong desire for peace.

The flag is very much a part of our lives.

It is displayed in our courts and schools and churches.

It flies proudly from our buildings.

It is in our homes.

Every one of our ships sailing the seven seas carries the U.S. flag.

We can never forget the flag.

We should always respect it because it stands for everything we have, everything we are, and everything we hope to become.

These are some of the reasons in my capacity as your Representative in Congress that I am presenting to you this new and beautiful 50-star flag.

It is a proud moment to be paying you the highest honor possible in this free land of ours.

That honor is presenting to you this gift—the Stars and Stripes of the United States of America.

PLEDGE OF ALLEGIANCE

"I pledge allegiance to the flag of the United States of America,
And to the Republic for which it stands,
One Nation under God, indivisible,
With liberty and justice for all."

Cross County Banks Provide New Service to Farmers

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 17, 1960

Mr. GATHINGS. Mr. Speaker, the May 1960, issue of the Arkansas Banker contains a most interesting article on the work of the banks in Cross County, Ark., to increase their services to agriculture. The Arkansas Bankers Association, through its agricultural committee and through its membership, has taken the lead in improving and expanding its services to agriculture, and I commend these fine citizens of the banking profession for their splendid work.

The article published in the May issue relates to another service—a Farm Recommendation Information Center—which has been set up in the banks of Cross County in conjunction with the Cooperative Extension Service. The article will be of interest to Members as an example of how banks may better serve their customers and improve the economy of agriculture in their areas:

CROSS COUNTY BANKS PROVIDE NEW SERVICE TO FARMERS

The Cross County banks have provided a farm recommendation information center as a new service to all their customers in cooperation with Troy Jennings, county agent.

Banks providing this service to Cross County farmers are First State Bank of Parkin, Bank of Cherry Valley, Cross County Bank at Wynne and Hickory Ridge, and First National Bank of Wynne.

The banks have purchased attractive aluminum display racks and placed them in the lobbies for free distribution of new and timely leaflets provided by the Extension Service. The racks are 2½ by 3½ feet and will display 12 different bulletins. The information furnished will be kept current by the Extension office.

The idea of this service originated with S. N. Green, cashier of the First State Bank at Parkin, and Howard Beasley, executive vice president of the Bank of Cherry Valley, in a discussion with the county agent on soil testing information. After getting good response to this service they decided that additional information would be of great help to their communities.

Some of the leaflets being displayed now are: Instructions for taking soil samples, fertilization recommendations, recommended crop varieties for 1960, cotton insect control, cotton diseases, chemical weed control on cotton, calibrating farm sprayers, rice disease, chemical weed control on rice, soybean production, beef cattle production, and controlling parasites of livestock.

Cardinal Spellman Honored

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 17, 1960

Mrs. ST. GEORGE. Mr. Speaker, the following remarks were made at the ceremonies at the Spanish Embassy when His Excellency, the Ambassador of Spain, Maria de Areilza de Motrico, presented the Grand Cross of the Order of Isabel la Catolica to His Eminence Cardinal Spellman, archbishop of New York.

The cardinal is known and admired by Americans of all faiths and is to many of them "our cardinal." His devotion to our country and his patriotism have always been an inspiration.

The Ambassador made very special mention of the cardinal's Christmas visits to our servicemen overseas.

These ceremonies were impressive and dignified and as the cardinal's remarks were extemporaneous I am especially grateful to Father Joseph Thorning for having copied them at the time and having allowed me to use them:

In presenting the gold-and-white decoration the Spanish Ambassador spoke as follows:

"Today is a day of special joy and honor for this Embassy, because we are paying public homage to an outstanding figure of the Mother Church of Christianity. Your Eminence is not only a Prince of the Church, but also the archbishop of New York, that great city that has so many links with Spain. Indeed, the first Catholic church that was built in your city, St. Peter's, was a gift from King Charles III of Spain, and a seat of honor for his royal successors is still preserved there today.

"It was the Spanish Queen Isabella whose feminine intuition led her to help a man of vision, Christopher Columbus, to realize his dream. When other European sovereigns, after listening to the plans and pleas of Columbus, had let him depart with empty hands, Queen Isabella gave him her confidence and the sufficient funds for him to equip the ships needed for his historic voyages. Consequently, it is fitting that the name of this far-sighted, magnanimous monarch should be given to Spain's famous decoration and that the Grand Cross of the Order of Isabella the Queen should honor the broad-visioned, brave Francis Cardinal Spellman known as the pastor of soldiers. My own first memories of the United States of America revolve around the moving scenes at Christmas when Your Eminence traveled to American servicemen overseas. They were soldiers of deep religious faith. Your Eminence's presence and payers encouraged them by your symbolic gestures of peace and friendship. Always, Your Eminence stood for human freedom against the menace of atheistic communism.

"It is my joyful privilege to present to Your Eminence the Grand Cross of the Order of Isabella the Catholic, in the name of my Government."

In expressing his thanks for the award, Cardinal Spellman made the following remarks:

"Your Excellency may be sure that I am happy about the ceremonies today. It is true that, in my travels, I have visited practically all the important cities and regions of Spain. The faith of the Spanish people, the same faith that inspired Queen Isabella to send Christopher Columbus on his explorations, impressed me favorably in the course of my observations in the Iberian Peninsula. It was this religious faith that won victories for the Spanish people in their struggle for victory over the forces that would have enslaved the nation. Thanks to the triumph of Spain, this country is a loyal friend today.

"I am pleased about the references made to my native State, the Commonwealth of Massachusetts, although it seems to be getting smaller. You understand, of course, that I brought my Boston accent to New York. Nor do I want to lose it. One year when I, as a young priest took a trip to Europe, I prepared carefully a Sunday sermon I was asked to give on the boat. When I concluded, one of the passengers who listened to my sermon complimented me by stating that I 'spoke English with hardly any accent at all'.

"Please extend to the Spanish Chief of State my expressions of happiness and gratitude for this decoration. I would also like to thank most cordially Spanish Foreign Minister Fernando Maria Castiella, who made the recommendation to his Government. I am proud to accept this honor in the name of Queen Isabella because, without her, none of us would be here."

Growers Say Foreign Workers Are Necessary

EXTENSION OF REMARKS
OF
HON. CHARLES M. TEAGUE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 17, 1960

Mr. TEAGUE of California. Mr. Speaker, under leave to extend my remarks, I call the attention of my colleagues in the House of Representatives to an article that appeared in the June 9, 1960, issue of the Fresno Bee, which points up the need for extending Public Law 78:

GROWERS SAY FOREIGN WORKERS ARE NECESSARY

Two leaders of farmer organizations today contended Mexican nationals are needed for work on California farms so consumers are assured of "a plentiful supply of high-quality, low-cost food for their tables."

George H. Hobbs, the chairman of the California Growers Farm Labor Committee, and John V. Newman, the president of the Council of California Growers, said in a statement following a meeting of farmers

and farm representatives in the Fresno Hacienda Motel that a "work force of reserve agricultural workers" is needed to assure the harvesting of the State's crops.

This reserve is assured through the program of importing workers from Mexico, they said. If the program should be discontinued, as has been suggested by some persons, they asserted, "the farmers will be faced with a genuine catastrophe due to a drastic shortage of farm labor and the people of this country would experience a serious shortage of food."

Proposed Return to Rigid Farm Supports a Disservice to Nation

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 17, 1960

Mr. HIESTAND. Mr. Speaker, the more thoughtful observers in America have reached general agreement on one thing regarding agriculture: we cannot perpetuate or accelerate old farm programs that have demonstrated their futility.

The taxpayers of the country, including the farmers, are fed up with price supports that only stimulate production and frequently depress farm incomes and production controls that do not work.

The program is a costly boondoggle that is unworkable and—except for its devastating reality—unthinkable.

Yet, we discover that some leaders of the opposition party still want to hang on to the failures of their own design rather than consider the bold and enterprising approach offered by the Republican administration.

Some Democratic spokesmen still advocate doles and controls instead of greater freedom wherein farmers may prosper.

My views on this are strengthened daily as I read the editorial comments of the Nation's ablest analysts. One such article appeared recently on the editorial pages of the Oakland (Calif.) Tribune, and I now ask that it be reprinted in the RECORD—the title being, "Proposed Return to Rigid Supports a Disservice to Nation":

[From the Oakland (Calif.) Tribune, May 13, 1960]

PROPOSED RETURN TO RIGID FARM SUPPORTS A DISSERVICE TO NATION

The proposal of the farm policy committee of the Democratic Party that a return to the programs of the Roosevelt-Truman eras would win farm votes this year has been taken apart by a man highly qualified for the job.

Secretary of Agriculture Benson, commenting on the decision of the Democratic planners to submit their proposal to the national convention in Los Angeles, branded it as a "sellout to servitude."

That's exactly what it would be. A return to rigid price supports to 90 percent of parity would be going right back to the breeding place of the bureaucratic disease that has plagued the entire agricultural industry ever since.

Secretary Benson said:

"It is a shocking commentary on the present confused thinking among some so-called experts. It is tantamount to a doctor prescribing for his patient more of what caused the illness."

Everything that the Eisenhower administration has done within the limited area in which it could move within the circumscriptions laid down by Congress, would be undone if the Democratic planners have their way.

The Eisenhower administration inherited the programs which Congress has refused to improve or modernize except to a very limited degree. The administration is not responsible for either the programs or the high cost of keeping them in operation. But it has fought to get the most for the farmer that it could and at the same time try to bring relief to the rest of the taxpayers.

Critics of Secretary Benson have been highly vocal, but this decision of the farm policy committee to turn back to the beginning is startlingly clear evidence they have not been able to devise anything better than what the administration has sought.

The administration policy has been to back away from rigid price structures and high parities, gradually to reduce them to the point where they could be done away with altogether, the farmer restored to independence and the market to the law of supply and demand.

That policy has been opposed at every turn by the same men who now admit failure to devise anything that has any semblance of success, and in their failure are asking that the old New Deal and Fair Deal policies be dusted off, policies created by depression and later geared to wartime needs.

There is no depression now, and no sign of one. There is no war either, of the kind we fought under Roosevelt and again under Truman. There is fear, there is tension, true. But there is no war.

It would be extreme folly to believe that the basic principles of the New Deal and Fair Deal as applied to the farmer can be resurrected and straighten out the mess.

Deportation of the Lithuanian People in 1940

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 17, 1960

Mr. FLOOD. Mr. Speaker, the Lithuanians are the most numerous of the Baltic peoples, and among these they are the best known in the West. These 3 million rugged and sturdy souls endured the oppressive alien yoke in their homeland for centuries, and in 1919 they succeeded in regaining their independence. But the independence thus earned did not last long, for during part of the time when they were masters of their fate, they were surrounded by aggressive dictators—in Nazi Germany and Communist Russia. And the treacherous designs of Communist Russia proved fatal to the freedom of the Lithuanian people.

Early in 1940 Lithuania was attacked, invaded and occupied by the Soviet Red Army. The country was then incorporated into the Soviet Union, and the people enslaved. But the Soviet authorities did more than that in their effort to subdue the Lithuanian people. They arrested more than 100,000 Lithuanians and deported them, under indescribable circumstances, to distant regions of the Soviet Union. That inhuman act was performed by Soviet authorities in June of 1940, and it is that event which is being observed today.

Area Redevelopment Legislation

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 17, 1960

Mr. SAYLOR. Mr. Speaker, I would like to bring to the attention of the House an editorial which appeared in the June 14, 1960, edition of the Tribune-Democrat, Johnstown, Pa.:

AREA BILL BLOCKADE "DISTURBING" TO IKE

In a letter to West Virginia's Gov. Cecil H. Underwood, made public last Saturday, President Eisenhower said he was "disturbed" that hearings have not been scheduled on the $180 million compromise area development bill proposed by the administration following the veto of the $251 million House measure.

The administration bill is aimed at relief for the hard-core areas of high and long-continued unemployment, in contrast to the House bill which would have spread the Federal money over not only a larger number of industrial areas, but some 600 rural areas with no previous history of industrial development. Both, of course, included the Johnstown area; but, as Under Secretary of Commerce Philip A. Ray pointed out last week, this and other regions of chronic high unemployment would have higher priority under the administration proposal.

There is still time to pass an area development bill before Congress adjourns early in July, but the time is growing short. Since the new administration proposal is a more limited version of bills which have been reported from committee and passed in both this Congress and its predecessor, however, its study in committee should require little time. And its quick signature by the President would be assured.

There is, however, an apparent lack of interest in the fate of this measure on the part of the Democratic liberals who were so vocal and so insistent only a short time ago in demanding the passage of a bill President Eisenhower was certain to veto. That includes Senator JOSEPH S. CLARK of this State, whose interest in the passage of a bill seems to have evaporated now that it can no longer be made a partisan political issue.

For the first time in the last three Congresses—the 84th, the 85th, and the present 86th—there is opportunity to obtain bipartisan support for area development legislation, and to get the program started promptly in the areas which have had the largest percentage of labor surplus for the longest period. The compromise administration bill contains more than enough money for the first year of such a new and untried program; and the experience during that year could, if it shows the feasibility of such a project, furnish the basis for larger appropriations next year.

If, however, the Democratic Congress refuses to act, in the weeks remaining before

adjournment, on a plan which could be started this summer, the only possible conclusion is that its Democratic sponsors were interested in their partisan political advantage—not in the fortunes of the people in the genuinely depressed areas of Pennsylvania, West Virginia, Illinois, and other coal and industrial States.

This could indeed become a political issue in the November elections, but we think it will backfire on those who are now blocking a bill in Congress which the Republicans would support, and the President would sign.

The U.S. Flag in Taos

EXTENSION OF REMARKS
OF
HON. THOMAS G. MORRIS
OF NEW MEXICO
IN THE HOUSE OF REPRESENTATIVES
Friday, June 17, 1960

Mr. MORRIS of New Mexico. Mr. Speaker, I want to call to the attention of all of my colleagues the historic achievement of the town of Taos, N. Mex., in the continuous flying of the U.S. flag 24 hours a day since 1861.

The flag of the United States was first hoisted in the Taos Plaza when New Mexico was occupied by American forces in the summer of 1846. Upon the outbreak of the Civil War, southern sympathizers tore it down whereupon Kit Carson, Capt. Smith H. Simpson, Col. Coran St. Vrain, and Lieutenant Boggs nailed the flag to a pole which they erected in the plaza and stood guard over it day and night. The daughter of Captain Simpson, Mrs. Margaret Simpson Gusdorf, related the following story to the Taos Girl Scouts on February 4, 1952:

As you know, the Territory of New Mexico was invaded by Confederate soldiers and sympathizers at the beginning of the War Between the States. The Stars and Stripes had flown from a flagpole in the Taos Plaza from the time of the occupation of the Territory by the United States in 1846. I do not know the exact date that my father put up the flag to stay, but it was in 1861, when it had been taken down several times.

My father was Capt. Smith Simpson, commissioned during the Mexican War, who had come to Taos to reside after the brief revolution when Governor Bont was murdered in 1847. He was greatly enraged by these "Rebel instrusions" and devised a plan to prevent further violations. He took some helpers to Taos Canyon and had them cut down the tallest cottonwood tree that they could find and they brought it back to the plaza. It happened to be slightly crooked, but it was sturdy, so they trimmed it and prepared it for a flag. Father always kept a fine large flag or two at home, and choosing the current best one, he called Kit Carson, Colonel Coran, St. Vrain, and Lieutenant Boggs to assist him, and he nailed the flag securely to the pole, and they set it up in the plaza. Then they retired to St. Vrain's store where the Taos Theater is now located at the corner of the plaza, and kept a guard posted there for several days, and my father told everyone within hearing distance that anyone who interfered with the flag would be shot.

There was no further difficulty, and as one of the major battles in New Mexico was fought near Santa Fe within a short time where the Confederates were defeated, there were no more demonstrations in the Taos Valley. Father kept the flag flying, and since there were no ropes or pulleys attached to it, it was there 24 hours a day. When the military officers in Santa Fe heard what father and his friends had done, they permitted him to keep it up.

When the first one wore out, Father replaced it and continued to do so throughout his lifetime, and asked me to continue the custom when he passed on. Now we have a little ceremony on Memorial Day or the Fourth of July and put up a new flag so that now, as in all the 91 years, it flies as a memorial to his courage and foresight in a crisis that threatened our community.

I am sure all Members of the Congress will want to join in paying tribute to the memories of the great scout and explorer and the brave soldiers who, with their comrades, sought to insure that the flag of the United States should fly, not only over Taos, but over all of this great Union, always.

A Bipartisan Foreign Policy

EXTENSION OF REMARKS
OF
HON. J. EDWARD ROUSH
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 17, 1960

Mr. ROUSH. Mr. Speaker, the past few months have seen the United States confronted with crisis after crisis in world affairs. Each crisis has mounted in severity and difficulty with the events of the past few days shocking the world.

It is the desire of every American that the United States adopt and administer a foreign policy which is the best and the strongest the combined and unified political forces of America can produce. For that reason I have been, and am, a firm believer in a bipartisan foreign policy. Today as an expression of that belief and with the hope that an expression of approval of this Congress will result in the adoption of such a policy, I have introduced a concurrent resolution expressing the sense of Congress in favor of the restoration of the principle of bipartisanship in American foreign policy.

The idea is not, of course, original with me. The idea of a bipartisan foreign policy dates from World War II in the United States. It is difficult to isolate a precise moment or source of beginning. The idea of bipartisan foreign policy support played an important role in the wartime planning of postwar foreign policy by the Roosevelt administration. There is no doubt but what the failure of the Senate to ratify the League of Nations Covenant after the First World War loomed large in the thoughts of those planning the new United Nations. It was during this time that a number of Republican leaders, notably Senators Arthur Vandenberg and Wendell Willkie, pressed upon their party a foreign policy position fundamentally in accord with that of the administration.

Bipartisanship was given its first major test in the San Francisco Conference of 1945, establishing the United Nations. Great care was taken to make the U.S. delegation representative of both parties. John Foster Dulles, closely associated with Thomas Dewey, then titular leader of the Republican Party, served as a representative of the Department of State. A bipartisan congressional delegation also participated. The apogee of bipartisan foreign policy perhaps was reached in the signing of the Japanese Peace Treaty of 1951 which was largely drafted and negotiated by John Foster Dulles appointed by President Truman.

I believe we are living in the most critical moments of world history. In the face of these crises and the external challenge which confront us our Nation must unite. Yes, "politics stop at the water's edge." These are times which demand that we stand together—demonstrating the power of our inner strength to our friends—and our enemies.

All Americans should be assured that partisan considerations are neither controlling the formulation and administration of our foreign policy nor are partisan considerations dictating the criticisms of that policy. The world should know that our great objective is the advocation of the cause of freedom and to make and preserve a just and lasting peace.

A Noteworthy Comment

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, June 17, 1960

Mr. IRWIN. Mr. Speaker, in the period immediately after the summit conference, the Russian news agency, Tass, sent out a tirade criticizing our colleague, Senator THOMAS J. DODD, of Connecticut, for his comments on Cyrus Eaton. Such propaganda is normally written off as typical communistic palaver but Charles McGill and his editorial staff of the Bridgeport Post, a Connecticut newspaper, added a sagacious observation. The Tass statement, said an editorial from the Post on Wednesday, shows the true Russian reaction to truth and that is fear. Pursuant to permission previously granted, I include the editorial:

HOW TASS FEELS ABOUT DODD

For years, Senator TOM DODD has been one of the prime targets of the Kremlin gang's hatred. In the past they have called him all sorts of things, such as an unfrocked clergyman, and other things not quite as humorous.

Tass, the Communist news agency which we permit to operate in Washington with as much freedom as, for example, the Associated Press, has continued to heap vituperation and libel on the Connecticut lawmaker. The Senator has been so alert and so vigorous in showing up the Communists that Tass has developed a positive hate for him. Which means, of course, that they fear him, knowing that he tells the truth about them and their slippery hoodlum masters.

The Russian "news agency" actually sent a statement to Moscow, in English, without any censorship, blaming U.S. "military and

imperialist extremists" for wrecking the summit conference.

Then Tass attacked Senator DODD as "the notorious enemy of peaceful coexistence and rabid cold warrior," for his opinions on the activities of Cyrus Eaton, the industrialist who holds the Lenin medal. "The American obscurantist (DODD) was particularly enraged by Cyrus Eaton's consistent struggle to improve America's relations with the Soviet Union for the benefit of world peace," wrote Tass, also scoring Senators GORE and HICKENLOOPER, who agreed heartily with what Senator DODD had to say about Eaton and his pro-Khrushchev, pro-Communist activities.

Just imagine what would happen to an American reporter or news agency in Moscow, if either attempted to write junk like that for home consumption. Of course, they wouldn't do it in the first place, but simply for telling the truth, which Tass almost never does, Americans have been bounced out of the Soviet.

Aside from the fact that strained relations have made the situation serious, this latest attack on Senator DODD is very, very funny. But it does show how scared they are when an American tells the truth about them.

The Social Security Inverted Pyramid—No. 5

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 15, 1960

Mr. ALGER. As a help for better understanding of the whole social security program, I am including additional observations from the original actuary of the social security board, W. Rulon Williamson.

SOCIAL SECURITY AND THE CONGRESS

(By W. Rulon Williamson, research actuary)

8. INTEREST

The pay-as-you-go philosophy, better called owe-as-you-go, or little-go-little-pay, then more-go-more-pay, then much-go-much pay, save for the accident that Secretary Morgenthau demanded twice the starting tax of one-half of 1 percent and one-half of 1 percent, making it 1 percent and 1 percent, does not pile up funds of any magnitude to earn interest.

The postponement of making benefit payments to meet evident need has accumulated a trust fund of $20 billion (once $23 billion, but shrunk to $20 billion as the fortuitous gain from the Morgenthau caution ran out). In an uncertain world, where apparently the Parkinsonian law that outgo rises to use up income seems to hold, the possible future payments to present covered persons not yet retired and to the retired primary beneficiaries and their family dependents could run to $683 billion, or $663 billion beyond the token $20 billion trust fund. That is, a trust fund of 3 percent of potential needs for past service, and that potential may well be growing at the rate of $30 billion a year, with tax collections not much beyond $10 billion.

That pays no attention to the possible death losses before retirement. Last year they reached over $1.1 billion, or twice the interest collections on the fund. There is no evidence that the interest will anywhere near meet the prior death benefits. It certainly is not expected to compound to aid in meeting the long-deferred age grants.

It may also be noted that the other part of social security—the Federal grants for public assistance, had they been charged against the trust fund would have exhausted that fund in either 1958 or 1959. The dual outlays for the fully Federal (National) and the Federal (National) subsidy to State and local governments for public assistance nearly reached 110 percent of the taxes reported as paid through 1959 as OASI earmarked taxes.

So I see no justification for discounting at compound interest rates from a perpetuity to make infinity finite. It is a farce to pretend that these tax-hungry systems will forever go unchallenged.

9. NEED

It is not the need of the citizen that has so far secured the acceptance of OASI. It is rather his gullibility and his cupidity. Seven and one-half million primary citizens may have paid some $3 billion of taxes against payments already made to them and their dependents, and yet to be made, to the potential amount of $120 billion. That means "2 bucks" of benefit against a nickel of tax. The figures are not available to validate these figures with any exactness, but the kick-in has been personally ridiculously low. And all the way through the lower benefit where the need is apt to be real is less than a third of the top benefit where need is improbable. Also, the truly needy year 1937 paid out one ten-thousandth of the benefits of the affluent year 1959.

10. COST FEELING

I might be glad to hear that folks in HEW regard the Congress as cost conscious. Having watched the biennial benefit boosts—to be paid for by posterity—I have not witnessed any very effective cost consciousness on the part of the Congress. Of course, traditionally, this should be none of their business. We can admire an amateur spirit and deplore amateur bungling.

OASI taxes in 1937 were one-half billion dollars. Twenty-two years later they were $8 billion. OASI benefits (and administrative costs) in 1937 were $1 million. In 1950 they were $1 billion. In 1959 they were $10 billion. The taxes grew 16-fold. The benefits grew 10,000-fold. The tax growth was 2 to the fourth power. The benefit growth was 10 to the fourth power. It is a queer cost consciousness that has allowed that sequence.

Navy Ignores Pearl Harbor Lesson

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1960

Mr. PELLY. Mr. Speaker, on previous occasions, I have raised my voice in strong protest at the failure of the Navy to deploy our active combat naval vessels so that there is not a heavy concentration in any single location.

Yet, as so vividly pointed up in the following editorial of the Seattle Times of June 8, 1960, the danger of a second Pearl Harbor has not been avoided by using the excellent geographic advantages of Puget Sound as a base for a part of the ships presently home ported in southern California:

NAVY IGNORES PEARL HARBOR LESSON

On the morning of December 7, 1941, 86 vessels of the U.S. Pacific Fleet were snugged down in Pearl Harbor. This concentration of naval strength enabled an enemy aerial force—light by today's standards of warfare—virtually to wipe out the Navy's retaliatory power and logistic support in the Pacific.

America learned several bitter lessons on that disastrous Sunday morning. One of these, we though, was the necessity for dispersing ships over a wide area rather than bunching them into a convenient and inviting target.

That lesson, though severe, obviously is being overlooked. The years following the second World War saw the Navy's "top brass" submit to the blandishments of southern California chambers of commerce, and unit by unit the Pacific Fleet has been withdrawn into sunny southern waters.

On a single day in April, for example, an official naval report showed no fewer than 129 ships of the Pacific Fleet berthed or at anchor in San Diego's harbor.

Arguments of defense-minded Congressmen and other Government officials have not halted the disappearance of ships from other west coast ports. Despite these warnings and the hardships suffered by communities whose economies historically have been tied in with naval installations, the inexorable move to warmer latitudes continues unchecked.

It was at San Diego that a U–2 reconnaissance plane—undetected by the Navy—took from high altitude the aerial photograph exhibited by President Eisenhower on a recent television broadcast.

The Navy was fortunate that this was not a hostile plane over its massed berthing of ships.

Why a National Fuels Policy Is Urgently Needed Now

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 9, 1960

Mr. DENT. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include the following, entitled "Why a National Fuels Policy Is Urgently Needed Now":

Energy is America's bulwark of defense and its only hope of growth and development. Our country has been one of the richest in the possession of fossil fuels which make that energy possible. It is still rich in fuel resources, but today the future ability of our domestic oil, gas, and coal industries to supply our needs is being threatened.

The warnings are clear, and growing. The world glut of oil is causing serious concern among domestic American petroleum producers as prices are slashed and high costs make new exploration and drilling in the continental United States unprofitable. The natural gas industry, hampered by rigid controls, rising exploration and pipeline construction costs, and the swelling importation of gas from Canada, is facing an uncertain future. And coal, America's most abundant fuel and her main dependence for the tremendous growth expected in electric power and industrial capacity, is existing today at little more than a standby production level—a level that is dangerous for national security and threatens our future industrial growth.

America's other two potential sources of energy offer little hope in the near future. Hydroelectric power supplies only 4 percent

of our present total energy needs, and its potential for further expansion is sharply limited. Atomic power as a source of domestic energy is now admitted to be many years in the future due to its extreme cost and still undeveloped technology.

All of these facts point to the very critical need for development of a sound national fuels policy, a need that must be met at once if America's essential domestic fuels industries are to prosper and continue to serve the Nation in the critical months ahead as well as in the years of the future.

Forty-three U.S. Senators and 29 Members of the House of Representatives have introduced concurrent resolutions calling for the establishment of a joint committee of Congress to make a thorough study of America's fuels and energy picture, leading to recommendations for a national fuels policy if such is found necessary. The National Coal Policy Conference strongly endorses these resolutions.

Lack of a national fuels policy and the failure to plan for our current and future fuel needs have brought us close to a crisis in these great domestic sources of energy.

OIL

On May 10 spokesmen for domestic oil producers from 13 States held an emergency meeting with the Undersecretary of the Interior to seek reductions of foreign crude oil imports which they reported are making new domestic explorations unprofitable and threatening to bring chaos to the petroleum industry.

Among their statements, as reported by United Press International:

Sam L. Robertson, president, West Central Oil & Gas Association of West Texas: "Unless imports are reduced soon, conditions in the domestic industry will become chaotic."

Paul Schulty, president, Oklahoma Independent Petroleum Association: Warned that the United States would begin running out of oil "when the independents lose their incentive to explore for new sources of oil," and that "it is not now economic" to drill oil wells.

R. S. Cockel, president, Ohio Oil & Gas Association: Independent operators "ask for no subsidy, but believe that imports should be cut or an equalizing tariff be put on them."

On May 25, the Wall Street Journal reported:

"The Nation's petroleum producers, badly shaken by sliding prices and disappointing demands are taking drastic measures to pull out of a deepening industry slump.

"They're cutting payrolls, reducing exploration and drilling activities, and turning increasingly to automation and other new technology to pare costs. Plagued by overproduction, many are throttling refinery runs. * * *

"While the industry scrambles for solutions to its mounting problems, many small financially hard-pressed producers are quitting. And industry suppliers, including steel, cement, and automotive firms, are glumly watching sales skid."

The plight of U.S. domestic oil producers is a new development that has come about following a number of international happenings in recent years. These include:

France has found rich new deposits in the Sahara Desert which are now coming into the West European market; Russia has entered the world oil export picture in a big way, and is now exporting heavily to such nations as Cuba, Iceland, Finland, India, and other European and Asian countries.

Other nations are basking in new discoveries of domestic oil, seek to become self-sufficient soon or even to become exporters.

As a result, capacity of present world oil wells is estimated at 26 million barrels per day—current demand for oil only 19 million barrels per day. In the United States, according to the U.S. News & World Report, there is an excess capacity of 2.5 million barrels per day from domestic producers.

This large and complex problem involves domestic security, the economic interests of millions of American investors, the relationship of oil and other domestic fuels, tax revenues of the Federal Government, cities, school districts, and States, as well as questions of international relations, foreign aid, support of our allies and competition with Iron Curtain nations for economic supremacy.

The answers are far from easy. But the plain fact remains: America does not have a sound, unified national fuels policy to help supply them.

GAS

The domestic gas and pipeline industry, now supplying an important segment of our energy needs, is faced with new problems that will require the greatest skill and planning to surmount. Some of these also seriously affect the economic strength of domestic coal and oil production.

With well-head prices controlled by utility type regulation under the Federal Power Commission many gas producers are finding it less profitable to continue new explorations which are off sharply.

In a desperate effort to increase gas use in off-peak months, both pipeline and gas distributors have frequently resorted to rate tilting, or "dumping" excess gas for steam boiler use at less than actual costs in slack seasons. This has resulted in the usurpation of the market for millions of tons of coal, without appreciably solving the long-term problems of the gas industry.

Such "dumping" practices spread much broader through the economy than their adverse effect on the coal industry. Frequently, they result in higher prices to domestic consumers, as has been widely publicized by recent congressional hearings. They also tend to create conditions of uncertainty in the market for all fuels, to the ultimate disadvantage of each, as well as to consumers.

Now, U.S. gas, oil, and coal producers are faced with an influx of natural gas from Canada, imported to compete with domestic fuels without any duty—although Canada charges American producers a 50-cent tariff for every ton of U.S. coal we ship to that nation.

Perhaps even more serious than the immediate economic impact on American domestic fuels industries is the danger of our industrial economy becoming too dependent on natural gas from abroad—even from such a friendly neighbor as Canada. We cannot forget that some Canadian leaders vigorously opposed these exports before the National Energy Board of Canada, as well as in Alberta where much of the gas originates. We have no assurance that changes in political fortune or economic development would not mean these sources will be severly curtailed; certainly, in case of war, Canada would have to look first to her own energy needs for production, and the amount of natural gas she could afford to export could be drastically reduced overnight. What would then happen to U.S. industries, apartments, and homes that had grown dependent on Canadian gas, while the sources and transport facilities of U.S. domestic fuels had withered away?

The problems of the domestic gas industry are serious, and are growing more critical each day, and the solution is not simple. But the plain fact remains: America does not have a sound, unified, national fuels policy to deal with them.

COAL

The American coal industry today looks to a steadily expanding demand for its product in the years ahead, although currently it is operating at little more than a "stand-by" production level. This level must be increased quickly to prevent deterioration of existing mines and coal transportation facilities if coal is to be able to meet its responsibilities for American energy in the future.

In recent years technological developments have resulted in the loss of two of coal's former major markets—home heating and railroad steam engines—but the industry recognizes these as logical marketing developments. It is responding with greater productivity, high mechanization, and product control to insure dependable fuel tailored to most exactly suit each users needs. And future prospects are for more than making up these losses in other markets—particularly electric utilities for which coal is the most important energy source.

However, certain current market practices (and the lack of a consistent national energy policy) meantime are causing the loss of millions of tons of production and consumption annually. These include the excessive imports of residual oil from abroad, priced to sell along the Atlantic coast at any figure necessary to undersell domestic coal, and the wasteful "dumping" of valuable natural gas for steam boiler use, often at less than cost. These practices have cost the domestic coal industry many millions of tons of sales and thousands of jobs each recent year. The result has been widespread unemployment in some major coal producing areas, sharp cuts in railroad coal freight traffic, and serious damage to tax incomes and the general economy of many states.

Loss of skilled workers in the coal mines, now largely operated by highly complex, modern equipment, is particularly serious for the future. To remain vigorous, as well as to meet the necessary growth requirements, the industry needs a steadily growing force of trained men; instead, its work force is being depleted and there is little incentive to bring new and capable young men into the mines, preparation plants and allied vital industries, such as the railroads.

As a corollary danger, today's level of coal production is insufficient to guarantee that the industry could meet demands it would face in case war shut off the import of oil and gas from abroad. To supply the energy fuel that our nation's defense production would require in an emergency, the coal industry would need a basic operating level of at least 500 million tons per year from which to start. This is about 80 million tons more than it is expected to produce in 1960.

Thus, coal, as does domestic oil and gas, faces problems whose solution is vital to America. But the plain fact remains: America does not have a sound, unified national fuels policy to deal with them.

NATIONAL DEFENSE AND A SOUND FUELS POLICY

In war, as in peace, America must depend on its domestic fuel sources for survival.

Just recently, the international situation has deteriorated, while Russia is moving more and more into the international fuels export picture. Both these happenings are warnings that America is being dangerously remiss if she fails to adopt a policy of planning for the future, as well as for instant emergency, as far as her production capacities are concerned.

No one can foretell what might result from an all-out nuclear war. But wise planning must realize that instead of an ultimate Armageddon, the present cold war may be marked in the years ahead by limited conflicts, political and economic pressure moves and even contained major wars in which both sides avoid destruction by the bomb.

Considering the havoc wrought by Nazi Germany's submarines on allied shipping in World War II, we must realistically appraise the danger of Russia's huge fleet of modern, snorkel-type long-range subs, and recognize

that overnight they could cut the imports of all oil products into America to a trickle.

We must be certain that, in any such emergency, our domestic fuels industries are capable of not only taking over the markets now supplied by imports but also of expanding to meet the vastly increased needs of a wartime economy. Under present conditions, this would be very difficult to achieve. If prompt action to sustain all our fuels industries is not taken, tomorrow it could be impossible.

The American Legion clearly recognized this threat when its national executive committee on May 4, 1960 adopted a resolution declaring that a national fuels policy study—"in our opinion, is vital to the national defense—it is vital that we assess the future civilian and military needs of our Nation in this field."

WHAT ABOUT "END-USE CONTROLS"

Opponents of a national fuels policy study have charged that such an inquiry by the Congress of the United States would soon lead to Government controls of fuels consumption, or as it is often put, "end-use controls." One giant international oil importing company has charged that a national fuels policy study would mean that the Government would tell the homeowner what kind of fuel he must use to provide domestic heat or order the housewife to burn a certain fuel in her kitchen stove. These assertions are, of course, nonsense.

The proposal made by the concurrent resolutions is for the establishment of a joint congressional committee to study the fuels industries of the Nation and make recommendations that may eventually comprise a national fuels policy—a single, overall guideline for this vital segment of our economy. This, however, is going to be a sizable undertaking. Current estimates are that the study itself will occupy some 2 years' work. It is, therefore, unthinkable that anyone could suggest at this time what substantive provisions might or might not be included in the final statement of policy.

All that coal seeks in urging the speedy approval of the concurrent resolutions is an atmosphere of fair and open competition between fuels industries and a national awareness of the importance of energy to America and its security.

THE CASE IN BRIEF

To sum up—America, unlike most of the other great nations, does not have and has not had a planned national fuels policy to insure the greatest benefit to all from its great national fuels resources, for the present and in the future.

Forty-three Senators and twenty-nine Members of the House of Representatives have sponsored concurrent resolutions to authorize a joint committee of Congress to make an exhaustive study of America's energy and fuels picture, and to determine the need for a national fuels policy. These resolutions are now awaiting action by the present Congress.

The domestic fossil fuels industries are facing very serious problems, problems of such magnitude that they pose a real threat to our economy and to our ability to survive if war should come.

The national coal policy conference, speaking for the coal producers of America, the coal carrying railroads, the utilities, coal mining equipment manufacturers and the United Mine Workers of America, urgently believes that a national fuels policy is critically needed, and that the study proposed by 72 Members of Congress should be authorized and started at once.

A congressional study of the need for a national fuels policy would:

1. Thoroughly investigate all factors affecting America's fuel needs and supplies, giving full consideration to the national welfare, the defense of the Nation and the economic well-being of all domestic fuels industries.

2. Make such recommendations to the Congress for remedial legislation as the committee concluded were necessary. Any action then taken would be a matter for decision by the whole Congress.

Newspapers Should Not Be Government's Whipping Boy

EXTENSION OF REMARKS
OF
HON. ROBERT W. LEVERING
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 16, 1960

Mr. LEVERING. Mr. Speaker, a free press is indispensable to the preservation of representative government. This is the primary reason why I oppose an increase in postal rates covering second-class mail at this time. Any rate hike would impose a tremendous hardship on the small daily and weekly newspapers throughout the Nation.

Under leave to extend my remarks in the RECORD, I include a cogent editorial on the subject, dated June 14, 1960, by Fred Koehl, vice president of the Ashland Times-Gazette, a fine daily newspaper published at Ashland, Ohio, in my congressional district:

[From the Ashland Times Gazette, June 14, 1960]

NEWSPAPERS SHOULD NOT BE GOVERNMENT'S WHIPPING BOY

Like many of the smaller daily and weekly newspapers in the United States, the Times Gazette will be faced with a severe problem if the proposed second-class mail increase now being considered by a subcommittee of the House of Representatives Post Office Committee is favorably reported in its present form. This proposal would increase the average postage cost per subscriber per year from $1.20 to $3.58, or 298 percent, and would affect the 2,110 families who receive the Times Gazette by mail.

Much has been made of the so-called subsidy that the newspapers are supposed to be receiving as a result of the second-class mailing privilege which has traditionally been granted to newspapers. The losses attributed to this source are in reality grossly exaggerated because other types of mail are lumped in the second-class category and the Post Office Department has consistently refused to break down and separate the actual cost of newspaper distribution through the mails.

Newspapers have consistently agreed to pay their share of the mailing cost but we do not feel that we should also pay the distribution costs of other types of publications which are included as second-class mail. We object to being the whipping boy for the Post Office Department.

As an example—Times Gazette drivers travel over 150 miles per publishing day delivering bundles to the post offices in Ashland County so the newspaper can be delivered the following morning. We feel that this not-inconsiderable expense should be taken into consideration in figuring the costs of distribution by mail. This is not now being done. If these bundles were distributed by star routes out of the Ashland Post Office they would not be delivered before the second day after publication. This is in no way a reflection on the operations of the local post office as it is being operated very efficiently.

To further show the effect of this proposed increase the annual cost of the newsprint and ink per subscriber is $5.94. This figures does not include any of the publishing costs of the Times Gazette. It is a matter of simple arithmetic to determine that the proposed postal rate of $3.58 per subscriber per year with the newsprint and ink cost will total $9.52 per subscriber per year. Since our yearly subscription rate is $9 in Ashland and surrounding counties by mail, one can easily see what this exhorbitant postal increase will do to our costs.

Such a situation leads to only one obvious result—the costs will have to be passed along to our customers. For several years we have heard a great deal about creeping inflation—his is a good example of how our Washington bureaucrats talk out of both sides of their mouths at the same time. All that we ask is a fair determination of our postage costs based on realities and not imagination. If you are interested in this situation we suggest that you communicate your thoughts to ROBERT LEVERING, Member of Congress, House Office Building, Washington, D.C., who is a member of the House Post Office Committee.—F. W. K.

Which Is the Tight-Money Policy?

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1960

Mr. CURTIS of Missouri. Mr. Speaker, I call to the attention of my colleagues a very able editorial recently appearing in the Christian Science Monitor. The people who have forced the Federal Government into the short-term money market by refusing to give it the flexibility of financing the Federal debt in the long-term money market should pay attention to the economic damage they have created. Attention has been directed to the cutback in home building. This, in turn, is directly related to the great sums of money that were funneled out of the savings and loan institutions when the Federal Government offered its fabulous fives in order to finance in a short-term market.

The editorial follows:

[From the Christian Science Monitor, June 14, 1960]

WHICH IS THE TIGHT-MONEY POLICY?

Those who resist raising the ceiling on Government-bond rates vow they are trying to protect the small businessman and the homebuilder or buyer from burdensome interest rates. But what is the result?

Limiting the Government to the short-term money market means, as Charles E. Walker, assistant to the Secretary of the Treasury, points out, that short-term interest rates become higher than they otherwise would be and that this pinches consumers, small businessmen, and farmers who rely on short-term credit.

Mr. Walker further notes that the distortion in the public debt structure can contribute to severe drain on savings institutions and thereby restrict the flow of savings into home construction.

Confirmation of this is given by W. O. DuVall, president of the U.S. Savings & Loan League. He says:

"Never before has the thrift business operated in an economy which must support

such a tremendous public debt with such short maturities as we have today. We may, therefore, expect the Treasury to be constantly in the market for funds to meet its refunding and cash needs. * * * Thus, we have a new competitor and we expect this competition to increase."

If Congress would remove the archaic 4¼-rate ceiling and let the Treasury attract long-term money from individuals and institutions by paying a going price for it, some of this pressure on the short-term money market would be relieved. Political leaders would do well to examine whether they are helping or harming those they mean to befriend.

The Twilight of Reporting

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 7, 1960

Mr. CURTIS of Missouri. Mr. Speaker, I call to the attention of my colleagues a very interesting article by George E. Sokolsky in the April 9, 1960, issue of National Review.

I would refer the readers to my speech on the floor of the House of Representatives on May 2, 1960, pages 8492–8497, titled "Lobbying and Reporting: The Future of Representative Government in the United States" where I am discussing the same subject from a somewhat different approach.

The article follows:

THE TWILIGHT OF REPORTING—OBITUARY NOTICE: DEAD, OF COMPLICATIONS, OLD-TIME AMERICAN REPORTING, VICTIM OF AUTOMATED NEWS-GATHERING TECHNIQUES, HIGH COST AND THE RACE FOR THE ADVERTISING DOLLAR

(By George E. Sokolsky)

Americans are supposed to be able to read because general education has been compulsory in most parts of the country for more than a century. In recent years, youngsters have been required to remain at school in some places, willy-nilly, until they are 16 years of age; 18 in others. Surely, in so many years almost anyone would learn something about something.

The fact is that most Americans are badly informed, particularly about their own country. In a recent conversation with an Asiastic visitor, I had to explain this phenomenon by saying that we have become a nonpolitical people, that up to World War I, our people, all over the country, were deeply concerned about politics, but that since we have become prosperous and have moved up to a high standard of living, we have lost our interest in politics.

If one were to take a look at the newspapers, say for any year between 1900 and 1917, he would find exciting, controversial, fighting reporting of the news. William Randolph Hearst, a tendentious socialist, associated with Arthur Brisbane who was brought up as a Fourierist by his father, Albert, battled for the socialization of the means of communication and for a broadening of public welfare. Joseph Pulitzer, a Hungarian Jew, a refugee from the battles for freedom in Europe, was fighting corruption in government in this country. Lincoln Steffens and Charles Edward Russell, radical idealists, were bringing the truth about the exploitation of the people into the press. Upton Sinclair joined them.

The list of competent, hard-hitting independent, unafraid reporters is legion. They had to live, too—and they managed well because their employers were as fearless as they were. Stories were not suppressed out of fear of economic pressure. In 1907, William Randolph Hearst, wrote: "* * * When there are faults in our unions and combinations, let us correct them, but not deny the value of united efforts." He was not afraid that antiunion employees would withdraw their advertisements, just as Adolph Ochs would not join organizations that might become pressure groups.

THE ADVERTISER TAKES OVER

The newspaper sought circulation. The assumption was that if a newspaper had ample circulation, the advertiser would be forced to do his pitch in that newspaper. In fact, so rigid was the separation between the editorial and reporting side of a newspaper and the business side that people on one side hardly spoke to those on the other. Interference by the business side was regarded as an intolerable intrusion. It was not that men were more moral than now; it was rather than the advertiser had not yet become so important. He was an indivdual, not an organized high-pressure group handling perhaps $100 million a year of business. He came in with his piece of copy, a comparatively small merchant, hat in hand, to ask for space from a notable figure in the land.

Men such as Greeley, Dana, Hearst, Pulitzer, and Ochs had no fear that J. P. Morgan or some such person would cut their credit or even their newsprint supply, which must come from a Canadian cartel. From the standpoint of the independence of the press, the radio, or television, Madison Avenue has been the worst influence in the United States. Any large agency possesses too much economic power. It represents not one firm but many, not one advertiser but many. It can give a newspaper several million dollars a year of advertising or nothing at all. It can switch advertising from newspapers to television, from television to newspapers. It recognizes that as many Republicans as Democrats use detergents, smoke cigarettes, and buy automobiles. Even Communists are consumers.

When the newspaper switched from being circulation-conscious for the sake of circulation to circulation-conscious for the sake of advertising, the character of American journalism was altered. Editors who had always ignored the business office as something inferior, became aware of the importance of Henry Ford or General Motors.

Columnists usually ignore newspaper policies because if a man's copy appears in 200 or 300 newspapers, he cannot possibly know the policy of each one. But it soon becomes noticeable to him that references to the absurd or indecent conduct of big advertisers are not too welcome. He also notices that the President of the United States is not as protected as a big advertiser. This represents a significant loss of independence of the press.

Another factor in this situation is the emergence of trade unionism in the newspaper world. Reporters do not report. They do not compete for a story. They go in packs. The press conference has become an instrument for the avoidance of individual reporting. The press conference and the mimeographed handout are a stultification of reporting. It makes the reporter a creature of the individual who is reported about. In the high noon of American journalism, the reporter dug out his own material. Can one imagine Sam Blythe digging up a story as one of a heterogeneous mob of American and alien reporters seated like school boys at a high school convocation?

President Eisenhower has followed a procedure which lowered the status of the reporter. To the stag dinners which were given to advertise favorites and as a "payola" for those who reciprocated, he invited publishers rather than reporters. His assumption undoubtedly was that, as a soldier salutes a general, so a reporter obeys a publisher. This, of course, his experienced press agent, Jim Hagerty, should have told him is not so. Jim's father, for instance, would not have written a lying word in his entire life nor would he have been asked to.

There are a few publishers who can write their own copy but not too many. Most of them come up on the business side, and the smartest of them avoid involvements in writing jobs. However, a publisher can set a policy but he has to be an extraordinarily watchful man to prevent his policy from being voided by willful reporters or every headline writers. Eisenhower's partisanship for the bosses has not helped him with the correspondents or the cartoonists as much as he believes that it has. RICHARD NIXON is smarter; he talks to anybody. But then, he is not yet a President.

NO NEWS, ALL GOSSIP

The high cost of reporting, the inadequate results, have forced many newspapers to fill their inside pages with features. It is unbelievable how many features there are and how little newspapers pay for them. Advice to the lovelorn; advice to parents about children; to children about parents; what to eat; how to prepare it; what to drink; where to go to get food better than the wife can cook. Gossip—endless gossip about nonentities; item after item about unknown persons who, like ships that pass in the night, shine once and disappear. Columns of every kind and description. It is all ike the filling in a cake—something that goes between the first page and the editorial page. Much of it is useless. I recently examined half a dozen medical columns and wondered why the American Medical Association did nothing about them. Absentee medical care can be a very treacherous activity, even if, at the end of a curbstone activity, the medical columnist says, "Consult your physician."

The space filler is no substitute for the reporter but what I am advocating would put many smaller newspapers into bankruptcy. They have to depend upon syndicates, wire-services, and other cooperative means to overcome the enormous costs which now face them. That is why so many newspapers are disappearing; why so many amalgamations take place.

When only one newspaper exists in a city, the residents could be limited to one partisan point of view. Actually, their newspaper may have no point of view or all points of view. It is a conveyor of views. For itself, it may reach a common denominator of views.

Sam Newhouse, the most recent and successful of publishers, is a businessman who operates newspapers without regard to views. In Syracuse, N.Y., for instance, he operates a Republican and a Democratic newspaper. Both are ably edited. Each is independent of the other. Both are independent of Newhouse. This is a new conception of newspaper publishing, in the sense that the owner stays in the counting house and keeps out of the editorial office altogether. But what will happen should Newhouse ever develop a profound sense of right and demand that his newspapers support his cause? He says that it could not happen, that he would never make such a demand on his editors. Never is a very, very finite word!

What Newhouse is trying to do is significant. He is trying again to separate the editorial from the business office. He is also trying to eliminate centralized overhead and thereby to make chain newspapers realistically profitable. Thus far, his efforts have been financially successful, but whether he can manage an empire of newspapers, magazines, radio and television stations without

any editorial supervision is to be seen. At present the Newhouse newspapers have no editorial supervision by Newhouse.

Nothing has yet come into existence which adequately replaces proper and complete reporting. U.S. News & World Report comes very close to it. Life and Look make no attempt at reporting; they are feature publications, like the inside pages of newspapers; Time and Newsweek are too limited in their scope. The radio and television, as they relate to news, do no reporting in the sense of exacavating news which governments or other instruments of power wish to suppress.

Curiously, where one finds good reporting, albeit belatedly, is in the small, biased, partisan papers and newsletters. Some of these exist only to support hate causes. Some are financial tip sheets. Some are house organs. Some are even blackmail papers. One does find in them, often badly done, gems of information not elsewhere published. Such weeklies as the New Leader, National Review, the New Republic, and even the National Guardian sometimes pick up an important item which the daily press misses.

The revival of adequate reporting presents an emotional problem. It used to be that boys went in for reporting at $10 or $15 a week because they felt the call. When they earned $25 a week, they bought a cane so that they would look like reporters. "Lightning Louie" Zeltner, one of the best leg men New York ever knew, earned a very hard living but he never missed a story, and his children were proud to go into the business.

Reporting was a profession, and men were proud to be part of it. It was not a trade; it was not a job; it was not a steppingstone to becoming a radio announcer or a television script writer. It was a proud profession and the final goal was to become an editor, which was a noble status in any community.

Can you name the editor of the newspaper you read today?

Text of Letter Addressed to "Fellow Liberals"

EXTENSION OF REMARKS
OF
HON. PHILIP A. HART
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Friday, June 17, 1960

Mr. HART. Mr. President, yesterday there was published in the New York Times the text of a letter from a number of outstanding Americans who have addressed an open letter to "fellow liberals."

These 16 distinguished Americans feel, as they have indicated in their letter, that it is essential the platform of the Democratic Party this year pledge executive and congressional action in support of the Supreme Court school decisions and the assurance of full voting rights to every American citizen.

I ask unanimous consent that the text of this open letter to "fellow liberals," together with the New York Times news story on the signers of the letter, be printed in the Appendix of the RECORD.

There being no objection, the letter and the news story were ordered to be printed in the RECORD, as follows:

TEXT OF LETTER TO LIBERALS ON KENNEDY

DEAR FELLOW LIBERALS: Until recently liberals have divided their support for the presidency among Hubert Humphrey, John Kennedy and Adlai Stevenson. All three men have demonstrated the kind of effective leadership which would make them great Presidents. The purpose of this letter is to urge, now that Senator Humphrey has withdrawn from the race and Mr. Stevenson continues to stand aside, that the liberals of America turn to Senator Kennedy for President.

We are impressed by the fact that Senator KENNEDY has won the primaries, but even more by the way he has campaigned in winning them. Day after day he has expounded with force and clarity the great issues of the 1960's and has given overwhelming evidence of his deep commitment to liberalism on the widest possible range of issues. We are now convinced Senator KENNEDY's adherence to progressive principles which we hold is strong and irrevocable. He has demonstrated the kind of firmness of purpose and toughness of mind that will make him a great world leader.

We are as determined as you that the Democratic platform of 1960 meet the issues of the day head on. We are convinced that Senator KENNEDY shares this determination. In particular, some of us have discussed the question of a strong civil rights plank with him, and he has assured us he favors pledging the Democratic Party to congressional and executive action in support of the Supreme Court desegregation decision and to whatever measures may prove necessary to making voting a reality for all citizens.

We think that the real struggle at the Democratic convention in Los Angeles will be not only between liberals and conservatives but, equally and importantly, between the "idealists" whose major interest is in substantive goal, and the "professionals" who are mainly concerned with party control and political office. Senator KENNEDY has repeatedly shown his willingness to sacrifice short-term political gains to advance the cause of liberal idealism.

All of us supported Adlai Stevenson in 1952 and 1956, and hope that he will be a leading foreign affairs figure in any new Democratic administration. But he insists he is not a candidate in 1960, and Senator KENNEDY, a man of whom liberals can be proud, is an active candidate who has proved his appeal to men and women of all ranks and creeds. The time has come, we suggest, to unite behind JOHN KENNEDY as the candidate of the American liberal movement and to work with him to defeat NIXON in November.

STEVENSON GROUP BACKING KENNEDY—16 URGE LIBERALS TO UNITE BEHIND SENATOR—CITE HIS ASSURANCES ON RIGHTS

WASHINGTON, June 16.—Sixteen former backers of Adlai E. Stevenson issued an open letter to fellow liberals tonight urging them to unite behind Senator JOHN F. KENNEDY of Massachusetts as the Democratic presidential nominee.

Their letter took Mr. Stevenson, the party's nominee in 1952 and 1956, at his word that he was standing aside and was not a candidate for a third nomination. They expressed hopes that Mr. Stevenson "will be a leading foreign affairs figure in any new Democratic administration."

The group, including several eminent historians and authors, called Senator KENNEDY "a man of whom liberals can be proud" and a candidate "who has proved his appeal to men and women of all ranks and creeds."

The group emphasized the importance of a strong civil rights platform plank, opposed by Southern leaders. They claimed assurances from Senator KENNEDY that he "favors pledging the Democratic Party to congressional and executive action in support of the Supreme Court's desegregation decision and to whatever measures may prove necessary to make voting a reality for all citizens."

Signers of the letter were James M. Burns, political scientist at Williams College; Henry Steele Commager, Amherst College historian; John P. Frank, Phoenix, Ariz., lawyer; J. Kenneth Galbraith, Harvard economist; Arthur J. Goldberg, Washington lawyer and attorney for the United Steel Workers of America, and Representative Edith Green, Portland, Oreg.

Also Gilbert A. Harrison, Washington, publisher of the New Republic; Lt. Gov. Philleo Nash of Wisconsin; Allen Nevins, San Marino, Calif., historian; William P. Patrick, Jr., Detroit councilman; Joseph L. Rauh, Jr., Washington attorney and long-time leader of Americans for Democratic Action, and John L. Saltonstall, Jr., Boston lawyer.

Also Arthur M. Schlesinger, Jr., Harvard historian; State Senator Monroe M. Sweetland of Oregon; Roger Tubby, Saranac Lake, N.Y., editor, and John D. Voelker, former Michigan Supreme Court justice and author.

West Virginia Wesleyan College

EXTENSION OF REMARKS
OF
HON. KEN HECHLER
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 17, 1960

Mr. HECHLER. Mr. Speaker, as an educator and one who believes that education is vital to our national security, I am proud to call attention to the recent achievements of West Virginia Wesleyan College at Buckhannon, W. Va., and to discuss some of its accomplishments.

To my mind, West Virginia Wesleyan is a good example of the way our smaller, independent liberal arts colleges can share in the tremendous growth in the number of college students which is now taking place, and yet not sacrifice the intimacy, the ability to give special instruction and individual attention, and the pleasant small-college atmosphere.

West Virginia Wesleyan has a recent history of orderly and well-planned growth. Its student enrollment has doubled over the past 7 years, rising from 502 students in 1953–54 to 1059 in 1959–60. Yet the annual increase has never totaled more than 176 students in any one year, enabling the college's administration to make responsible plans for the increased student load. This is a far cry from the picture in some colleges, which have accepted a swelling tide of new students without making adequate plans for their training and care. Wise future planning envisioning a maximum student body of 1,250 also has been undertaken and approved.

The college is making serious efforts to attract the higher caliber student who can benefit most from the type of training West Virginia Wesleyan has to offer. Of 561 applications received for the 1960–61 school year—compared with 371 the year before—344 have been approved. Of this number, 53 of the students ranked in the top 10 percent of their high school class, and all but 54 in the top half. The school is hoping to add a special admissions counselor this year to insure even better screening and selection of future applicants.

As with most such institutions, this growth has created a strain on physical facilities. But the college is meeting this challenge with an excellent long-range

plan which envisions renovation, and enlargement of the physical plant, which I might point out is one of the most beautiful in the entire State. An active campaign to raise funds on a national basis for a new athletic and physical education center is underway, and I feel certain that this drive will be successful, for the college has enjoyed a reputation in sports far beyond its small enrollment in the past.

Most importantly, however, West Virginia Wesleyan is recognizing the fact that more teachers are needed to cope with the growing student body. This year, 17 new faculty members have been added, and the total faculty now stands at 57 members. This figures to a student-faculty ratio of 20.5, a very commendable figure, and a reduction from 25.0 in 1955.

The college is busy with other plans also. A projection has been made to bring the first graduate-level courses to the college by establishment of a graduate school of religion. Since 140 of Wesleyan's students are enrolled in preministerial study or religious education, this is certain to improve the level of training and the service to the Methodist Church, which controls the college.

A special project also is underway to encourage faculty members to publish more papers and research projects, and to stimulate undergraduate students to assist in their preparation. This program has been highly successful in its 2 years of existence, with more than 35 publications coming from the college in that time. In addition, Wesleyan students were responsible for 8 of 17 papers read at the recent West Virginia Academy of Sciences conference.

These are only a few examples of the well coordinated program that is taking place at West Virginia Wesleyan. I feel certain that this excellent little college, now in its 71st year of existence, will continue to prosper under the able leadership of its president, Stanley H. Martin, and will bring continuing credit to its administration and to the State of West Virginia.

Economic Growth

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1960

Mr. CURTIS of Missouri. Mr. Speaker, I wish to take this opportunity to call to the attention of my colleagues an article from the June 20, 1960, edition of Newsweek:

ECONOMIC GROWTH—PICK YOUR STATISTICS

The great debate over how fast the economy is and should be growing—especially in view of the Red challenge—should become fierce this election year. Many an American will ask: "Are they all talking about the same economy?"

A few hints on how to weigh election-year evidence came last week from W. Allen Wallis, special economics assistant to President Eisenhower. One important thing to remember, said Wallis, is that it all depends on where you start.

A favorite technique of the politically minded experts is to compare a recession low with a boom peak to make their favorite party look good. Thus, the real gross national product grew at a yearly rate of 3.9 percent in the Democratic years 1947–53, which started in a recession, ended in the post-Korean boom; the rate was only 2.2 percent in the Republican years 1953–59, which started in a boom, ended as the economy was coming out of a slump. Yet if the periods are moved just a bit, comparing 1945–52 (Democrats) with 1953–60 (Republicans), the latter looks twice as good. "You pick your party, and then you pick your period," said Wallis.

But no amount of economic sleight-of-hand can change one important trend, Wallis said firmly: "There is no possibility that the Russian economy will overtake ours any time in the visible future—certainly not in this century."

An Inspiring Service Story

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Friday, June 17, 1960

Mr. EDMONDSON. Mr. Speaker, a young Oklahoman named Floyd Eugene Goines probably owes his life today to the alertness and humanitarian spirit of two great services—the U.S. Air Force and the U.S. Navy.

An Air Force veteran who is a skin-diver by profession, Young Goines was hastened to a Tahlequah, Okla., hospital early this week, suffering from acute decompression sickness as a result of an accelerated return to the surface after an 85-feet dive in Tenhiller Lake.

The physician attending young Goines, Dr. Herbert Masters, of Tahlequah, soon concluded that it was imperative to transport the young man immediately to a decompression chamber to avert death or possible permanent paralysis. At the time of Dr. Master's diagnosis Goines was paralyzed on one side and in acute pain.

The Tahlequah doctor telephoned the Navy's submarine base at New London, Conn., where doctors speedily agreed that the decompression treatment was urgently needed, and offered Navy decompression facilities to the young veteran.

The immediate problem was emergency transportation from Oklahoma, with physicians in agreement that even minutes of delay could be critical in young Goines' chances for survival.

At midnight on last Monday, I was called by long distance telephone from Muskogee, Okla., by County Attorney John Luton, who told me of the emergency and asked for help in obtaining a night flight to New London.

A call to Dr. Masters confirmed the urgency of the matter and also brought news that the plane provided would require pressurization, oxygen supply, and medical attendance, since Goines' condition was becoming increasingly critical.

I then placed a call to Maj. Gen. Thomas P. Gerrity at Tinker Airbase in Oklahoma City, and advised the general personally of the emergency.

General Gerrity's response was immediate and heartwarming. He said he would endeavor at once to assemble a crew with a doctor and a nurse for the mercy flight.

This was at midnight, e.d.s.t.

At 1:30 a.m., c.s.t., an Air Force plane took off from Tinker with young Goines aboard, after a 170-mile ambulance trip from Tahlequah to Oklahoma City.

At 9:57 a.m., e.d.s.t., the patient was in the decompression chamber at the Navy School of Deep Sea Diving here in Washington, under the expert care of Navy doctors and hospitalmen familiar with his injury.

Hospitalman 1/c Roger Christenson was in the tank with him on a 38-hour assignment that later was to send Christenson back to decompression for 4 hours himself, with a mild case of resulting "bends."

Under the watchful eyes of Comdr. J. C. McNicol, USNR, Lt. Comdr. Emmett W. Carpenter, USN, and a team of three Navy doctors, Goines was carefully moved through the critical stages of compression and decompression to dissolve the painful air embolism creating paralysis.

Thirty-eight hours later, he walked out of the tank, with only a slight weakness in one hand as a souvenir of his harrowing experience.

His recovery is the direct result of the generous and humanitarian service, beyond the call of duty, of our Navy and Air Force officers and men. We can be very proud of what they have done.

One of the splendid and commendable customs of our armed services in general is their demonstrated willingness, and generous readiness, to lend assistance to people who are the victims of disaster.

I believe every American is proud of this humanitarian custom, which is in the highest tradition of our country and its great heritage.

My personal thanks and congratulations are extended to all who helped to continue this tradition, in the case of Floyd Eugene Goines.

Yates Amendment Makes Sense

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Friday, June 17, 1960

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Daily News, May 23, 1960:

SENSE IN STORAGE

The scandalously high cost of storing the mountains of surplus farm products held by the Government has been well publicized. For fiscal 1960, the charges will run around $612 million—more than $1.5 million a day.

The Government itself has built storage bins for the millions of bushels of grain and bales of cotton that it acquires under the price-support program. But Representative YATES, Democrat, Illinois, uncovered the fact that Government-owned facilities were only 65 percent utilized, while many millions were paid out for other space.

At the very least, reason would require that storage capacity paid for with public funds would not remain empty while rent was paid for other space. Representative YATES has sponsored a policymaking amendment to a farm bill requiring maximum utilization of Government-owned storage.

The saving could run into hundreds of millions a year, the while it introduces at least a breath of reason into the whole farm policy madhouse.

Khrushchev's Campaign Thrust

EXTENSION OF REMARKS
OF
HON. JOSEPH E. KARTH
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 17, 1960

Mr. KARTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following perceptive remarks of Ralph McGill who seeks to warn us, Democrats and Republicans alike, in the campaign months ahead to debate the real domestic and international issues and avoid the spurious and dangerous issue of Khrushchev.

Ralph McGill, publisher of the Atlanta Constitution, is an outstanding commentator on the American scene whose great writing has won him wide recognition—including the 1959 Pulitzer Prize for editorial writing.

I hope Ralph McGill's observations are soberly read and taken very much to heart.

[From the Washington Star, June 13, 1960]

KHRUSHCHEV'S CAMPAIGN THRUST—BID SEEN TO INFLUENCE U.S. POLITICS, PUSHING US INTO AGGRESSIVE POSITION

(By Ralph McGill)

On that stormy and perhaps Monday when he wrecked the summit conference at Paris, Nikita Khrushchev thrust himself into the American presidential campaign.

This duly was noted at the time.

Since that hour he has served as a sort of unofficial and uninvited Republican campaign manager to assure the nomination and election of Vice President NIXON.

Mr. Khrushchev has done this by the very simple device of saying that he does not like Mr. NIXON and hopes the American people will not elect him.

This potential influence of Mr. K. poses a very real danger to our country. It serves to make him appear even wiser and more shrewd than he is. It suggests that he understands that he can weaken us by causing us to become involved in another senseless and debilitating argument about which candidate or which party is "soft" on communism. The Soviet Premier can surely but slowly push this country into a position as an aggressor or as one which does not fail to see the purpose of his participation in our politics.

There are tremendous issues which we must solve.

Whatever the final effect of Governor Rockefeller's eloquent manifesto may be, he has called attention to what confronts us.

It is no exaggeration to say that if we fail to give due attention to such issues and demands of foreign policy, national defense, education and medical care for the old, we very well may commit slow national suicide.

Khrushchev knows this.

Therefore, if he can so intervene as to cause Mr. NIXON and the candidate who will run against him to wrap themselves in an American flag and campaign on emotions aroused by Mr. K., he will have won a major victory without bloodshed.

If we commit the supreme idiocy of permitting the shadow of the late Joe McCarthy's fear and divisive tactics to become an integral ingredient of the 1960 Presidential campaign, then indeed will communism advance itself in Europe and Asia.

It is a dangerous oversimplification to say merely that communism wishes to conquer the world. That is true. But it ignores the method. Communism cannot conquer the world with war. Not now, at any rate.

Communism can conquer the world only when, and if, it obtains control enough of the people and resources to become invincible. Mr. K. knows this. This is what Mr. K. meant when he said he would bury us without war.

Knowledgeable men in many departments of our Government know this and are concerned by the progress made. They are troubled by what goes on in what is left of Asia and in the new states struggling to independence in Africa—lacking trained men and resources necessary to stability.

How mature are we?

This is an important question.

But even more important is the question of how politically mature are our candidates. They and their campaign managers can protect the Nation from the grievous results of allowing Nikita Khrushchev to be a personal factor in this campaign. Communism is. Russia is. But we must not permit Khrushchev shrewdly to arouse our angers and resentments so that we allow him to manipulate our votes. He would like nothing better than to divert our eyes from the real issues—and focus them instead on him.

Here is not merely an opportunity, but a duty, on Mr. NIXON and the Democratic candidates. Let them warn us by their own words and example not to fall into Mr. K.'s net.

Edward R. Devlin

EXTENSION OF REMARKS
OF
HON. HERMAN TOLL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 17, 1960

Mr. TOLL. Mr. Speaker, on behalf of my colleagues, the Honorables WILLIAM A. BARRETT, JAMES A. BYRNE, KATHRYN E. GRANAHAN, ROBERT N. C. NIX, and myself, I rise to pay tribute to the life and works of a good friend, a great public servant, and a dedicated American, the Honorable Edward R. Devlin. He was only 43 years of age when he passed away on June 12, 1960, in the Nazareth Hospital of Philadelphia, Pa. He was buried on June 15, 1960, in the Resurrection Cemetery, Cornwell Heights, near Philadelphia.

At the time of his death Ed Devlin was first deputy State secretary of revenue, having been appointed by Gov. David L. Lawrence in March of 1959. Prior to that time he served as deputy register of wills of Philadelphia. He served in the Army of World War II and was a member of the American Legion. Since 1957 he had been the leader of the 57th ward.

Ed is survived by his wife, Mary Devlin, a sister of the Honorable WILLIAM J. GREEN, JR., chairman of the Democratic city committee of Philadelphia and Member of Congress from the Fifth District of Pennsylvania. He is also survived by four sons, Edward R., Jr., John Patrick, Terrence, and William, and a daughter, Mary, all of the home address, 8301 Algon Avenue, Philadelphia. In addition, he is survived by his mother, Mrs. Edward R. Devlin, Sr., and four sisters.

Ed was an amiable and faithful public servant and was extremely well liked and respected by the citizens of our city. He will be greatly missed by his family, his friends, and the community he served so faithfully.

Coleman May Become National Chairman of Democratic Party

EXTENSION OF REMARKS
OF
HON. WALTER H. MOELLER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, June 17, 1960

Mr. MOELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call to the attention of my colleagues a feature article appearing in the Columbus (Ohio) Citizen Journal on June 11. It is a most refreshing article in this respect that the author uses many lines to set forth the sterling character and deep-seated religious motivations of a man who may be selected to become the national chairman of the Democratic Party. Regardless, whether the selectee be for either party, it is most enocuraging that men of this caliber are being sought and that they are active in and influenced by civil and religious endeavors.

The article follows:

COLEMAN MAY BECOME NATIONAL CHAIRMAN OF DEMOCRATIC PARTY

Coleman knows about the talk that has quietly been going on among the Democratic chieftains. "A lot of people have talked to me about the job, but I've never given the idea much consideration," says Coleman. He did reveal that four U.S. Senators, whose names he wouldn't disclose, had invited him to talk it over late last year in Washington. But he didn't take the subject seriously enough to make an appointment. Later, he did go to Washington on other business and talked individually to the Senators.

Would Bill Coleman, the refreshing type of straight-forwarded politican that county chairmen instinctively trust, take the job. "I'd be very reluctant. I like to stay home with the family (his wife, Rose Anna, and six children, aged 5 to 17) too much," says Coleman.

"You know I took on the State chairmanship very reluctantly," he adds.

DiSalle?

"I'd be for him, of course. I'm very fond of Bill," says the Governor who became so

impressed with Coleman's utter frankness and honesty that he tagged him with the State chairmanship.

Of course, DiSalle would benefit by the switch from Butler, whom he dislikes, to Coleman whom he trusts implicity.

Some even go as far to say that DiSalle would then not only control the State Democratic machinery which he does now, but also would be Coleman's mentor in the administration of national Demo affairs, no mean political coup.

The only thing they fail to note is that while Coleman is intensely loyal to DiSalle, there is a little stubborn thrust of his jaw that frequently keeps him from seeing eye to eye with the Governor. He's no kowtower.

Coleman is accused of being a political novice, of being completely naive. But most county chairmen trust him, like him. "You never have to worry that someone can buy Bill Coleman," says DiSalle. "Go on up to Marysville (Coleman's hometown) and you'll never hear a bad story about him. Coleman himself says, "If trying to tell the truth is naive, then I am naive."

In Union County or Columbus, Coleman has no private interests that benefit by his place of influence with DiSalle's office or other State offices.

His law practice at Marysville is largely probate. Companies that he represents in court do not bid on State business. One of his clients formerly did. When Coleman became chairman, they quit.

He and his wife are pillars of civic and religious life in the small Ohio hamlet which some day may produce the next Democratic national chairman.

They regularly attend Trinity Lutheran Church, belong to every organization that substantial smalltown citizens belong to. An intensively loyal Democrat, Coleman sees as his only political duty the building of the party. Of warring factions in it, he says: "I'm not mad at anybody." But he still can stick that jaw out when he feels the majority mandates are being ignored or undermined.

Nineteen Hundred and Sixty Osmers Presidential Poll

EXTENSION OF REMARKS
OF
HON. FRANK C. OSMERS, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, June 17, 1960

Mr. OSMERS. Mr. Speaker, the results of the Presidential poll, which was part of my 1960 questionnaire, have now been tabulated. More than 9,800 replies have been received to date from the 46,000 constituents to whom questionnaires were mailed on May 2.

Of those replying, 30 percent indicated they considered themselves Democrats; 37 percent Republicans; 33 percent independents. This percentage division, among Democrats, Republicans and independents follows very closely the voting patterns of the Ninth New Jersey Congressional District over the past decade.

Each constituent to whom a questionnaire was sent was asked to mark a first and second choice for President from among the seven best known prospects listed or to write in their own choice. Possible candidates who received less than 1 percent are not shown on the chart. Bridges, Dirksen, Goldwater, Halleck, Lausche and Meyner received a number of votes each but under 1 percent. Lodge, who was not listed, received 3 percent of the Republican votes as a second choice—see footnote on chart. Because of the national interest in the July nominating conventions and in the candidates, I ask unanimous consent to include the tabulated results in percentages in the Appendix of the RECORD. Answers to the other questions in my 1960 questionnaire appear on page A5045 of the CONGRESSIONAL RECORD for June 15, 1960.

The chart follows:

	Democrat, 30 percent of total		Republican, 37 percent of total		Independent, 33 percent of total		Combined, 100 percent	
	1st choice	2d choice	1st choice	2d choice	1st choice	2d choice	1st choice	2d choice
Humphrey	1	3	0	0	3	0	1	1
Johnson	9	20	2	5	6	9	6	11
Kennedy	55	23	8	11	18	16	25	16
Nixon	3	12	71	18	46	36	44	20
Rockefeller	4	12	16	60	15	18	11	33
Stevenson	22	23	2	2	9	18	10	14
Symington	6	7	1	1	3	3	3	4
Other	0	0	0	[1]3	0	0	0	[1]1

[1] 3 percent of the Republicans wrote in Lodge as 2d choice.

Temporary Tax

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 17, 1960

Mr. ROGERS of Florida. Mr. Speaker, the following editorial, from the April 30, 1960, edition of the Palm Beach Times, West Palm Beach, Fla., sets out clearly and simply the problem of the transportation tax. Since the question of extending, reducing, or eliminating this tax is now before the Congress, I ask that the editorial be printed in the RECORD for the information of all Members:

TEMPORARY TAX

It seems there is nothing quite so enduring as a temporary tax. We should live so long.

Back in early World War II days the Federal Government levied a temporary transportation tax. It was designed to keep civilians off public transportation and provide additional revenue for the war effort.

The war ended, but the transportation tax didn't. Six years ago it was reduced from 15 to 10 percent—a rate which still obtains even though the U.S. Senate has twice voted for full repeal. The House has refused to go along, unbending last year to the extent of agreeing to a reduction of 5 percent.

However, the President in his budget message asked Congress to retain the 10 percent levy, and Congress is now considering whether or not it should rescind last year's reduction, which was to go into effect July 1, 1960.

It should not. It should, in fact, repeal the entire tax if it is to keep faith with the people.

The tax served its wartime purpose; now it is discriminatory and a discouragement to legitimate travel. It discriminates against common carriers—railroads and airlines—and it discriminates against travel in the United States while exempting travel aboard.

The temporary transportation tax has neither justice nor logic to recommend it. Tell your Congressman so.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Daily Digest

HIGHLIGHTS

Senate passed bills for Federal pay raise, flood control, Labor-HEW appropriations, and took up debt limit and tax extension bill.

House passed Mutual Security appropriation bill.

Senate committee reported appropriation bills on general Government matters and independent offices.

See Congressional Program Ahead.

Senate

Chamber Action

Routine Proceedings, pages 12041–12061

Bills Introduced: 6 bills were introduced, as follows: S. 3690–3695. **Pages 12045–12046, 12252**

Bills Reported: Reports were made as follows:

S. 2388, a private bill (S. Rept. 1608);

S. 3421, relating to payment of death benefits under the Federal Employees' Group Life Insurance Act (S. Rept. 1609);

H.R. 11389, fiscal 1961 appropriations for general Government matters, with amendments (S. Rept. 1610);

H.R. 11776, fiscal 1961 appropriations for independent offices, with amendments (S. Rept. 1611);

S. 3650, relating to the Fort Hall Indian irrigation project (S. Rept. 1612);

H.R. 8186, omnibus amendments to the Reserve Officer Personnel Act of 1954, with amendment (S. Rept. 1613);

S. 1342, to assist in the provision of housing for moderate-income families and for elderly persons, with amendment (S. Rept. 1614); and

H.R. 10, proposed Self-Employed Individuals' Retirement Act, with amendment (S. Rept. 1615).

Page 12045

Bill Placed on Calendar: H.J. Res. 696, to provide for the designation of the month of September 1960 as "National Wool Month," was ordered to be placed on calendar. **Page 12041**

Federal Pay Raise: By 62 yeas to 17 nays (motion to reconsider tabled), Senate passed without amendment and cleared for President H.R. 9883, to provide salary increases for postal and other Federal employees, after rejecting the following amendments and motions, as indicated:

By 28 yeas to 54 nays (motion to reconsider tabled), modified Carlson amendment providing that increase shall be at rate of 6 percent rather than 7½ percent; by 23 yeas to 58 nays (motion to reconsider tabled), Ellender amendment to limit increases to employees whose annual salary is not more than $10,000 per annum; by 19 yeas to 63 nays (motion to reconsider tabled), Ellender amendment to eliminate legislative employees from the bill, and to adjust basic compensation of employees in Senators' offices (after rejecting two amendments to this amendment offered by Senator Case of South Dakota (1) to include employees in Representatives' offices in adjustments of basic compensation in Senators' offices, and (2) to eliminate subsection that would adjust basic compensation of employees in Senators' offices); by 22 yeas to 58 nays (motion to reconsider tabled), Church amendment to confine the increases to postal workers; by 11 yeas to 70 nays (motion to reconsider tabled), Dirksen amendment (in the nature of a substitute) to adjust Federal pay rates to those prevailing in private enterprise for similar work; on division vote, Dirksen amendment to readjust postal rates; and by 21 yeas to 56 nays, Ervin motion to commit the bill with instructions it be reported back in separate pieces of legislation, (1) as to postal pay increase, and (2) as to other Federal employees' pay increase. **Pages 12062–12101**

Omnibus Flood Control: By 70 yeas to 5 nays (motion to reconsider tabled), Senate passed with amendments H.R. 7634, omnibus river and harbor and flood control bill, after adopting amendments as follows:

All committee amendments en bloc, which were thereafter considered as original text for purpose of further amendment; Kerr amendments to various parts of the bill on behalf of the committee; Hill amendment providing for acquisition of land for a national wildlife refuge on Tombigbee and Warrior Rivers;

Appendix

Our Youth and Our Counties

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Saturday, June 18, 1960

Mr. WILEY. Mr. President, today the Nation is greatly concerned—and rightly so—over the need for providing the right kind of environment, opportunity, and, yes, responsibility for our youth upon whom depends the future of our Nation.

As I have stressed previously, the creation of youth development programs is primarily the responsibility of the home, of the community, State, and only as necessary should the Federal Government get into this field.

Increasingly, I am encouraged by the splendid way in which individuals, organizations, and local governmental bodies are taking hold of the situation. They are attempting not only to provide antidelinquency programs, but to carry on constructive, realistic, forward-looking efforts for utilizing the talents, energies, and capabilities of the Nation's youth.

A recent issue of the County Officer—with a nationwide readership—published an informative article by Mrs. Stella B. Werner, entitled "Our Youth and Our Counties." The article reviews activities of the recent White House Conference on Children and Youth, particularly as these relate to the particular subdivision, the county. I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUR YOUTH AND OUR COUNTIES

(By Mrs. Stella B. Werner, councilwoman, Montgomery County, Md.)

(EDITOR'S NOTE.—Mrs. Werner, NACO's representative to the White House Conference on Children and Youth, is reporting here on some of the most controversial and far-reaching subjects in our time. Your county will be vitally effected by every word in this report.)

"Our youth now love luxury; they have bad manners, contempt for authority, and disrespect for older people. Children are tyrants; they no longer rise when their elders enter the room. They contradict their parents. They chatter before company, gobble their food, and tyrannize their teachers." Who said this? Socrates 2,500 years ago.

Interest and concern in youth has been continuous through the centuries. Every generation has hoped to improve upon the past, and parents work for a better life for their offspring in the future. A discussion of the subject, "Youth," was organized in the United States by President Theodore Roosevelt under the title "White House Conference on Children and Youth." It has been called since then by succeeding Presidents every 10 years.

The purpose of the 1960 Conference called by President Eisenhower from March 27 to April 2 was to "promote opportunities for children and youth to realize their full potential for a creative life in freedom and dignity."

The subject matter; discussed at the Conference from which the recommendations were made was presented at 18 forums: Environment; Mobility; Support; Nurture; Opportunity; Free Time; Mass Communication; Human Resources; Beliefs; Moving Toward Maturity, Birth to Puberty; Moving Toward Maturity, Puberty to Young Adulthood; The Young as Learners and Thinkers; The Young as Doers; The Young as Citizens; The Young with Mental Handicaps; The Young with Physical Handicaps; The Young in Conflict; and, The Young With Social Handicaps.

As your delegate at the Youth Conference I have scanned the 1,600 recommendations which came from the forums and pass on the following ones to you arranged under appropriate headings as pertinent to a program of action by the local county government.

PLANNING

"Young people should be invited to full participation in community planning, and there should be a special concern for the improvement of conditions affecting children and young people.

"States develop model codes for land use planning, zoning, essential services and facilities, subdivision regulations and housing standards, and take appropriate steps to facilitate their adoption by political subdivisions within the States.

"Better communications and coordination on Federal, State, and local levels, among public and private, lay and professional organizations, and individuals who are concerned with any aspect of the growth and development of children."

EDUCATION

"Through the continual raising of standards, reciprocity between States in teacher certification be expanded for the encouragement of teacher mobility.

"Vocational counselors should be provided with more information on job opportunities and the outlook in specific occupations.

"We recommend and urge that State and local educational authorities diligently pursue the responsibility of locating and enrolling migrant children in schools.

"It is recommended that society, through planning by community, industry, business, government, and educational interests, provide opportunity for specialized training for youth in existing and in newly expanding occupational clusters at the post high school levels, so that they may become more productive members of society.

"Education for family life, with emphasis on understanding the causes of human behavior through discussion and participation in appropriate experience, should be part of the school curriculum at all age levels. We further recommend that teachers of such courses should have specialized training and that the methods used consistently be re-examined to insure effectiveness.

"Schools should give increased emphasis to such educational values and ideals as character, discipline, creactivity, dignity, freedom and responsibility.

"Every school system should operate a school year of at least 180 full days.

"Public and private financial support at the local, State, and national levels for the further development of noncommercial educational television stations.

"Teacher-education institutions should increase and improve courses in TV and radio communications and methods of utilization in the classroom.

"School systems should incorporate, into their curricula, a program of motion picture and drama appreciation.

"There should be greater development of film departments and film programs for children and youth, in public libraries."

"All elementary and secondary schools should provide physical education programs of high quality for all students.

"Community education agencies should stress the fact that a character building program in early childhood will prove less costly than a corrective program in adolescence and adulthood.

"More extensive medical, educational, and guidance facilities should be developed for the preschool gifted child, the mentally retarded child, and the child with physical handicaps.

"All State legislatures should make it possible for State Departments of Education to assume the responsibility of extending public education to include nursery schools.

"Kindergartens should be made an integral part of the tax-supported, public school system in all communities, in order that every child may have the advantages of kindergarten experience.

"In order to allow and encourage the gifted student to develop his capacities to think clearly, choose wisely, perform with exceptional skill and accept responsibility, all schools make special provision for the education of the gifted, talented and creative student.

"The wider use of community resources inside and outside the schools should be planned for the purpose of providing gifted students with more opportunities for seminars and advanced and independent study.

"School systems in cooperation with management and labor should include in the secondary school curriculum educational experience which will provide young people with an understanding of our American economic system.

"Beginning in the elementary school, joint action should be initiated among schools, parents, employers, unions, State, and community agencies to find solutions to the needs of 'drop outs,' minority youth, and any other youth with special employment problems.

"Counseling, guidance and work study programs should be provided with adequate financial support at Federal, State and local levels.

"The school program should be revised for greater emphasis on education for political responsibility by stressing the meaning of democratic values, greater emphasis in the social studies curriculum on current issues, family living, civics and economics, the defense needs of the Nation and present military obligations of youth, and all responsibil-

ities of citizens of the local, State, National, and world community.

"That the schools make adequate provisions for the education of all physically handicapped children, in keeping with the American ideal that every child is entitled to the benefits of an educational opportunity commensurate with his abilities, capacity, and potentials."

WELFARE

"Since migration contributes to the problems of urban areas and since individuals involved require many kinds of public services, State and local government should eliminate residence requirements as a factor for Government eligibility for health and welfare benefits and services.

"Guides (in appropriate languages) should be distributed to migrants at point of departure, listing location and purposes of available resources in the places to which they will travel.

"Child care programs, including foster day care, day care centers, and homemaker services should be instituted and strengthened by Federal, State, and local help, including State regulation of standards.

"Provision should be made for intensive casework services for all families receiving financial assistance.

"More and better adoptive services should be provided for preschool age children.

"Public-welfare agencies should accept responsibility to reimburse private agencies for treatment services on the basis of 'purchase of service' provided by private agencies and not available through public agencies on a child-by-child basis; such reimbursement to be commensurate with cost of services provided.

"Removal of statutory provisions or administrative regulations which restrict or deny public assistance and other public social services to needy children born out of wedlock, and to their mothers.

"That accessibility of services for the unmarried mother not be restricted by residence requirements."

HEALTH AND SAFETY

"Since accidents are a major cause of death in children of every age:

"(1) A renewed aggressive effort be made to support community programs of accident prevention. Such programs should cover accidents on homes, farms, highways, educational and recreational centers.

"(2) Architects and engineers be alerted to health hazards in drawing up plans to build new or remodel old buildings and playgrounds.

"(3) State and local departments of health initiate a crash program for the prevention of accidents to young children; that safety education be included in the curriculum as early as possible; that local and State legislation provide for safety in housing, traffic and pedestrian control, and protected and supervised play space.

"Closer coordination should be established between religious institutions and social, welfare, and health agencies for the purpose of meeting the health needs of mobile people.

"Programs should be developed to educate adolescents to form food habits in this critical period of their life which meet their nutritional needs and lay a good foundation for continued good health.

"A survey be made of the cause of the alarming rise of illegitimacy and venereal diseases among adolescents and that appropriate educational measures sensitive to moral and related emotional factors be instituted.

"In order to improve programs of treatment of emotionally disturbed children, the governmental agencies, local, State, and National, should participate in financing actual treatment services as well as research and training.

"As a means of keeping the family intact, financial assistance be provided for the provision of nursing and medical services for mentally handicapped children, when necessary.

"A uniform way of recording and reporting data on mentally handicapped be developed and adopted to facilitate research.

"In order to evaluate our present methods of prevention and treatment all hospitals, communities, cities, and States put to continuous use the already existing standardized procedures and/or new methods to be discovered for reporting fetal deaths, the occurrence of congenital abnormalities and birth injuries, and the handicapping conditions which are discovered in infancy and childhood.

"That there be developed institutional facilities and community services for the child with multiple severe handicaps who cannot benefit from restorative or rehabilitative services."

HOUSING

"That local communities throughout the Nation be urged to take all necessary steps to give full support to the intent of the Housing Act of 1949 to the end that children and their families of all social levels should have decent housing in an adequate neighborhood. Public policy must also provide in relation to decent housing adequate social services and the opportunity for youth to live in representative American communities."

RECREATION-LIBRARIES

"More emphasis on cultural activities to provide children and youth with creative outlets and increase their appreciation of beauty and their interests in the arts.

"Because of the present lack of recreational facilities and space available for recreational activities we recommend: that State and local governments should include in their budget appropriations for employing or securing professional qualified leadership and financing recreational programs.

"Facilities be provided such as picnic areas, hostels, camps, marinas, boat launching sites, playgrounds, golf courses, athletic fields, recreation centers, libraries, museums, theaters, etc., and that large natural areas such as forests, reservoirs, and defense areas be developed for multiple recreation purposes.

"Youth be given the opportunity to participate in leadership responsibilities at national, State, and local levels as members of boards and committees of such recreational and cultural agencies as libraries, museums, community theaters and symphonies, and other leisure time organizations concerned with youth, with full privileges of membership within legal restrictions.

"Recreation programs, both public and private, make provisions for the troublesome youth and do not bar his or her participation because of occasional offenses or as permanent punishment; give such youth more than one chance to join an organized recreation program."

LEGAL

"All-out effort be made to clarify and strengthen laws concerning marriage, divorce, separation, annulment, and desertion and to move toward uniformity in law among the States.

"All States work toward uniform marriage and divorce laws and that more family relations courts be established and staffed with competent social workers, psychologists, and counselors.

"The use of jails and inadequately equipped and staffed adult mental hospitals for the housing and detention of emotionally disturbed children be condemned, and, separate adequately equipped and staffed facilities should be substituted."

RELATIONSHIP TO COMMUNITY

"Rural people should be encouraged to establish community service councils to study and apply the principles and techniques of community development with emphasis upon 'self-help' and the opportunity for employment of rural youth.

"Youth should be encouraged in their leisure time to participate in civic, social issues, and world affairs.

"Community agencies and organizations, both public and private, should plan cooperatively programs of leisure-time activity to secure optimum use of facilities and resources, including year-round and evening use of schools."

MISCELLANEOUS

"Expansion of the present USDA rural development program, and urge that State and community organizations participate fully in it.

"The salaries or fees of persons providing services to children and youth be commensurate with the training, skills, and experience and responsibility of the persons involved, and should be such in beginning amount, in range, in increments, and in fringe benefits to attract and retain sufficient numbers of competent personnel and be consistent with standards recommended by the respective professional organizations.

"All professions in health, education, and welfare should continually study changing needs and bring about corresponding changes in curricula needs in the preparation of such professions.

"Additional urgent emphasis should be given to the application of what we know or can find out to the prevention of conditions harmful to children and youth as a means of conserving personnel. Examples for action include urban renewal, fluoridation of public water supplies, parent education, and immunization.

"Child-serving interests in the community work together on a continuing basis to meet the unique needs of adolescents with programs to fit the needs of families and individual children, with emphasis on assisting parents rather than supplanting them in their primary responsibility for their children.

"Active programs should be locally implemented to improve relations between the civilian community and the military personnel.

"It is imperative that those working with youth operate democratically so that youth will learn the principles and practices of democracy through participation as well as by precept.

"Communities undertake the responsibility of establishing and increasing the services already in existence concerning youth employment opportunities, and that they actively publicize the existence of such services to the youth of the community."

Over 50 percent of the recommendations dealt with human rights.

A good way to close this summation of the President's White House Conference on Youth is to give you two proposals which repeated themselves in many forums:

"We reafirm the recommendations of the 1950 White House Conference that each State take steps to establish youth councils or committees. We also encourage youth to take the initiative in establishing these youth councils to initiate, coordinate, and extend youth activities and participation by individuals, both professional and lay, be urged to support such projects with funds, services and interest.

"We shall welcome leadership by political figures at all levels who recognize explicitly and support increased appropriations and taxation by equitable means to support the program development and expansion envisioned by this conference."

Pending Old-Age Health Benefit Legislation—How the States Would Share Federal Cost and Payments

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 17, 1960

Mr. HARRISON. Mr. Speaker, the Social Security Amendments of 1960 (H.R. 12580) include a proposed new title XVI of the Social Security Act which would authorize Federal payments to the States toward the cost of providing certain health-care benefits to elderly citizens classified as medically indigent.

Table "A" on page 11 of the committee report on H.R. 12580—House Report 1799—breaks down by States the estimated annual amounts of Federal funds which would become available to the States under the proposed title XVI for provision of medical services to the aged not covered by the old-age assistance program.

As we prepare to consider this legislation in the House, it is of interest to compare this breakdown with estimated State-by-State contributions to the Federal cost of the program as computed by the formula used by Tax Foundation, Inc., in its allocation of the Federal net budget tax burden, published in "Facts and Figures on Government Finance."

I include a table presenting these shares in rounded dollar amounts and percentages:

Estimated annual shares of the States in the Federal cost of the proposed medical services for the aged program (title XVI)

State	Percent of total estimated to be payable	Percent of Federal tax burden borne by State [1]	Federal share estimated to be payable	Estimated share of Federal cost borne by State [2]	State	Percent of total estimated to be payable	Percent of Federal tax burden borne by State [1]	Federal share estimated to be payable	Estimated share of Federal cost borne by State [2]
United States	100	100	$165,450,000	$165,450,000	Missouri	0.34	2.31	$567,000	$3,821,895
					Montana	.02	.31	35,000	512,895
Alabama	.02	.97	39,000	1,604,865	Nebraska	.88	.61	1,455,000	1,009,245
Alaska	.0006	.12	1,000	198,540	Nevada	.037	.20	62,000	330,900
Arizona	.008	.56	13,000	926,520	New Hampshire	.76	.32	1,264,000	529,440
Arkansas	.018	.45	29,000	744,525	New Jersey	8.84	4.28	14,624,000	7,081,260
California	4.8	10.39	7,956,000	17,190,255	New Mexico	.006	.37	10,000	612,165
Colorado	.29	.91	477,000	1,505,595	New York	30.76	13.56	50,885,000	22,435,020
Connecticut	4.8	2.20	7,992,000	3,639,900	North Carolina	.57	1.41	95,000	2,332,845

District of Columbia	.086	.68	144,000	1,125,060	Ohio	3.32	5.85	5,501,000	9,678,825
Florida	.23	2.48	386,000	4,103,160	Oklahoma	.61	.99	102,000	1,637,955
Georgia	.009	1.31	15,000	2,167,395	Oregon	1.87	.86	3,101,000	1,422,870
Hawaii	.035	.30	59,000	496,350	Pennsylvania	2.81	7.22	4,655,000	11,945,490
Idaho	.021	.25	36,000	413,625	Rhode Island	.82	.53	1,355,000	876,885
Illinois	11.5	7.23	19,008,000	11,962,035	South Carolina	.0036	.61	6,000	1,009,245
Indiana	3.7	2.35	6,699,000	3,888,075	South Dakota	.0048	.21	8,000	347,445
Iowa	.14	1.15	241,000	1,902,675	Tennessee	.014	1.16	23,000	1,919,220
Kansas	1.0	.99	1,684,000	1,637,955	Texas	.097	4.34	161,000	7,180,530
Kentucky	.0097	1.09	16,000	1,803,405	Utah	.02	.36	39,000	595,620
Louisiana	.085	1.20	141,000	1,985,400	Vermont	.03	.18	55,000	297,810
Maine	.3	.43	488,000	711,435	Virginia	.41	1.68	679,000	2,779,560
Maryland	.72	1.90	1,196,000	3,143,550	Washington	2.85	1.54	4,718,000	2,547,930
Massachusetts	8.5	3.47	14,077,000	5,741,115	West Virginia	.087	.76	144,000	1,257,420
Michigan	2.0	4.74	3,227,000	7,842,330	Wisconsin	3.96	2.08	6,552,000	3,441,360
Minnesota	3.02	1.65	4,999,000	2,729,925	Wyoming	.044	.17	73,000	281,265
Mississippi	.004	.45	6,000	744,525					

[1] Based on allocation of the Federal net budget tax burden, Tax Foundation, Inc., formula.

[2] Tax Foundation, Inc., formula applied to estimated Federal cost of program.

The foregoing figures may have some interesting individual comparisons. Connecticut and California each will draw about $8 million for medical benefits, but Connecticut's share of the tax contribution is $3.6 million, whereas California's share is $17.19 million.

New Jersey contributes 4.28 percent of the tax burden, and Michigan contributes 4.74 percent of the same burden. Yet, New Jersey will receive 8.84 percent of the benefits and Michigan 2.0 percent.

Four States will receive more than half of the money payable for medical benefits:

	Percentage of benefits	Percentage of tax costs	Dollar benefits	Dollar tax cost
Connecticut	4.8	2.20	$7,992,000	$3,640,000
Massachusetts	8.5	3.47	14,077,000	5,741,000
New Jersey	8.84	4.28	14,624,000	7,081,000
New York	30.76	13.56	50,885,000	22,435,000
Total	52.90	23.51	87,578,000	38,897,000

Four other States which contribute in the tax burden about the same as the foregoing favored States receive a great deal less.

	Percentage of benefits	Percentage of tax costs	Dollar benefits	Dollar tax cost
California	4.8	10.39	$7,956,000	$17,190,000
Michigan	2.0	4.74	3,227,000	7,842,000
Ohio	3.32	5.85	5,501,000	9,679,000
Missouri	.34	2.31	567,000	3,821,000
Total	10.46	23.29	17,251,000	38,532,000

The six States of Connecticut, Illinois, Massachusetts, New Jersey, New York, and Wisconsin get 68.36 percent of the benefits while paying 41.01 percent of the proportionate taxes.

New York, which contributes 13.56 percent of the tax burden, receives 30.76 percent of the benefits, which, percentagewise, is more than nine times as much as 28 States and the District of Columbia, which receive a total of 3.35 percent of the benefits and contribute 28.24 percent of the taxes. New York gets $50,885,000 in benefits, whereas all 29 of these jurisdictions get $4,758,000 of benefits. The 29 are: Alabama, Alaska, Arizona, Arkansas, Colorado, Delaware, District of Columbia, Florida, Georgia, Hawaii, Iowa, Kentucky, Louisiana, Maryland, Mississippi, Missouri, Montana, Nevada, New Mexico, North Carolina, South Carolina, South Dakota, Tennessee, Texas, Utah, Vermont, Virginia, West Virginia, and Wyoming.

Mighty Fleet Watches Over Eisenhower

EXTENSION OF REMARKS
OF
HON. VANCE HARTKE
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Saturday, June 18, 1960

Mr. HARTKE. Mr. President, the President has just arrived at Taiwan from Manila at the center of a Navy task force. The Washington Evening Star for June 17, 1960, has a most informative article on this portion of his trip and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MIGHTY FLEET WATCHES OVER EISENHOWER—PRESIDENT STEAMS TOWARD FORMOSA ABOARD CRUISER

(By Marvin Arrowsmith)

En route with Eisenhower, June 17.—The mighty U.S. 7th Fleet kept an unflagging vigil today, ready to meet any Chinese Communist show of force as President Eisenhower steamed north toward the Nationalist Chinese island fortress of Formosa.

Vice Adm. Charles D. Griffin, commander of the fleet guarding Mr. Eisenhower, told newsmen the Chinese Reds "might well do something" in an attempt to further mar the President's Asian tour, already blighted by cancellation of his visit to Japan.

Admiral Griffin conceded there was no evidence so far of any unusual preparations for Communist mischiefmaking. But he added:

"We are ready and we would contemplate that the Chinese Communists might well do something. It is for this reason we have our fleet deployed this way."

UNHAPPY OVER CANCELLATION

Mr. Eisenhower slept late this morning aboard the heavy cruiser *St. Paul*, flagship of the fleet. He worked for awhile on his revised trip schedule, then planned an afternoon of relaxation. He had appeared weary and grim as he boarded the cruiser last last night in Manila Bay after his tremendous reception in the Philippines and the disappointing cancellation of his visit to Tokyo.

White House Press Secretary James C. Hagerty told newsmen the President did not believe the blowup of his Tokyo visit had marred his prestige or hurt U.S. national interests. He has been in touch with the State Department but has received no messages thus far from U.S. congressional leaders, Mr. Hagerty added.

It was no secret, however, that Mr. Eisenhower was unhappy that he was not going to Japan because of Communist-inspired violence.

But he could look forward to an extremely warmhearted reception from the Chinese Nationalists and similar outpourings of friendship in South Korea. A steady rain was drenching Taipei, the Formosan capital, but thousands were hoping it would stop before tomorrow so they could greet their stanch ally.

DUE IN KOREA SUNDAY

Dropping of Japan from the itinerary caused revision in the President's tour plans.

Mr. Hagerty said Mr. Eisenhower will arrive in Korea on Sunday—3 days earlier than originally planned. He will spend more than 24 hours there instead of the 8 hours previously scheduled.

From Korea, the President's big jet will take him to Hawaii for several days and then on to Washington. Mr. Hagerty said the plane would refuel en route to Hawaii, but not in Japan. Presumably it will put down at Okinawa or Wake Island.

Weather permitting, a helicopter will whisk Mr. Eisenhower from the deck of the *St. Paul* to Taipei's Pine Hill Airport tomorrow to start his 24-hour Formosa visit. If rain continues on Formosa, the *St. Paul* will land the President at the port of Keelung, and he will be driven the 15 miles into Taipei.

The President spent the morning with his staff revamping his travel plans. Mr. Hagerty said he was calm and unruffled despite the international furor resulting from cancellation of his Japanese trip. Asked how Mr. Eisenhower felt about the turn of events, Mr. Hagerty replied:

"He expressed his attitude yesterday. He squarely placed the blame for the postponement of the Japanese trip on those elements controlled by the Communists under external (meaning Moscow and Peiping) direction and control."

Ambassador Douglas MacArthur II was reported to have sent the President quite a few cables telling of his latest talks with Japanese Government leaders.

Virtually the entire 7th Fleet—125 warships and 500 planes—was on patrol to guard Mr. Eisenhower as he sailed through the South China Sea toward Formosa. At one point on the 780-mile voyage, his route lay within 125 miles of Red China's coastline.

SPEEDING AT 30 KNOTS

Admiral Griffin, meeting with reporters in the wardroom of the escorting aircraft carrier *Yorktown*, proudly called his array of ships and planes "the mightiest peacetime navy the world has ever known."

Fighters from the *Yorktown* and the carrier *Ticonderoga* kept a round-the-clock vigil overhead as the *St. Paul* sped along at 30 knots. A shield of destroyers and radar planes hunted for any submarine intruders.

Admiral Griffin said the 30-knot speed was about twice as fast as his ships generally moved in the area.

"Speed is our best defense," he commented.

He declared that if any submarine made a hostile move or action, "we would do our best to destroy it under the circumstances."

But he explained later that in such case his first order would be for the *St. Paul* "to get out of here as fast as it could."

WARNING ON FLIGHTS

He said the only unusual development in recent days was an increase in warnings by Peiping against flights over the Paracel Islands. They are a tiny chain midway between the Philippines and Hainan Island, off the South China mainland. They are claimed by Red China, Nationalist China, and Vietnam.

He estimated Red China has 20 Soviet-built submarines in the Pacific but said only a few had been sighted. The Soviet Union, he added, keeps about 100 subs in the area and these were sighted often in international waters.

Manila returned slowly to normal today after President Eisenhower's 2½-day state visit—marked by the greatest outpouring of friendship and adulation ever showered on a guest.

Manila newspapers reflected the good will and affection for the United States that abounded in the wake of the visit.

FIRM UNDERSTANDING

The Manila Daily Bulletin said in its lead editorial:

"He leaves behind millions of friends whose understanding of America has been made all the more clear and firm because he has been here."

Said the Manila Times:

"Not the least of the benefits from the Eisenhower visit is the chance it gave both Filipinos and Americans to realize how deep is the friendship the two peoples share.

"The tumultuous acclaim for Eisenhower from all sectors of Filipino society • • • proves how false is the often-made charge that hatred for American has become a principle of Filipino thought and Philippine policies."

Economic Growth

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1960

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to include the attached article, by Donald C. McGraw, president, McGraw-Hill Publishing Co., Inc., one of a series prepared by the McGraw-Hill Department of Economics to help increase public knowledge and understanding of important nationwide developments:

RECENT ECONOMIC GROWTH—THE NUMBERS GAME

If it truly portrayed recent rates of economic growth in the United States, the report on employment, growth, and price levels recently issued by the staff of the Joint (congressional) Economic Committee would point up scarcely less than a national disaster. Among other things, it would document impressively Premier Khrushchev's crack that "the capitalist steed the United States is riding • • • is worn out."

One of the major findings of the Joint Committee's staff (in the Eckstein report, named for its staff director Otto Eckstein) is that between 1953 and 1959 the average rate of growth of physical output in the United States was only 2.4 percent per year. This is scarcely more than half the average annual rate of growth of 4.6 percent the staff found to have prevailed between 1947 and 1953.

Happily, however, the report does not reflect the basic economic realities. Its finding on relative rates of economic growth for the two periods is a statistical tour de force which, by the selection of certain figures and certain dates, distorts the record of America's long-term economic growth.

PLAYING THE NUMBERS GAME

By the selection of appropriate starting and terminal periods it is possible to document almost any rate of economic growth that is desired. The table at the bottom of this page shows you how this can be done. It will also show you how the Eckstein staff worked out its shocking contrast in growth rates. The table is built like a schedule of airplane fares between different cities. The postwar years 1946 through 1959 are put down on two axes. One runs down the left hand column, the other runs across the top of the table. Put your finger on the point where the two axes intersect and you have the average rate of growth for the period covered.

Annual average growth rates of the U.S. economy, 1946–59 [1]

[Percent increases, starting year to terminal year, of GNP in 1954 dollars]

Starting year	Terminal year													
	1946	1947	1948	1949	1950	1951	1952	1953	1954	1955	1956	1957	1958	1959
1946	------	−0.1	−1.9	−1.2	3.0	3.9	3.8	3.9	3.2	3.7	3.6	3.4	2.9	3.2
1947	------	------	3.8	1.8	4.1	4.9	4.6	4.6	3.7	4.2	4.0	3.8	3.2	3.5
1948	------	------	------	−.1	4.2	5.3	4.8	4.7	3.6	4.3	4.0	3.8	3.1	3.4
1949	------	------	------	------	8.7	8.1	6.5	6.0	4.4	5.0	4.6	4.2	3.5	3.8
1950	------	------	------	------	------	7.4	5.4	5.1	3.4	4.3	3.9	3.6	2.9	3.3

[1] Compound rates of growth.

Following this procedure, you can find growth rates ranging all the way from −2.3 percent, between 1957 and 1958, to +8.7 percent, between 1949 and 1950, along with almost any other rate you would choose for various years and sequences of several years over the postwar period.

For example, if you want to demonstrate that the postwar growth rate through 1953 was less than 4 percent per year, you take off from 1946, include a drop of 0.1 percent between 1946 and 1947, and come up with a growth rate for the 1946–53 period of 3.9 percent. But if you want to show it was quite high, you take off a year later, from 1947 (which drops out that dismal −0.1 percent for 1947) and come up with a fine growth rate of 4.6 percent for the 1947–53 years.

STATISTICAL HOCUS-POCUS

That's what the Eckstein staff did. It took off at one end from a year when there was just about no growth, went to the Korean war boom year of 1953 at the other end, and got that average growth rate of 4.6 percent. Then it took off from the Korean war boom year of 1953 and ran to the year 1959, when business was recovering from a recession and suffered through a steel strike of 116 days, to come up with its 2.4 percent growth rate for the second postwar period. As the table indicates, by taking off a year later (1954) the average growth rate would have become 3.2 percent, and if the take-off had been 1949 it would have been 3.8 percent.

There are those who, in nontechnical terms, would characterize this as statistical hocus-pocus. There are also those who would see in it an element of political hocus-pocus, too. This is because the years 1947–53, when the Eckstein staff found there had been the healthy 4.6-percent growth rate, were roughly years when we had a Democratic President, while the anemic growth rate of 2.4 percent it calculated for the subsequent years was for years of a Republican Presidency.

Actually it can be shown that the civilian part of our economy has had more rapid growth during the Republican administration than it had during the Democratic years. If military expenditures are subtracted from the national output, the resulting growth rate for 1953 to 1959 is slightly higher than for 1947 to 1953.

However, we do not question the bona fides of the Eckstein staff. But we do assert that it has produced a statistical picture of the postwar growth of the American economy which is dangerously misleading both at home and abroad.

Abroad, the report appears to give official documentation to the propaganda line that the Soviet economy is running rings around the U.S. economy in growth, and that it is communism a country should choose if it really wants to develop rapidly. Building on a much smaller economic base than the United States of America, the Soviet Union—as well as almost every less advanced nation in the world—is bound to show a larger percentage increase in output than the United States of America. But the Eckstein staff calculation gives the Communists ammunition they don't deserve.

ARE WE FACING A CRISIS?

The contrast drawn by the Joint Committee staff in postwar U.S. growth rates suggests that we are facing scarcely less than a crisis through paralysis of our economic growth which calls for drastic remedies. But this, as the full 1947 to 1959 growth record set forth in the table makes clear, is very definitely not the case. Our overall postwar rate of growth, as measured by the gross national product in physical terms, has been 3.5 percent per year, a rate nearly double the long-term growth rate of 2 percent per year between 1909 and 1939. In the continuing fluctuations in the rate of growth which more or less inevitably characterize a relatively free economy, we have had some downs in recent years. But our economy is now on the upbeat again. And at the end of this year, the U.S. economic growth rate for the postwar period can be expected to be 3.7 percent per year.

It is extremely important for the United States to continue to maintain this rate of economic growth or even to surpass it. Upon this effort depends our capacity to meet our defense requirements without dangerous strain, to provide an adequate margin for foreign aid, to improve our own productive facilities, and to continue to raise our own standard of living.

How not only to maintain but possibly improve upon our postwar pace of economic growth will be the subject of strenuous debate in the months ahead. However, the debate will have a much better chance of being constructive if the postwar growth record is seen in proper perspective. To this end one of the first things to do is to junk panic rousing statistical portrayals such as that in the Eckstein report.

National Space Sovereignty Dogs World Legal Circles

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Saturday, June 18, 1960

Mr. WILEY. Mr. President, the exploration of space requires of man a new perspective—an ability to extend his thinking beyond the known frontiers, to the unknows of outer space.

To meet the challenge, our scientists and technologists are creatively producing instruments and vehicles for space exploration.

As man explores the new frontier, however, a great many complex problems emerge. Within legal circles, for example, new and serious questions on the operations of vehicles occur, such as: "Where, and how, may satellites and other space vehicles travel without violating the national territories and air space?"

In determining the boundaries of national sovereignty, such additional questions arise as: "How high is up? How far upward does national sovereignty extend? Where does air space end, and outer space begin?"

As the nations of the world move forward in exploring and operating in space, it will be ultimately necessary to find answers for these questions.

Why? To assure protection of national rights and interests in rights; to prevent conflicts of interest, without a foundation of laws or regulations upon which to determine those interests; to prevent misinterpretation of the intention of flights; for example, the ability to know whether a space vehicle may be aloft for military or peaceful purposes.

Despite these complex questions, in the absence of guidelines, the nations of the world, somehow, someway, will need to find more and more answers, to assure orderly utilization of, and protection, of rights within, the areas of outer space.

Recently, the Christian Science Monitor published an informative article by Nobuo Abiko, reviewing a few of the challenges in this field. At this time I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Christian Science Monitor, June 16, 1960]

NATIONAL SPACE SOVEREIGNTY DOGS WORLD LEGAL CIRCLES

(By Nobuo Abiko)

How high is up?

How far upward does national sovereignty extend?

Where does air space end and outer space begin?

These are but some of the many complex questions which promise to demand the increasing attention of international lawyers in the days ahead.

The questions, however, are not new ones.

Although the much-publicized U–2 plane incident has probably served to dramatize the issue, the problem of a legal regime of space is one which legal circles have been discussing for some time.

U.S. VIOLATION SEEN

In fact, the one clear legal question involved in the U–2 flight—the alleged U.S. violation of Soviet air space—already appears to be obsolescent. Legal consensus regarding the question seems unanimous.

"Without exception," says a professor at the Harvard Law School, "we would say the United States violated international law in flying the U–2 over the Soviet Union."

If the matter were referred to an international tribunal, comments Roger Fisher, lecturer on law, "we would get an adverse decision."

Professor Fisher explains that legal precedent for such a decision lies in a long series of mutually tolerated acts and implicit agreements among nations which by now have hardened into customary law.

As far back as the Paris convention of 1919, states in the international community were arriving at the conclusion that "every power has complete and exclusive sovereignty over the air space above its territory."

One legal writer even asserted that such sovereignty reaches "to an unlimited height."

The Convention on International Civil Aviation, signed at Chicago in 1944—which many consider the basic text of the legal status of air space—made little if any change in the stipulations of the Paris convention.

In fact, annexes to both conventions, as Professor Fisher points out, defined aircraft as "machines which can derive support in the atmosphere from reactions of the air."

Coming in an era when sputniks, satellites, and other man-made space craft were but wild dreams of scientists, the Chicago convention made no effort to distinguish between air space and outer space. Indeed, there was no need to.

Present-day rereading of the Chicago convention, therefore, assumes that air space—in the absence of a clear definition—designates those parts of the atmosphere where the gaseous air is sufficiently dense to support airplanes and balloons.

It further assumes national air sovereignty to be limited to those areas.

FIRST SPUTNIK LAUNCHED

It was, of course, the electrifying launching of the first sputnik on October 4, 1957, that shocked international lawyers into a serious study of the distinction between air space and outer space.

Previously, however, developments on the international scene had given them some direction for their deliberations.

In 1956, the United States, followed shortly by the Soviet Union, announced programs of planned satellite flights in conjunction with the International Geophysical Year.

Neither nation, however, Professor Fisher comments, felt it necessary to ask formal permission of other countries in order to place the proposed satellites into orbit—orbits which would pass over the territory of these other countries.

And no country recorded objections to these planned flights.

"If, on the first flight, someone had protested," says Professor Fisher, "that would have been one question."

In the absence of any protest, says the professor, "one can say that there is worldwide recognition that it is not a violation of law to send scientific satellites up in the air."

A well-known expert on international air law, Prof. John C. Cooper of McGill University, Montreal, has put the matter succinctly. In an address delivered in November 1957, he declared:

"International conduct since the satellite flights were first announced is consistent with no theory other than the acceptance of the principle that 'outer space' is not part of the territory of any state and may be used by all states as freely as the high seas are now used for surface shipping."

The task for international law for some time has been to define the boundary between territorial air space and universal outer space. The urgency of the task, of course, has been heightened by the recent launching of the U.S. Midas, early warning satellite and continued testing of other military satellites.

WHERE TO DRAW LINE?

But how and where to draw the line?

Legal thinking has offered several proposals.

Some legal writers have suggested basing an arbitrary horizontal boundary on a supposed physical constant, such as "the point where the earth's gravitational effect ceases."

Others have sought to determine the height at which there ceases to be enough air to support aircraft.

Still others have talked in terms of the actual physical control which any nation can exert over space. In other words, the top limit of air space would be the greatest height at which any national can effectively control space due to its scientific and technological progress.

The difficulty of dividing space into fixed boundaries, Professor Fisher says, has forced many legalists to turn from the question of physical boundaries to that of activities.

This approach itself runs into the necessity of delicate judgments. For it would require lawyers to distinguish "peaceful" or "scientific" satellite ventures from "military" ones.

COMPLEXITY INCREASES

The assumption is that the former would be legal. On the other hand, as Professor Fisher puts it, "no matter how high up it is, a satellite using your territory for military purposes would be deemed in violation of international law."

The complexity of the scientific-military criterion is immeasurably increased by what some writers have termed "the extraordinary interdependence of scientific, military, commercial, and other objectives that may be advanced by the same activities in space."

Los Angeles County Population

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 14, 1960

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to present the text of a letter dated June 14, 1960, from the Bureau of the Census, Regional Operating Office, Los Angeles, Calif., with accompanying figures. It itemizes the population as just determined by the 1960 decennial population and housing census of the major cities and towns in Los Angeles County, in which the great 23d Congressional District is located.

The material follows:

U.S. DEPARTMENT OF COMMERCE,
BUREAU OF THE CENSUS,
REGIONAL OPERATING OFFICE,
Los Angeles, Calif., June 14, 1960.

The Honorable CLYDE DOYLE,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN DOYLE: The 1960 Decennial Population and Housing Census is now completed and we take pleasure in presenting you with the attached copies of the preliminary census count for the city and county of Los Angeles, Calif.

These preliminary figures are subject to some revision when the official count is released later this year by the Washington, D.C. office of the Census Bureau.

Very sincerely yours,

LEONARD C. ISLEY,
Regional Field Director,
Bureau of the Census.

CENSUS COUNT FOR LOS ANGELES CITY, 1960

The population of the city of Los Angeles is 2,451,862 according to preliminary results of the 1960 Census of Population announced today by the Los Angeles regional office, Bureau of the Census. This represents an increase of 481,504, or 24.4 percent, over the 1950 census count of 1,970,358. It is an increase of 207,961, or 9.3 percent, over the 1956 special population census count of 2,243,901. According to these figures the rate of growth has increased from about 46,000 per year during 1950 to 1956, to about 52,000 per year for the past 4 years. The preliminary 1960 figure is based on field counts and is subject to some revision when the official count is released later this year by the Washington, D.C. office of the Bureau.

PRELIMINARY 1960 CENSUS COUNTS FOR LOS ANGELES COUNTY

The population of Los Angeles County is 5,987,246 according to preliminary results of the 1960 Census of Population announced today by the Los Angeles regional office of the Bureau of the Census. This represents an increase of 1,835,559, or 44.2 percent, over the 1950 census count of 4,151,687. This preliminary 1960 figure is based on field counts and is subject to revision.

Of the total county population, 4,890,101, or 81.7 percent, resided within the 68 incorporated cities as of April 1, 1960. Attached is a tabulation showing the distribution of the 1960 preliminary population for all incorporated places together with available figures from the 1950 Decennial Census and more recent special population censuses conducted by the Bureau of the Census. This table also shows that 1,097,145 persons were counted in the unincorporated areas of the county.

The Important Participation Which Louisiana Had in the American Revolution

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 17, 1960

Mr. BOGGS. Mr. Speaker, it is my privilege to incorporate at this point in the RECORD an address recently delivered under the auspices of the Louisiana Society of the Sons of the American Revolution by the distinguished Louisianian, Hugh M. Wilkinson of the New Orleans bar.

The title of the speech is "The Important Participation Which Louisiana Had in the American Revolution." I found the address of tremendous interest and I think other people in our country will also have interest in these historic facts which have not been too well publicized in our country.

I commend Mr. Wilkinson's address to the attention of all of our Members. Mr. Wilkinson himself is a member of a famous American Revolutionary family.

The address follows:

THE IMPORTANT PARTICIPATION WHICH LOUISIANA HAD IN THE AMERICAN REVOLUTION

Very appropriate, and most timely, is the use of the theme selected for this dinner meeting, and carried out in the program, by these lovely decorations and place-favors, and especially by the colors chosen. Here we see, in brilliant combination, the crimson derived from the lions rampant on the escutcheon of Leon, with the gold of the triple towers of Castile, heraldic symbolism dating back beyond the voyages of Columbus and coloring predominant in the flags and standards of our revolutionary ally, Spain.

I emphasize that this is indeed a timely tribute, because 179 years ago this week, on Sunday the 18th day of March, in the year 1781, there was performed one of the most gallant, one of the most heroic feats in all American history—but a heroism, I am sorry to point out, which has never had adequate recognition by historians of the American Revolution.

The scene of this act of gallantry was the broad channel of the sea pass leading from the Gulf of Mexico, between the western extremity of Santa Rosa Island and the Florida mainland, and connecting the gulf with the lower Pensacola bay.

In this area, supported by a fleet of transports and ships of war from Havana, Bernardo de Galvez, the 33-year-old Spanish Governor of Louisiana, had invested the well-fortified city of Pensacola, principal British port and military headquarters on the Gulf of Mexico during the American Revolution, and a haven of refuge for many Tories, who had fled from the Atlantic Colonies.

Having captured from our enemy, after Spain entered the war in 1779, the posts of Manchac, Baton Rouge, Natchez, and Mobile, Galvez once before, by a hurricane, had been turned back from this, his most important military objective of Pensacola.

And now Captain Calbo, the senior naval officer from Havana, jeopardized the fortunes of this expedition by refusing to order his vessels to cross the bar and enter the uncharted pass in the face of the artillery fire of the British fort which the Spaniards called Barrancas Coloradas, or Red Cliffs.

The delay threatened disaster. By amphibious landings, Galvez's soldiers had already been put ashore on Santa Rosa Island, and if, in that unpredictable season of the year, an equinoctial storm blew up, and drove the supporting fleet away from the coast, those men would be left destitute of munitions or food, and, in such circumstances, could fall easy prey to the British defenders and their savage host of Creek Indian auxiliaries.

In this tactical dilemma, Governor Galvez asserted his habitual enterprise and daring. Captain Calbo, it was true, was in command of the navigation of the Havana naval contingent; but, fortunately, Governor Galvez had complete authority over four comparatively small craft from Louisiana; two armed launches, a sloop, and the brig *Galveztown*.

After first bitterly taunting his naval colleague for the latter's reluctance to force the passage into the bay, Galvez ran up a broad pennant on the *Galveztown* and fired a salute of 15 guns so that no one, friend or enemy, would have any doubt who was aboard the brig.

It was a bold gesture of defiance to the British artillerymen, a dramatic touch borrowed from feudal times, when each Spanish knight sought to carry his own colors high and into the thick of the battle.

Thus, with his flags and standards flying, his crews stationed as though on dress parade, himself and his staff in the most exposed posture, Galvez sailed this little Louisiana squadron through the vigorous cannonade from the Barrancas Coloradas, and brought his ships safely to the weather-protected anchorage of the lower bay in the lee of Santa Rosa Island.

Then it was, as Professor Chambers in his history tells us that the Spanish naval commander "came to realize that inaction meant dishonor; that this young and provincial commander was winning for himself the fanatic adoration of his men and the undying glory which heroic courage, dramatically displayed, is ever ready to confer" (Henry E. Chambers, "History of Louisiana," p. 333).

The next day, therefore, the Havana ships likewise safely ran the gauntlet of the Barrancas fort's fire. The necessary stores and supplies were landed, the siege carried forward, and after about 7 more weeks the British commander, General Campbell, surrendered Pensacola to Galvez on May 10, 1781, which was just 5 months and 8 days before the capitulation of General Cornwallis to a Franco-American attack at Yorktown, Va., concluded the War for American Independence.

Substantial tokens of the Spanish King's appreciation of the heroic conduct of Bernardo de Galvez quickly followed the subjugation of the important British Province of West Florida.

Carlos III made Galvez a count, promoted him to the rank of lieutenant general, and conferred on him the commission of Governor of West Florida, as well as Louisiana.

And finally, "to perpetuate for posterity," as the royal order read, "the memory of the heroic action in which you alone forced the entrance of the bay, you may place as the crest on your coat of arms the brig 'Galveztown' with the motto 'Yo Solo.'"

Yo Solo: I alone.

What more impressive testimonial to the courage and determination of a splendid leader, a gallant soldier, a dashing and romantic figure of Louisiana's colonial history—but, alas, a man who in the prime of his life, 5 years after the event I have described, perished at the age of only 38, from yellow fever, while continuing to serve his King as viceroy of Mexico.

My time to speak will not permit of a review in detail of the several military campaigns, during the American Revolution, of Galvez and his brave Louisianians, many of them ancestors of members of these Louisiana chapters of the DAR.

I prefer to take as my text this one act of conspicuous gallantry at Pensacola, and from that text to ask the question: Why is it that every American schoolchild is taught such things as, for example, what John Paul Jones said about "I have just begun to fight;" but there is little or no popular education, in Louisiana, or elsewhere, regarding Galvez's heroism in forcing the entrance to Pensacola bay?

John Paul Jones, in the exploit for which he is given his greatest fame, captured a whole British province, and did it at a time when such attrition was weighing heavily against Britain's ability to reinforce Cornwallis in Virginia, and thus continue the war.

And yet, in all but local history books, that valuable contribution, by Louisianians, to the victorious termination of the War for American Independence, is persistently ignored.

In the historical accounts which were chronicled on the Atlantic seaboard, of the progress and events of the American Revo-

lution, there would seem to have been a conspiracy of silence against anything connected with the Revolution that occured or originated in Louisiana.

Fame, perhaps, is more a consequence of able propaganda than reliable historical fact. Witness the South Carolina epic of the sergeant named Jasper, who replaced a flag on the parapet of Fort Moultrie; New Jersey's Molly Pitcher, who was said to have served a cannon when her husband suffered a sunstroke during the Battle of Monmouth; the Philadelphia myth of Betsy Ross and the first flag; Paul Revere's poetic credit for a nocturnal horseback ride which a man named Prescott actually completed; the familiar painting of George Washington in the unlikely position of standing up in a rowboat buffeted by a snowstorm on the Delaware River.

Americans also are taught that Robert Morris of Philadelphia financed the American Revolution; and that France smuggled supplies to the patriot armies through Beaumarchais, author of the "Barber of Seville."

But how often do we read of similar Spanish help dispatched from New Orleans? Or how often is credit given by historians to the New Orleans merchant Oliver Pollock, who pauperized himself shipping Spanish gunpowder up the Mississippi and Ohio Rivers to Virginia's troops of the Continental Line, and by underwriting personally the expenses of George Rogers Clark's conquest, from the British, of the huge territory now comprising Ohio, Indiana and Illinois?

It is perhaps quite a compliment, to the substance and integrity of this Louisiana businessman of those early days, that the traders of the Illinois district, from whom Clark had to purchase supplies to sustain his army, were unwilling to receive from him the paper money of the Continental Congress, but readily accepted drafts in any amount that he drew on Oliver Pollock at New Orleans.

In a biography of Pollock, published about 20 years ago, Professor James Alton James of Northwestern University said that in providing the financial support for the winning of the West by Clark, this New Orleanian, Pollock, made "the greatest money contribution of any individual to the Revolutionary cause."

And yet Robert Morris of Philadelphia generally gets the credit in the Yankee history books for being the great financier of the American Revolution.

Pollock himself perhaps put his finger on the sore spot when, in a plea to the President of Congress for reimbursement, some time after the victory had been won, he wrote:

"It has not been my fortune to move on a splendid theater, where the weary actor frequently finds in the applause of his audience new motives to exertion.

"I dwelt in an obscure corner of the universe alone and unsupported."

Separated, by hundreds of miles of Indian-infested wilderness, or equally hazardous ocean waters, from the then centers of publicity and propaganda on the Atlantic seaboard, Louisiana was a redheaded stepchild in the sisterhood of American communities. Her aid and assistance in the American Revolution was most valuable where and when it was worst needed, but seems to have been speedily forgotten when the time arrived for giving out the medals, the bouquets, and most important, the historical and literary credits.

But there is no reason why these educational slights and oversights should continue to be tolerated.

As I occasionally travel in the United States, or talk to visitors from other sections who come here, I am appalled at the almost universal ignorance—and often among people of a cultural background who should know better—concerning the important part which Louisiana played in the American Revolution.

In fact, due to what I think are deficiencies in our own method of requiring the teaching of the comparative history of the period, the average Louisianian, young and old, is not much better informed on the subject than are persons domiciled elsewhere.

There is no task, in my humble opinion, more important, to which the Louisiana chapters of the Daughters of the American Revolution can dedicate themselves[1] than an unceasing and untiring educational campaign, to make the people of America, and essentially the people of Louisiana, teach, know, and understand that Louisiana did have a participation in the American Revolution, and how important that participation actually was.

The general society, admittedly, took a great, practical stride in this direction when it provided for the admission of descendants of the soldiers of Galvez; but there still remains much to be done, with the aid of its Louisiana chapters, toward achieving for Louisiana her proper status in the Nation's correct and accepted historical accounts of the Revolutionary period.

The American Revolution, we must understand, was more than just a war. It was one of the effects—as the revolution later in France was another—of a great sociological movement, for which mankind was ripe and ready by the middle of the 18th century, and which provoked consequences, in Europe and in America, that were not stabilized for several generations afterward.

As John Adams once expressed it: "The Revolution was effected before the war commenced. The Revolution was in the hearts and minds of the people."

The era of enlightenment, so-called, which preceded the outbreak of the War for Independence, furnished its intellectual nourishment, and these sources were as available—perhaps more available—to Louisianians, as to persons in the English colonies. Writings of Voltaire, Montesquieu and Jean Jacques Rousseau on the European continent, and of John Locke in England, were then being widely read and studied, and influenced the arguments and documents of the revolutionary upsurge which soon took place across the Atlantic.

To this reaching for political freedom, the French and Indian War was the curtain-raiser, and the War of 1812 was the epilogue. It was a process of social adjustment which embraced more than half a century. The cycle can well be said to have started with Wolfe's conquest of Quebec in 1759, and to have finally run down when Pakenham's failure to capture New Orleans in 1815 demonstrated the futility of further attempts at monarchial aggression in North America, and thereby set the final seal of military confirmation and ratification on our continental solidarity achieved by the Louisiana Purchase.

At the height of his power, Louis XIV, the Grand Monarch of France, had laid out a fortified arc from Quebec to New Orleans, contemplating the overall strategy of confining England's Thirteen Colonies between the Allegheny ridge and the Atlantic beaches.

But Wolfe's brilliant reduction of the northern bastion of this line severed Canada from Louisiana, and gave George III, ridden by war debts, the political latitude to so abuse by taxations, and restrictions the economy of his American subjects, that, within a decade and a half, they were provoked to rebellion.

Contemporaneously, cession to Spain of thousands of French subjects in Louisiana, like a sale of cattle, fostered a rebellious spirit on the Mississippi which Spanish ruthlessness, in 1769, put down for a time, but never stamped out the spark.

Louisiana French colonials and English colonials, who had opposed each other at the headwaters of the Ohio between 1753 and 1758 in the French and Indian War, made common cause against the British king in the Revolution from 1779 to 1781—under Washington and Lafayette and Rochambeau on the Atlantic shore, and under the Spaniard Galvez on the lower Mississippi and the coast of Florida.

And, finally, it was French and Spanish Creoles together, with Anglos from Mississippi, Tennessee, and Kentucky, who, shoulder to shoulder, delivered the coup de grace at Chalmette in 1815 to lingering British pretensions of reviving Louis XIV's grand strategy of encirclement, by means of a new British colonial empire based on the ancient fortified line from New Orleans via Detroit to Quebec.

Louisiana was therefore, at all times, very much a part of this revolution in America.

At the beginning, she was part of those events which precipitated its causes.

Her soldiers served in the French forces which ably defended the forks of the Ohio, now the site of Pittsburgh against the successive expeditions of Washington, Braddock, and Forbes.

The names of Jumonville and Coulon, for example, are well known among Louisiana colonial families.

Jumonville de Villiers was killed by Washington's troops near the Monongahela in 1754, and his brother, Coulon de Villiers, avenged him by capturing Washington in Fort Necessity on July 4 of that year—the only man to whom the Father of his Country was ever obliged to yield his sword and put pen to terms of surrender.

Aubry, the last French Governor of Louisiana before the Spanish cession, was recommended for the Cross of St, Louis for repulsing a British attack on Fort Duquesne in 1758; and when, for lack during the Seven Years War in Europe of adequate support from across the seas, the Louisiana Colonials had to abandon Fort Duquesne, Captain Aubry brought his troops safely to New Orleans.

Louisiana was likewise closely concerned in the effects of the revolutionary process in America.

A population which had lived under the French flag, amidst colonizing privations and hardships of decades, did not receive agreeably the news that Louis XV had tossed Louisiana way to Spain so unceremoniously; and let us observe the interesting parallel of events, on the Mississippi and in the Thirteen English Colonies, which followed.

By the time the first Spanish Governor, Ulloa, arrived, in 1766, at New Orleans, George III had attempted to impose on his American subjects the obnoxious stamp tax, and Patrick Henry had voiced his famous speech, reminding the British monarch of the fates of Tarquin, Julius Caesar, and Charles I.

In those days Louisiana also had its Patrick Henry.

He was the colonial attorney general, Nicolas Chauvin de Lafreniere, and it was his oratory that aroused the Louisianians in 1768 to resist, by force and violence, the transfer of Louisiana to Spain.

In Virginia, a 1,000 miles away, Henry was then asserting the doctrine of government by compact between the people and their ruler, and that a violation of the compact by one party had the legal effect of discharging the other. A king, by injustice, he affirmed, from being the father of his people degenerated into a tyrant, and forfeited all right to the obedience of his subjects.

Compare that philosophy with Lafreniere's speech to the Superior Council at New Orleans on October 29, 1768, as quoted by the historian Gayarre (vol. II, p. 208).

---

[1] The same observation can be applied to the Louisiana compatriots of the SAR.

"In proportion," said Lafreniere, "to the extent both of commerce and population, is the solidity of thrones; both are fed by liberty and competition, which are the nursing mothers of the state, of which the spirit of monopoly is the tyrant and stepmother. Without liberty there are but few virtues. Despotism breeds pusillanimity, and deepens the abyss of vices. Man is considered as sinning before God, only because he retains his free will."

Strong sentiments were these in the 1760's, whether addressed by Henry to the absolute monarchy of England, or by Lafreniere to the absolute monarchy of Spain.

And when a mission to Paris failed, in the desperate efforts of the Louisianians to petition Louis XV to rescind his cession to Carlos III, Lafreniere and his associates formulated the plan of a republic on the banks of the Mississippi. Even the historian Gayarre, who, because of his Spanish lineage, favored the Castilian annexation, admits the existence of this early republican movement in Louisiana, and he has said: "There is no doubt that the colonists would have eagerly adopted this form of government, had it been possible at the time, for it must be recollected that, from the earliest existence of the colony, almost all its governors had uniformly complained of the republican spirit which they had observed in the inhabitants" (vol. II, p. 281).

Writing many more years after the event, the French-descended historian, Fortier, said: "Our ancestors were evidently mistaken in their noble efforts, and their plan was but a dream; for how were they to resist the power of the King of Spain?

"But they gave Louisiana the glory," Professor Fortier exulted "of having thought of establishing a republican form of government in America several years before Jefferson wrote his immortal Declaration of Independence, which gave birth to our United States" (vol. 1, p. 208).

The first Spanish Governor's expulsion from Louisiana, in the revolution headed by Lafreniere, took place at New Orleans exactly 1 month after red-coated soldiers were quartered by George III on the citizens of Boston to try to intimidate his colonists in America.

Carlos III of Spain acted against the Louisianians with even greater ruthlessness. He sent General O'Reilly, with an overpowering military force, and on October 25, 1769, almost 1 year after Lafreniere's inspiring speech, the attorney general and four of his compatriots, for having advocated the same principles of human rights and liberty upon which our American Revolution was founded, were executed in New Orleans by a firing squad in a barracks yard next to the Ursulines Chapel, where their sorrowing kindred heard the volley that killed them, while the sisters of the order attempted to comfort their grief.

A little over 4 months later, on March 7, 1770, the musketry fire of British soldiers killed other American martyrs in what we known as the Boston massacre.

A year after that, in 1771, occurred the rebellion in North Carolina of the "regulators," for which six victims were condemned to death by the Royal Governor. The last words uttered by one of these doomed patriots can well be applied to such sacrifices as were thus being made in the cause of freedom throughout North America.

"Our blood," he said, "will be as good seed in the ground."

The blood of the Louisianians, Lafreniere, Villere, Marquis, Milhet, Noyan, and Caresse, mingled as "good seed in the ground" with that of patriots who made the supreme sacrifice in Boston, in North Carolina, and later at Lexington, Saratoga, Yorktown, and everywhere that men have stood up and fought and died for what they believed was right.

This heroic French colonial, Lafreniere, expounding in Louisiana the same fundamental principles of human dignity and individual freedom as Patrick Henry was asserting then in Virginia—but which brought to Lafreniere death instead of liberty—was a shining example in our American revolutionary era of the fact that the virtue of patriotism is not bounded by nationality nor circumscribed by sectionalism, and that Louisiana was indeed in the forefront of America's political awakening which history calls the American Revolution.

Lafreniere, the martyr: our first evangelist of freedom, from whom came the inspiration.

Pollock, the benefactor: whose unbounded generosity sustained the revolutionary cause.

And Galvez, the soldier: the personification of gallantry in action, the commander of Louisiana's military contribution to the War for Independence.

What monuments to these three have a grateful people reared?

What garlands have we hung on their memories?

Or how forgotten have we let them be?

Daughters of the American Revolution in Louisiana: There were, of course, many others who as devotedly served the cause, but these are the symbols—these were the three stalwarts of that period in our colony's history which your Society represents.

Teach America what they did; and you tell the story for all.

Urge unceasingly the true record of their service, and it must follow, as night shall follow day, that our posterity will better appreciate the extent of the important participation in the American Revolution which Louisiana had.

The Social Security Inverted Pyramid—No. 6

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 17, 1960

Mr. ALGER. Mr. Speaker, the following remarks conclude the analysis of the social security program by W. Rulon Williamson, original actuary of the Social Security Board:

SOCIAL SECURITY AND THE CONGRESS

(By W. Rulon Williamson, research actuary)

THE 1960 SCENE AGAIN

The Forand bill, the White House Conferences' concern with youth and aging, the three congressional committees—the Ways and Means, the Senate Finance, the Labor, and Public Welfare—engaged in study, have as yet evolved no clear definition of the scope and limitations of the American welfare state—the Federal takeover of personal responsibility for a citizen's own welfare and that of his family.

To me it is clear that the more interference, and dictation, the less freedom; the more subsidy, the less self-reliance; the bigger the State promises, the less the personal equity; the bigger the handout checks, the bigger the mortgage on the common property.

When the proponents of bills that call relief by fancy names demand adding medical care handouts to something called insurance, and say it is tested and tried, but leave out the phrase "and found wanting," I am willing to admit ignorance as an excuse. But were I—knowing what I do about these systems—to remain silent, I lack that excuse. We cannot know what men who biennially promise more and more benefits, with a deferred steady rise in taxes in the future, will continue to do to this beleaguered system.

Director Stans has outlined other built-in rising tax demanders. All of his items taken together seem less than this one item of OASI accrual. In the inflated values of today I expect our goods and chattels may top a trillion dollars—perhaps $1.2 trillion. I seem to remember a built-up mortgage of $750 billion without the OASI item. Were this $650 billion (with a $30 billion annual extra as we move along) added, it would seem to be a possible $1.4 trillion mortgage against a $1.3 trillion property. This is, of course, a fantastic situation—but no parliamentary body should have that amount of responsibility.

PERORATION

I contend that in thinking along these lines, for the 1960 legislators, apprised by their own instincts of the error of so much collectivism, to consider piling on top of this unstable OASI program and the disability program I cannot evaluate at this point, save that I view it with alarm, the further provision of State-run medical care, with a camel's-head-under-the-tent-flap approach would be fiscal irresponsibility to the point of madness.

I agree with Mr. Peterson that so far the Congress has been fed "actuarial anesthesia." At the same meeting that he presented that paper, there was no actuary willing to argue for the addition of medical care benefits. "The Devil's advocate" was Leonard Lesser. I heard no one say he was convinced by said Devil's advocate.

Even though Mr. Peterson's plausible recommendation for a study by fresh, untainted minds were followed, there would not be time for the studies, essential to the men required, before the fall election.

We are looking for more than Diogenes sought. He would have been satisfied with an honest man. We need a man or a group of men not only honest, but also technically informed. Their number is not legion. I believe they exist and that they should be found. Then they need time, and recognition that they need time.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

Task Force Report: American Strategy and Strength

EXTENSION OF REMARKS
OF

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. RHODES of Arizona. Mr. Speaker, today a 15-member task force of the House Republican Policy Committee has released a report—"American Strategy and Strength"—which is so vital to our national survival that it deserves special note in the RECORD and the serious study of all Members of this body.

I shall describe some of the background of this study, and then the actual report summary will be presented.

At the outset of my remarks, I should point out that this document is nonpolitical. I wish to emphasize that attempts to make it appear political could destroy its usefulness and lead the United States ever deeper into the mire of international miscalculation.

I consider it a great tribute to the 14 members of this body who worked with me and the task force staff in evaluating the papers upon which the report is based that they so effectively shunned partisanship temptations. This is particularly commendable in an election year when the very subject at hand is likely to be one of the most bitter political controversies.

The report is based upon study papers prepared on a full range of subjects dealing with national and international strategy by distinguished experts on diplomatic, military, scientific, economic and psychological phases of the conflict between the free and slave worlds.

In addition, still other authorities from academic and professional life were called on for comments and suggestions. Altogether, more than 50 evaluations by task force staff members, authorities in the fields concerned, and Members of this body, went into the report.

I believe the hundreds of crises which have arisen between this Nation and its allies on the one hand and, on the other, the countries of the Soviet bloc in the past 30 years are ample proof of the need for such a study.

In the consideration of this age-long struggle, those who worked on the report and the study papers upon which it is based have neither sought the solution to an individual crisis nor suggested a course of action designed to meet any particular conflict which may arise. Rather, they have attempted to outline an overall strategy which could be expected to preserve our freedoms for all time.

No one concerned in this project considers the study or its report the complete, or final, solution to all problems at hand. Indeed, Mr. Speaker, such a thing obviously would have been impossible of attainment in the short period which has been devoted to the subject.

The studies were begun 4 months ago under the direction of the distinguished gentleman from Wisconsin [Mr. BYRNES], who is chairman of the policy committee, and my able colleague, the gentleman from Michigan [Mr. FORD], chairman of the study group.

At the outset, those who took part in the project fully considered the problems which would be presented by time limitations and the question of producing something more than a superficial study with the small staff we had available for the task.

The task force recognized that the strategy followed by the slave world in its conquests thus far has not been limited to any particular sphere or spheres of influence, but rather has been as varied as the governmental interests of its opponents. We were aware that mere military deterrents, economic blocs, diplomatic approaches, propaganda techniques, and scientific and industrial development could not, in themselves, halt the spread of world communism or long defend the freedoms Americans consider more important than life itself.

Instead, an articulated strategy, or what we have called a public strategy, in which every area of enemy onslaught could be defended through the coordinated efforts of our entire people, would be necessary.

The ultimate strategy arrived at, of course, should spell out in bold letters the difference between our national survival in freedom and our enslavement.

In a world where every compromise of vital interests work out only to the benefit of our opponents time obviously is not on our side. For this, and other considerations, it was determined to have a report ready prior to the adjournment of this session of Congress. We felt that, if we could enlist the aid of experts in the more vital fields of consideration, we could produce something with which to work. This, we were and are convinced, would be a start.

It perhaps could develop in all of us, a better sense of direction and coordination. It could channel the thinking of Americans everywhere into the streams of a coordinated and well-articulated strategy with which to meet alien onslaughts on our civilization.

An an example of this desire by those responsible for the studies and the report at hand, I should point out that the recommendation for a coordination of vital public information media under the direct supervision of the White House was arrived at before the recent U-2 incident. In this respect, I think it is significantly important to reemphasize that such a strategy as is put forth would not be limited to a particular crisis, but rather would preclude American loss of prestige or power because of them.

In an effort to produce the best possible report within our time limitations, the task force enlisted the aid of the best available experts in all fields concerned. Volunteers were used wherever possible and the cooperation of faculty members at America's leading universities, scientists, diplomats, military leaders, economists, psychologists, legislators, and others was overwhelming.

Now, briefly, here is how we proceeded:

Last February it seemed to certain Members of this body that the then-current debates over the so-called missile gap reflected a lack of real depth and appreciation—both of our national strategy and strength and of how to build upon our present strategy and strength constructively for the decade just entered.

It was shortly after this that the chairman of the Republican Policy Committee appointed a task force of Members to study the total strategy and strength of this Nation in relation to its conflict with the Sino-Soviet bloc. Initially, there were but six Members in the group, but as study progressed, the Members became increasingly aware of the broad-gage approach needed for the problems involved. Consequently, the task force was enlarged to an eventual 15 Members drawn from vital House committees.

It also was felt that the study should be broadened by viewpoints of experts outside of Congress, especially those of academicians and professional people. As a vehicle for initiating this, background papers were sought not only from the staff and some of the Congressmen of the task force, but also from outside authorities on the subjects at hand.

To further enrich the study, the papers are being circulated in the academic community, and remarks and comments thus elicited were are are being considered. Naturally, some of the conclusions and comments differ, and this is good. The report soon to be presented is thus a result of the task force's evaluation of the more than 50 viewpoints available.

The members of the task force, with the increased depth obtained from these viewpoints, papers, and discussions, have consolidated into this task force report summary of conclusions the ideas, concepts, and recommendations which they felt especially needed congressional and public discussion before the close of this session of Congress.

Many equally important problems are considered in the study papers which merit greater discussion for a future task

force operation. But we think we have made a real beginning.

As coordinator for the task force, I wish to make grateful acknowledgment to my colleagues on this task force, to the staff members who assisted us, to those who prepared the study papers which were considered and evaluated by our group, and to those in private fields who gave time and effort to assist Members of this body in their assessments.

Mr. Speaker, first, I will list my colleagues who participated in this study and acknowledge their particular contributions to the project. The gentleman from Wisconsin [Mr. BYRNES] appointed the task force and especially participated in recommendations for improved policymaking within the Congress. The gentleman from Illinois [Mr. ARENDS], the minority whip and the ranking Republican on the Armed Services Committee, has lent overall advice to the preparation of the report and has contributed valuable background material. Of the study group itself, the gentleman from Michigan [Mr. FORD] was chairman and particularly devoted attention to the review of national objectives. The other members of the task force specialized in portions of the report as follows: The gentleman from New Hampshire [Mr. BASS], scientific aspects; the gentlewoman from Ohio [Mrs. BOLTON], diplomacy and awareness in approach to undecided and captive nations; the gentleman from Michigan [Mr. CHAMBERLAIN], appraisals of our forces in being; the gentleman from Missouri [Mr. CURTIS], economic aspects; the gentleman from California [Mr. HOSMER], national policy; the gentleman from California [Mr. JACKSON], psychological aspects and deterrence; the gentleman from Minnesota [Mr. JUDD], Sino-Soviet characteristics; the gentleman from Wisconsin [Mr. LAIRD], military aspects; the gentleman from New York [Mr. MILLER], responsible political partisanship; the gentlewoman from New York [Mrs. ST. GEORGE], individual responsibility; and the gentleman from California [Mr. WILSON], implementing public strategy.

The staff members of the task force also deserve special commendation for the long and arduous hours spent in assimilating and preparing material. Working under the able direction of Dr. David M. Abshire on the staff were Dr. Donald Ackerman, Guy Waterman, and Priscilla E. Turner.

Now, I wish to express the appreciation of the Policy Committee and the task force to those who prepared the background study papers. The papers and those who prepared them are:

First. "National Character as an Element of Power," by Prof. William Y. Elliott of Harvard University widely known both for his academic and governmental experience.

Second. "Fundamentals of a National Strategy," by Dr. David M. Abshire, task force staff director.

Third. "How Democracies Die," by John H. Stambaugh, vice chancellor of Vanderbilt University.

Fourth. "An Appraisal of Soviet Economic Capability," by Representative THOMAS B. CURTIS, of Missouri, ranking minority member of Joint Economic Committee.

Fifth. "International Tension and National Defense," by Prof. Robert W. Newmann, director of the well-known Institute of International and Foreign Studies at UCLA.

Sixth. "Key Factors in Future Military Planning," by Adm. Arthur Radford (retired). The distinguished former Chairman of the Joint Chiefs of Staff.

Seventh. "U.S. Defense: Policies and Posture," by Dr. Donald H. Ackerman of the task force staff and special assistant for Defense Affairs to the gentleman from Michigan [Mr. FORD].

Eighth. "The Requirement of Deterrence," by Prof. Paul Peeters of Iona College.

Ninth. "Science and Foreign Affairs," by Dr. George B. Kistiakowsky, the distinguished special assistant to the President for science and technology.

Tenth. "A History of Ballistic Missiles," by Representative LESLIE C. ARENDS, of Illinois, ranking Republican member of House Armed Services Committee.

Eleventh. "The Cost of National Security," by Prof. Arthur E. Burns of George Washington University.

Twelfth. "The Economics of National Defense in a Free Economy," by Guy Waterman of the task force staff.

Thirteenth. "The Economic Challenge of the Soviet Union," by Dr. Don Paarlberg, special assistant to the President for economic affairs.

Fourteenth. "The Impact of Inflation on America's Balance of International Payments," by Dr. Rita Hauser, author and lawyer.

Fifteenth. "An Extension of National Security Council Machinery," by Prof. William Y. Elliott, his second paper.

Sixteenth. "Some Psychological Aspects of Soviet Propaganda," by Malcolm Smith, of Senator THOMAS H. KUCHEL'S staff.

Seventeenth. "Civil Defense Policies," by Dr. Donald A. Melnick, of Scientific Planning Associates.

Eighteenth. "Disarmament: Problems and Prospects," by Representative CRAIG HOSMER, of California, member of the Joint Atomic Enery Committee, and Arthur Peterson, of the University of Wisconsin.

Nineteenth. "Soviet Subversive Forces," by Ralph De Toledano, well-known author, lecturer, and syndicated columnist.

Twentieth. "Soviet Strategy and Free World Defense," by Prof. Gerhart Niemeyer, of the Notre Dame faculty.

Twenty-first. "An Examination of Partisanship and Bipartisanship in National Security Matters." A symposium of political scientists: Prof. James Atkinson and Prof. Karl Cerny, both of Georgetown University; William Y. Elliott, Harvard University; George Grassmuck, University of Michigan; Ivan Hinderaker, University of California, Los Angeles division; Karl Lamb, University of Michigan; the Reverend Stanley Parry, Notre Dame; Howard Penniman, also of Georgetown University; and Robert Loevy, John Hopkins University, who served as secretary for this symposium.

I should like to say at this point that we especially respect and appreciate the advice and assistance which we received from these individuals: Professor Penniman, Dr. Malcolm Moos, Father Parry, Dr. Cornelius P. Cotter, and Prof. Franklyn Burdette.

In behalf of the task force, I also wish to express appreciation to Karl Hess, John Patten III, and Patrick Anderson, for their invaluable voluntary assistance to the staff; and to the following distinguished participants for their evaluation and assessment of studies and other helpful suggestions:

Prof. Vaughn David Bornet of Santa Monica, Calif.; Dr. W. Glenn Campbell, executive director of the Hoover Institution on War, Revolution, and Peace, Leland Stanford University; Prof. George O. Comfort of Butler University; Prof. George Grassmuck of the University of Michigan; Alfred de Grazia, director of the Center for Applied Social Research at New York University; Neil H. Jacoby, dean of the Graduate School for Business Administration, University of California at Los Angeles; Prof. G. Warren Nutter of the University of Virginia; James K. Pollack, chairman of the department of political science at the University of Michigan; Jackson A. Ransahoff, president of Neutron Products, Inc.; Prof. Wilson E. Schmidt of the School for Advanced International Studies, Johns Hopkins University and of George Washington University; Prof. Joseph L. Sutton of Indiana University; Prof. Paul Van Riper of Cornell University; and W. Allen Wallis, dean of the School of Business at Chicago University.

In conclusion, Mr. Speaker, I repeat that we have made every attempt to avoid partisanship in the preparation of this report and that it is intended only as a basis for further study and consideration of the articulated strategy necessary for our national survival. The study papers concerned in the report should provide all Members with a valuable foundation upon which to build future policy and bring wider participation into these efforts.

That our work has been nonpolitical in nature, is attested, I believe in one of the recommendations made: That the policy committees of both major political parties continue these task force studies in order to provide the Government and the people of the United States with sound, well-considered recommendations for a national strategy to deal with the greatest challenge our country ever has known.

Time, as I pointed out earlier, is on the side of the opponent, but we can make it serve us through just such an approach as this task force report.

This task force report summary, submitted by the task force membership, covers the full range of national-international strategy involved in the conflict between the free and the regimented sectors of the world. This report includes diplomatic, military, scientific, economic, and psychological strengths.

The purposes of this task force report are: First, to increase public aware-

ness by offering a clear course for national policy; second, to furnish Members of Congress with a comprehensive viewpoint as an aid in their specialized committee activities; third, to identify American political dilemmas fomented both by the Sino-Soviet protracted conflict and the nuclear age; fourth, to offer specific recommendations, especially in regard to policy machinery, party and personal responsibilities.

OUR OBJECTIVES

Short-cut objectives for military victory in two world wars ignored long-range policy, lost the peace, and created conditions for the present conflict with the Sino-Soviet powers.

In this cold war, a panic-inspired objective of survival only might destroy free civilization.

Survival only is not a policy. It is the delusion of a nation marked for social suicide. It is the sure graveyard of human dignity. Captive nations survive, but only in slavery.

Free nations with no objectives beyond survival are prone to panic at times of artificial as well as real crisis and to engage in the piecemeal surrender made inevitable by seeking "peace at any price."

"Survival only" seeks glittering substitutes for facing crisis with a courageous and firm will. Cold war medicine men are daily peddling panaceas with stereotyped plans for economic growth, for fluctuating military organization, for legislating leadership, for unilateral disarmament, for another summit regardless of conditions, for appeasing Khrushchev by apologizing to Khrushchev unnecessarily.

Equally negative is the objective of merely opposing communism. Sparta, resisting external challenge, destroyed internal freedom and creativity. Mere opposition to communism could do the same, erecting in the name of expediency the sort of central, Socialist tyranny it had meant to oppose.

The real challenge to the United States is to reevaluate the methods by which a republic can meet its challenges without renouncing the spirit of liberty. Our concern should center not so much on freedoms from, as on freedoms for a better, more creative life for all the peoples of the earth.

Proper, positive objectives are:

PROMOTION OF WORLDWIDE POLITICAL AND ECONOMIC ORDER

Anywhere in the world, stability, law, and order work in favor of America's best interests. At home and overseas, the Vice President has spoken of the rule of law. The virus of communism can infect people only in a climate of disorder, discontent, and instability. Mutual security, the Development Loan Fund, the Food-for-Peace program all support stability. Associations such as the common market serve as independent obstacles to Communist expansion.

Emergence of other peace-loving centers of power in Europe, Asia, and Africa reduces the possibility of Soviet attack and eases the tensions inevitable when only two power centers exist in the world.

INCREASING INTERNAL STRENGTH

The free society is being tested by trends in both science and government toward amalgamation into large, more complex systems. But excellence in both derives not from monolithic but from decentralized organization. From outer space to the hometown, America's challenge is to produce scientific creativity and local government responsibility without overreliance upon central support and authority. The consciences of the States, as an example, must be stimulated to revise tax structures and leadership concepts and carry greater burdens in such fields as education and civil defense.

OPEN SOCIETIES

Closed societies constantly pose the possibility of secret preparations for surprise attack. Thus, President Eisenhower has set as a major American objective a world of open societies. The objective can be achieved. Open societies, although frequently not scoring initial successes, have greater staying power, flexibility, originality, and loyalty within. Open societies can harness science for the cause of freemen. The lack of walls in space antiquates the Iron Curtain. The Midas satellites proclaim the doom of the closed system.

OUR STRATEGY

To accomplish these objectives, a strategy is needed for the maximum use of our resources. In the cold war battle, the resources are political, military, scientific, economic, and psychological. National strategy must embrace and employ the task force approach, which uses these resources in combinations, mutually complementing rather than competing.

Psychological objectives, especially, can be reached by interchangeable means.

While a massive satellite might have great psychological impact, an exportable cancer cure, or salt-water freshening method might have greater long-range impact among less favored nations.

Since the 1958 reorganization, the military services have placed increased emphasis on the task force or functional approach. Each military service has the mission to provide forces to command, respectively, on the land, sea, or in the air. The mission of actual victory, however, in anything short of all-out war, is assigned the unified theater command in task force organization.

Elimination of rivalry, duplication, and harmful competition depends upon such clear viewpoints of overriding objectives.

A PUBLIC STRATEGY

A national strategy should not be tucked away in a national security document. To be a public affair, it must be readily understood and enthusiastically supported by the scientists, the educator, the reporter, the engineer, the Congressman, and the housewife. Such an understanding would enormously refortify our present position of strength, and enable a real cold war victory.

The framework of a public strategy can only be built upon the timber of past success. This means understanding why war has been deterred since 1953 and why the Communists have not increased, at the expense of our allies, their territorial expansion one square inch since 1954.

Workable alternatives to the strategy that has achieved this success have not been formulated or even proposed. Yet, some critics would pull national strategy to pieces without replacing it by something better—this is like demolishing your house because you assume the roof might leak.

The Monroe Doctrine is an example of a public strategy understood and supported by Americans of both parties, enabling successive administrations to preserve the integrity of the new world.

To develop an equivalent public strategy for the 1960's, Americans must not tear down proven success, but must erect an even better structure upon it. Small but vocal minorities must not be allowed more destruction than construction. Men of both parties working together can transform our present strategy to a public strategy with which a united people can deter war and advance liberty for a century or more—until the final world triumph of the open society.

THE CHARACTER OF THE SINO-SOVIET CHALLENGE
INDIVISIBLE, PROTRACTED CONFLICT

Communist strategy is total, with war and peace merging into a completely flexible conflict system designed to seek victory, regardless of how long or what means it takes.

The Sino-Soviet strategy aims to divide the United States from within and from her allies without, to sap her ability to resist, to undermine her will to act, and to monopolize the initiative over an entire historical era.

STRATEGY OF TERROR

Nuclear blackmail, in which Soviet propaganda relentlessly emphasizes the devastation of atomic warfare, is used in an attempt to weaken the fiber of persons seeking "peace above all." Probing maneuvers are used to keep the West off balance, particularly during such politically sensitive periods as national elections. Soviet exploitation of the Suez crisis in 1956, the Quemoy-Matsu crisis of 1958, the U–2 incident of 1960 are examples. A new propaganda probe, possibly in the space field, may be expected, also, prior to the November election.

The Communists shifted from the direct penetration of the Korean limited war to a proxy penetration of peripheral gray areas such as Indochina, and then in 1955 shifted to a leap-frog strategy into the Middle East. Now, Communists are shifting to a forward strategy aimed more directly at the new world—in Cuba, in South America, and in the internal politics in the United States.

Pavlov, the father of Russian psychology, trained dogs to respond by automatic reflex to certain stimuli or signals. By changing the signals enough to produce confusion, he drove them to frustration, neuroticism, and eventual collapse. The Russian psychological strategy aims at conditioning the West to neurotic frustration, guilt complexes, and conscience destruction. The prin-

cipal conditioner is sharp alternatives of friendship and bellicosity. The result sought is to make the West react reflexively, in terms beneficial to Soviet power, to each Soviet gambit.

Examples of zig-zags: the 1955 summit "Spirit of Geneva"—the Czech arms deal with Egypt; Khrushchev's smiling 1959 tour of the United States—Khrushchev's 1960 summit frowns; stormy threats of immediate settlement of the German problem one day—quiet insistence on patience the next; threatening Pakistan with missiles one moment—proposing disarmament the next.

SUBVERSION

The knife of Communist subversion is in its most deadly form aimed at the national will-to-resist. No modern revolution has succeeded without the destruction of that will in legitimate government. Lenin had the half-hearted Kerensky government efforts in his favor. This erosion of will employs inevitability and wave-of-the-future concepts, downgrading national achievements, upgrading enemy achievements, and use of the strategic minority. This last group, once will is undermined, takes over in a time of crisis.

Three Communist parties infiltrate America today: The open party or card carriers; the underground party, having more than 75 percent at work in industrial plants; and the "sleepers," or most dangerous group, with no recorded history of affiliation, now hard at work muddying policy whenever possible.

DECEPTIONS AND DISTORTIONS

Soviet scientific achievement is a principal weapon, not technically but as propaganda, to batter Western confidence. In this respect, it is not required that the Soviet be actually superior but only that they focus on areas where vocal and uneasy spokesmen in the West will, in panic, concede Soviet superiority on Soviet word alone. An example is Western inferiority statements about the Russian moonshot despite Russia's admission, after many official statements to the contrary, that the famed moon photo was merely a retouched composite.

Soviet economic claims, taken at face value rather than with grains of statistical salt, are used in the same way, to induce Western feelings of inferiority and the fright of panic-proneness that follows.

Actual Soviet strength is vastly inferior to our own. Our steel production, much below maximum capacity, exceeds that of the Soviet, running at full capacity by 60 percent. We have 3 times the number of hydroelectric plants, 9 times the shipping, 20 times the number of cars and trucks, and a standard of living 4 times as high.

Our industrial manpower exceeds that of the Soviet by some 10 million due to the fact that Russia's backward agricultural system keeps half the entire working population chained to the demands of collective farms.

The plight of the United States would be serious if she exchanged places with the U.S.S.R. In the military, we would have a one-weapon strategy based on a handful of first-generation ICBM's, and several hundred bombers less than enemy bombers operating from Bermuda, Hawaii, Alaska, Venezuela, and Newfoundland. We would face thousands of fighter aircraft and IRBM's from bases scattered through Canada, Mexico, and the Caribbean islands, and an enemy capability to fly across our country despite our best air defenses. While our ground troops were dispersed over a restless satellite empire, the enemy would have a quarter million nuclear-armed troops and reliable alliance systems to the east, south, and west.

EXTERNAL ACTIONS AND INTERNAL STRESS

Internal stresses result from domestic imbalance, power struggles, discontent, and rivalry with Red China for Communist leadership. Competent studies suggest that Soviet threats actually cover internal Soviet weaknesses, whereas a real prelude to overt military action would most likely be in the form of a concentrated "peace offensive." This is ample reason for never dropping our guard during such periods, and is one reason for the U–2 flight before the summit.

DANGER POINTS

The protracted conflict could only culminate in general war as a result of, first, Soviet miscalculations; second, Soviet desperation; third, Soviet conviction of possessing the strength to emerge victorious. The national strategy of the United States is designed to prevent these three conditions. But one actual threat to world peace is the possibility that the Soviet could be deluded into thinking it has sufficient power to win a contest of arms.

An example of the difficulty faced, however, in substituting fact for fears is that the administration easily could have countered critical charges of a missile gap by revealing information gathered during 4 years of U–2 reconnaissance. But to do so, before the Soviet revealed its knowledge of the flights, would have seriously shortened the duration of the overflight project.

THE COMMUNIST TOTAL STRATEGY OF DIPLOMATIC, MILITARY, SCIENTIFIC, ECONOMICAL, AND PSYCHOLOGICAL MEANS CAN BE MET ONLY BY AN EQUALLY TOTAL STRATEGY, STRENGTHENED BY THE UNITY AND CONFIDENCE OF THE AMERICAN PUBLIC. FOLLOWING ARE WHAT THIS TASK FORCE CONSIDERS TO BE KEY ASPECTS OF OUR NATIONAL STRATEGY: A FOUNDATION OF POSITIVE NATIONAL POLICY

BACKGROUND

Following World War II, the United States tried to build a containment dike around communism, and yet confined her one strong capability-in-being to strategic A-bombing. This containment policy centered upon the European area, NATO, and the Marshall plan, to the neglect of worldwide dangers. The exclusion of Korea led the Communists into a miscalculated attack. Fear of Russian aggression in Europe restricted the response to the Korean aggression to defensive measures and permitted a privileged sanctuary.

Russia had engaged the free world through a pawn. A continued opposition to Communist limited wars with a purely negative strategy would have worked through attrition in favor of a shifting of global strength to the Communist bloc.

DETERRENCE THROUGH INITIATIVE

In 1953 and 1954, speeches by the President, the Vice President, the Secretary of State, and the Chairman of the Joint Chiefs of Staff intentionally announced that the United States no longer would play into the protracted conflict design by meeting aggression according to the ground rules of the aggressor, but would punish aggression at the time, place, and with weapons of our choice.

Thus the gap was spanned between unlimited nuclear retaliation against Moscow and defensive containment on enemy terms. This policy of calibrated retaliation achieved a total deterrent effect, and confronted the aggressor with unacceptable risks on each level of military aggression.

AVOID WAR THROUGH MISCALCULATION

The new national strategy sought to avoid Korea-type miscalculations by communicating in advance our intentions to punish aggression. The new administration in 1953 warned the Chinese Communists that the United States would not continue to tolerate a Manchurian privileged sanctuary and that the fighting might, to the aggressor's peril, soon spread beyond the limits and methods of his selection. The armistice followed.

It is essential that an opponent be convinced of firmness through public and private expressions by our Government. Prior to the proposed 1960 summit meeting, the State Department, on April 4 and 20, strongly reiterated that under no conditions would the free world retreat over the Berlin issue. Summit hopes were inconsequential as compared to avoiding Russian miscalculations leading to war. Similar examples of announced firmness are found in the Eisenhower Middle East doctrine, as well as in strong statements that the United States would resist any attempts of a Russian takeover in Cuba.

COLLECTIVE SECURITY

The third element of national policy has been collective security buttressed by self-help and mutual aid. An enlargement of what was begun in the Marshall plan and in NATO, the Eisenhower policy expanded the alliance systems so that aggression could be punished through a legal system formed in free world interest.

The 1954 Indochina crisis illustrated the need to expand globally the legal basis for U.S. intervention to halt aggression. A Far East alliance system had not been established and thus collective deterrence was lacking. To avoid a repetition of other indirect aggressions, the United States led in forming various security treaties and the SEATO alliance, constituting for southeast Asia and the Pacific area what Senator George called "the Monroe Doctrine formula."

The Eisenhower doctrine, a unilateral declaration, authorizes the United States to assist economically and militarily nations which want such assistance to preserve their independence. If the independence of a Mideastern nation is declared to be vital to international peace and the national interest, the United States will act when necessary and with

initiative. The commitment of the Middle East resolution, as well as the commitments functioning in the Middle East through NATO—Turkey, SEATO—Pakistan, and CENTO—Iran afford a framework of deterrence which indeed worked, as proved in Lebanon.

Virtually the entire free world now stands in unity against Soviet aggression.

MILITARY CONCEPTS AND CAPABILITIES FOR INITIATIVE

RELATION OF THE MILITARY STRATEGY TO NATIONAL POLICY

Military strategy must be tailored to serve national policy developed to fulfill basic national objectives. Yet, some have considered military policies as if in a vacuum, isolated from a policy foundation.

Present national strategy is translated into military capabilities through five concepts. The long-pull concept is covered in the economic section.

MIXED FORCE CONCEPT

To meet aggression at the time, place, and with the weapons of our own choosing, our military forces need flexibility, selectivity, and variety in weaponry which takes best advantage of our geography and the capabilities of our allies. We seek a comparative military advantage in the decisive areas of deterrence. This eschews the dangerous, defensive concept of exactly matching an opponent in weapons or divisions, but poses for an aggressor risks that outweigh any gain. The mixed force concept was supported in the report of the House Defense Appropriations Subcommittee in this session of Congress.

Important is not only the "mix" of limited war capabilities in current needs, but also the increasing search for more effective future capabilities such as gases for disarming troops. At the same time, any concept of limited war strategy which disavows the possibility of using tactical nuclear weapons when opposed by Russia, Red China, or their pawns, would return us to the "wall of flesh" strategy, encourage Korea-type wars, and lose us our freedom of action.

SHIELD AND SWORD CONCEPT

The shield is largely composed of the conventional war forces of the free world alliance; the sword, massive mobile striking forces of the United States. This means getting more defense per taxpayer dollar by aiding allies to build conventional and limited war forces to meet creeping aggression and brushfire wars, while supplying through our own efforts the missile and nuclear weapons capability which is beyond the economic reach of most allies.

Ways must be sought to strengthen our allies with modern weapons. For example, the mobility and economy of the Polaris or Pershing missiles, on land and floating mounts, however, could add to the shield forces an independent deterrence capacity.

The shield and sword concept vastly enlarges the limited war capabilities of the free world. Mutual security helps to support, and our military missions help to train, over 200 divisions.

MOBILITY CONCEPT

Essential to our national policy is the capacity to react quickly to enemy aggression. Not merely a matter of more planes, airlift, and ships, mobility also is a matter of staging bases, of logistic followup, of improving equipment, of paring down requirements to basic minimums in order not to destroy the mobility sought.

Because of the vast comparative expense of airlift for a number of divisions, and the fact that only Western Europe has adequate airfields for landing a massive airlift anyway, the divisions of the common alliance system remain the primary limited war land deterrent. We must seek ways to improve the airtransportability of the combat division and the airlanding facilities around the globe. At the same time, sealift remains the primary means of large limited war troop movements, as demonstrated in Lebanon.

Mobility of missiles is necessary for protection of deterrent capabilities. This administration is giving top priority to mobile missiles invulnerable to surprise attack and thus explointing a breakthrough in solid fuel missiles. Because missile launching sites, unlike airbases, can be dispersed more widely, and given additional mobility on rails, roads, beneath the seas and under the polar ice cap, the missile age will complicate vastly the task of the aggressor.

INVULNERABILITY OF THE DETERRENT

Another component of mobility relates to the indestructibility of the deterrent forces. So great is the destructive power of the megaton missile warhead that it is not in numbers of missiles, but in the invulnerability or the inability of an aggressor to destroy our retaliatory capability, that our true deterrence lies. A potential aggressor will calculate no benefit in aggression if he knows he cannot destroy the opponent's ability to destroy him.

Until we fully enter the solid fuel missile age, the invulnerability of our deterrent will rest not only in hardened liquid fuel missile sites, but more so in our Strategic Air Command. The present dispersion of SAC bases throughout the world, just-announced plans for further dispersion among civilian airfields, and our early warning systems, render SAC indestructible today. As the Russian ICBM capabilities increase, our ability to place a substantial portion of SAC on a sustained airborne alert will increase. Meanwhile, the President can, if necessary, overspend the budget and has standby powers to put SAC on airborne alert during an emergency period. The capacity for the alert in terms of, for example, spare engines and trained crews, is provided for in current budgets (fiscal year 1960 and fiscal year 1961).

FORCE-IN-BEING

Capabilities-in-being are the heart of deterrent power. This demands a new look at the traditional roles of stockpiling, of transport facilities—air, sea and land—and of the Reserves and National Guard. Instead of being wedded to World War II concepts, our forces, services, and industries must seek new roles identified with the forces-in-being concept.

While Russian military might has been concentrated in their heavy reliance on the intercontinental ballistic missile, the United States has included the ICBM as one element in an overall military capability which takes account of our control of the seas, our advanced bases and system of military alliance, our vastly superior bomber force and other strong points in our position. Thus, while Soviet military strength has been forced into a single and obsolescing channel, due to their lack of carriers, oversea bases, and sound alliances, the United States has built up a force-in-being which concentrates on variety, flexibility, continual modernization, and dispersion of our weapons systems—a truly balanced force.

RÉSUMÉ OF U.S. FORCES-IN-BEING

Actual U.S. military might includes: 2,000 long-range strategic bombers, each with the destructive potential of several ICBM's, with a sizable proportion of them on 15-minute alert.

Sixteen wings of tactical aircraft, each with nuclear capability, deployed on bases strategically located in advance positions around the world.

Operational Atlas missiles now ready for launching from the west coast.

Snark missiles with a very large warhead, difficult to detect through defense radar.

Four more operational tactical missile squadrons equipped with a mix of Matador and Mace missiles which are all to be replaced with the Mace by 1962, each exceeded by far the total explosive power expended against all Axis military targets in Europe during the whole of World War II.

Intermediate range ballistic missiles, the Thor, stationed in Allied Forces' hands in the United Kingdom.

Two cruisers and five submarines equipped with the Regulus I, a surface-to-surface weapon.

Fourteen aircraft carriers, several of which are deployed around the periphery of the Soviet Union, able to launch more aircraft than the entire Soviet heavy bomber force and capable of nuclear strikes into almost any area of the Communist bloc.

Our naval alert forces also include 9 antisubmarine carriers, 14 cruisers, 269 destroyers, 115 submarines, 81 minecraft and more than 7,000 operational aircraft; augmented in the future by nuclear attack submarines, destroyer-escort vessels and other high priority efforts in research. They will provide an aggressive antisubmarine warfare program.

Fourteen Army divisions, eight overseas and six in this country, all at the highest state of readiness in peacetime history.

Three divisions of Marines, always prepared to move quickly and effectively to trouble spots anywhere in the world.

Allied nations provide the United States with some 250 strategically located bases, and contribute to our collective defense more than 5 million men, air forces of over 25,000 planes, half of which are jet powered, and help insure free world control of the sea with their 2,200 combat vessels.

Near-future strength will be even greater. Added this year: two atomic-powered submarines each equipped with 16 operational Polaris missiles, with

more to be added progressively at a minimum rate of three per year—the House approved Polaris program would soon add 336 missiles to the strategic forces of the United States—IRBM's soon placed in Italy and Turkey—Atlas ICBM forces to be expanded to 13 squadrons by 1963, all but the first squadrons in hardened, underground sites—the Titan ICBM in hardened bases next year, with 14 squadrons available shortly after 1963. The Midas satellite system will double our warning time—the target date for the Minuteman solid-propellant ICBM will be reached earlier than expected, thus giving our missile force the mobility to roll the length and breadth of our country before 1963.

Our striking power, by the dispersal of bases, the mobility of new nuclear missiles and warning systems, is now sufficiently invulnerable to deter use of surprise attack. It is only by exercises of science-fiction fantasy that critics can say Russia might destroy our retaliatory power. These critics are not, in fact, able to say that Russia actually possesses such power. Such criticism characteristically says that Russia could do such and such if Russia had such and such—that Russia could destroy our SAC bases if they had hundreds of missiles, if they had the sites from which to launch them simultaneously, if our bombers had no warning, if they all were on the ground, if every missile hit. The "if" bomb thus becomes one of Russia's greatest propaganda weapons.

Thus we see that there is no deterrent gap and that our forces today are capable of carrying out their assigned roles and missions. This capability will continue, aided by future procurement policies and research and development work. As General Twining has stated, "the impression in some quarters that the Soviet Union has overtaken or even outdistanced the United States in military power is simply not supported by facts."

BROAD-GAGE SCIENTIFIC DEVELOPMENT

BACKGROUND

The Communists seek superiority in a few key scientific fields for international prestige and power. Totalitarianism can concentrate upon selected areas and probe for technological breakthroughs.

Following World War II, the Soviet Union commenced intensive efforts in the field of high-thrust ballistic missiles and gained a 5- or 6-year head start over the United States. Although their lead in propulsion is waning and the scientific value of their space efforts is inferior to ours, they nonetheless gained a psychological advantage through Sputnik I and other spectaculars.

Russian scientific discoveries could produce special advantages on a short-term basis. Yet, if we narrowed our own research and development efforts into special-purpose crash programs, we would provide neither the lasting scientific reserve, stability, and flexibility to last out the protracted conflict, nor the most reliable end product for any 1 year of the contest.

By wise management of resources, the United States holds far greater basic advantages in terms of capital, productivity, labor skills, and scientific resources, all in combination with an atmosphere friendly to the spirit of free inquiry so essential to scientific progress. Our accomplishments in science have been more broadly based. While maintaining at least parity in the development of missiles and in other areas of military science, we have achieved preeminence in such fields as chemical research, especially in polymers and pharmaceuticals; molecular biology, with its intriguing advances toward an understanding of the real origins of life; medical and health research, so meaningful to the world's people; and solid state physics, which have yielded the transistor.

SCIENTIFIC POWER THROUGH PURPOSE

The real danger confronting the United States is not Russian science, but a lack of our ability to integrate scientific perspective into our national purpose. In 1947, when Stalin overflowed with enthusiasm over the theories of the German scientist Sanger about big rockets spanning continents, the United States still thought, scientifically, in World War II research and development terms. Plainly, the Soviets moved into a new field ahead of us, not because of any general superiority, but because they identified the particular field with their national goals.

The establishment in 1957 of the President's Science Advisory Committee and the post of Special Assistant to the President for Science and Technology has already created a new relationship between science and government at the policy-making level. Additional progress for focusing responsibility for technical decisions at policy levels has resulted from the appointment of executives for research and development in the military services, the establishment of a Director of Research and Engineering in the Department of Defense, and the establishment of NASA and clarification of its responsibilities.

SCIENCE AND PRESTIGE

Correct choices must weigh contributions to general scientific data, to national security, and to international prestige, as well as technical feasibility.

The psychological purpose can be accomplished by timing with international events and dramatizing the achievements we do have. Nevertheless, it would be a tragic mistake to upset sound scientific programs for purely psychological goals. It is poor psychological technique, and not any failure in scientific progress, which has made uncommitted nations more aware of who launched sputnik than who invented the Salk vaccine, who produced the recent breakthroughs in molecular electronics, who developed atomic submarines capable of traversing beneath the ice cap at the North Pole or rounding the world completely submerged, or who has communicated farthest into space. Scientific articulation and appreciation is the American lack.

ADEQUATE FLOW OF EFFORT INTO BASIC RESEARCH AND EDUCATION

There is a continuing temptation to bring research resources to bear on the areas where immediate results are being spectacularly achieved. But, if we do not keep the flow of invention and innovation going, if we fail to push forward the frontiers of scientific discovery, the pace of development will relatively and decisively slow 10 years hence. The same long-range importance attaches to education.

Echoing Vannevar Bush's postwar call, Dwight Eisenhower again and again has asserted basic research should be given stronger support. Ultimately, the leader in outer space will be the nation which has made the greatest progress quietly, patiently, and perhaps undramatically on the true frontiers of knowledge—the laboratories of basic research on earth.

Long-range planning essential to scientific research also is essential in our educational process. The nation of schools is the nation of the future.

The strength of our intellectual pursuits will depend upon the ability to improve education and teacher incentives from the bottom up rather than through centralized and federalized education.

We must also recognize that today's and tomorrow's endless frontiers are intellectual ones. We must learn to honor the pioneers of those frontiers as warmly as the pioneers of our territorial frontiers.

FLEXIBILITY IN DECISIONMAKING

Each year compounds the outpouring of research results and at the same time the acceleration of obsolescence. The limitation of any Nation's scientific resources demands of decisionmakers a keener appraisal, selection, and phasing.

No nation has unlimited resources. Superiority in the technological race will go to the power which makes the best use of its resources. In the shifting sea of technological change, wise management demands a courageous willingness to stop and start major programs in accord with changing analyses to fulfill long-range objectives. The pressures of geographical interests, politics, organizational inertia, conflicting claims, and Russian propaganda conspire against the decisionmaker.

An uneconomical crash program is one in which basic understanding or underlying development is lacking. At the same time, it is false economy and unwise timidity which deliberately stretch out a program where the feasibility of the development and production cycle is already assured.

The United States, for example, is the world leader in nuclear research. But a vital next step, the construction of a powerful linear accelerator, has once again failed to pass Congress. Rapidly rising construction costs and, especially, the difficulty of retaining top qualified personnel contribute to the imperative need to push this.

LEADTIME

In recent years the leadtime problem has been practically solved for top-priority projects such as Thor, Jupiter, and Polaris. Thor and Jupiter were available for deployment in about 3 years from project initiation. Reducing leadtime involves the development of production, logistical support, training, test and operation concurrently instead of consecutively. However, in advanced technology, concurrent development can add greatly to the cost in re-

sources of a project because the feasibility of each step in development is uncertain until actually accomplished. The proponent of a system is apt to become very impatient of delay caused because others are not as optimistic as he that the project is ready to move forward. Sound management consists of knowing when to press forward with a concurrent program to reduce leadtime, and when to hold back for further research evidence to avoid false starts and costly waste.

SCIENTIFIC APPROACH TO SPACE

An outstanding example of America's broad-gage approach to scientific advance, as opposed to the narrow-purpose pursuits of the Soviet, is our space program.

Russia, with a headstart in space exploration, has been able to maintain a lead only in the field of rocket thrust. This lead could be closed within 2 years. Of the 22 additional earth satellites launched since Sputnik I, three have been launched by Russia, 19 have been launched by the United States. Of the seven space probes launched since October 4, 1957, four have been launched by the United States and have produced far more scientific knowledge than the Russian probes.

Where as the Soviets have accounted for some important "firsts," the U.S. programs have achieved the first detailed photo of solar ultraviolet spectrum, the first photo of a complete tropical storm, the first penetration of equatorial ionospheric current sheets, the first detection of X-rays in high atmosphere, the first identification of the Van Allen radiation belt, the creation of a manmade radiation band around the earth, the first geodetic use of artificial earth satellites to obtain refined information on the size and shape of earth, the first communications satellite.

NASA has instituted a 10-year plan which is not keyed to what Russia does (and is therefore not trapped into a "fits-and-starts" program). Target dates include: 1961 lunar impact vehicle, Atlas Centaur vehicle, and manned space flights; 1963, two-stage Saturn vehicle; and 1963–64, unmanned vehicle for controlled landing on the moon. The U.S. program of long-range objectives will increase scientific knowledge, will be a positive counter-force to Soviet propaganda, and will afford a startling quantum jump over Russia's limited approach to space.

AN ECONOMY FOR THE LONG PULL

During the 1940's, the unrecognized need for a long-haul strategy had resulted in the armed services being "princes today and paupers tomorrow." Despite the Russian peril at the close of World War II, our defense budget ($79.9 billion) dwindled by 1950 to $11.9 billion. Development on long-range missiles was eliminated. Had the Communists delayed aggression a year longer, planned service cuts would have further reduced U.S. combat capabilities.

Crash rearmament by 1953 had raised the budget to $43.7 billion. Such a fluctuating budget policy has a seriously adverse impact on our long-range security posture, and inefficient stops and starts destroy effective research and development efforts. Such policies spell ultimate disaster.

After the Korean armistice, the new administration redesigned national policy to provide indefinite sustaining power for the long haul. This concept of the military need for a healthful economy was, therefore, a basic decision of the Joint Chiefs of Staff, and not, as often described, of the Bureau of the Budget. The decision recognizes the danger of tying defense preparations to magical critical years as predicted dates of future war.

The long-haul strategy has several corollaries:

PLATEAU OF PREPAREDNESS

This entails a planned level of national security outlays which will provide and sustain effective military defenses for the indefinite period of the protracted conflict. Hence, the administration opposed a hasty demobilization in 1953.

Short-range crash efforts of the World War II type often compete with instead of reinforce, the capacity to sustain long-range preparedness efforts. A crash bomber program, as demanded by some critics in 1955, in response to Russian propaganda about an unfounded bomber superiority, would have competed with resources for our missiles program.

Second, the concept seeks stability of military, scientific, and Government personnel levels. A limitation on the future size and effectiveness of the armed services is obtaining and holding qualified personnel in the numbers needed.

The plateau of preparedness concept calls for a national security program on a taxation level: First, which the people and the politicians will support over the long pull; second, which furnishes adequate forces in being for every year; third, which gently rises if necessary to meet increased costs of weaponry. This demands a balanced set of priorities and the ability to shift priorities and funds as needed to meet technological changes. A compromise must exist between too much too soon and too little too late. The request to shift funds this year because of successful Polaris tests is an instance of flexibility.

A PROGRAM FOR FINANCING NATIONAL SECURITY

We can afford all the defense that is needed, if we will soundly finance the full cost. But critics who would increase defense spending should discuss the full price tag. Members of the House or Senate who propose preparedness programs involving major cost differentials from the program in being should introduce bills or make a matter of public record the total cost and concepts of their program.

Responsible suggestions to increase preparedness expenditures should include specific legislation and public statement of the total costs of the alternate program.

There is no painless way to pay for preparedness. Increased tax revenues mean increased tax rates. Deficit financing means inflationary erosion of our overall economic position in world markets at a time when these markets are, in fact, a battleground, and at a time when our own balance of payments position has shifted downward.

Elimination of waste is a goal toward which to work but not a panacea immediately available.

Economic growth will make more tax moneys available but also will require increased expenditures because of vast built-in spending programs. A very serious view must be taken of adding further such spending programs.

Those who advocate a rising GNP as a painless process to increased defense often are the same persons who proposed the built-in spending schemes which have made this impossible.

Without further legislative action, the Nation is already committed to $25 to $35 billion for highway programs, and $8 billion for public works, as part of a total of $455.5 billion in future spending.

The two sound means of increasing preparedness expenditures remain: First, cutting back on nondefense programs; and, second, increasing taxation, with the potential dangers which that course carries. All factors must be weighed to insure that economic policies do not defeat long-range defense efforts or destroy individual economic freedom. In the last session of Congress alone, the 20 major spending bills introduced in the House and in the Senate for new programs would have added $50 or $60 billion a year to present spending and placed in jeopardy nearly all of the national objectives related to the world conflict between freedom and regimentation.

In the formulation of the defense budget, countless decisions must be made in a context of uncertainty, rapidly changing technology and, unfortuantely, political pressures, external and internal. Defense outlays lack the continuous test of the private enterprise market to insure proper allocation. Automobile manufacturers may launch new cars with high hopes, but the market turns in a verdict quickly, ruthlessly, but effectively, and if the verdict is negative, that particular misuse of resources is ended. Lacking this advantage, the managers of the multibillion-dollar defense budget must make special means of improving efficiency and obtaining more defense per dollar, such as stabilization of outlays over a plateau of preparedness.

Significant assistance to the preparedness program could be provided by prompter action each year on military appropriations, developing better budgetary and appropriations techniques in handling military budgets, developing closer liaison between industry and Congress, forgetting local geographical pressures when considering defense matters, and removing legislative roadblocks to efficient use of personnel and patents by defense contractors.

In sum, economic policies for the long-haul contest between freedom and regimentation should be geared to our strengths and not our weaknesses. These policies should foster stable growth and a climate favorable to savings, investment, and capital formation. Also, they should encourage competition in private

markets while discouraging the need for Government intervention which shelters particular groups from the discipline of such competition.

STRENGTH THROUGH PSYCHOLOGICAL AWARENESS

The United States can escape the frustration of Soviet psychological conditioning only through a counterstrategy of her own based on character, purpose, and by articulating freedom to the world. Essential to such a positive strategy is:

A REALISTIC APPROACH TO UNDECIDED NATIONS

Have-not nations, like have-not people, are seeking to find—in the Soviet system or in the free-enterprise system—identification with their own hopes for a better life.

This psychological struggle must not be interpreted as merely a contest between persuasive efforts, either with money or with words. It is the personal approach that is important on every level—from the tours of President Eisenhower to exchanges of technicians and artists, businessmen, and tourist. This is worth more than tons of literature, thousands of words.

In the world of mass communications, the wistful citizen of an underdeveloped nation, in effect, carries on his back a walkie-talkie tuned to all that goes on within the United States—the bickering especially—the mistakes we make here and within our Government services overseas.

He resents our mistinterpretation of his beliefs, his actions, and his needs. He seeks evidence of our real desire to share with him our scientific knowledge, our industrial know-how, and our far-reaching objectives. Most of all does he want to be certain that we care, that our hearts seek to express our interest in his well-being.

APPROACH TO CAPTIVE PEOPLES

This should include: First, continued attempts to break through the Iron Curtain by such visits as that of the Vice President to Russia last year; second, the story of our American free enterprise system which has created the highest level of living in history; third, showing simply and clearly how the American economy serves the individual. If patiently and continuously done this should automatically create internal demands upon the Soviet rulers for liberalization and so further open societies. The Kremlin's determination to torpedo the planned visit of the President to Russia this summer obviously stemmed in part from the telling effects of these visits.

ARTICULATION

We must prove by results rather than by words that America's ideals of political freedom and machinery of individual enterprises have more to offer them than either Russian or Chinese communism. If we truly believe in what is in our Constitution and our Bill of Rights and live our trust in God, this will permeate all we say and do and will be a powerful influence in the decisions they will make. America, therefore, must prove the value of her ideals, her purpose and her goal, not by her words, but by her actions, the visible evidences of her heartful desire to share with them the riches of her understanding of their needs. Men will not choose between what nations say of their ideals. They will choose between what they can see.

DETERRENCE AND PSYCHOLOGY

Deterrence involves a state of mind and will. Throughout history, materially and militarily superior nations with divided will have fallen prey to inferior nations with united will. Without national character and commitment, NATO, SEATO, SAC, STRAC become not deterrents but shambles.

The credibility and respect assigned by a tempted agressor to our military strength depends upon the aggressor's estimation of the manifest will to use those forces. Throughout the 1930's, Hitler, with inferior forces, calculated the democracies lacked the manifest will to use their combined forces. Critics today who assert a strategy encompassing tactical use of nuclear weapons would not be credible to the opponent, actually are saying our will to act would not be credible. They are saying our will to defend freedom would not be credible. If we lacked this will, the Communists would be allowed an overwhelming advantage in their strategy of terror to monopolize the initiative.

Asserting constantly a lack of credibility can indeed discredit deterrence and lead to miscalculated war. Khrushchev knows that the majority of Americans support the present administration's policy of firmness. But Khrushchev's obvious interest is in whether the next President will continue the same commitment to a national strategy which has deterred the Kremlin from military action. Any Presidential candidiate who questions the credibility of the deterrent power in such a way as to discredit the national will to act automatically places in jeopardy that credibility if he is elected President.

Maintaining the credibility of our strength by unified purpose and clear objectives is necessary both to the deterrence of war and to the progressive enlargement of liberty throughout the world.

PSYCHOLOGICAL STRATEGY OF INITIATIVE

Psychologically, we must respond to the Communist challenges not in the areas of their advantages, but with initiative, in the ideological manner and with psychological weapons of our choice.

Freedom is our trump card. We believe in the sovereignty of God, the dignity of man, the right of each citizen to seek his own happiness. In this system, the doctor of medicine who promotes the health of the individual is the highest paid professional, whereas in the Soviet he is the lowest paid.

A positive faith can destroy all effects of the Soviet psychological strategy.

IMPLEMENTING THE PUBLIC STRATEGY

A continuing reevaluation of the machinery to implement national strategy is a constant necessity. This task force, refraining from attractive-looking, impracticable recommendations, has sought a few practical steps capable of implementation without upsetting existing workability, effectiveness, and progress:

PRESIDENCY AND VICE PRESIDENCY

It is essential to continue and enlarge upon the policy of the present administration in utilizing the position of Vice President as a vital post in national security policymaking.

PRIORITIES IN RESOURCES UTILIZATION

To further utilization of resources and investment efficiency according to policy objectives, this task force recommends some type of priorities review board for comparative analyses of interagency programs as an adjunct to the National Security Council.

The study paper of Dr. William Y. Elliott proposes that the board consist of a standing group charged solely with studying and reporting on priorities in the allocation of resources—human, military, economic—to maximize national security. These board members, supported by a small staff of top capability, would be unencumbered with other duties and would not be delegates from other agencies. Each member would be an expert with top-level experience in his particular field, preferably with high-level experience in several agencies, the fields being military and foreign assistance defense programs, disarmament problems, NSC mechanism, foreign policy, psychological strategy, basic research and technology, mobilization base, civil defense, national economy, and fiscal policy related to growth factor and inflation.

Because of the advisory relationship of the board to the President, the task force believes that such a board should be established by administrative action rather than by statute, with the President left free to name its chairman and members.

DEFENSE ORGANIZATION

This task force believes that a single chief of staff for all the services would overconcentrate power and decision-making on the wrong level. Such concentration could introduce an imbalance into consideration of our military program as part of, not the whole of, our preparedness program. Also, in the foreseeable future, there will not be present the great balance wheel of a Chief Executive of unparalleled military background who is uniquely trusted by the citizens to exercise independent evaluation in that field.

DEFENSE REORGANIZATION

This task force believes that the Reorganization Act of 1958 should be allowed time to accomplish the objectives of that act before another major reorganization. Highest praise is due the present Secretary of Defense for building splendid teamwork as an element of maturing the Department of Defense operation. His close consultation with the Joint Chiefs of Staff is a model for successors.

EXPERIENCED APPOINTEES

The excellent performances of both Secretary of Defense Thomas Gates and Gordon Gray in the national security fields points out the advantage of extensive previous experience in national security matters, and sets a precedent for future appointments.

PUBLIC OPINION

Its increased role in the psychological conflict with communism demands a continuing reevaluation of ways to disseminate information at home and abroad. This reevaluation must go beyond the scope of USIA, and fix clear responsibility for coordinating vital information from all departments and agencies bearing on national security or foreign policy. One suggestion is that the State Department be charged with overall responsibility, but the majority of this task force favors such an assignment within the existing framework of the White House staff. At the very top level, the timing and impact of releases can be best appraised.

TOWARDS RESPONSIBLE PARTISANSHIP

Public confidence as an element of deterrence has placed upon political parties new and grave responsibilities. Political parties in the United States must not become the catalyst for the poisonous processes by which our adversary seeks to create disunity and dissension within the free world.

Inevitably, change in government will invite moves to test the national will and upset international balance, unless there is responsible partisanship in national security matters.

In the testing years ahead we must as a Nation cherish this great strength of our political system where the "opposition party" is not forced by political maneuvering to oppose, just because it has a different party level, the sound policies for continuous defense of the Nation. Those many members of the other party in both Houses of Congress who called for unity after the recent summit collapse are to be commended.

POLICY MACHINERY WITHIN CONGRESS

Within the Congress there is a neglected tool the concept of party policy committees, for achieving responsible partisanship for right policies and for promoting a public strategy. This machinery, at the same time, would afford a vehicle for criticisms of existing policies where such criticism serves as a much needed corrective.

During the 79th Congress, the Joint Committee on the Reorganization of Congress recommended the establishment of policy committees "for the determination and expression of majority policy and minority policy." These committees, to be elected by the party conference, were to be a means of strengthening party responsibility and accountability.

The four policy committees would have comprised a Joint Legislative-Executive Council designed to meet with the President "to facilitate the formulation and carrying out of national policy, and improve relationships between the executive and legislative branches of the Government."

In times of crises, both parties could express opinions and criticisms in executive session through these committees. A joint policy committee resolution would produce an ethical limitation, so that criticisms and divisive influences would not destroy the strength of our international position, give potential opponents undue advantage, and lose prestige with the uncommitted nations.

This policy committee legislation passed the Senate, but was never brought to the floor of the House. In 1949 the Republican Members of Congress unilaterally set up their policy committee. The recent U–2 incident, the summit crisis, and Khrushchev's attempt to influence domestic politics refortify the recommendation of this task force to implement such legislation.

SUBCOMMITTEE ON NATIONAL STRATEGY WITHIN THE POLICY COMMITTEES

The present congressional committee system affords difficulty in properly appraising national strategy. No one congressional committee represents all interests involved. But both in a legislative and in an opinionmaking role, Congress becomes a vital accessory to the national strategy of the Executive.

If the policy committee machinery were fully implemented, consideration might be given to establishing policy subcommittees of select members from applicable standing committees to assess national strategy. This task force has had such a mission. Dissenting reports of counterpart subcommittees could serve to deepen legitimate debate over real issues, and the joint reports could promote a sound, comprehensible public strategy.

Consideration must be given to streamline and compact regular committee hearings. The Secretary of Defense appears before 10 or 12 committees, often for protracted periods, during one session of Congress.

TOWARD INDIVIDUAL RESPONSIBILITY

This Republic, and the freedom for which it stands, was born in the decision that how a nation survives is as important as whether it survives.

No circumlocution or rhetoric of special and expedient interest can long evade the necessity for a similar decision today.

This is America's moral responsibility. Virtually all other arguments between our people are matters of individual conscience. This is a matter of the Nation's conscience.

If a nation doubts its mission in the world, it will regress and cease to retain the confidence of anyone.

The outcome of our contest with Russia will depend upon the personal commitment of the American housewife and the breadwinner to the values that made America—values not exclusively ours, but belonging to a common humanity.

History abounds with examples of nations forced both to fight and surrender because of failure to convince an enemy that it will not only live for its ideals, but it prepared to die for them.

No way has been shown to disengage from this responsibility without also disengaging from freedom.

Nations cannot drift into peace. They can only drift into war. Thus, the national responsibility is to unite in purpose, no matter how divided as to technique. Criticism within such a framework of purpose can be constructive Criticism oblivious of such purpose can only be destructive.

It is the heavy responsibility of criticism in a republic that it be accompanied by clear and specific alternatives.

It is the responsibility of citizens in a republic to constantly demand this criticism of clear alternatives and to reject those appeals which are simply to disunity, discontent, and discord. The philosopher Ortega y Gasset has noted that the fall of Rome began when discord outweighted concord.

The decisive battles of history which dramatize the death of nations after centuries of life came as a result and not as the cause of decline and decadence.

Weakness or vacillation in national character can be a nation's greatest weakness, irreplaceable by any amount of hardware, material, or money.

National character is the key element of national power.

First. Survival alone is unacceptable as the objective of American strength and strategy. Liberty, justice, and open societies are the only goals worthy of our heritage, and these are promoted by the rule of law, by a stable world, and by independent, internally healthy republics.

Second. These can be accomplished by a national cold war strategy which becomes a public affair, understood and enthusiastically supported by people in all walks of life.

Third. The first steps of this strategy have already been accomplished: Since 1953, national policy has renounced any defensive method of meeting aggression on the terms of the aggressor, has embraced a diplomacy of firmness which has deterred a Soviet adventure in Berlin, invasion of Formosa, reinvasion of Korea, and Soviet takeover in the Middle East.

Fourth. The military phase of this strategy has achieved effectiveness by the mix of forces, incorporated with a worldwide shield of troops from the free world alliance and a sword of massive, mobile, and indestructible striking power, capable of varying and calibrated responses.

Fifth. In the scientific phase, real progress has been made in integrating scientific and national purpose. American technology, in comparison with Russia's is more broadly based, devoted to the welfare of mankind, and has produced far more solid scientific data from space exploration. If the public and the political leaders will give greater attention to basic research and education, in a climate of decentralized responsibility and creativity, and understand and support efforts such as the new 10-year NASA program, American science will win the resurgent confidence of the world and antiquate Iron Curtains.

Sixth. The "long-pull" policies initiated in 1953 have ended the peaks and valleys characteristic of American preparedness since the Revolutionary War and have given stability within the Armed Forces and within the national economy. No sound economic alternative for the cold war has been offered to this policy, and this task force overwhelmingly endorses it as a basic premise

for both preparedness and the preservation of economic freedom and health.

Seventh. Improved psychological techniques and timing are necessary, but by far the best antidote to the attempted Communist strategy of conditioning is an ideological initiative, not to force beliefs, but to articulate beliefs through purpose and public conscience.

Eighth. Essential to a dynamic public strategy is a continuity of successful policies from one administration to the next, an offering of a real alternative by those who criticize, policymaking machinery within Congress to produce responsible partisanship, and executive machinery for overall evaluation and articulation of our strategy and strength. The foundation of any public strategy is national character, conviction, and confidence.

The task force study papers are inserted elsewhere in the CONGRESSIONAL RECORD.

Task Force Report: American Strategy and Strength

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. BYRNES of Wisconsin. Mr. Speaker, as part of the "Task Force Studies on American Strategy and Strength," I place in the Appendix of the CONGRESSIONAL RECORD study paper No. 1: "National Character as an Element of Power," by Dr. William Y. Elliott, professor of government, Harvard University:

NATIONAL CHARACTER AS AN ELEMENT OF POWER

(By Dr. William Y. Elliott, professor of government, Harvard University)

National character is probably one of the most fought-over fields among sociologists, philosophers, political scientists, and others who occupy themselves with this kind of thinking. The first thing to be said about it is that there is no such thing as a single national characteristic that is enduring and simple and overwhelming in its control of all other factors in any country.

People who have written about this essence of a nation with the grace, for instance that Salvador de Madariaga did in one of his better books—"Englishmen, Frenchmen, and Spaniards"—do nevertheless try to find some identifiable national characteristics. Perhaps the best way to approach the problem is to ask how national characteristics are formed; what the balance is in what might be called defects and virtues; and how they stamp the behavior of a people in responding to leadership, in creating leadership, in supporting it, and in correcting it, if necessary.

This country inherited in its early stages primarily, of course, a British tradition. But it did have ingredients, even at a very early period, from Dutch as well as German traditions. The French influence comes also, both from Canadian contacts and the Acadians, who it will be remembered were resettled in Louisiana. We also have had some measure of Spanish culture from our country's beginnings. But these were all borne along the main stream: until the potato famine in Ireland our immigrants were mainly British.

These ingredients gave us a national political and constitutional characteristic which meant that we inherited, institutionally, a great constitutional framework of law, as well as a conception of government as a limited government.

De Tocqueville noted clearly this concept of limited—and legal—government in "Democracy in America." With French eyes, he saw this as meaning that there was no feudal element really in the United States that was resisting the evolution of the country. Turner, the historian, put this in "The Significance of the Frontier in American History"—and it is still a frontier in every way—as science carries us whizzing into the future. Lord Bryce, too, made some of the most sage comments on our character in "The American Commonwealth."

We cannot neglect these national origins and, above all, the cultural heritage that they brought. They brought, for instance, Shakespeare and the Bible which were the molding influences upon the American epic of Lincoln. They brought as well the Puritans and the Baptists and Episcopalians, the Quakers, the Methodist circuit riders and the Presbyterian dominie and the Catholics in Maryland.

These religious elements of our culture are absolutely fundamental. They are the foundation of our morality—to which we do not attach sufficient meaning. Whatever our defection from them, or our falling away, they have shaped the ethos of America profoundly. These religious values have given us a sense that we are not the creators of the universe. This is our basic challenge to communism and to all other "magic formula" ideologies. They have given us, in short, a faith by which we live—however poorly and however badly we fulfill it. Nevertheless we do live by it.

Whatever else may be said of us, no one will deny that our values are profoundly religious ones, a fact which accounts for one characteristic in our behaviors which is extremely important: It stresses charity or loving kindness in the full Christian sense. It stresses also the concept of duty to offset the idea of rights. And to the degree that we have lost that conception of duty as a balance we have been false to our own tradition. We lose one of the great elements in American character when we stress only a philosophy of "rights" only.

Rights, protecting freedom and the development of responsibility are basic to freedom. We call these "natural rights." But, taken in the debased form of "what I get out of it," they degenerate into self-interest or group-interest—not those of mutual moral responsibility implying equal stress on duties. The rights that are mistranslated into "gimme" or "grab" are the basis of pressure-group activity, of self-interests, of egoism and of the softness that chooses the pursuit of pleasure instead of the pursuit of true happiness which Emerson rightly said was achieved by finding and following principles. Selfish rights that are concerned only with "what do I get out of it" erode the moral character of any civilization. The eye of the soft man cannot confront hardship. It will look away. The man behind the eye will choose evasion, not responsible action, courageously faced.

Character cannot be had without risks, hardship and suffering, as we can observe from a great deal of human history which is difficult to refute. Men decay as men when the going gets so soft that there is no challenge. This, at least, is one problem we do not have to contend with. We are now confronted with a clear and visible challenge to our national life. It is a challenge that embraces not only a military field, though certainly the challenge from ICBM's is serious enough.

It encompasses not only will but what lies behind will. Indeed, self-will will never help us in the struggle in which we are involved, for it is precisely the thing that weakens people. Self-will is generally and easily related to appetite—what Shakespeare called a "universal wolf." If a nation does not recognize its duty and destiny and, therefore, a positive mission, it has lost its character because it has lost its ethos. An ethos is the shaping force of a nation. It is the essence of national character. We are molded from our mother's knees and our father's hands, our great-aunts, our great-uncles, and our grandfathers and grandmothers, our schools, our churches, the discipline of our games with our fellows from childhood on. A great variety of forces all converge on what is accepted as good, noble, heroic, or "what is done." What one "gets by with" in the "softest" manner, and what is "smart" and "slick" is the other, the dark side of ethos as habit. To that degree a nation's character is shaped not only by its leaders as examples (exemplars), by its Washingtons, its Jeffersons, its Jacksons, its Lincolns. It can be undone by an unbalanced diet of dubious TV personalities, bred under glass and klieg lights, to whom a wisecrack or a risque joke is more precious than a good name or a just and firm character.

One can have no doubt after he reviews history in these terms that the great epics that have shaped civilization have shown the trials and the struggles of a hero who represents the highest concept of folk character. The epic of the hero is what the bards sing to the youth and what mothers teach their children to be like. It is what young men grow up by imitating as a model. It is what the Arthurian legends, as treated by Mallory and Tennyson, did for England. It is what Shakespeare did in his great historical plays, too, nurtured on Plutarch's "Lives" and Holinshed's "Chronicles."

These lift the imaginations of all men who read them. Even "Doctor Zhivago" is pulled around in this direction, coming from a very different cultural background in all sorts of ways. It is worthwhile to note that the late author of "Doctor Zhivago" was a great Shakespearean scholar.

This epic tradition of the hero, of nobility of purpose and deed, of greatness and magnanimity—if this is lost out of a nation, how can it have character? How can it wish to serve? Who, but a fool, on any basis of pure self-interest, would ever embrace public office or the duties that carry him frequently to obloquy, certainly to savagely hostile criticism, and possibly to destruction through loss of health as well as wealth.

What is it that makes people recognize and follow true leaders? They may kill them, but sooner or later they acknowledge and follow the great leaders of history. When we put up pictures of Washington, of Jefferson, of Old Hickory or Stonewall Jackson, of Lee, and of Lincoln, and of other great Americans, so that we can look at them, it is because we know that the models of the men we produce shape our characters. We can learn from their weaknesses as well as from their strengths.

This is the essence of the problem of how to continue a great tradition of leadership that is simple, humble and wise in the biblical sense of "understanding," that is rooted in man's turning for guidance and strength to God, his Creator, as Lincoln did. What are our assets and what are our liabilities in these terms?

First, from the religious heritage, we are an excessively amiable and open people.

This spirit is plainly evident in our doughboys and GI's. It is this unfailing sense of "buddy," "partner"—an openness, a kind of

fraternal cooperation, first rooted in the frontier spirit and the openness of our society. This amiability, this trustfulness puts a wonderful stamp on our national character because it means that there really is in us, almost universally shared by Americans, a consensus juris (a universal agreement on what is right as the basis for law) that makes us feel "alike," no matter how diverse the racial strains are. It is this spirit that overcomes differences so we can work together as Americans. We not only close ranks against class and other hatreds from outside lands. We open ranks to all men who believe in true human rights and duties of freedom and justice. We don't believe in leveling down but in freeing and educating to grow up.

But the corollary defect of this openhandedness is that we are extremely unsuspicious people and trustful. Since we are peaceful, we accept all pacifists in good faith, even Lord Russell and "Pugwash" Eaton. We are willing to give Stalin, Khrushchev or Mao Tse-tung the benefit of the doubt—in spite of the record of planned deceit and the tactics of terror and subversion, including takeovers by disciplined mob violence, turned off or on. There are times when we should remember the Biblical injunction to be "as wise as the serpent as well as harmless as the dove." It is necessary from time to time in the world we live in, to open our eyes to evil and to discern how to deal with it and not to be overcome by it. This characteristic of watchfulness is not adequately present in our tradition; or at least we might say it is being produced by necessity but very painfully. It is well to state again the basic objective, grounded on a balanced view of human nature, that we aim at as a culture:

Our Constitution is based upon the idea that men are neither angels nor demons but that they have ingredients of both in them. The angelic can be victorious only if the demoniac is controlled. Therefore, we have checks and balances to prevent the usurpation of power or the abuse of it, to limit the Government, to see that men have a right to develop on their own responsibility and by their own choice. That is the only way we can achieve any true morality. All other morality is conditioned—socially imposed by some leader's magic pattern in the manner of Pavlov's trained dogs.

With whatever inscrutable wisdom Providence has put us here, one condition of human life is certain; that we have our own salvation to work out in fear and trembling, that we do have to develop as individuals. The moment we concede that the other "imposed" morality is moral—which is that we are conditioned by our environment like the animals in Pavlov's experiments—we are no longer human. We have retrogressed back down the tree of life—headed back down the evolutionary road perhaps to wind up as completely "adjusted" as the ant heap and the beehive, which are arrested societies. They are indeed in some ways naturally marvelous societies; but they are finished societies: they have no further evolution. They have adjusted themselves to their environment completely. Instinct governs them, not reason. They punish deviation ruthlessly.

How do we show our national purpose? Best of all through the lives, the faces, the families of men and women, bred in freedom, who grow in stature and show it by their faces, by their words, by their deeds. What human race would rather breed Khrushchevs or Stalins or any other such leader than any 10 of the best citizens of any town, city, state or free nation of this world? The ant heap is not humanity's destiny.

The American tradition is a restless, questing tradition, which has the weakness perhaps of being always on the move and looking for new things, sometimes without digesting and settling down in the old: Main Street lies right down the middle of the town, with houses on each side. It marches through and marches on and the people are always on the move. This is disrupting in some ways. Yet it has advantages; it "mixes" us all up in the process so that there are no castes.

But it is a little extreme to compare us to a melting pot or a mixing bowl, or something that shakes us up, that whips us in, and maybe homogenizes us, or sifts us into the sameness of soft flour. We resist this atomizing by our sound habit of protecting the individual and keeping his own richness and flavor.

The great traditions of any society are carried in people who have their roots deep down in home ground, rooted in the unconscious behavior and social heritage of the past as well as the projection into the future. If we do not want to be windblown by all the passing doctrines, we have to have security in our own background, in our institutions, and in the models that have been set us—the old men and the old women we have known who have set a model like that—our parents, our friends, our community, our neighborhood, and traditions. What is considered right is done because in some ways it has been proved to be a good thing for a long time. We are a conservative people, in the best sense, innovating to preserve old values, tested truths, to meet new times and technologies.

One weakness of American character has come from our supreme eagerness to conquer a continent and to push faster the things that we do with our hands—the creative work of the builder. This was good and necessary. But we have sometimes fallen into the trap of regarding success in these things as an end in itself. That is materialism not as blatant as that of communism, which is materialistic in its origins as well as in its ends. But it is materialism, if it looks only to goods. Let us not have ends that are materialistic. We must use our goods for moral good. Let us attempt once more to balance the virtues of the spirit with organic needs—both for individuals and society.

Aristotle's observation, in short, about the nature of virtue—the golden mean between the extremes, which has become a good part of Christian doctrine in various ways—is a true interpretation of real character. It was rooted in the Judaic tradition, too, of the Old Testament. That is something to remember. That is what checks and balances in our system mean. It is what restraint and moderation mean in a man's character. Without it he is a slave to something, perhaps to his lower self, to appetite. He cannot be a free man on that basis. This is equally true of a nation.

Now, how does this bear on leadership? And how does it bear on power?

The ultimate ingredients for real power in any man depend on his capacity to develop sustained support and "contagious" leadership. To help develop others for leadership is to broaden leadership. It is the real aim of education in the broadest sense, along with understanding the need and the way to pick leaders and to support them. We all depend upon this conception of individual responsibility and duty as being a part of human development. But we do not sufficiently recognize the effect of models and the duty of examples, the contagion of courage and devotion. This must in turn reflect itself (and be reflected in) an image of a national ethos; a mission, a model for humanity and for realizing this model in human life.

Everything depends upon morale in any nation. Weapons are only useful to the degree that they can be used and that it is reasonably clear they will be used. A posture of strength is relatively worthless and can become dangerous, particularly if the posture is a purely defensive posture that never anticipates anything except a resistance of the kind that does not punish but that tries only by piecemeal resistance, on grounds of another's choosing, to prevent the Sino-Soviet bloc, often through "stooges" from pushing freedom out of the world. That is what John Foster Dulles fought with the courage of a Christian and a free man—and what, God helping us, we Americans shall always understand and fight.

Morale means, first of all, the faith that a nation has in its destiny and its world position and mission. That is quite important. If a nation loses that faith in its own chosen destiny it has lost its battle of conflicting faiths. And it is exceedingly important that leadership should, therefore, be measured in terms of keeping alive this faith of a nation in its destiny. It cannot be done by leadership alone because leadership is a product of a nation's character which is the best guarantee of morale. A nation's leadership is bound to be reflected by the morale of its people, and limited by it.

At certain periods of our history when we have had no very grave challenges, our leadership has reflected it in the most obvious way. At the times when we have had challenges as profound as the Civil War or as that period in which our revolution was fought and the Constitution was created we have produced leadership that was incredible, that stood as a symbol to the entire world. And we have produced it again at very important periods of history and in our own times. Sometimes, of course, and inevitably, that leadership has been fallible, and is after all human. But it was great leadership measured in terms of growth to new potentials of creating national "tone".

Well, there never was a time in our history more propitious for great leadership than now. We face a challenge beyond any other that this country or probably humanity has ever undergone, certainly since what were in our known past only the dim struggles for human survival against other forms of life in prehistoric periods. At no time before has the human situation been so fraught with really apocalyptic possibilities, both for good and for evil; for evil in terms of the destructive potentialities of weapons systems that we know about.

What is a more important threat perhaps is the possibility of success for a systematic syllogism of terror, practiced openly by Mr. Khrushchev and his Chinese allies. Certainly both of them are now quite bold in resorting to nuclear weapons as a threat, the risk of which is calculated to deter us from any action anywhere in the world. If we accept Khrushchev's assumption that he can and will destroy us if we don't concede his demands, and that this is the only open alternative if we wish to be "allowed to coexist"—then, of course, he doesn't need more than threats—untested. He can take us at will—the richest prize in history, lost through cowardice in the face of a man who plays up his anger and his terrorization with an actor's skill and a tyrant's method.

At the time of the Quemoy-Matsu crisis in 1958 and at odd moments since then, we heard many arguments to the effect that these small islands were not worth the risk of nuclear war, that they are really part of the mainland of China, etc.; therefore we ought to consolidate our position at some point where we have more of the support of the world, perhaps on Taiwan proper. Yet, on this reasoning there is no better title to Taiwan than there is to Quemoy and Matsu, unless one takes the Chinese Republic as being the legitimate Government of China and as being in de facto possession of both. The same logic that would give up Quemoy

and Matsu would, the next time, when the risk of nuclear weapons and the chips are down on the test of who will support us in the showdown, find equally compelling reasons for yielding our position on the new point d'appui. And where does one draw the line on that basis? We have to reject Khrushchev's first thesis—both that he can and that he would destroy us if we refuse his demands.

In any case, we have made this clear enough as our basic belief and policy. Now, more than ever, we ought to prepare ourselves for resisting terror as a tool. Those in positions of leadership in this country should attempt to prepare other people for facing this kind of challenge with an adequate response. As surely as we do not face this kind of challenge with an adequate response and with that firmness that allows no miscalculation on the part of the other fellow, we have encouraged the most dangerous element in international affairs to miscalculate our intentions and our ability to back them up.

There has not been one single iota of evidence on any record of Russian or Chinese behavior that does not suggest that if we stood absolutely firm we would be confronted with a situation which at the moment risks a good deal more for them than it does for us.

This is what the deluded followers of Bertrand Russell and Cyrus Eaton, the Pied Piper of Pugwash, miss: their logic seems to many softheaded and hysterial intellectuals to be overwhelming: "Better be Red than dead." But we might be Red slaves and still dead, through a falling-out among our masters of the Sino-Soviet bloc, or just over who will run the world even within Russia. Our renunciation of nuclear weapons won't control their future employment by others. Indeed, it will make that employment to destroy any centers of courage and freedom, piecemeal, easy—where an all-out struggle would threaten the safety of both China and Russia (by massive worldwide fallout) on the very premises that Russell has popularized. Even if we were destroyed by adequate surprise, this would still be so.

But to disarm unilaterally—the real theme of the miscalled sane nuclear policy, advocates of slavery rather than extinction—would be the surest way to make extinction probable. Khrushchev has lost control of Mao. Indeed, one day Mr. K., or his successor (and he may have one sooner than he thinks), may reckon us as a restraining force on a Red ally, Peiping, grown to the stature of a challenger for world mastery.

Under those conditions, the undoubted capability and the certain will to punish an aggressor in the measure of his aggression remains our surest hope of peace—by restraint through that power. It is not perfect nor is the world perfect. But it is calculably far more a protection not only for liberty but for the life of most of humanity than encouragement of Khruschev and company and Mao to risk a showdown of terror because they felt Pugwash had washed out our national character and crippled our unity of will and purpose.

Lord Russell's politics and history are either cynical (puckish) or naive, maybe both. Wars are bred by miscalculations to which Russell may prove a chief contributor.

In other words, the alternatives to the assumptions are always the things we must look at. Our leadership must teach us to do that because it must be as wise as the serpent in these time; but it can only do so if it convinces the people of this country that firmness—not weakness—leads in the direction of just and lasting peace. When this has been made clear, leadership has done what is necessary to have people take the risks with the fortitude and conviction which will enable us to meet, under God's guidance, this challenge with which we are presently confronted.

Task Force Report: American Strategy and Strength

EXTENSION OF REMARKS

OF

HON. GERALD R. FORD, JR.

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. FORD. Mr. Speaker, as part of the "Task Force Studies on American Strategy and Strength," I place in the Appendix of the CONGRESSIONAL RECORD study paper No. 2: "Fundamentals of a National Strategy," by Dr. David M. Abshire, task force staff director:

FUNDAMENTALS OF A NATIONAL STRATEGY

(By David M. Abshire, task force staff director)

I. WHAT IS STRATEGY?

This paper explores fundamentals of a strategy designed to promote our national policy objectives. The paper will seek historical perspective—or the big picture—behind these fundamentals which often have explained the rise and collapse of nations.

A sense of historical perspective within the Communist ideology has furnished the fuel for Soviet achievements, whether in space or in a rising industrial output. We think the Communists' sense of history is wrong, but they are right in believing that history is as much of the unwritten future as of the written past. They are right in viewing an age as a whole. This is why Russia and Red China have the most integrated, unified doctrine of military strategy in human history, and this integration maximizes the advantages of her physical strength.

Their principal strategic advantage has resulted from this historical or integrating perspective, and consequently our strategy needs a counterpart historical perspective—except we want our perspective to be true. America traditionally has disunity of policy and a short-range point of view, further fractured by political partisanship. This American disadvantage could enable Russia, although weaker industrially, politically, and spiritually, to overcome the United States, stronger in all these respects.

How is "strategy" defined?

In pre-World War II thought, strategy frequently was understood as the art of moving armies and navies to gain maximum advantage prior to actual battle. Tactics was the art of fighting the battle itself. Some military writers argued, however, that in certain types of conflict, blockade, economic strangulation, or attrition could accomplish the work of battle. Regardless, all agreed that the purpose of the advantage sought was the destruction of an opponent's will to resist, or of a bellicose nation's will to aggression.

Sun Tzu, the ancient Chinese military theorist, wrote in 500 B.C.:

"To fight and conquer in all your battles is not supreme excellence; supreme excellence consists in breaking the enemy's resistance without fighting."

Thus, the best of the ancient Chinese militarists recognized that the final objective of strategy lay in the moral or psychological realm, that power is a function of the will, and that if there is no will to fight, there is no power.

Since World War II, strategy increasingly has been translated into an extended time dimension. Indeed, a "protracted conflict" lasting an entire historical era is not a new concept, for the hundred years wars between England and France, and long before that the extended wars between Italy and Carthage are two of many examples of protracted conflicts. But again, the Communists have perfected a "protracted strategy" for the nuclear age through the intensification of the extended pressures by a varying but constant threat of all-out holocaust. This they do through exploiting the dilemma: the struggle with the Sino-Soviet powers could last a century of cold war or could burst into a hot war Armageddon which conceivably could end within a week.

But the protracted conflict alternative is more probable than the Armageddon alternative, since the true Communists believe that "historical inevitability" or the "wave of the future" is on their side, and consequently that they do not have to undertake gambles such as many past conquerors have undertaken. Hence in the present conflict with Russia, strategy may be defined especially as the art of optimum utilization of resources, before hot war is ever commenced, to destroy or block the will of an opponent. For a peace-loving power it becomes a protracted art in which the pay-off may not be in battle that destroys an acquisitive opponent's will to further aggression, but in a superior diplomatic, technological, or economic position, which deters an acquisitive opponent's temptation for aggression. In fact, for either a peace-loving or an acquisitive power, real "victory" would have to be achieved without nuclear battle, nuclear battle being self-destructive of almost any conceivable national policy.

II. ARE THERE FUNDAMENTALS OF STRATEGY?

In view of these new influences or emphases within the strategic equation, can it be said that there remain certain constant fundamentals of strategy? In 1914 and in 1940, the French talked a lot about principles of war and then fought the next war in archaic terms of the last war. The trouble with the French was that they tried to apply to dynamic change static principles derived from certain temporary conditions of tactics and technology.

Our strategic thinking must not be tied down, to say, fleets, armies, or geographical positions, and project static World War II concepts onto the dynamic time-space age. We must seek fundamentals in recurring relationships between humans trying to utilize to best advantage the resources at hand. It is human nature that does not change.

Britain's brilliant military theorist, G. F. R. Henderson, noted:

"The first thing is to realize that in war we have to do not so much with numbers, arms, and maneuvers, as with human nature.

"What did Napoleon find in the history of the campaigns of Alexander, Hannibal, and Julius Caesar? Not merely a record of marches and maneuvers, of the use of entrenchments, or of the general principles of attack and defense. This is the mechanical part* * *.

"No; he found in those campaigns a complete study of human nature under the conditions that exist in war; human nature affected by discipline, by fear, by the need of food, by want of confidence, by overconfidence, by the weight of responsibility, by political interests, by patriotism, by distrust." [1]

In conflict situations, how human beings obtain maximum advantage with material and human resources forms the basis for any true fundamentals of strategy. Those fundamentals, in a way, are merely highest commonsense.

III. THE FIRST FUNDAMENTAL: THE OBJECTIVE

On the field of battle, the unpardonable military sin always has been for the general to forget his objective, or to get a false objective (an unimportant piece of land or a

Footnotes at end of speech.

useless fort) substituted in his mind for the real objective.

General McClellan made Richmond, not Lee's indefatigable army, his objective. Without the destruction of the mobility and freedom of action of Lee's army, the war could not be won. Grant, avoiding McClellan's mistake, devised a strategy that, through his and Sherman's maneuvers and battles, would paralyze Lee. When this was accomplished, he offered Lee magnanimous terms of surrender, in accord with the objective of the war as laid down by Lincoln: The restoration of the South, in spirit and in fact, to the Union. He used unlimited military means to obtain a limited political objective. Both Lincoln and Grant possessed long-sighted views of strategic and political objectives.[2]

The first step toward a public understanding of a national strategy is understanding of clear national objectives. Karl von Clausewitz, in his book, "On War," pointed to the fact that modern war had become "an affair of the whole nation" where all factors—military, psychological, and political—were involved. He asserted that "political aims are the end and war is the means, and the means can never be conceived without the end," or expressed differently, "war is nothing else than a continuation of political transactions intermingled with different means."

A. Failures of two World Wars

Clausewitz, often pegged as a militarist, was saying that war, to follow any rule of reason and be more than a suicidal absurdity, had to be the instrument of policy, the servant and not the master of national goals. This is quite the opposite of militarism. Clausewitz's central truth was grossly ignored in World War I and World War II. World War I did not serve the true policy ends of the Allies, if those ends or objectives aimed at a stable peace. The phrase "a war to end wars," followed up by a policy of victory wrought by unconditional surrender, might have been means to stir the public effort and enthusiasm, but were self-defeating ways toward an objective of stable peace. Instead of achieving stable peace, we bred the depression, fascism, nazism, and a worse war. As already noted, Grant too used "unconditional surrender" as a military means. But at the end of the war, he conformed to the temperate political objectives.

The conduct of World War II, on the part of the Allied Powers, similarly violated true objectives of American interest. The unconditional surrender policy inaugurated at the Casablanca Conference was carried through to the peace policy and made inevitable a postwar European vacuum which Russia would fill. Again, the demands of shortsighted military expedience dictated many of the concessions to Russia at Yalta, concessions which violated the true aims of the United States.[3]

B. Defensive objective of opposing communism

In the cold war, is America pursuing a self-defeating policy as she did in the two World Wars? What are our true objectives, our grand design, our overall concept? Is our aim to survive the Soviet threat? Or is our aim something beyond survival?

For America in the cold war, the real objective must not be opposing Russia and counteracting communism. Communism thrives on chaos, on the vindictiveness of the have-nots against the haves, on the frustrated hope for order and for total, planned solutions in the human soul. Communism is not the cause, but the product of world disillusionment. Communism is but one solution proposed to bring a sort of order and a kind of progress out of disorder and retardation. A policy or an objective of simply opposing communism is self-defeating. In the long run, communism can only be overcome by a different and more satisfactory answer to man's needs, frustrations and longings. Communism is a faith, a religion, and can only be replaced by a better faith, a better religion.

C. The objective beyond survival

Certainly a proper goal beyond survival is the preservation of freedom in America. But what type of freedom? Freedom from fear of Russia? Freedom from the destruction of the atomic bomb? Or freedom toward greater happiness, greater prosperity, greater humanity, greater constitutional liberties, greater rule of law, greater faith, greater creativity and harmony within and between individuals?[4]

Certainly the objective is somewhere beyond survival and framed in freedom at home and compatible values abroad. Through that frame lie still greater values, according to man's particular faith, religion and conviction that become his ultimate concern, to use Theologian Paul Tillich's term.

In the protracted conflict, if we are to follow the principle of the objective, this question must be posed: What do we really mean by a free society based on the foundation of constitutional liberties? When do we reach the point of jeopardizing that freedom? How much are we willing to sacrifice for security? Or rather, how much freedom can we safely sacrifice without violating the ultimate objective—the preservation of freedom?

D. Giving up freedom to preserve freedom

Confronted by the Kaiser's Germany and Hitler's Germany in World War I and II, this was an easy question to answer. Our military expenditures, during fiscal year 1945, were at $75.9 billion. Freedoms were given up. Regulations and controls were instituted in almost every economic phase of American life. Our youth was drafted into the service. There was a temporary abdication of freedom—rationing, higher taxes, price controls, the draft—to fight for the preservation of freedom. We were confident our Nation had sufficient constitutional flexibility to regain that freedom after the war.

But now we are in a continuing cold war, a lasting struggle, a protracted conflict. As President Eisenhower quite clearly explained on May 19, 1953: "We live, as I have said, not in an instant danger but in an age of danger. • • • We must think and plan and provide so as to live through this age in freedom—in ways that do not undermine our freedom even as we try to defend it."

Thus, it becomes not a matter of giving up for 3 or 4 years; it was a matter of giving up for possibly a hundred years.

At the peak of World War II, the Nation spent about 45 percent of our national product on national security, without going bankrupt. As Col. George Lincoln notes in his book, "The Economics of National Security":

"Up to perhaps half our national product, the question is not how much can be taken. It is rather a questioning of what extraordinary economic measures we are willing to institute to enable the efficient expenditure of dollars for defense while at the same time stabilizing the economy. • • • Whatever the proportion, there is a limit beyond which economic controls become necessary. When the budget of the security plan goes beyond a certain level, that budget plan must be associated and coordinated with a plan for exercising the necessary government control (including taxes) over the economy. If the Congress and the people accept both plans, then we can afford a very large budget. If not, then a large budget can be very dangerous indeed to the economy. In chapter I we posed the question, 'How much will you pay to live?'"

This question is on the level of survival only, without guarantees of liberties. Is the young American graduating from school content to just survive—without real choice of where he lives or where he works? That would be his lot under communism or socialism. Indeed, Bertrand Russell thinks the question in the nuclear age should be put on this level of survival only, with or without freedom. In colloquial terms: "Better Red than Dead."

But Colonel Lincoln goes further in his discussion and says: "There is an associated question, 'What Government economic controls will you accept to live?'"

Such a question, posed before the age of space and of cold war, would carry with it the inference that unwillingness to accept the necessary controls and the necessary sacrifices would be a sign of national softness. In the space and cold war age, there must be genuine concern for the permanent loss of freedom in an attempt to defend freedom. When the period of "giving up of freedoms" may run beyond the average lifetime, the "giving up" is permanent. President Eisenhower was quite conscious of this when he said on May 19, 1953: "We didn't want to become a garrison State, we wanted to remain free. Our plans and programs had to conform to the practices of a free people, which meant essentially a free economy."

This objective must be kept foremost in mind. In the forthcoming decades, it will be quite necessary to increase the amounts being spent on national security. There is no amount which can grant us absolute security. The amount selected must be based on balanced judgment of short-range and long-range security and objectives. Then the increased security should be financed not by inflation but by a sound tax program and a cutting back on nondefense Government spending.

E. Reaction to the external challenge

Arnold Toynbee notes that challenges arouse nations to unprecedented efforts.[5] Yet he observes that the stimplus of the blow can be too great, especially if prolonged over a long time, as was the case of the Hannibalic war in Italy.

True enough, the Communist empire could break up within a decade or so, but if the struggle continues over a century, the severity to us could be far more dangerous than one single military blow tomorrow.

Liddell Hart makes an apt comment in this regard:

"The acquisitive state, inherently unsatisfied, needs to gain victory in order to gain its object—and must therefore court greater risks in the attempt. The conservative state can achieve its object by merely inducing the aggressor to drop his attempt at conquest—by convincing him that 'the game is not worth the candle.' • • • Indeed, in attempting more it may defeat its own purpose by exhausting itself so much that it is unable to resist other enemies, or the internal effects of overstrain. Self-exhaustion in war has killed more states than any foreign assailant" (Liddell Hart, "Strategy," Praeger: New York).

One danger of the protracted struggle is illustrated by the case of Sparta. She met external challenge with an internal militarization and statism. This so absorbed her energies that she had none left over for real development.

Negative missions and objectives on the part of the United States in the present protracted conflict could produce a similar effect—deprive us of our rationale of freedom at the time we are opposed by a revolutionary rationale of communism. Historians would write that in the protracted conflict, as in World Wars I and II, our means of conflict destroyed our national objectives.

Footnotes at end of speech.

F. The military objective: Destruction of the will to wage war

In military conflict, the immediate objective is to destroy the enemy's will to continue to fight. To accomplish this, force must be applied to sensitive or decisive areas which will destroy the will.

What constitute the most decisive target areas?

In the past decade, the Air Force has argued for a counter-force strategy, i.e., concentration against the enemy forces which will strike at us. By and large, this seemed an appropriate strategy during the air age. But it appears that the equation may shift during the missile age, where, while still maintaining a mix, primary reliance will be placed on what has been labeled a minimum or finite deterrence strategy as the surest road to decision and the greatest comparative advantage for a defending nation. Gen. Pierre Gallois, recently head of the atomic-warfare planning staff of the Western Alliance, noted:

"Simple arithmetic is enough to show the difference between the means needed for defense and those needed for aggression. If the defending nation, for instance, had 400 missile-launching sites thoroughly dispersed throughout its territory, and if these launching sites were well protected, it has been estimated that the aggressor would have to expend some 22,500 missiles—each with a warhead of 1 megathon—to destroy them. But the defense could wipe out 30 of the aggressor's largest cities with less than 50 missiles.

"And so, in this era of long-range ballistic missiles even more than in the age of the airplane, the advantage lies with the defense. The defense can prevent an aggressor from resorting to force by the threat of a relatively small number of missiles capable of reaching the highly populated areas that constitute their objectives." [6]

Certainly the retaliation would be unwise if he made the missile sites, many of them emptied, his primary targets. Retaliation would be aimed at heartland, population, and production. These would be decisive in destroying the will of the opponent. This price would be too great for the aggressor, and hence deterrence would occur.

There is little logic in arguing that such a retaliatory strategy should be outlawed as a violation of the principle of the objective. From the moral point of view, the United States, right or wrong, already inaugurated the use of atomic weapons against population and industry at Hiroshima and Nagasaki. Secondly, the use of unlimited means is necessary to counter the unlimited objective of our opponent—our total obliteration. But at the same time, our unlimited means do not require us to set for ourselves unlimited objectives. We dropped the A-bombs on Japan and then offered conditional, not unconditional surrender, in what became the model peace of human history.

General Grant, as already noted, employed an unlimited strategy to promote a limited political objective.[7]

IV. ECONOMY OF EFFORT

How do we best utilize our resources to accomplish our objectives?

In any conflict, the resources of both contenders are limited, even though the resources of one contender basically may greatly outweigh the resources of the other. Victory has not necessarily fallen to the contender with the greater resources. Alexander, Hannibal, Gustavus, Adolphus, Frederick, Napoleon, and Hitler defeated larger armies and superior nations or alliances. The principle explaining their successful art of getting the most from the least is known in classical military literature as economy of effort.

When this term was first used, the economy part of economy of effort meant the best management of effort, the maximum use of the resources at hand, knowing when and where to spend effort, and knowing when and where to conserve effort to gain a comparative advantage. To gain this advantage in the decisive areas meant conserving in less decisive or lower priority areas. Winning in the decisive, critical area was like cutting the vine at its roots; its branches would wither of their own accord.

The application and misapplication of this fundamental is very easily illustrated by the strategic bombing campaign against Germany in World War II. In January 1943 at the Casablanca Conference, five primary target systems were established: submarine construction yards, aircraft industry, transportation, oil industry, and other industrial targets. This dispersion destroyed effectiveness. In June 1943, a new directive concentrated the air attack on the German aircraft industries. The theory was correct, but the objective was wrong, because the Germans partially nullified the attack by greater industrial dispersion. It was not until May and June 1944, that a new strategic decision was made fully to concentrate on the German oil industry—the key to transportation, a correct and decisive target. Consequently, transportation and resupply slowed towards a halt; the munitions industries were no longer being adequately resupplied.[8]

Here then are two illustrations, first the wrong way: trying to be strong everywhere and ending up with being affective nowhere; and secondly, the right way: economizing in areas of secondary importance in order to concentrate in a decisive area.

A. Flexibility and the mixed force concept

Flexibility is a necessary ingredient for economy of effort. When the Allies chose to concentrate on destroying the German air frame industries, they were applying economy of effort, but they had selected the wrong target. At least the Air Forces had the flexibility to shift to a decisive target. Inevitably, mistakes will be made. As Napoleon said, in war the successful general is not he who makes no mistakes. "No mistake" is impossible. But he is the general who makes the fewest mistakes.

Flexibility allows for correcting mistakes before the opponent can capitalize on them. Flexibility means having alternate plans, or as Bourcet said:

"Every plan of campaign ought to have several branches and to have been so well thought out that one or other of the said branches cannot fail of success."

The 1956 State of the Union Message called for an "effective flexible type of power calculated to deter or repulse aggression and to preserve the peace." This was flexibility for a given diplomatic or military crisis, for a general or a limited war—fixed in time and space. By and large, this flexibility has been achieved through the "mixed force" concept. Rather than reliance upon one weapon with a given characteristic, reliance is placed on a combination of abilities to retaliate: SAC bombers, liquid fuel ICBM's (many in hardened sites), aircraft carriers, hound-dog air-to-ground missiles, IRBM's around the periphery of the Sino-Soviet bloc, and soon the solid fuel nuclear-tipped Polaris. The very "mix" of the forces tends to add to the invulnerability of the striking capacity.

Economy of effort through a "mix" achieves comparative advantages and especially high returns from our mutual security program. Our own defense budget provides a military establishment of about 2½ million men. The $2 billion the administration requested for military assistance facilitates the effective utilization of over 7 million allied personnel in their military structures. A greater return comes at lower cost.

B. Flexibility and technological breakthroughs

Equally, the administration has stressed research and development flexibility over the decades of the cold war where both blocs of powers will seek to make new technological breakthroughs and weapons advances. The decision of when and where to place the emphasis demands a sensitivity to change and an unusual sense of balance. As the Secretary of the Navy said in March 1954, we often have to choose between "too-little-and-too-late and too-much-and-too-soon"; we have to "buy our security in installments with the most promising weapons of the day."

This especially involves flexibility in regard to Executive-congressional actions on transferral of funds. Before a weapon has proved itself, economy of force is flouted by rigid over-commitment in advance. When a piece of technology has proved itself, however, major reevaluation is called for.

An example of the type of shifts constantly necessary occurred when the President on April 6, 1960, approved changes in the Navy and Air Force budgets.[9] These actions resulted from increasingly favorable technological and strategic estimates based upon tests of the workability and value of the weaponry concerned. By the time action on the defense appropriations bill had been completed by the House subcommittee, still other shifts were made, incidentally, without changing by 7/1000 of 1 percent the dollar increase over the President's request.[10]

Economy of effort, incorporated into a protracted conflict strategy, demands this constant willingness to make changes, to reassess, to shift funds, to make new decisions, to cut back or cancel out-dated programs. Economy of effort becomes the fulcrum of the see-saw, with too-little-too-late on one end, and too-much-and-too-soon on the other, with the point of balance of the fulcrum having to be constantly shifted. As Secretary of Defense Gates said: "It takes courage to change, to cancel an expensive program that has been overtaken by events, to close an installation employing trusted competent people, or to abandon a proven military mission of the past in exchange for a better way." [11]

In regard to the Atlas, for example, economy of effort demands a never-ending series of shifts and reappraisals. The first generation of missiles is enormously expensive and vulnerable and, in accuracy, it has been estimated that from 6 to 60 of them might be required to take out 1 enemy launching site.[12] Any type of effective counterforce capability, therefore, would demand a considerable superiority of such missiles over the Russians. In accord with the dictates of economy of effort, then, every effort is being made to better utilize our resources by (1) speeding the development of the solid fuel mobile Minuteman, (2) improving the "mix" of our overall retaliatory capability, and relying more on Polaris, (3) covering the period of transition by increasing the SAC air alert and hence its invulnerability, in proportion to the increase in Russian ICBM capabilities.

Obviously, the solution—posed by some critics—to match our Atlas missile for missile with the Russian counterpart would gear our national strategy to a rigid numbers concept of matching the Russians man per man, liquid fuel ICBM per liquid fuel ICBM. Indeed, that would escape hard decision of evaluating the cost and capabilities and effective operational years of Atlas with the mix, flexibility, mobility, and economy of efforts possible from the solid fuel generations. But it would flagrantly violate every commonsense idea that makes up the concept of economy of effort.

Footnotes at end of speech.

C. Economy of effort and fiscal management

This principle of economy of effort, with its demand for flexibility and adjustment, applies to our fiscal economy.

Defense spending, if financed by improper means and methods, can destroy the flexibility and mobility within our fiscal structure. To finance spending by inflationary measures is to invite catastrophe, especially if high levels of expenditures are projected over the entire length of the protracted conflict. To finance high levels of expenditures by higher taxation of the type which destroys savings, investments, and incentives—in short, destroys the ingredients for sound growth and a fluid economy—is likewise to court disaster.[13]

The traditional foundation of American military policy had rested upon a sort of three-point concept: a preeminent industrial base for expansion, comparatively weak forces in being, and dependence upon time to move from no mobilization to full mobilization after attack or great peril. The time-space age shattered this three-point concept. Needed was, first, a plateau of preparedness through an age combining perpetually peace and war; second, a design for forces in being prior to any attack of an aggressor, whether it occurred in 1955 or in 1985.

These new needs of the time-space age were not incorporated in our military policy from 1945 through 1952. Our Government, in the face of Russia, dismantled the greatest military force ever assembled within 2 years of the end of hostilities. Our Armed Forces has been reduced from a peak of 12,125,000 men to about 1,500,000. We were still rapidly cutting the residual force in 1950 when the Korean aggression took place. Then started another massive mobilization back to 3,636,000. In 1953 the new administration conducted a reappraisal which recognized that such extreme fluctuation of peaks and valleys, from a 1945 defense budget of 79.9 billion to 11.9 billion in 1950 to 43.7 in 1953, could spell disaster to America if the Soviet strategy actually was a protracted conflict perhaps extending a century. The defense burden and deficit financing, in part, explained the 50 percent loss of value of the dollar from 1939 to 1949, which meant we were getting 50 percent less defense per dollar.

In a speech on April 16, 1953, President Eisenhower inaugurated the long-haul concept. Not only was this demanded by the principle of the objective, but also by the principle of economy of force. Policy was not to be geared to any "magic critical year" but was to be based upon the "sounder theory that a very real danger not only exists this year, but may continue to exist for years to come," and the old policy would be replaced by a new, long-range policy which would avoid "inefficient and expensive starts and stops."

D. The matching fallacy and England's great strategic mistake

Today we hear cries about a missile gap; in 1955 we heard cries about a bomber gap. The simple advent of the solid fuel Minuteman, which many now picture as an absolute final weapon, is not going to stop the constant flow of technological change. There will be gaps and rumors of gaps from now on. To try to eliminate all gaps would be to try to zig and zag with the Communists and copy the particular weapons which offer the greatest advantage to Russia. Military advantage seldom comes from a strategy of duplicating or matching everything an opponent does. It comes from being stronger in certain specific areas of advantage.[14]

Britain, after nearly a century of the Pax Britannica, abandoned her naval strategy of small land armies striking with mobility out of the blue. The German Empire, in the rapid growth of youth, was making startling advances industrially, economically, and militarily. It was within the shadow of the German peril that Britain forfeited her native national strategy and tried to copy and match Germany division for division. She developed and committed vast land armies to the continent where her sea mobility offered no advantage. Whereas previously, Britain had retaliated against an aggressor at times and places of British choosing and with the unique weapons of Britain, in 1914 she met German aggression at the time and place of the choosing of the German general staff, in a strictly defensive policy. The cost was that Britain never regained her world leadership.

E. Economy of effort and human resources

Especially is economy of effort paramount in relation to human resources in the field of research and development. Dr. Mettler, executive vice president of Space Technology Laboratories, pointed this out to the House Committee on Science and Astronautics (March 31, 1960):

"Space technology was obviously a field in which major projects would become increasingly large and complex and expensive and would increasingly tend to take on the character of national and even global undertakings. And to further complicate matters, a rapidly multiplying number of alternate projects became technically feasible. With limited economic and intellectual resources, it was—and still is—very important to distinguish between what is possible, and what is needed—between what could be done and what should be done. A relatively few large projects must be done superbly well."

Our economic effort behind the space program would be limited even if we doubled the space budget tomorrow. The human resources behind the space program are even more limited. For example, thousands of engineers are involved in the present Atlas project. It becomes a very critical decision, then, where this scientific talent should be placed after the termination of the Atlas project. Should it be moved into the space field, or the defense field, or split between both? Such decisions are crucial in maintaining a better economy of effort than Soviet Russia.

V. FREEDOM OF ACTION

Freedom of action, necessary to accomplish economy of effort, implies the mobility to retain the initiative. It means dictating—not being dictated to. In all levels of policy, its application becomes quite evident. The freedom of action or mobility needed for flexibility in shifting scientific, industrial, and economic resources can be lost by political and lobby pressures exerted to maintain the status quo or promote a vested interest. The recognized failure of the so-called containment policy was in its lack of freedom of action on the politico-military level.[15]

How is freedom of action gained in a conflict situation? A boxing match furnishes the answer. The negative or defensive part of the match is an ability of a contender to keep the guard up and ward off the punches. The positive part is his ability to deliver the punches into sensitive areas of the head and body, so that the opponent will lose his balance and equilibrium.

In an all-out missile war, the negative, defensive part would come from a relatively secure or invulnerable retaliatory capacity, such as the mobile Minuteman, Polaris missile systems, BMEWS, Midas, and early warning systems should offer. The positive, offensive part would come from an ability to strike at decisive areas of the enemy's defensive structure, so that the enemy will lose his stability, and eventually his capacity and will to resist.

A. Reciprocity of military action: Limited and unlimited war

The relative success of opponents to strike at each other will be determined by which side has a technology and weaponry "one better than the other." In an all-out struggle, each side chooses its own weapons. A man with his fists only is not going to beat a man with a pistol. The one that chooses the pistol forces the other to try to select an even more effective weapon. This principle, Clausewitz called "reciprocity of military action." He said:

"War is an act of force, and to the application of that force there is no limit. Each of the adversaries forces the hand of the other, and a reciprocal action results which in theory can have no limit."[16]

This does not mean that war must be unlimited. With the two boxers in the ring, the fight is limited because they had a referee and they both agreed to limitations. But limited war can only be a product of limited aims of not just one, but both sides. In the age of chivalry, knights settled the disputes of states. Hoffman Nickerson points to the medieval truce of the church as a successful attempt of the papacy to limit war throughout Europe. In the 18th Century, limited wars were often fought over territorial disputes, a duchy or a province. In all cases, the political policies of the states were limited and were not aimed at the ultimate destruction of the opponent.

When the violence of the French Revolution and Napoleon was unleashed in Europe, the nations accustomed to limited means quickly fell before Napoleon's strategy. Not until the allies abandoned their limited means, and adapted themselves to an all-out struggle, was Bonaparte overcome.

With this, there is an interesting parallel in the age of cold war. The Communists have set off an unlimited ideological struggle which reached global proportions after the defeat of Germany and Japan in World War II. While this does not mean that the Communists will unleash nuclear holocaust, it does mean that they hope to maintain the initiative by constantly operating in all areas—economic, psychological, political and military—with less limitations and consequently relatively more powerful means than we. In the late 1940's, they played this game successfully because of our self-imposed limitation, containment. Like the allies opposing Napoleon, the tide globally did not turn in favor of the allies opposing communism until the new administration in 1953 altered this strategy of containment limitation which played into the hands of the unlimited strategy of our opponents.

B. Graduated retaliation

Dulles realized that deterrence is not just military, that it depends upon conviction and credibility, that power is a function of the will, and that without will there is no power.

The only way, then, that America can maintain its freedom of action is to convince a potential opponent that America will not subscribe to the limitations that an aggressor chooses to place upon war caused by its aggression. The aggressor must know that we will escalate our means or places of retaliation—not all the way to nuclear holocause, but a notch or so—enough to make aggression not worth the cost.

This concept was applied to NATO, at first ineffectively and then effectively. The original North Atlantic Treaty concept in 1949 envisioned no integrated allied defense plan; nearly all the forces were on occupation duty disposed administratively. Nevertheless, these factors furnished a wire to trip off a pyrotechnic which could signal for atomic retaliation in case of Soviet aggression.

With the Soviet A-bomb development in September 1949, and the Korean war in

Footnotes at end of speech.

June 1950, the inadequacies of threatening major atomic retaliation (we had no atomic weapons, only our strategic bombing capabilities) became apparent. Notes Prof. Lincoln Gordon, "From the tripwire extreme, the NATO strategic concept shifted in 1950 to the other extreme of containing the Soviets by conventional defense." [17]

Certainly, continued reliance on conventional deterrence for the defense of NATO would have been a step backward toward World War II strategy. In order to mold NATO strategy and tactics around one unified, flexible force which employed to better advantages than the Soviet the tools of war born in the nuclear age, decisions were made in 1954 and 1955 which produced the shield and sword concept. The sword of NATO includes the U.S. Strategic Air Command, the U.S. Navy carrier striking forces, the U.K. Bomber Command, IRBM's in Great Britain, ICBM's based in the United States, and soon the well-nigh invulernable Polaris. The shield forces, not merely conventional forces as planned in 1950, possess tactical atomic capabilities. Yet their conventional capabilities of ground divisions are adequate to cope with probing or ambiguous actions of Soviet satellites. Their tactical nuclear capabilities are adequate to cope with actions still short of all-out conventional aggression by the Soviet Union. In effect, then, the shield function is avowedly to meet the type of aggression with a response one grade higher in the strategic spectrum.

Thus the ultimate deterrent, the sword, is translated into a flexible deterrent at all possible levels of challenge. By clearly defining the strategy to the Soviet Union in advance, any idea that NATO will tolerate the Soviets setting the limitation or rules of an aggression is eliminated. In effect, the Soviets have no choice in the spectrum of aggression, unless they are prepared and willing to initiate all-out nuclear aggression.

This follows Karl von Clausewitz' concept that war is a reciprocal action and that only a limitation of ends can logically result in a limitation of means. That is, provided the opponent which unilaterally limits his means desires to place himself at a decisive disadvantage and fight with one hand tied behind his back.

C. Credibility of the deterrent

Such a theory has indeed been critized: William Kaufmann comments:

"Our actions should symbolize the intentions of the United States to confine both the conflict and the issues over which it is being fought within the narrowest limits commensurate with the security and tactical initiative of our forces." [18]

He then cites the attrition strategy in Korea as a good example of his policy. But we lost initiative, mobility, and freedom of action in Korea.

Critics assert our strategy of graduated retaliation lacks credibility. In situations of lesser magnitude, it is not credible to the Soviet Union that we would meet a probe against NATO with a nuclear strike at Moscow. But it can be and has been made quite credible to Russia that a Soviet probe, or border raid will be met by full division strength, and that a full division attack will be met by tactical nuclear weapons.

It has been argued that, if we do have such a credible deterrent, then the Soviets might launch an all-out attack on us in advance. If they do, it will not be because our strategy of graduated retaliation has failed, it will be because of the conditions already mentioned, namely, first, because Russia feels she can win in an all-out attack, or secondly, a mad ruler of Russia seeks war in desperation, or thirdly, because of diplomatic miscalculations.

Footnotes at end of speech.

Adm. W. F. Boone, former U.S. Representative on the Military Committee and on the Standing Group of NATO, points out [19] that the NATO deterrent comprises three essential elements: (a) a massive retaliatory force, (b) a shield force, and (c) the manifest will to use these forces. If this third element is lacking the whole srategic theory crumbles. It is this danger which makes some criticisms about our defense posture so dangerous. Such criticisms could reach a tempor that would indicate a lack of national resolve. That could jeopardize not just the NATO strategy, but the entire global strategy of the United States.

If the credibility is so destroyed, then indeed it would be proper for the United States to reverse its strategy and follow a concept closer to that advocated by the critics. The only alternative to graduated retaliation would be geared to meeting every Soviet challenge within the limitation set by the aggressor, and at his place and time. It would demand a much higher degree of mobilization and much greater conventional war forces. It would destroy our freedom of action, our economy of force, and place in jeopardy our ability to develop a national strategy which would further, and not be self-destructive, of national objectives which lie beyond mere survival. It would play directly into the hands of the Soviet strategy of protracted conflict.

D. Limited and unlimited challenges

Some critics have become confused by two different sets of challenges. The first is specifically that of the Sino-Soviets. The second grows, not directly, from Russian or Chinese communism, but indirectly from power vacuums, disorder, and conflicts of nationalism and anticolonialism. Russian and Chinese communism indeed exploit and agonize these latter situations, yet their basic causes lie beyond communism.

The British and French actions in the Suez crisis and the U.S. landing in Lebanon fall into this second category. In these limited actions, no major power aimed to destroy another power. Thus, limited aims called for limited applications of force. During the Suez crisis, British cruisers were ordered not to use 8-inch guns. In the Lebanon crisis, Americans were ordered to land without Honest John rockets, since they had the capability of firing an atomic warhead. In other words, we purposefully avoided resorting to a larger calibration of force. The objective, and therefore, the means were limited.

Once the conflict becomes translated to where Russia or Red China is our opponent, or where their pawn is our opponent, the conflict is basically and potentially an unlimited one in aims. The law of reciprocity of means applies and we would destroy our freedom of action by necessarily using only conventional means.

In the case of these genuinely limited conflicts (not involving Russia or Red China) the United States is restricted to limited war forces. In such cases, limited war forces, whether our own STRAC or marines, need to be capable of lightning response, immediate transportation by sea and airlift, landing facilities, and modern equipment once landed. The British sorely bungled the Suez crisis because their reaction was slow, cumbersome, and delayed. It is the quality, not the quantity of the forces, that count.

Many advocates of so-called "limited or conventional war forces," however, call for an entirely different strategic concept than that just outlined. Some critics advocate massive conventional war forces to engage the Soviet Union or Red Chinese forces and pawns directly. Success of such a strategy would depend, first of all, upon our ability to mass adequate conventional war forces to defeat the aggressor on his terms. Secondly, it would depend upon possible victory not being nullified by the aggressor then upgrading or escalating to tactical nuclear weapons. Consequently, such a strategy appears to ignore the reciprocity of unlimited conflict, the Soviet protracted conflict design, and the need for America to retain freedom of action.

The critical need for limited war forces is greater mobility, and as Admiral Radford often has noted, mobility is a matter of more staging bases, of paring down requirements to absolute minimums, and of developing improved technology. But a type of "wall of flesh" strategy, which met the enemy on his terms, would demand huge conventional war forces which would lack mobility.[20]

VI. FORCE IN BEING

This follows the traditional concept of a fleet-in-being, a concept of great moment during the heyday of Dutch and British sea power. The fleet, without going to battle, had a decisive influence upon diplomacy by the very fact that it was "in being." To exercise this effect, however, the Nation in question had to convince other nations of her unquestioned willingness to go to battle if necessary. During the Pax Britannica, there never was any question as to Britain's willingness to use her fleet. This willingness made the fleet-in-being a credible deterrent.[21] Thus, the objective was accomplished without resort to battle.

Nuclear holocaust in our time can be avoided by the capability of force-in-being, if that force resides upon a superior position so clear and credible that the opponent is deterred from temptation to fight. In the Ulm Campaign of 1805, Napoleon deceived the Austrians while he maneuvered around their right flank, crossed the Danube, and blocked their rear. General Mack surrendered to him without a battle, so convinced was he that Napoleon would fight, would not limit or restrict himself during the fighting, and would win. The Japanese Government on July 1945 sought terms of surrender because Japanese leaders were convinced General MacArthur had drawn up invasion plans that would work, and that the United States had A-bombs which she would use. The U.S. capability had the same effect as a battle-in-being.

A. The necessity of the will

On the other hand, military history verifies that the nation unwilling to risk war for the preservation of its vital interest cannot have peace. That nation can never experience the diplomatic dividends of a force-in-being. The rise of Hitler Germany in the 1930's—the move into the Rhineland, Austria, the Sudetenland, and remaining Czechoslovakia—is replete with examples of the peace-loving powers destroying their own deterrent power and the credibility of their military forces—far superior to Hitler's—by lack of national resolve and unity.

The credibility of our deterrent system is not destroyed by Russia's also having a nuclear capability. But the credibility can be weakened by an American attitude which refuses to consider any chance of all-out nuclear war and passes it off as unthinkable. The deterrence of our forces-in-being will be improved when Russia is convinced that we have the will and capability to fight and survive such a war, that we do not consider it—regardless of how horrible—something unthinkable.

B. Skill always counts

Which opposing power comes out best (even though we could not call it victory) in this court of last resort, would depend upon strategy—skillfully using the means at hand. The makeup of this strategy, unlike the strategy which terminated in the battles of Waterloo, Gettysburg, Sedan, or the Ar-

dennes—will have begun long before the campaign of Armageddon is joined. The strategy, in part, would have to be a product of the research and development field over the decades, molded by scientists, engineers, as well as the military. The strategy, in part, would have to be derived from maximum use of geography, of dispersed bases, of mobile and underwater launchers to give us the most invulnerable striking capability possible.

Even in the court of last resort, where destructive power by nuclear weapons staggers the imagination, strategic ability still will count. It is possible for America to retain a position of advantage over Russia, and for Russia to recognize this in advance. If we possess the physical capabilities and moral will to fight through such a contest, then there is a chance of our force-in-being producing a Pax Americana. For the struggle with the sino-Soviet powers is a battle of wills, and the best safeguard the United States has to all-out war is firmness of will.

VII. UNITY AND MORALE

The importance of unity of national will led Napoleon to form his maxim: "the moral is to the physical as three is to one." Napoleon utilized and appreciated the zeal, morale, and unity of spirit of Revolutionary France as contrasted with the negative, disunified purposes of monarchies like Prussia, Austria and Spain, which were filled with negative purposes, splintered alliances, and limited defensive aims.

Morale and the will to resist continue to be more important than the physical. And determination, unity, and conviction equal morale, or moral force.

This moral force explains the rise of communism in Russia and China; small, disciplined minorities held together by indomitable morale that overcame vast numbers. It was not superior numbers of Communists that took over Russia in the "October" 1918 Revolution, but a small, dedicated, determined group that "found power lying in the street and picked it up."

Today, it is this same unified minority which remains a greater threat than missiles or bombs to America. It is this threat which enables Russia to make inroads into uncommitted nations, with less expense than that of the United States. And this is all by design, for Lenin said, resounding the tactics that won Rusisa for the Communists:

"The soundest strategy in war is to postpone operations until the moral disintegration of the enemy renders the delivery of the mortal blow both possible and easy." [22]

Now the Communists successfully employ this concept globally.

The Soviet psychologists brilliantly use military and space developments as psychological weapons to produce, bit by bit, moral disintegration, confusion, and pessimism within our country. Indeed, sputnik was an enormous Soviet achievement, but the greatest and most lasting part of the achievement was psychological, not technological. Today, the totality of our space program is ahead of the Soviets' despite their superior rocket thrust. The United States has placed more satellites in orbit and derived much greater scientific information.

Secretary of Defense Gates has aptly described the Soviet psyochological and moral success in our reaction to sputnik:

"The United States reacted with self-criticism. Doubt and worry produced little that was constructive. A feeling of inferiority swept across the land, a feeling of being second rate began and persisted. No real sacrifices were offered. People were quick to blame, but life went on as usual. Big expense accounts, short working hours, long vacations, and the easy way remained. Men did not change the normal pattern or orient themselves toward the business of government.

"The role of the United States in its free world responsibility was having growing pains at a time we could ill afford them.

"Certainly we should not have reacted with complacency, but we should not have gone with a sense of guilt into a process of tearing down our fundamental beliefs and institutions. This was the time to comprehend fully our defenses and to realize that sound planning existed and anticipated much of the demonstrated Soviet capabilities. The pendulum swing too far." [23]

A. Role of the opinion makers

Ways to gain moral solidarity and national conviction become, indeed, a fundamental necessity for any U.S. national strategy. Criticism must be channeled into constructive, not destructive avenues. National success must be recognized and dramatized just as much as national failure. The body politic must gain an overall and long-range view, built upon a foundation of recognizing basic advantages of our system of government. For there is no leader who can resist public opinion when it becomes strong enough. As a Council on Foreign Relations report to the Senate noted:

"The Government must be generally responsive to public opinion. It cannot get too far ahead or too far behind. It works under a great handicap if the public is ill-informed on the significant issues or if political leaders choose to play domestic politics with them." [24]

B. Concord

Certainly the formulation of the Marshall plan and the NATO alliance by a President of one party, approved and advanced by a Congress controlled by another party, remains as a shining example of American unity. Initially, NATO, physically, was weak indeed. But the moral support given it by both political parties immediately bolstered its deterrent value far out of proportion to any inherent physical strength.

Ortega y Gasset in "Concord and Liberty" notes how dissent on surface issues promotes progress, but how dissent on the fundamental issues in a society, as in the latter days of the Roman Republic, spells the doom of that society. Concord in the United States will be increased when the individual American develops a sense of mission, and a closer personal identification with the role of the United States in offering world leadership toward free, open societies. And upon this identification within the body politic can spring a national strategy far superior to what the Communists possess.

We have defined strategy and reviewed a set of its fundamentals. A strategy becomes a national strategy when employed by a nation to promote its national policy ends. Hence a national strategy, in terms of the United States, is reflected in National Security Council documents.

But the review of these fundamentals clearly indicates that a national strategy is not enough, and that it is a public strategy which is needed. The term is used in this paper in a context similar to that used in Walter Lippmann's term "public philosophy." A national strategy becomes a public strategy when the majority of the people understand and support it. As already noted, the modern day advantage of the Communist Party members is that they do have a public strategy which furnishes a means of total integration of national effort into clear purpose.

VIII. IS A PUBLIC STRATEGY POSSIBLE FOR A REPUBLIC?

This leads to the question: Can a republic such as ours truly understand and embrace a unified public strategy, achieve continuity from one administration to the next, and one party to the next? Perhaps upon the answer to this question hangs the future of the Republic.

A. First case: Pax Britannica

Historically, Great Britain was able to develop such a strategy, fully understood and approved by the butchers, bakers, merchants, and housewives of England. The protection of Antwerp, a potential naval arsenal for invasion of the island kingdom, and a base from which the Channel could be controlled, became the key to British national security: In strategic defense of Antwerp, Charles II in 1670, Anne in 1704, Chatham in 1742, and Pitt in 1792 took England to war.

In the 19th century, British national strategy became so perfected as an instrument of state policy that the Pax Britannica resulted: major war was deterred from Waterloo to Sarajevo. In unity there is strength, and the strength of the British deterrent sprang from popular English understanding and appreciation of all the elements which made up that national strategy: the uniqueness of the British island position as a springboard for maritime power; the need for a small, highly mobile amphibious army, rather than an attempt to match man per man the cumbersome continental armies; control of the narrow seas and global bases like Gibralter, Malta, Aden, St. Lucia, Cyprus; an integration of military and naval power with economic power of peacetime commerce and industrial supremacy.

Why did the British strategy produce an effective deterrent to war? Because the British did not destroy its workability by internal disunity and destructive criticisms. Germany, France, and Russia fully realized that Britain had committed herself wholeheartedly to the defense of this policy, and was willing to fight for it.

B. The second case: The Monroe Doctrine

There are also encouraging examples in American history of an ability of the body politic to adopt a public strategy. Notably, the Monroe Doctrine was a unique application of a public strategy to the particular American geography, interests, and need for deterrence of European intervention in the new world. Crystallized in 1823 by President Monroe and Secretary of State John Quincy Adams, this initial expression did not make it fully "national policy," it is significant to note. In fact, this doctrine aimed initially at deterring England's greed in America (as Professor Perkins' research has shown) [25] was in turn enforced, from 1823 to 1845, not by the United States, but by England. Finally, in 1845, James K. Polk, in his annual message, grabbed the doctrine back and brandished it at Europe, particularly at England, its recent custodian, to demonstrate that the United States would allow no colonization in California.

Even with this dramatic reassertion by Polk, the doctrine was championed for the next decade by only one political party. Although it became a topic of public conversation, the United States still did not always act upon it: During the American Civil War, with impunity France violated it in Mexico and Spain violated it in the Dominican Republic. Why? To have enforced the doctrine in the midst of our Civil War would have jeopardized a greater objective—the preservation of the Union.[26]

Failing to act, when not to our best interest and when the setting was incorrect, did not invalidate the strategy, as Henry Wriston has commented.[27]

Its validity and force grew, however, with the almost universal public support it received in the United States after the Civil War. American public opinion, Republican and Democratic alike, united behind the "maxims of Monroe," maxims so sacroanct by 1923 that a noted American religious leader typified national sentiment by writing "I believe strictly in the Monroe Doctrine, in our Constitution, and in the laws of God." [28]

Footnotes at end of speech.

C. The third case: Mahan's strategy

The United States adopted a clear, decisive national strategy, beginning with the Manifest Destiny Period of 1896 and blossoming fully during the Theodore Roosevelt administration.

In lectures, articles, and books, Capt. Alfred Thayer Mahan, supported by Theodore Roosevelt and Henry Cabot Lodge, integrated naval, economic, political, and even religious considerations into a strategy to promote national greatness and prosperity. The question, whether to follow an expansionist course based on trade, colonies, and naval power, reached a crux during the summer of 1898 over the annexation of Hawaii. Arguments were clearly stated on both sides, in the Senate and House, by proponents Senators Lodge, Platt, and Beveridge, and by opponents Speaker Read, Senators Hoar, Vest, and Mallory. Public opinion was truly allowed to crystallize; by and large, it crystallized in favor of the national strategy advocated by Mahan. When T. R. Roosevelt entered the White House, the people and the President, jointly, supported a unified, clearly defined national strategy of international firmness and national preparedness, incorporating our Navy as a deterrent to intervention of foreign powers in the New World, promoting our strategic control of the Caribbean, pushing the construction of a canal to increase maritime mobility, and inviting the public to look outward toward the Pacific. Public debate over real alternatives and issues had made possible a public consensus which led to an acceptance of such a well-defined public strategy.[29]

IX. WHY THE BODY POLITIC HAS NOT REACHED A CLEAR CONSENSUS ON A PUBLIC STRATEGY

Since World War II, sufficient public debate on the long-range issues of the decades has seldom occurred, and hence, neither has there developed a genuine public strategy. Political partisanship and constant confusion from swift technological change has further clouded clear alternatives and at times has led to an onslaught on much constructive thought and leadership.

How the public has been distracted from the true issues is easily illustrated. In the Korean war, the Truman administration, the Congress, and the public were confronted with this fundamental issue of cold war: What type of national strategy is needed to meet a type of Communist aggression where the bases for aggression are located in a major Communist power, but the battlefield itself is located within a pawn of that power. The real questions were: Would America respond purely defensively against the power or would she seek a policy of initiative to punish the real aggressor? Did isolated events—Yalta, Potsdam, the Communist coup in Czechoslovakia, the Berlin blockade, the take-over in Red China, and then the Korean aggression—point to a pattern? Were the crises related in some kind of grand design? Could each crisis only be met, not in isolation and panic or in a packaged solution for each emergency, but by a long-range national strategy, prepared, if necessary, for a century of crisis between freedom and communism?

Perhaps such questions could have crystallized had there been the type of debate that took place over the Monroe Doctrine or the Theodore Roosevelt-Alfred Mahan strategy. But in popular discussion, the Korean issue became distorted into secondary surface issues, such as civilian control over the military, or the personality of MacArthur versus the personality of Truman, or the right of the Executive to fire MacArthur.

Although the public did not come to see the need for a long-range national strategy at the time of the Truman-MacArthur dispute, the public, by supporting the 1952 presidential candidate committed to seek a positive solution to the Korean war, did revolt against the indecisive, stalemated Korean war. Thereby, it also revolted against containment policies.[30]

X. EFFORTS OF PRESIDENT EISENHOWER AND SECRETARY DULLES TO DEVELOP A PUBLIC STRATEGY

Following this electoral mandate, the new Eisenhower administration, in the words of Secretary of State Dulles, notified the aggressor that the new administration would not tolerate a privileged sanctuary in Manchuria, and that "the fighting might, to the aggressor's peril, soon spread beyond the limits and methods which he had selected." It seems reasonable to conclude that this warning—that the United States would follow a new strategy of initiative—had a decisive effect on ending the Korean war.

Next, Secretary Dulles attempted to codify this successful strategy for global use, so that Red China and Russia would not again be tempted into new Koreas in other parts of the world. In a speech explaining the policy before the Council of Foreign Relations on January 12, 1954, Dulles referred to a secure, massive retaliatory capacity. He did not mention a concept whereby the United States would meet any scale of aggression by dropping atomic bombs on Peking and Moscow. His point was that we had abandoned the pure containment policy which forced us into the inflexible defensive position of having to meet any aggression by limiting ourselves to the ground rules of the aggressor. At the same time, the strategy sought to improve the position of NATO, the best product of the containment era. The new strategy amounted to a policy of maximum flexibility, firmness, and initiative whereby we would respond to aggression by going beyond the particular limitations, geographical or weaponwise, set by the aggressor. In terms of Korea, for example, he proposed the possibility of striking at the privileged sanctuary of the Red Chinese in Manchuria, if aggression were renewed.

The subsequent public debate, however, took form around a doctrine of meeting all aggression by threatening general war with Moscow, as opposed to a doctrine of meeting all aggression in kind. In short, the public was not debating the Dulles policy at all. What came to be interpreted by certain segments of the public as the Dulles policy of "massive retaliation" was not his policy.

What is more, administration critics seized upon the Indochina crisis of 1954 as evidence that the administration had failed to follow its own strategy, thereby proving its fallacy. The truth of the matter was that it failed to be in our national interest to intervene in Indochina, just as it failed to be in our national interest to intervene in Mexico or in the Dominican Republic in 1861. Mr. Dulles explained on June 11, 1954, requisites for American intervention, assuming Red China did not openly intervene. Intervention would have to be a collective, not a unilateral effort; there would have to be agreement that Vietnam, Laos, and Cambodia would be granted independence. France would have to maintain her forces in the combat. It was not our strategic concept that failed; it was that unilateral action would not have served our objectives. On the other hand, a United Nations Security Council resolution had furnished a legal and common basis for intervention in Korea.

Considering how long it took the Monroe Doctrine to obtain public acceptance and understanding, it is not surprising that the Eisenhower-Dulles strategy is still not fully understood. It is esential, however, that the American public really debate this strategy in its true context of meeting aggression on our terms. Then the public may reach a consensus of opinion and a philosophy of action which will be the first genuine step forward toward understanding an American strategy for the second half of the 20th century. Then the Eisenhower-Dulles strategy could furnish the beginning of a doctrine comparable to the Monroe Doctrine. We will have much less confusion over such things as missile gaps, deterrent gaps, and even about whether to put more emphasis on the Bomarc, the Nike-Zeus, the Polaris, or the aircraft carrier. For the Eisenhower-Dulles strategy coordinates military with diplomatic strategy by asserting we will meet aggression, not on enemy terms, but with the weapons best suited to our purposes. And this focuses on the need to develop the weapons system to our greatest advantage, intead of matching Russian weapons.

XI. STRATEGY REVIEW MACHINERY ON CONGRESSIONAL LEVEL

The policymaking machinery for developing a consensus on a public strategy could greatly be advanced by both political parties in the House and the Senate by following the 1946 recommendations in regard to policy committees of the LaFollette-Monroney Committee on Reorganization of Congress. This committee recommended, as a step toward better party accountability and responsibility, that each party establish policy committees elected respectively by the Members of House and Senate. In matters of great concern to the national welfare, the four policy committees could meet in executive session with the President. While this recommendation was not concerned with a public strategy, the merit of the machinery in this regard is obvious.

What is more, each party policy committee could establish a subcommittee on national strategy. This would bring into one body congressional Members from key congressional committees in a manner they are not brought together now.[31]

Through studies and resolutions from these subcommittees, key issues could be presented to Congress and thereby to the public. Where bipartisan agreement existed between the subcommittees of the two parties in House and Senate, joint resolutions could be issued to articulate aspects of national strategy and unanimity of concepts of deterrence. Differing opinions between the party subcommittees would serve to point up the real issues of debate. As a special benefit of such policymaking machinery, each Member would take back to his particular standing committee (Foreign Affairs, Armed Services, Joint Atomic Energy, Appropriations, Government Operations, etc.) a much enlarged knowledge of the overall requirements of national strategy. This knowledge would eventually be translated into more effective legislative action.

In the century of protracted conflict, it is indeed essential that the Congress and the public reach an understanding of a basic national strategy. When this happens, citizens will begin to view each day-to-day crisis in the larger context of long-range concerns and will surely demand of all politicians a greater effort to see our century, our strategy, and our strength as a whole. Granted, such an attitude would not eliminate the risks. But it would certainly strengthen the national will, reduce the anxieties, and immensely diminish the possibility of all-out war through cumulative evasions of the real alternatives and fundamentals of a public strategy.

[1] G. F. R. Henderson, "The Science of War" (London, Longmans, Green & Co., 1908), p. 174.

[2] The best explanation of Grant's strategy is found in Maj. Gen. J. F. C. Fuller, "The Generalship of Ulysses S. Grant" (London, John Murray, 1929).

[3] Hanson W. Baldwin, in "Great Mistakes of the war" (Harper, 1950, pp. 1 and 2) notes:

"The United States has fought wars differently from other peoples. * * * Unlike the British or the Russians, we have had no grand design, no overall concept. * * *

During World War II our political mistakes cost us the peace. The British and the Russians thought and fought in terms of the big picture, the world after the war; we thought and fought in terms of what we could do to lick Germany and Japan now."

[4] To this question, Max Ways has addressed his attention in the book "Beyond Survival" (New York: Harpers, 1959).

"We have been struggling for survival and we have survived. Success? Our condition does not have the look or feel of success. So we turn the statement: we have been struggling only for survival and we have only survived. * * * To test our policies now, in the short years that count, we need standards beyond survival, beyond the particular perils of any month's crisis, beyond the kaleidoscope of news."

William Y. Elliott and his associates in a study project for the Woodrow Wilson Foundation ("The Political Economy of American Foreign Policy," New York: Henry Holt, 1955, p. 383) appropriately point out a larger implication of the objective:

"Security is not achieved in a world of dynamic struggle by mere defense.

"Successful protection of the national interests * * * means also that, given the nature of contemporary problems and values, these protective or preventive objectives are not likely to be realized except as part of a broader concern to create new institutions and relationships in the non-Soviet world capable in time of achieving and maintaining the economic health, political effectiveness, and defense capabilities of the other free countries."

[5] Arnold J. Toynbee, "A Study of History" (New York: Oxford, 1947).

[6] The Reporter, Sept. 18, 1958, p. 25.

[7] Maj. Gen. J. F. C. Fuller, in his "Second World War 1939–45" (New York: Duell, Sloan, and Pearce, 1949), criticizes Winston Churchill for initiating a civilian bombing campaign against the Germans. This, he claims, violated British self-interest in maintaining Germany as a counterforce to Russia. The politico-military mistake of the Allies, as Churchill constantly pointed out during the war, was not the bombing, but the failure to occupy central parts of Germany before Russia did. West Germany has certainly revived into a counterforce against Russia.

[8] Observed the postwar Strategic Bombing Survey: "Even if the final military victories that carried the Allied armies across the Rhine and the Oder had not taken place, armaments production would have come to a virtual standstill by May; the German armies, completely bereft of ammunition and motive power, would almost certainly have had to cease fighting by June or July." (U.S. Strategic Bombing Survey, "Effects on German War Economy," p. 14.)

[9] Eighteen Atlas ballistic missiles ($226 million) were added to the 130 already scheduled for launching pads by the end of 1962. An additional $86 million was shifted to accelerate development of the Midas, BMEWS warning system, and the Minuteman. $153 million for nuclear reactors and other components needed for six more missile-firing submarines, was added to the Polaris programs.

[10] As Representative GERALD FORD, ranking Republican on the subcommittee explained on the floor:

"Such changes in this fast-moving world are not only necessary but highly desirable. The maintenance of the status quo is indefensible. Adherence to flexibility is absolutely essential for our national security." Commented Representative MAHON, ranking Democrat on the subcommittee:

"The initial request of the President 'was worked out last fall, and in this rapidly moving world it is expected that changes would be made, and we made a number of them, and the Department of Defense made a number of them.' " (CONGRESSIONAL RECORD, May 3, 1960, pp. 8592–8593.)

[12] Johns Hopkins Study on Weapons Technology and Foreign Affairs, p. 109.

[13] See "The Problems of National Security," July 1958, by the Committee on Economic Development, p. 20:

"With national security making huge claims on the Nation's resources, it is indisputably more essential to minimize waste in the use of public funds in both defense and non-defense programs, and to retrench public expenditures that are luxuries we can no longer afford. There must be a new look at non-defense expenditure programs of Government. Since we are facing a protracted period of large defense requirements, what is called for is close examination of the size and character of continuing programs, not temporary deferral of necessary expenditures" (p. 20).

[14] It is interesting to note that in 1952 the Joint Chiefs of Staff reaffirmed that they "consider the general period of 1954 to be the most dangerous for the security of the United States in the foreseeable future." (Report quoted CONGRESSIONAL RECORD, Feb. 23, 1960, p. 2917.) As it turned out, 1954 was not a "dangerous year" at all.

[15] George C. Reinhardt, in "American Strategy in the Atomic Age" (University of Oklahoma, Norman, 1955, pp. 16–17) points out the failure this way:

"Containment gives the Soviets no inducement to settle down. It precludes our creation of pressures which they cannot ignore. We are, in fact, precariously containing our opponents but effectively blocking ourselves. * * * Containment does not meet the Communist challenge. They may and can decide to challenge us at any point or time of their own choosing. We are under permanent threat; they are under none."

Maxwell Taylor in "The Uncertain Trumpet." Also, Henry Rowen in "National Security and the American Economy in the 1960's" for the Joint Economic Committee, p. 44.

[19] U.S. Naval Institute proceedings, April 1959, p. 24.

[20] Comments Hanson Baldwin:

"Exercise Big Slam/Puerto Pine has stressed, as all troop transportation exercises have done, that any attempt to combine mass and mobility adds up to astronomical aircraft requirements.

"The airborne division has 52 light liaison aircraft and helicopters in its organization. These must be disassembled for air transport and the Army now contemplates using a naval aircraft carrier to transport them.

"In Lebanon, a sea 'tail' of about 25 ships was required to back up and support one airborne battle group of about 2,000 men.

"Thus there are many observers who believe that the Army has set its airlift requirements too high and that the concept of total air transportability—the so-called air transportable army—is beyond achievement now or in the foreseeable future.

"Instead of attempting to move masses of troops and equipment by air, the objectives should be the extremely rapid transportation of fairly small numbers of troops—lightly armed and with limited staying power—to any part of the world.

"These fire brigade forces could then be reinforced and supplied, not only by airlift but also by prepositioned stocks of arms and equipment in various parts of the world and by support from the sea.

"Airlift is essential for speed but sealift is equally essential for mass and staying power." (Hanson W. Baldwin, "The Airlift Problem—II," in the New York Times, Mar. 23, 1960.)

[21] In 1827, during the Turko-Grecian struggle, the allies—Russia, France, and Great Britain—had sponsored a truce between the warring powers. When provoked by the violation of that truce, Admiral Codrington, the allied commander, sunk the Turkish-Egyptian Fleet. Despite the tactical action, no war occurred. Or to put it in another way, war was deterred by the British willingness to take fleet action. See David M. Abshire, "The Battle of Navarino," U.S. Naval Institute Proceedings, January 1959.

[22] Surveying in turn the decisive battles of history, we find that in almost all the victor had his opponent at a psychological disadvantage before the clash took place. Examples are Marathon, Salamis, Aegospotamoi, Mantinea, Chaeronea, Gangemela (through grand strategy), the Hydaspes. * * * Austerlitz, Jena, Vicksburg, Koniggratz, Sedan." (B. H. Liddell, "Strategy" (New York, Praeger, 1955, p. 163.)

[25] Dexter Perkins, "The Monroe Doctrine, 1826–1867," Baltimore, the Johns Hopkins press, 1933, ch. 2.

[26] It is interesting to note that after the war was over it was a Republican Secretary of State, Seward, who issued to Napoleon III a declaration supporting the Monroe Doctrine principles, inaugurated by the Democratic Party. France did withdraw; the doctrine regained renewed respect in Europe; the doctrine in America truly became national bipartisan policy. In 1896, incidentally, both party platforms subscribed to the doctrine. (Julius W. Pratt, "A History of United States Foreign Policy," New York, Prentice-Hall, 1955, p. 344.)

[27] "The Doctrine was not a law, not a fiat, but a desideratum. Occasionally there was no opportunity to act effectively * * *. At other times those in charge lacked the understanding, the energy, the skill, or even the will to pursue our fundamental national objectives. None of these circumstances affected either the reality or the validity of the policy itself." ("Diplomacy in a Democracy," New York, Harper, 1956, p. 74.)

[28] Dexter Perkins, "Hands Off." (Boston, Little, Brown Co., 1941, pp. 370–371.)

[29] Although A. Whitney Griswold, in "The Far Eastern Policy of the United States," (New York, Harcourt, Brace & Co., 1938, p. 32) asserts that the debate over the 1899 Philippines problem largely centered on constitutional and moralistic arguments, and not upon American interests in the Far East; Julius W. Pratt, in "Expansionists of 1898" (New York, P. Smith, 1951, p. 350) observes the opposite: for example, Senator Spooner feared possession of the Philippines might involve us with Asiatic powers. Professor S. F. Bemis has termed this phase of diplomatic history, the great American aberration ("A Diplomatic History of the United States," New York, Holt, 1951, pp. 463–475), opinions echoed by George Kennan in his "American Diplomacy 1900–1950" (New York, New American Library, 1951). See differing opinions in Foster Rhea Dulles' "America's Rise to World Power" (New York, Harpers). Whether or not the policies were carried too far in regard to the Philippines, this national strategy, from 1898, through the Theodore Roosevelt administration, successfully guided our rise to world power, gave us security in the Caribbean and in the Pacific through Hawaii, without which we might have incurred war on our very shores. See J. Fred Rippy, "The Caribbean Danger

Zone" (New York, G. P. Putnam's Sons, 1940). The second point is, such a national strategy must be based on a conviction of right, a reasonable sense of moral justification. The fact that morals can be turned into hypocrisy does not mean the cure is to abolish morals and conviction. This Admiral Mahan understood quite well. The best account of Mahan's philosophy and its influence is William E. Livezey's "Mahan on Sea Power" (Norman, Okla., U. of Oklahoma Press, 1947).

[20] Samuel Lubell says, in "The Revolt of the Moderates" (New York, 1956, Harpers, pp. 45–46): "In his conduct of the Korean war, President Truman fought to preserve the concept of a limited war, in which atomic weapons would not be used. The political effect of the 1952 election was to repudiate that concept." And, on p. 39: "The angriest condemnations of the Truman administration from traditionally Democratic voters were provoked by the grievances that rose out of the Korean war—higher taxes and higher prices and the drafting of 'our sons' for a 'useless war.'"

Task Force Report: American Strategy and Strength

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1960

Mr. ARENDS. Mr. Speaker, as part of the "Task Force Studies on American Strategy and Strength," I place in the Appendix of the CONGRESSIONAL RECORD, study papers Nos. 3 and 4, "How Democracies Die," by John H. Stambaugh, vice chancellor, Vanderbilt University; and "An Appraisal of Soviet Economic Capability," by Congressman THOMAS B. CURTIS, of Missouri, member of the Joint Economic Committee, as follows:

HOW DEMOCRACIES DIE

(By John H. Stambaugh, vice chancellor, Vanderbilt University)

The prominent historian, Channing Pollock, addressing a group of teachers observed that most democracies last for about 200 years. They are conceived and developed by simple, vigorous, idealistic, hard-working people who unfortunately with success become rich and decadent, learn to live without labor, depend more on the largess of big government and end by trading domestic tyrants for foreign tyrants.

With the end of the second century of our democracy a short 16 years away, it appears very much in order to examine its political, social, and economic structure, to ascertain whether it contains a unique character which makes it impervious to the lessons of history.

Are our people subject to the same frailties as the citizens of the democracies that died in the past?

Can we overcome these weaknesses and remain the strongest and most blessed people on earth?

Are we willing to stand firmly with the basic American idea that there can be no substitute for individual initiative and productivity?

An indication of weakness became evident when the Soviet rocketed Sputnik I into orbit in October 1957. A strange state of mind seized the United States. We seemed to question our own abilities. Some Senators and Congressmen screamed for sputniks in their Christmas stockings and an ICBM in each garage. The rest of the world looked on in amazement and seriously questioned whether we would demonstrate the same toughness and dedication that we had demonstrated in past international crises.

Fortunately some of our leaders, and in particular the President of the United States, refused to accept the premise that this great Nation could be overwhelmed by the Soviets' material contrivance. This faith was dramatically justified when in a short 4 months, under extreme pressure, Explorer I soared heavenward. Since that time, the scientific value of American achievement in space has vastly outstripped the Soviets'.

THE BASIC DANGERS FOR A DEMOCRACY

However, there are dangers other than the fantastic space-age weapons, dangers much more persistent and insidious. These dangers are two:

One from without—Communist ideological and economic penetration.

The other from within—the loss of our individual freedoms by a willingness to let the central government be all things to all people.

If we use our resources positively and wisely we have within the framework of free enterprise capitalism all the tools necessary to demonstrate to the world the fallacy of the Communist doctrine of absolute economic and social control by government.

Surely the system which permits our 6 percent of the world's population to produce and consume 40 percent of the world's goods can win this struggle. This system can win, if its exponents practice what they preach while investing our capital abroad and trading throughout the world. It can win if we refuse Government subsidies and protection, welcome competition, and support the sovereignty of the market. It can win the struggle with Communism if its people have the will.

THE DANGER FROM WITHIN

It is the second danger which is the more frightening, the danger from within. Among our citizens an attitude of dependency on Washington has developed. This trend toward "Let Uncle Sam do it" argues in effect that only Federal bureaucrats and their intellectual associates are wise enough to tell us how we attain "life, liberty, and the pursuit of happiness." We have come to depend on the Central Government to finance many of our responsibilities which we should assume in the home or at the city and State level. While doing so, the Federal Government inevitably lays down the rules of the game. This trend can lead only to the weakening of the American family and of our State and local governments and hence to destruction of the Federal system.

The liberal editor, John Fischer of Harper's magazine, has pointed out:

"Up till now, at least every nation of continental size has had to be governed in one of two ways: either as a federation or as an autocracy. The coming generation of politicians, therefore, will have to find some way to renovate the idea of federalism and get it back into working order."

If we permit our system to be destroyed, not only will the lessons of history be reaffirmed but Communist Chief Khrushchev will indeed have been a prophet when he said to five visiting U.S. Senators, "I prophesy that your grandchildren in America will live under socialism."

THE WILLIAMSBURG IDEA

The President of the United States, speaking at the Governors' Conference in Williamsburg, Va., in June 1957, gave evidence of his deep concern for the preservation of our way of life. President Eisenhower rang the alarm with the statement, "Those who would be and would stay free must stand eternal watch against excessive concentration of power in government." He then challenged the conference of Governors to join with him in an effort to reverse the trend toward Washington.

The Joint Federal-State Action Committee was thus created by the President of the United States and the Governors of the 48 States as a task force for action—a joint committee charged with three responsibilities:

"1. To designate functions which the States are ready and willing to assume and finance that are now performed or financed wholly or in part by the Federal Government;

"2. To recommend the Federal and State revenue adjustments required to enable the States to assume such functions; and

"3. To identify functions and responsibilities likely to require State or Federal attention in the future and to recommend the level of State effort, or Federal effort, or both, that will be needed to assure effective action."

The conference of Governors readily accepted the President's proposal. For years it had concerned itself with problems of Federal-State program responsibilities, the division of tax revenue sources between the Federal and State Governments, and with emerging problems calling for governmental action—Federal, State, and local. Many State Governors were deeply troubled by the same trend which so concerned the President. The conference, accordingly, authorized its chairman to appoint a committee of Governors to serve with Federal representatives chosen by the President on the Joint Federal-State Action Committee.

It is interesting to note that this is the first time in our history that a President suggested action be taken to reverse the growing trend toward reliance on the central authority for services to our people far beyond the responsibilities originally intended for assumption by the Federal Government.

The initial phase of this mission was a limited one. It was to recommend that action be taken to shift a small number of governmental functions and revenue sources from the Federal Government to the States and to define more clearly certain responsibilities that might continue to be shared by Federal and State Governments. The purpose was not to accomplish the whole job, but merely to demonstrate that a long-term drift to governmental responsibility toward Washington is not inevitable.

OPPOSITION TO LOCAL INITIATIVE

Many with overdeveloped senses of Federal responsibility reacted strongly against this move by the President. They protested that the complexity of our society requires the Central Government to concern itself more and more with the welfare of the individual citizen. In turn they argue that State and local governments are poorly organized and unable to finance adequate public services. Yet rather than join in a realistic examination of ways to revitalize State and local governments, these opponents fall back on a familiar plea that the Central Government solve all problems on a crash basis. What these so generous people fail to acknowledge is that each time the Government assumes responsibility for our personal economic and social welfare, we take another long stride away from those principles which have permitted us through individual initiative to become the most privileged of the earth's people.

Unfortunately, even the President of the United States joined by a committee of the Governors of the sovereign States, was unable to do much more than slow down the trend

toward more dependence on the Central Government. Northern Democratic Governors from highly populated and rich States resisted the effort. In spite of the protest of some of the more moderate in that party and the Republican Governors, mostly from the Middle and Western States, the centralist view prevailed. The northern Democrats prevailed because the traditional States rights Democrats of the South had been so seduced by the Federal dollar that they refused to take back to the States the responsibilities which must be assumed at that level if the term "States rights" is to be anything more than just that—a term.

The simple fact is that for every dollar of Federal aid, the citizen who believes in State sovereignty forfeits a dollar's worth of States rights. It is entirely logical that Federal control follow Federal funds. This has to be because when a Congressman from New York votes to support a project for Tennessee, he has a right to say something about how the money is spent. His constituents after all are paying their share of the bill.

OTHER PROBLEMS

There are other evidences of this voluntary weakness on the part of our people. The great moderate masses of our society have withdrawn from the political scene as a consequence of the very abundance which our free system has provided, the blessings of education and the advances of technology. The professional and businessman, the technician, the white-collar worker, the highly trained and productive operator of our massive machines, all enjoy a way of life which leads them to prefer to be left alone. The businessman is restrained from political participation for fear of public criticism or the loss of a customer, not understanding that it is much better to lose a customer than to lose the climate which permits him to make a profit.

In the meanwhile, highly militant and well-organized minority groups control the body politic.

The overwhelming desire for security rather than for opportunity on the part of our young people has been encouraged even by our great corporations. Recruiters visiting the campuses of our universities no longer challenge the young American male with opportunity, but instead with what is going to happen to him 45 years hence. This young American with a mind like a sponge and muscles of steel then is tempted to enter the competitive world looking for a pension rather than a risk, little realizing that his forefathers who developed this great country were risk-takers above all else.

CONCLUSION

The historical cycle of the body politic indicates that man progresses from bondage to spiritual faith—from spiritual faith to courage, from courage to freedom, from freedom to abundance; and then comes the warning, from abundance to selfishness, from selfishness to apathy, from apathy to dependency, and from dependency right back into bondage again.

It does not require the talents of the highly trained political scientist to show us where we are in this sycle. It only requires a little serious thinking on the part of any reasonably intelligent citizen.

Certainly all thoughtful people must agree that if the system we cherish is to survive we must learn to understand that democracy is more difficult to maintain than to attain. Only by our individual efforts can we be sure that the lessons of history do not catch up with our Republic.

An Appraisal of Soviet Economic Capability

(By Thomas B. Curtis, Congressman from Missouri)

One of the most vital aspects of the long-run competition between the United States and the Soviet Union is the economic one. With both sides likely to abstain from any all-out and mutually destructive military clash, the more subtle and basic contest of economic strengths comes to the fore.

Following the ancient axiom, "Know thy enemy," it is incumbent on us to appraise accurately the Soviet's economic capability.

THE JOINT ECONOMIC COMMITTEE'S STUDIES

In November 1959, the Joint Economic Committee's Subcommittee on Economic Statistics held panel hearings based upon 31 study papers on comparison of the United States and Soviet economies prepared by some of the leading students of Soviet Russia's economy. The publication of these series of papers by the subcommittee was described by Prof. G. Warren Nutter as "more complete and covers more ground, than any other such publication I know of." These papers and the hearings on them have been widely acclaimed by students of the Russian economy.

However, the subcommittee failed to issue a report to the Congress and to the people of the United States based upon these materials and other materials available to the subcommittee upon the important subject of Soviet economic capability.

The failure of the subcommittee to make a meaningful report to the Congress has left this subject shrouded in unfortunate ambiguity. In some quarters there is shrouded in unfortunate ambiguity. In some quarters there is a tendency to exaggerate the economic progress and potential of the Soviets. Apparently there are those who have found fear of Russia to be an effective emotional appeal to gain popular support for particular political objectives.

IMPORTANCE OF ACCURATELY APPRAISING SOVIET CAPABILITY

Presenting Russia's economic achievement through a false magnifying glass has two extremely damaging effects upon the United States. The greatest damaging effect results from unintentionally aiding and abetting Soviet Russia's own propaganda among the uncommitted nations concerning her prowess and the superiority of the Communist system over the private enterprise system. Indeed, Russia would not dare make some of the extravagant claims of achievement that some Americans make for her in an effort to frighten the United States into a course of action which, in a calmer context, would never be considered seriously.

The second damaging effect is undue complacency in the public mind, when the people find that exaggeration has been employed. It is true that we are in a tough economic competition. This being the case, our people need to know the true picture of the adversary we face. If an exaggerated picture is later discredited, undue complacency is sure to follow.

The best course and the course of wisdom is to seek the truth as best we can. We should neither overestimate nor underestimate an enemy. There is much room for honest dispute even among experts who undertake to appraise Soviet economic capability.

For this reason, it was appropriate that the Subcommittee on Economic Statistics undertake the appraisal of Soviet economic capability inasmuch as one of the greatest limitations we have in this undertaking is that of our economic measuring devices.

LIMITATION OF THE STATISTICS

Even before we examine the limitations of statistics for finding the truth about Russia's economic capability, we must recognize the limitations we face in determining what is the economic capability of the United States. It is generally recognized that the economic statistics of the United States are the best in the world. Yet the Subcommittee on Economic Statistics is constantly confronted with the inadequacy of our own economic statistics in measuring economic factors which are fundamental in determining economic capability, such as total plant investment and capacity; human skills available by accurate nomenclature and number; productivity figures in various industries, and especially for the economy as a whole; convertibility of plant, equipment, and skills from civilian type operation to military oriented operations; and many other data. Even such a simple concept as the cost of living involves problems of measurement which have been often debated by scholars appearing before the Joint Economic Committee.

We in the United States have no statistical series that really measure the industrial, transportation, communications, raw materials, human skill capabilities. There are no series that can measure the extent of the organizations that relate human skills to plants and machinery. There are no real figures that give us a clear insight into productivity. There are some figures of capabilities in a few of our industries. We have some data on steel capacity and capacity to produce some basic metals and raw materials, but these are indeed raw figures and certainly we have little breakdown information for example in steel production as to shapes and forms, grades, etc.

There are some productivity figures by individual industries, but even these are quite limited and before these figures are usable they need considerable interpretation. It is because our statistics in this direct area are so limited that we have resorted to such broad statistical series as gross national product to try to measure economic capabilities.

Certainly we know by just a casual analysis of the gross national product indicator its great limitations in measuring the economic capabilities of a soicety. Yet the gross national product indicator is probably the most meaningful indicator we have.

The limitations of gross national product as a device for measuring economic capability might be partially listed as follows:

1. It measures yearly effort not capability.

2. It measures waste product and economic mistakes equally with sound economic production.

3. It does not suggest the real significance of research and development, education, discoveries, and breakthroughs.

4. It unduly weighs newly built capital plant, heavy industry, and industrial products in relation to other equally important economic factors which go to make up economic capability.

5. Increased productivity can receive a negative weighting (e.g., eliminating a long transportation haul by building plant and raw material source closer together will decrease its contribution to gross national product).

These and other limitations affect our own measurements of gross national product as well as other countries. But when we look at the further difficulties in measuring Soviet capability, the problems increase. Testimony before the subcommittee was quite explicit on this problem.

The statement of Robert W. Campbell, University of Southern California (p. 33, hearings), noted as follows:

"The statistics of any nation have their parochial distinctiveness, but those of the Soviet Union are particularly difficult to compare with those of other countries. Because they are used to glorify as much as to illuminate, the numbers released by the Russians tend to be ambiguously defined and subject to change in meaning over them. Obscurities in meaning might be clarified, were there an abundance of data because of the many interrelationships existing in any fabric of statistical economic description. But the statistical raw materials for the Russian side of comparisons

are unfortunately sparse as well as ambiguous."

Hans Heymann, Jr., economics division, the Rand Corp., Washington, D.C. (p. 31 of hearings), stated:

"In the last 3 years the Soviet authorities have released more statistical information about their own economy than they have in the preceding 20. The new data fill some gaping voids, afford us greater opportunities for checking internal consistency, and provide a somewhat more rounded picture of Soviet economic development. But the new data are still a long way, indeed, from meeting what would be considered in the Western World minimum acceptable standards of statistical adequacy. Thus, despite its recent easing, the restrictive and propagandistic Soviet information policy continues to impose on us a heavy burden of statistical compilation, interpretation, and verification, and seriously impedes our ability to reconstruct a reliable, balanced, and undistorted statistical image of Soviet progress."

Therefore in making any appraisal of Russia's economic capabilities we must do a great deal more than usual in checking internal statistical inconsistencies.

THE TRICKY QUESTION OF ECONOMIC GROWTH

Thus far we have not yet alluded to the further statistical problems which arise when we get into the area of economic growth.

Economic growth rate based upon gross national product figures is an even more dangerous method of estimating economic capabilities and yet it is the growth rate that has become the basis of much present misconception in evaluating Russian capabilities vis-a-vis U.S. capabilities.

The limitations on the use of rates of growth measured in gross national product might be listed as follows:

1. A rate depends upon the base from which it starts. The smaller the starting base the more rapid the rate in the initial stages and the slower the rate in the more mature stages.

2. Economic growth has a real relation to the maturity of an economic society. This relationship has been inadequately studied, but it is nonetheless real. The more mature an economy the less the rate of growth measured in gross national product.

3. The limitations of gross national product as a measuring device listed above become even more limited, indeed, almost antithetical, when placed into the rate of growth measurements. For example, investment in capital plant for heavy industry shows up more heavily than anything else in gross national product and accordingly an emphasis upon growth in this area will make the overall growth rate look high. Yet sustained growth depends upon a broader economic development. It particularly depends upon great sums of investment going into research and development and into education which show up poorly in gross national product and growth figures based on gross national product.

4. Productivity increases upon which much future sustained growth is based, frequently show up as a negative in growth rates. Furthermore, labor efficiency as one of the bases of productivity increase, is dependent upon such things as health improvements, better housing, more education and training, and other things frequently and falsely referred to as consumer items and luxuries.

5. An industrialized country recovering from war damage to its industry will show very rapid growth rates which show up some time after the actual plant replacements. It is more than a coincidence that the industrialized countries of World War II which had extensive war damage are in the countries showing the very rapid rates of economic growth. Russia is merely one of this group.

The economists testifying before the Joint Economic Committee over a period of years have made the valid point that economic growth per se is almost meaningless. The tests to be applied are where is the growth needed for a well balanced economy and where has it been occurring. The U.S. gross national product is higher in one sense than it should be because of unwanted farm production. How silly it would be to have more rapid growth measured in gross national product occurring in that area. Does the United States need more steel production? More oil? What does Russia need? It is in respect to the specific areas of an economy that we are most apt to find our answers to present economic capabilities and meaningful projections into the future.

To the extent that overall economic growth rates are of any value, it is worth noting that as respected and cautious an economist as W. Allen Wallis stated without equivocation recently:

"In short, there is no possibility that the Russian economy will overtake ours, at any time in the visible future—certainly not in this century."

SOME IMPORTANT QUESTIONS

It is clear that the Soviet Union poses to us a challenge, economically. However, any serious appraisal of Soviet economic capability must raise certain questions which have too often gone unasked.

For example, how much of an economic plant did the Communists simply take over from the prerevolutionary regime? Our Director of the Central Intelligence Agency, Allan Dulles, made an interesting observation on this point during the joint committee's hearings (p. 4):

"The year 1913 is taken as the base for many Soviet studies and claims. The Soviets try to picture prerevolutionary Russia as the economic counterpart of black Africa today. The official myth about the relative backwardness of imperial Russia has been deliberately created so that Communist economic achievements will appear to be even greater than they have been. * * *

"The weight of the evidence, as I see it, would peace prerevolutionary Russia as the sixth or seventh largest industrial power of its time, though it is true it was relatively backward by then existing Western European standards of per capita output."

Another key question is how old is Russia's economic plant? Some of it dates back to the czars, particularly in agriculture and housing. On the other hand much of it is quite modern, particularly that which constitutes a replacement of World War II destruction.

How balanced is its economic plant? This is the area where I believe any fair analysis will show that not only is Russia far behind the United States in gross figures, but even farther behind in the area that must be developed if she is to catch up. She has built the plant that shows up the largest in gross national product indicators and neglected that which does not show up.

It is worth examining three specific industries each of which is crucial to an appraisal of economic capability, especially as it relates to the question of balanced capability. These industries are transportation, communication and power, and housing.

TRANSPORTATION

One of the weak links in the Soviet economy is the transportation system.

In transportation Russia has so throttled her economic growth that her economy can be described as a string of beads. The string is her railroad lines and the beads are the industrial plants strung on it. Move off the main rail lines and you find no industry. Russia's transportation is over 80-percent rails and the rails have no feeder lines or feeder highway system. Even the length of her trackage is a small part of the United States and yet she has three times the distance to cope with. She seeks to overcome her transportation bottleneck by a more extensive use of what she has, but primarily she seeks to overcome it by subjecting the shipper to the needs of the transportation system—a cramp which our producers would regard as unthinkable.

Russia apparently has little plans for immediate building up of her transportation system, weak as it is, except through a stepped-up program of dieselization of her locomotives. The transportation system is so weak that it is doubtful if she can have the production she claims she has in other sectors of her economy.

Such a transportation system renders the Soviet economy brittle. Consider the vulnerability to military attack such limitations and rigidities mean. Furthermore, her usage of her rail system is probably over 100 percent, which means that there is not the shutdown for necessary maintenance. In the long run this eats into the capital investment itself and can only be replaced by calling upon the rest of the economy to produce more rail equipment than would be necessary if proper maintenance practices were followed.

Relate this picture to U.S. transportation. The U.S. transportation system is so widespread and filled with variety that it gives amazing flexibility to the rest of the economic plant, including mobility of labor. It is being used at well below capacity. These characteristics minimize the destruction and disruption that can come from military attack but, even more important, give an economic capability that probably could be tripled in the event of mobilization.

COMMUNICATIONS AND POWER

The same story exists in regard to the other lifelines of a modern industrial economy—communications and power. Russia's communication system is not even on a par with her transportation system. U.S. communications system is unparalleled in extent and flexibility anywhere.

The story on power shows a similar vast disparity between Russia and the United States.

In 1958 Russia had a total generating capacity of 53 million kilowatts. The same year the United States had a capability of over 167 million kilowatts.

In 1959 Russia jumped to 59 million kilowatts.

During the same period the United States jumped to 183 million kilowatts.

Russia's announced goal for 1965 is 110-112 million kilowatts.

The United States is expected to have about 245 million kilowatts in 1965.

One of the important aspects of power is its usability, and this depends to a large degree upon transmission lines.

At the end of 1957 the total length of transmission on lines of 35,000 volts and above in Russia was about 46,485 miles.

In the United States the same year the total length of lines 35,000 volts and above was 240,000 miles.

These facts should be viewed in the light of the knowledge that Russia has at least three times the distances to be covered as the United States.

In 1958, 80 percent of the power generated in Russia was devoted to industry and construction. Only about 16 percent went for rural and residential use.

In 1959 Russia produced 1,161 kilowatt-hours per capita.

In 1959 the United States produced 4,481 kilowatt-hours per capita.

The average home use of electricity in Russia is about 400 kilowatt-hours a year.

In the United States the average home use of power in 1959 was about 3,550 kilowatt-hours per year.

But even in utilization of personnel in the power industry itself (which Russia has upgraded well ahead of almost any other

industry) we find some startling contrasts—as we should expect when we analyze the health, housing, and educational standards of Russia. From 1950 to 1957 the number of personnel per megawatt of installed capacity was reduced from 9.6 to 5.6 persons. By 1958 in the larger power stations with a capacity of 500,000 kilowatts or over, the number of personnel was 2 to 2.5 persons per megawatt of installed capacity. In the United States, according to the Federal Power Commission, the large coal-burning plants built during the la st decade require from 0.2 to 0.5 employees per megawatt of plant capacity.

Available power is a good indicator of overall economic strength of a society. Certainly it relates to potential use of the overall economic plant, flexibility, and mobilization multiplier.

HOUSING

Adequate housing is not just a matter of nice living—it has a direct relation to worker efficiency and productivity. Worker health also is related. Certainly electric power in the home has real bearing on worker productivity if for no other reason than it permits home study. Vacations and the 40-hour week were adopted in the United States for reasons of increased productivity as well as the well-being of the human being.

It is foolish to speak of America's high standard of living as if it were merely a matter of luxury and were not directly related to worker productivity. It is this high standard of living that produced worker productivity. Furthermore, it is no cliche to state almost as an axiom that freemen have greater efficiency and productivity than slaves.

Furthermore, overall national good housing means greater worker mobility and worker mobility is important in keeping any economy dynamic. It seems strange that all the reasons we have used to persuade our people to increase their standard of living which we have rightly related to economic productivity are completely forgotten by some of our American scholars in their evaluation of Russia's economic capabilities.

LIMITATION OF A CONTROLLED ECONOMY

Shortcomings of the Soviet economic capability in the fields of transportation, of communications and power, of housing—these evidences of gross imbalance tend to blur the image of Russian economic power.

Socializing and economy does not eliminate economic mistakes; it merely buries them from view. The cost of the economic mistake is bound to have its effect somewhere. This is illustrated by the interesting fact that Russia has not cared to develop a realistic system of cost accounting. This stems either from a belief that costs are not real or from a more cowardly and cynical approach which seeks to thwart the truth by hiding from it. We have the same problem in our society in dealing with the Military Establishment. There seems to be an inherent faith that dollars are not devices for measuring manpower, material, and the business processes of putting the two together.

There are those who argue that a dictatorship makes fewer economic mistakes than a free market economy because the dictatorship knows what it wants to do and accordingly can short-cut the economic process. Their misconception arises from two fundamental errors: (1) A misunderstanding of the essence of a free market economy; (2) a misunderstanding of how our own military establishment fits into our free market economy.

The essence of a free market economy is that it is a laboratory, testing new ideas, new products, new processes. It is through this kind of testing that mankind, under our free system, moves ahead into the unknown.

Certainly an observant dictatorship may benefit from the experiments being conducted in the laboratories of free societies. This is a parasitic relationship, however, which will always keep it second best. Furthermore, the very failure to establish a laboratory to test new economic and social ideas which is inherent in a totalitarian government where political and economic power is merged, is fatal.

The second misunderstanding is shared by an altogether too large body of American thinkers. They do not distinguish clearly the fundamental difference between our military institution and our civilian society. The systems are antithetical.

This is in the nature of the case. An effective military organization is bound to be based upon principles fundamentally opposed to those of a free and growing society. And yet, to protect that society we must allow for coexistence of a military organization. Our code of military justice has been in essence a common law code, not a statutory code, evolving from centuries of battle and experience. When, after World War II, we tried to introduce elements of the civilian code of justice, we destroyed a good military code and ended up with something that was neither good for the soldier nor the civilian.

Actually the military institution can exist and should exist as a separate system, restricted to military matters. The difficulties arise when we extend the military jurisdiction into areas where military organization is not necessary to achieve the results.

THE REAL NATURE OF THE THREAT

Russia's economic capability shows severe limitations on close inspection. However, it is precisely because she has channeled her strengths so single-mindedly into certain areas that she constitutes a threat.

In testimony on the last day of the Joint Economic Committee's hearings, in a colloquy with the witness, Mr. Lovestone, I pointed out what I believe is the nature of this threat. (p. 223):

The question is how much of that system which seems to me so lopsided can be set up to transmit power into a military machine which could be a threat and, secondarily, how much of that power can be set up and transmitted through the machine of subversive devices * * *.

"Nazi Germany's system in the long run could not prevail. Yet by channeling its efforts into a military force, it came very close to taking over systems that were better suited in the long run to prevail.

"The result would have been disaster and I think that is the very point to watch for."

Russia is a threat to us, of course, in a military way, just as every man, regardless of his size and physical prowess, became a threat to every other man when the pistol was perfected. In gangster language a pistol is referred to as an equalizer because it made the little runt equal to the biggest and most powerful male. So atomic bombs are in effect equalizers among nations which have atomic bombs and the ability to deliver them.

But should the strong man be afraid of the little man if both have guns? He has to look at things a bit differently, but it is spiritual values that are the test of whether he is or is not afraid, not weapons.

The real threat to America is ideological. If we believe in the private enterprise system then we must understand it and promote its philosophy. The facts of history and of the present day demonstrates beyond much doubt that communism is self-defeating. To the extent that we in this country have abandoned some of the basic features of the private enterprise system by substituting political bureaucratic or industrial oligopolic decisions for the decisions of the marketplace—and we have—to that extent we have weakened ourselves. Herein lies our danger, not Russia's economic capability.

Task Force Report: American Strategy and Strength

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 20, 1960

Mr. RHODES of Arizona. Mr. Speaker, as part of the Task Force Studies on American Strategy and Strength, I place in the Appendix of the CONGRESSIONAL RECORD, study papers Nos. 5 and 6: "International Tension and National Defense," by Robert G. Neumann, director of the Institute of International and Foreign Studies, University of California at Los Angeles; and "Key Factors in Future Military Planning," by Adm. Arthur Radford, retired, former Chairman of the Joint Chiefs of Staff:

INTERNATIONAL TENSION AND NATIONAL DEFENSE

(By Robert G. Neumann, director, Institute of International and Foreign Studies, University of California, Los Angeles)

Tension is the watchword of our times, and it is therefore perfectly natural that much of our thinking should gravitate around the problem of how that tension might be reduced.

In this connection, however, it is sometimes overlooked that tension is not only the result of certain situations and policies, but as far as the Soviet Union is concerned, frequently is policy in itself. Tension favors subversive activities; it encourages conditions in which the wildest rumors flow freely and authority is undermined. Tension favors revolutionary activities in which Communist movements may try to tie themselves to, and infiltrate, revolutionary movements which in themselves may be quite non-Communist and even anti-Communist.

In the realm of diplomacy, tension is frequently and deliberately engendered by Soviet policy in order to place impending negotiations under great pressure. And when tension is then allowed to decrease slightly—in as artificial a manner as it was originally increased—an actual gain for the Soviet side may be made to appear like a concession merely because it is perhaps somewhat less extreme than that which the Soviets demanded at the height of the crisis.

This technique has been invariably pursued before every major international conference, and the exploitation of the U–2 incident and the blowup of the Paris summit conference are merely another evidence of this policy of tension, although undoubtedly not the only explanation for this latest Soviet step.

Because the creation and manipulation of tension is an important Soviet policy, one cannot assume that it will be readily abandoned. No country feels inclined to give up a policy which is clearly in its own best interests. Hence, it must be clear that Western concessions made entirely or primarily for the purpose of reducing tensions are fruitless. The Soviets may indeed permit tension to die down on one issue only to arouse it again somewhere else or even in the same area where and when it meets their purpose. Western concessions to the Soviet Union can be very much in point where they are met by concrete, realizable Soviet counterconcessions. They are a pointless abandonment, however, where they are merely designed to insure Communist good behavior. Such a policy of abandonment without quid pro quo tends to create an unending opportunity for blackmail, making it possible for the Soviet Union to demand in

effect, "What will you pay me for not kicking you around?"

EFFECTS OF STRUCTURAL CHANGES WITHIN RUSSIA

A number of observers have expressed the view that tension in the world might relax as a result of certain important structural changes occurring within the Soviet system, and that it might be possible to return to the more realistic methods of power politics and classical diplomacy in relations with the Soviet Union, free from the pressures and the smokescreen of ideological considerations. Mr. Walter Lippmann, in particular, is to a considerable extent a proponent of this interesting analysis.

Now it is an unquestionable fact that important changes have occurred in the Soviet Union. Since the end of the Stalin era the living standards of the Soviet people have considerably improved, and the coercive machinery of the state, while still formidable, is now less in evidence and its forays less deadly then they used to be. There is also the beginning, or perhaps the potential beginning, of a certain amount of decentralization. In addition the eventual rise of a new managerial class with some relatively independent ideas, lately comparable to a middle class, cannot be excluded.

It is however, in my opinion, a fundamental error to believe that only the Stalinist version of communism constitutes true communism and that all important modifications indicate a departure from communism itself. Just as the capitalistic or free enterprise system of the 19th century, the century of heavy capital accumulation, was very different from the free-enterprise system of the 20th century, so the communism of Stalin's era of capital accumulation and brutal buildup at any price is different from the communism of Khrushchev. For all its structural changes, Soviet communism has given up none of its theoretical claim to infallibility, nor its messianic fervor, nor its unabated desire for world domination.

Nikita Khrushchev has been most explicit on these points, and to believe that he does not really mean what he is saying when he speaks about the aims of communism, is as dangerous as it was to disbelieve the words of Adolf Hitler about the aims of nazism.

There is perhaps this much to the abovementioned theory: It the improvement of the living standard within the Soviet Union is permitted to continue, if the internal security mechanism is further relaxed, if the process of decentralization is pursued, then it is conceivable that at some time in the distance future the Government of the Soviet Union may not be quite so free to embark upon an aggressive policy, because its people may have acquired too much of a stake in a peaceful development and may have acquired some means of impeding such a Soviet Government policy.

But surely nobody would argue that this is the situation now. Whatever the possibilities for the future, the structural changes in the Soviet Union are in their infancy, and the Soviet Government and the Communist Party high command have every opportunity to arrest this development and to reverse the course should they so desire. Hence, these changes in the Soviet Union, whatever their potential future significance, do not have much of a bearing on the present crisis.

EFFECTS OF RELATIONS BETWEEN RUSSIA AND CHINA

Another area of intense speculation is that of the relations between the Soviet Union and Communist China. It is sometimes suggested that these two rash countries are likely to have a falling out before long. From this expectation, some draw the conclusion that we should have a much softer policy toward the Soviet Union in order to separate her from China, while others feel that we ought to ease Red China's road into the United Nations and to general recognition in order that she may speak for herself rather than through Russia.

Now it is quite true that a considerable body of evidence is available, indicating tactical differences between Russia and Red China. During my recent travels in the Middle East and north Africa I have come across quite a number of such instances. It is, however, only too easy to exaggerate these differences.

The evolution of communism in the Soviet Union and China is in two entirely different phases in the two countries. Moreover, due to its size and significance, China never was and has never been treated like a Soviet satellite.

To this must be added the fact that in the Communist family Mao Tse-tung is the last of the remaining great founders and his position in the evolution of Communist theory is more comparable to that of Lenin than to that of Khrushchev. It is also undeniable that Mao's theory and Chinese Communist practice have powerful attraction in Africa and especially Asia, where the Chinese are regarded as fellow Asians, and the Russians, after all, as Europeans. Also Mao's theories on revolutionary warfare have been required reading in areas of revolutionary or colonial struggle, especially in the prisons which have bred leadership of anticolonialism.

The Chinese Communists are feeling their oats, and in their doctrinaire rigidity they often enjoy the support of those Eastern European Communist leaders like Walter Ulbricht who, because of the weakness of their support, instinctively fear and distrust any relaxation of Communist control. Thus there is considerable material for conflict and diversion of views between the Soviet Union and Communist China.

But in their search for expansion these countries need not be in each other's way for a long time to come, and their leaders are far too intelligent not to see that any serious conflict would be bound to benefit that Western World which they both regard as essentially hostile. It would therefore be more realistic to regard the conflicts between Russian and Chinese tactics as comparable to the differences of views which exist between the United States and Great Britain, rather than to indulge in the idle hope of a major conflagration.

IMPLICATIONS FOR U.S. DEFENSE POSTURE

For these reasons it might be concluded that while the aspects of the struggle between communism and the free world may be subject to occasional variations, the conflict itself remains unabated. It is a long-range conflict and our policies and defense posture have to assume the same long-range nature.

This means in particular that our defense needs must not be assessed in terms of a given crisis. Certainly it must be clear to everyone that in view of the complex nature of modern military equipment, especially in electronics and rocketry, any step-up in expenditure could have practical results only years hence, and therefore could not possibly have a practical bearing on a crisis which has already broken out.

Our defense needs have to be assessed for a variety of crises. And, as the long-range forecasts must take into consideration the likelihood of continued, though perhaps, intermittent tension, our defense level must be an appropriately high one. In determining the desirable level of our defense effort, we must take into consideration the probable nature of any conflict that might break out. This means, in particular, that we must face the fact that we are politically and psychologically incapable of striking the first blow. Our defense posture is therefore determined not by a pointless counting of missiles, but by our capacity to absorb the first murderous blow and reserve enough retaliatory capacity to strike decisively against the enemy. In other words, our defense, no matter how strong or weak in numbers of missiles and other equipment, can serve as a true deterrent only if the potential enemy realizes that we have the means to protect enough of our weapons, of our means of delivery, and of our population to return to the fray and deal him punishing blows. The very variety of our means of delivery is therefore in itself a strategic advantage which makes it more difficult for a potential enemy to bring us to our knees in one destructive blow.

It is, however, necessary that we take a hard second look, not only at our much publicized, probably too much publicized, missile program, but also at our means of protecting the missiles against a first attack, and in particular at our system of civil defense. Because our ability to protect at least a large portion of our population from possible destruction is an integral part of our defense posture and our deterrent capacity, it seems highly doubtful that this important sector of our national defense should be left to a largely voluntary effort.

IMPLICATIONS FOR DISARMAMENT

It is a common saying that an armament race leads to war. Historically this generalization is far from correct, but it is nevertheless true that an arms race does increase tension and make for general fear and uneasiness. It is therefore obviously in our interest to reduce or even eliminate the arms race if that were posible. There is little doubt that the peoples of the world profoundly hope for such a course. And in an era where the struggle between East and West is also, to a very large extent, a struggle for the minds and the decisions of largely uncommitted nations and peoples, this desire for disarmament cannot be lightly dismissed.

But whether we like it or not, we cannot afford to lose sight of an unpleasant, but nevertheless very real fact; that the uneasy peace of our time, the fact that despite all tension and provocation, full-fledged war is not likely to break out, is primarily due to this "balance of terror" which has made it very unsafe for an aggressor to unleash atomic war. If, by the same token, disarmament were to be undertaken in such a way as to gravely upset this balance, either by being too unilateral or by being too uncontrolled, then such action would not be a step toward peace, but would, quite on the contrary, immeasurably increase the fearful danger of war.

Because of the highly complex nature of this "balance of terror," because of the high complexity of modern defense systems, any suggestion toward immediate and total disarmament, such as Mr. Khrushchev proposed, is revealed as unserious and as pure propaganda. The only serious and possible form of disarmament is a gradual and controlled one.

This is also the course of action which our delegation has pursued at the 10-power Geneva disarmament negotiations. We have suggested that disarmament be achieved through four stages, each of which is to be carefully controlled: That (1) it might begin with a system of regulation and control of existing armaments; that (2) these armaments be limited either at their present level or at a lower one; and that (3) a level of armament be gradually reduced until it is possible to reach the final level; (4) namely, that of disarmament proper. The keyword here is "control" in order to prevent an imbalance which might easily and speedily lead to war or to enforced surrender.

In view of the overriding importance of this point, it would seem that the argument that an "imperfect control agreement is bet-

ter than no control agreement at all" is more than questionable.

LESSONS OF THE SUMMIT

Many people had hoped that the Summit Conference of May 1960 would result in some concrete steps toward disarmament. The brutal breakup of this conference by Mr. Khrushchev has therefore filled many people throughout the world with bitter dismay and dark foreboding.

I doubt that these fears are any more justified than was the unwarranted optimism which preceded this conference. One does not have to be any inverted Pollyanna to say with considerable assurance that the Summit Conference of 1960 never had a chance.

When busy heads of government get together for a few days, they can indeed make important decisions and bridge gaps between their positions, if the original gaps had been sufficiently narrowed in previous conferences on lower levels so that a final decision can close the gap. But when, in exceedingly complex and technical subject matters such as disarmament, only very insufficient progress has been achieved on lower working levels, a miraculous solution at a summit conference is out of the question, or can be achieved only if one side blunders badly. It is equally clear that not enough progress had been made on the problem of Berlin to warrant great expectations.

The breakup of the Paris summit conference should serve, at the very least, to discourage the holding of other summit conferences without an agenda and without essential preparatory work. Let us hope that this shocking experience may help to place greater emphasis on the more traditional methods of diplomacy which, because of their quiet and more confidential characters, are further removed from the war of propaganda, and which, because they take place without the pressure of time that characterizes a summit conference, may have greater chance of success.

A return to the more normal ways of diplomacy will also give us an unparalleled opportunity to test the true intentions of the Soviet Union. For if the Soviet Government really desires agreement on a given subject, it will permit its representatives to make at least some concessions and generally to allow some progress to be achieved. If this is not the case, it ought to be pretty clear that even a summit conference could not clear up the issue, but rather that another gigantic propaganda trap would be in the making.

Progress in diplomatic negotiations is usually very slow; it becomes far slower still when Soviet representatives participate, for their disregard for time can take on oriental proportions. They know very well that being in a hurry is a Western, and especially an American characteristic, and that if you are too much in a hurry to reach agreements you are likely to make all the concessions. Progress, if any, will therefore have to be excruciatingly slow. But if any progress can be achieved by these means, it will be far more real than the ephemeral "spirit of Geneva" or the "spirit of Camp David."

Patience and a calm outlook are therefore of the essence. But our diplomats and representatives will hardly be in a position to exercise this requisite patience, if they are constantly pushed by a nervous and impatient public. The cold war takes place on many fronts; one of its most important is the nervous equilibrium of our people. By our realizing and accepting the fact of life, which means the fact that we shall have to live with crisis, we can all add immeasurably to the strength of our country and help to make it truly invincible.

KEY FACTORS IN FUTURE MILITARY PLANNING

(By Adm. Arthur W. Radford, former Chairman, Joint Chiefs of Staff)

Many factors are involved in military planning, but eight are particularly basic. Their resolution one way or another vitally affects not only our military planning, but our whole military structure.

First, it is well to note what makes a good plan. An effective plan must provide for changes in short-range and even long-range objectives, for shifts in policy as a result of varying degrees of success and failure, for changes in relative strengths and alinements of our enemy and our allies, and for the counterplay of the programs of our enemy and our friends. It must anticipate what a probable enemy can do in the future, and what we will need 2 or 3 years from now. It goes, almost without saying, that it must be both comprehensive and flexible.

Then there are the men who must carry out these plans. This country needs men who are not panicked by problems but men with the wisdom, the intellect, and principle to find solutions rather than faults, to come with aid rather than anger, to encourage and not to discourage, and to do good for the Nation rather than good for themselves.

I believe that today we have such men—in the President, in the Department of Defense, who are making a very real effort to solve the difficult problems with which this country is faced.

I. NUCLEAR WEAPONS

The use of nuclear weapons is what I would call the No. 1 planning factor. Our present military force structures and our war plans provide for integrating nuclear weapons with other weapons in our military arsenal. There has been no change in this policy, nor has there been a change in the conditions which dictated the need for this policy. In fact, if the policy were changed, it would have a tremendous effect on all our forces structures.

General Gruenther has said he feels that if nuclear weapons were banned, it would require our forces to adopt a wall-of-flesh type of strategy. If such a situation can be avoided, it certainly seems foolish to match man for man the regimented military power of the Communist bloc. A would-be aggressor must be made to understand that he cannot hope to carry out any attack, even a surprise one, which would destroy our ability to strike back in a devastating manner.

Briefly, here is how this policy came into being: In July 1953, the President and the Secretary of Defense asked the Joint Chiefs of Staff to reassess our national strategic and logistic capabilities in the light of foreseeable developments and the world situation. The motif for our study took into account many factors: the armistice in Korea, the changes in the military posture of nations and in the regional defense arrangements around the world, and technological advancements, particularly since 1950. Despite familiar Soviet protestations to the contrary, there was no evidence of any fundamental change in Soviet long-range objectives.

After receipt of the JCS study in August 1953, and following discussions in the National Security Council, two basic decisions were made by our President: First, to base our defense program on "preparations for the long pull"; secondly, to maintain "a great capacity" to retaliate by means and at places of our own choosing. These decisions became national policy and the cornerstones to our strategy. Atomic weapons became part and parcel of our military arsenal.

At the top of my list of myths is the one that assumes atomic weapons will remain locked in the barn. I do not believe it. First of all, there is no atomic stalemate. Nor could there be—so long as wars involve humane traits of cunning and wit, skill, and training, and willpower and determination.

Besides, the Soviets have not hesitated to break agreements whenever it has served their purpose. The Senate Judiciary Committee has studied nearly a thousand treaties and agreements in which the Soviets have been involved. Their staff found that in the 38 short years since the Soviet Union came into existence, its Government has broken its word to virtually every country to which it ever gave a signed promise.

A Senator once asked me whether I thought any nation, including our own, would keep modern weapons locked in the barn while it went down in defeat using the equivalent of the flintlock. I had to give him a frank and candid answer: "No, I don't." Atomic weapons, like other weapons, are part of our arsenal. It is imperative that every individual with a role in military planning know and understand that this is national policy.

II. STABILITY OVER THE LONG PULL

Through the decades of American history, our military strength usually had its ups and downs. In case of war, we went all-out for mobilization. In case of peace, we went all-out for demobilization. The peaks depicted our alarm in an emergency; and the valleys depicted our apathy in peacetime. Such is the path charted from Lexington and Concord all the way to Korea. Prior to 1950, the United States liquidated the most powerful military machine in American history, and placed it at such a low level as practically to invite aggression. Even during the first year of the Korean war, we had to more than double our Armed Forces. Again, we paid a heavy price for a swift demobilization, the one that followed World War II.

In the reappraisal of 1953, it was the aim of the administration and the Joint Chiefs of Staff to eliminate forever these cycles of feast and famine. In their place was adopted a defense program based on preparations for the long pull.

Since 1953 strength and defense budget levels have been based on world conditions, on improved military preparedness of other free countries of the world, on improved weapons systems, on better utilization of manpower, on the continued Communist threat, among many other factors. There are, of course, a number of intangibles always to be considered when determining our required force levels. One of the greatest intangibles is just exactly where, when, or how the next shooting war might be forced upon us. If we knew we were going to face a major onslaught in the next 6 months, then we might need additional manpower and appropriations. On the other hand, if we were guaranteed that we were not going to be forced into a war for the next 20 to 50 years, our force levels could be reduced. We cannot guarantee such a course of events and, therefore, must be prepared for the possibility of war.

The provision of adequate military strength is indispensable to our future safety. Moreover, it is imperative that from here on out, our country have a defense program that is reasonably stable—one that is not materially disturbed by every hot and cold effort of an unfriendly nation, or wishful thinking on the part of ourselves or a friendly nation. Large upswings or downswings in force levels have disastrous effects upon defense planning, just as they do on business. Not only is this wasteful but it also involves serious risks which militarily we cannot afford to take.

Stability in all the Armed Forces, stability which is being made possible by the Presi-

dent's program, is probably the most important single defense policy we want to see continued. It permits planning, orderly procurement, and efficient operation. It gives us a defensive posture which is readily appreciated and understood by the rest of the world.

III. COLLECTIVE SECURITY

A third key factor is collective security. Most planners believe in collective security; they understand the need for allies. They realize that the Communists are continuing to work for the piecemeal collapse of our friends, and are doing everything possible to undermine Western defenses. National security policy is predicated on our having allies, and on our giving them selective military assistance in building and maintaining those forces of their own which will best contribute to collective military power..

Our collective security and our retaliatory forces give us what might be termed a "two-fisted defense." Like any good fighter in the boxing ring, there is in one glove a defensive fist to meet, parry, and defend against an enemy's blows. This is the collective defense force—the worldwide system of allied forces which constitute the guard or the shield. American forces are part of that shield. By participating in various regional defense pacts, our forces help dissuade a would-be aggressor from a hostile act which would touch off a war. The other fist is the counterpunch—the fist that can retaliate and strike back. The American portion of the retaliatory fist includes long-range air forces, ICBM's, IRBM's, carrier task forces, and our active striking forces of all services.

IV. ARMED FORCES TEAM

A fourth key factor is the nature and variety of our Armed Forces team. Our ability to defeat the major enemy in a global war depends first of all upon our ability to survive the initial phase of such a war, and then subsequently upon our ability to gain superiority over the enemy.

The initial phase, however, could be the decisive phase, since we, the United States, have to assume that we will not be the aggressors and, therefore, may have to survive a surprise attack. At the same time, it cannot be assumed that a next war will be only a short, violently destructive affair, and will terminate in a period of only a few weeks. Hence, our forces also must be prepared to initiate subsequent operations of much longer duration.

We are not, and must not count too much on one weapon, or one service, or one type of warfare. No one weapon, service, or form of military action is sufficient to meet all our security needs. Specifically, the United States needs highly mobile atomic striking forces and strategic reserves in a constant state of combat readiness. We must emphasize forces for defense of our continental U.S. vitals, and for swift offensive counterblows, plus the necessary forms of military assistance to back up and support our allies, thereby increasing their defensive strength. Our national strategy presently requires and probably always will require the combined and varied capabilities of all the Armed Forces.

V. MOBILITY

If our forces are to constitute a real deterrent, we must be willing, and potential aggressors must be made to understand that we are willing to apply quickly whatever power it may take to defend against Communist aggression. To be able to apply power quickly, we emphasize mobility—the ability to move ready forces rapidly into forward areas to reinforce other forces or to fight unassisted.

Mobility needs better definition. We want mobility, and more of it. But all too frequently there is an inference that more mobility is merely a matter of more airlift and airplanes and ships. The advocates of this say that with more airplanes, we could shorten all our time factors for the moment of our divisions and air groups.

This is rather wishful thinking, for mobility is much more than numbers of airplanes or ships. It is, for example, a matter of bases. In addition to the facilities in an area of projected deployment, mobility is also affected by intermediate staging bases and by the status of our petroleum products, both at the end of the line and at intermediate staging bases. Mobility is further affected by the availability of supporting personnel and maintenance personnel, both at the destination and en route, both during the actual movement and during the logistic followup. Finally, mobility is a function of minimum requirements. It is a matter of paring down requirements to basic minimums lest we destroy the very mobility we seek.

The mobility U.S. military planners must seek is the kind that comes first from streamlining the units to be deployed after the technical services have designed equipment that fits into the mobile concept. These comments are applicable to all the services.

VI. TECHNOLOGICAL RACE

Inherent to our mobility is another factor, namely, first-class weapons and equipment. The main danger we must constantly guard against is our tendency to be complacent. In a sense, this is the most insidious weakness a nation can have. Any conclusion based on the premise that the Soviet scientists and engineers are not as well qualified as ours will not hold water. Because of the Communist capability of enforced concentration on technical skills, there is always the grave possibility that the Soviets can develop in some particular field a weapon more radically advanced than one that we may have. No stone must be left unturned to insure that our rate of technological progress is the best.

All political, military and scientific leaders must help other Americans to understand the great influence that technology will have on the future. This is not to spread alarm, but rather to develop a full understanding of the need for a technological base that is without peer in the world. An increasing portion of our young men must be encouraged to become scientists and engineers, good ones, particularly if we are to develop and support the weapons of tomorrow necessary for survival. Skilled men must be used wisely and not wasted on jobs others can do.

VII. TRAINED, CAREER MANPOWER

Our long-range planning has achieved reasonable stability in numbers within the services. The next step must be to achieve stability of personnel within these numbers—to further reduce personnel turnovers, and increase the ratio of career personnel to total personnel. The governing limitation on the future size and effectiveness of the Armed Forces will not be money, nor weapons, nor research, nor production. The governing limitation will be that of obtaining and holding the qualified people in the numbers we need. Our personnel policies, and our national attitude toward the man in uniform, must be shaped accordingly.

VIII. CONVICTIONS

The final factor has to do with the courage of our convictions and our ability to express and explain the reasons for our convictions. It is obvious the Communists have made amazing gains, largely because they know what they believe, why they believe it, and can explain it. They are educated and completely versed in it.

On the other hand, we who are free have many times been incoherent or have lacked the verbal ability to explain or defend completely what our way of life really is.

Our Founding Fathers established the framework in which freedom could flourish. Those who conceived this Nation, and brought it to life, breathed into it a sense of mission, of destiny, and of progress. As representative government grew, Americans realized that our governmental processes would have to be free of dependence on the few, and rest on the informed cooperation and hard work of the majority. We rejected tyranny, and took up democracy. We became, in fact, the living proof that freedom is the most worthwhile heritage of all.

But this is not a heritage we are able to take for granted. Communism continues to be the major challenge to our way of life. At issue is the true nature of man himself. There are voices which say we live in a world which could be destroyed without notice, that our national values have decayed, that we have no great cause to guide our future history, and thus it is futile to try to maintain feelings of true patriotism and self-sacrifice. This leads, of course, to a newer version of an old saying: "Eat, drink, and be merry, for tomorrow we die." Perhaps this comes from Communists themselves who would like us to think that communism is irresistible.

Yet, the United States, its institutions, its people, and its great progress are refutations of the Communist dogma. Our free system is the complete antithesis of Communist dictatorship. But our Nation must know itself. "We hold these truths • • •"—indeed we hold these noble truths right in our own hands, in trust. If we doubt our mission in the world, we probably will cease to progress. If America ever loses confidence in herself, we will retain the confidence of no one.

Our ultimate strength lies in our faith in God, the same faith that sustained our ancestors against the perils of their time, the same faith that encompasses our greatest hopes for the future.

Task Force Report: American Strategy and Strength

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. LAIRD. Mr. Speaker, as part of the "Task Force Studies on American Strategy and Strength," I place in the Appendix of the CONGRESSIONAL RECORD, study paper No. 7: "U.S. Defense: Policies and Posture," by Dr. Donald H. Ackerman, task force staff:

U.S. DEFENSE: POLICIES AND POSTURE

(By Donald H. Ackerman, Jr., task force staff, formerly on faculty of Western Michigan University, currently on staff of Representative GERALD R. FORD, JR.)

AREAS

1. U.S. defense policies, 1945–52.

2. Long-range goals of U.S. defense, 1953–59.

3. Current issues of U.S. defense policies.

4. U.S. military capabilities—1960 and beyond.

[May 1960]

PREFACE

In a study of past, present, and future defense policies of the United States, so much ground must be covered that of necessity selection of inclusions and exclusions

becomes a great factor. The topic has been divided into four shorter papers which can be used either as entities or as part of the organized whole.

The first, reviewing the history of U.S. defense policies and programs since World War II, serves as a background for the present and compares, in a sense, the approaches of two administrations to the defense picture. Recently, President Eisenhower suggested that such a project be undertaken to show how, when, and why certain issues evolved as they did.

From there, we proceed to an examination of the long-range goals of U.S. defense policy today. Frequently, critics of a program will denounce a specific item without critically examining its place in the total picture. We do have a consistent policy today, and perhaps through an understanding of the long-range elements thereof a better critique of plus and minus factors can be made.

Issues evolving from current defense stature range from the need for personnel increases to the alleged missile gap. Recent indictments of one or more of these by Generals Taylor, Lamphier, Kissinger, Jackson and others must be answered by hard and fast examination of each component as well as the total deterrent picture, rather than merely by stressing the infallibility of President Eisenhower and top military experts.

This total picture is represented by American capabilities now and in the future, taking into account intelligence data, future weapons systems, Russian performance and capabilities, and the future of defense in our world to come.

The recent Johns Hopkins Foreign Policy Research Center report on "Development in Military Technology and Their Impact on U.S. Strategy and Foreign Policy," concluded with the statement that "a relatively stable strategic-nuclear stalemate and a reasonable degree of protection against nonstrategic aggression can be established, provided the United States equips itself with a secure retaliatory missile force and, with its allies, creates strong dual-purpose defense forces backed by readily available reserves." [1]

A close examination of our past record, present posture and future capabilities should convince the thinking public that this protection exists today and will continue into the future.

DEFENSE POLICIES OF THE UNITED STATES, 1945–52

The issues of today are often rooted in the past. While we strive to see present problems in the U.S. defense posture, and look into the future to judge the effect of new weapons systems, diplomatic efforts and defensive developments, many defense policies of our administration are based on lessons of the past—both of a sound or mistaken nature.

On June 30, 1945, the close of the fiscal year 1945, the United States had over 12 million men in its Military Establishment.[2] A war which had cost the treasury around $350 billion,[3] exclusive of later debt interest incurred and veterans benefits paid, was ending. How we came from that point to the isues of today is a fascinating and vital story.

National security expenditures for the period varied from over $50 billion, in fiscal 1953, to a low of less than $12 billion during 1948. Military strength ranged from the aforementioned 12 million to the 1¼ million plus manpower figures at the close of fiscal 1950. Through the passage of 15 years the strength of our Nation bobbed up and down on the waves of world tension and power relationships.

Footnotes at end of speech.

It is always easy to second-guess with historical hindsight and the related temptations to blame and praise. We can see which alternative would have brought the optimum results, while those taking part in the unfolding drama had no such opportunity. However, it is part of our democratic tradition to examine history with a view toward examining performance as well as antecedents of current issues and trends. As examination of American military posture and policy since World War II is made, one can see that, while both the Truman and Eisenhower administrations performed in superb and ragged style at certain times, it was only with the advent of the latter that a sound, consistent, long-range policy evolved with its purpose to build America's strength to keep the peace.

Disarmament, demobilization and disillusion 1945–52

When World War II ended, American policy recognized the new responsibilities of America in compatibility with the basic interests of free people everywhere. Adherence to principles of generous peace treaties, establishment of the United Nations, emergence of colonial peoples to self-government and democratic institutions for former captive peoples were all undertaken with the hope that the powers of the United States and the Soviet Union would continue their wartime cooperation into the peacetime period.

However, even during the war, some military and diplomatic officials having firsthand dealings with the Russians sent warning after warning that the Soviets had not forgotten their long-range plans of world domination.[4] The Soviet was undergoing only a partial demobilization, planned to leave her ground forces superior to those of the Combined Western Powers. By 1948, the Russian actions had caused revival of conscription in the United States, based on enumerated actions such as: [5]

"The Communist coup d'etat in Czechoslovakia, the excessive pressure put upon the Government of Finland immediately thereafter, the Soviet diplomatic probings on the Scandinavian Peninsula, the severe and annoying restrictions put upon the American occupation forces in Berlin and Vienna."

It took the explosion of an atomic device by the Russians on September 23, 1949, to wake some up to the comparative capabilities as well as the intentions of the Russian military machine. In February 1948, General Gruenther briefed the White House on our military capabilities and their failure to measure up to our intentions and commitments in foreign affairs.[6] The House Committee on Armed Services had by now realized that 1,384,500 men were not enough to enable the services to meet their commitments.[7]

What had happened, among other things, was that the administration, echoing the sentiments of the American citizenry, gave little thought to the method and effect of demobilization of manpower and instead strove to "get the boys back home." Despite the existence of fairly comprehensive plans for demobilization of European troops, a public clamor for this wholesale return, only natural under the circumstances, along with the unexpectedly sudden end of the war in Asia, led to a dilemma solved by putting off the long-range security of the United States until later. As General Marshall testified: [8]

"The rate of demobilization has been determined by transportation facilities and by the availability of trained personnel to carry its administrative requirements out. It has no relationship whatsoever to the size of the Army in the future."

Results included the loss of the older and experienced men in units, due to the individual rather than unit discharge plan. There thus was a dearth of trained personnel to adequately occupy conquered areas, to keep unit equipment in operating condition, and to impart training and necessary knowledge to replacements.

Footnotes at end of speech.

Especially was the situation critical as far as disposition of surplus war material was concerned. By 1946, the Army had close to $32 billion in surplus property and the Navy about $17 billion.[9] The program had been slow in forging ahead due to changes in administration from the Surplus War Property Board to the Surplus Property Board to the Surplus Property Administration to the Reconstruction Finance Corporation to the War Assets Administration. Due to the lack of trained manpower, conflicting and complicated criteria and the resultant failure to make an accurate inventory, the goals of prompt disposal on a broad basis with a fair chance for the purchaser, good price for the Government, and avoidance of disruption to the national and world economy alike were not met.[10] It is of interest to note that the value of surplus war property at the end of calendar 1946 exceeded the total military expenditures for fiscal 1949, 1950, and 1951 combined.

On the positive side, our commitments to principles of collective security were both necessary and beneficial. We worked to settle disputes through the United Nations, but a series of Russian vetoes tied the hands of the U.N. Security Council. Through bilateral and multilateral treaties, notably the Rio Pact (September 1947) and the North Atlantic Pact (April 1949), we became fully cognizant that peaceful but free nations must help themselves by promising the assistance of others. Financial, economic, and technical assistance through the Truman doctrine in the Near East, the Marshall plan (economic recovery program) in Europe, and later addition of technical assistance to constitute the Point 4 program all over the world had a great impact on our defense programs and showed Americans that we were in the world to stay.

Senator Arthur Vandenberg perhaps best summed up our foreign policy as related to defense by the so-called Vandenberg resolution, which stated that the policy of our Nation was "to achieve international peace and security through the United Nations so that armed force shall not be used except in common interest. * * * The United States should associate itself with such regional and other collective arrangements as are based on continuous and effective self-help and mutual aid, and as affect its national security." [11]

At the time of signing of the Southeast Asia Collective Defense Treaty and Protocol (SEATO) in Manila, September 8, 1954, the United States was tied by defense treaties to 42 other nations [12] and by bilateral defense assistance agreements to 51.[13] The implication for future defense policies and expenditures was plain, even though it took a "conflict" to stop the decline of men and money for the protection of our Nation.

On the home front, meanwhile, a special committee under Vice Adm. J. O. Richardson had since 1944 been studying the matter of unification of the Armed Forces under one head. The recommendations of the committee provided for just such a thing, urging a single department with a single commander and civilian secretary. They reasoned that because of the failure of necessary integration in theaters of operation "the theater commander's ability effectively and efficiently to carry out his command decisions is hampered by conditions over which he has little or no control." [14] Admiral Richardson dissented. For those who presently quarrel with the Joint Chiefs of Staff system and the "bickering in the Pentagon," it must be recorded that for over 2 years bickering between civilian and military leaders alike reached a new height back in the postwar

years, and resulting compromises no doubt led to long-range defense policies existing even to today.

Hearings and debates failed to point up the problem more sharply, and it was apparent that the traditional arguments between the services regarding their roles and missions were being continued in this great debate. The advice of Senator Welsh to Secretary Forrestal leading to the formation of the Eberstadt Committee in 1945 may have held back successful unification of the services for another 4 years. The report recommended change of existing departments to War, Navy, and Air; set up the National Security Council idea; but recommended no superior Department of Defense and paved the way for the inadequate National Security Act of 1947, a compromise in that it tried to unite federation and confederation. Secretary Forrestal commented that "good will can make any organization work; conversely, the best organization chart in the world is unsound if the men who have to make it work don't believe in it." [16]

These and other comments on the National Security Act of 1947 seemed to weaken its effect, which was to establish a federated agency to merely coordinate 3 separate executive departments, and showed that unification was still a theory and not an established fact. It was obvious to groups like the Eberstadt Task Force and the Hoover Commission that the authority of the Secretary of Defense to bring about certain reforms and to exercise control over the military departments must be extended. On August 12, 1949—some 5 years after the Richardson Committee began its deliberations, Public Law 216 was adopted to set up the Department of Defense as an executive department, expand the authority of the Secretary of Defense, and give him staff assistance in the Department of Defense and the military departments.

This seemed too late to mitigate the controversy over missions of the Armed Forces, which raged from 1945 on through the end of the Truman administration. Issues such as strategic bombing, amphibious operations and delivery of the atomic bomb separated service from service and often resulted in decisions primarily affecting one service being made by another with less access to pertinent information and more liable to be based on pettiness and jealousies.

While conferences at Key West and Newport in 1948 solved some current issues, no meeting of the minds within the Armed Forces actually resulted. In 1949, investigations by the House Armed Services Committee turned up a dispute which resulted in waste of money and materials, and which has had its effect on the U.S. defense posture down to this day. Those interested in the details of the controversy can find the details of the B–36-Carrier problem in the hearings and report on "Unification and Strategy." [16]" Suffice it to say, the Navy interest in strategic air warfare rather than mere strategic bombing led to opposition of the B–36 as a long-range intercontinental heavy bomber, while Army and Air Force spokesmen felt that the building of the carrier *United States* was a waste of funds, since they saw no logical employment of such a supercarrier in future wars. [17]

Though investigators vindicated the B–36 and never did assure the Navy that carriers would continue to be important, time and subsequent developments have changed the picture to the point where the need for control of the seas is implicit in long-range military strategy. [18] Most budget-conscious citizens felt that the tragedy of this controversy was the cancellation by Defense Secretary Louis Johnson of a project (The *United States*) on which $10–20 million had already been spent. In light of the current efforts of the Navy to build up their carrier force, the far-reaching tragedy may still be felt today.

Following President Truman's recommendation of universal military training, revival of conscription and the Marshall plan on March 17, 1948, the House Armed Services Committee issued a report significant in its contributions to future defense policy. Besides recommending strength to bring the Armed Forces up to about 2 million (something never approved by the administration since our military strength as of June 30, 1950, was still only 1½ million), the committee established the valuable balanced forces principle as a justification for selective service. The committee concluded that "no single military arm can be fully effective unless adequately supported by the other arms" and "a 70-group Air Force is not a substitute for selective service." [19] Since the Army needed "beefing up," a temporary two-year draft was the answer.

Meanwhile, Russia got a taste of America's willingness to use power to promote peace. When a Soviet inspection system of Allied personnel entering the Russian zone of Germany was extended to the halting of all rail, road and waterway traffic between the Western zone and Berlin by August 4, 1958, the Berlin airlift resulted. Were it not for events in Korea, the Truman military policy might well have been judged more favorably, as this would have constituted its high-water marks. Results of the prompt and effective American action included not only a lifting of the blockade the next year, but also a rise of prestige, strengthening of the North Atlantic Alliance, and, ironically, stationing of two SAC B–29 units capable of carrying the atomic bomb in bases in Great Britain.

After the Russian explosion of a nuclear device in 1949 and a growing realization that the Russian threat was on the rise, President Truman announced that he had directed the Atomic Energy Commission to continue its work on the hydrogen bomb as well as all forms of atomic weapons. Coming at a time when some scientists felt the atomic bomb to be an ultimate weapon, this decision turned out to be most fortunate. Since, by October, 1953, Soviet explosion of a thermonuclear bomb had been confirmed, Truman's decision no doubt saved the United States considerable embarrassment in future years. It became evident at this point in history that the United States could no longer slacken research and development because of the feeling that we had reached the ultimate in any weapons system—all weapons systems from then on would be relative to Soviet capabilities in the field.

It appeared that actions of the Truman administration would affect weapons systems for some time to come. The decision on development of the H–bomb added to the U.S. capability, but taking the economically easy way out in other matters had violated the principle of balanced forces and placed so much reliance on SAC and the delivery of atomic bombs that other arms capabilities suffered.

Forrestal reported that President Truman proposed a strictly mathematical limit on defense spending for fiscal 1949, 1949, and 1950, which led to respective ceilings of $11, $12, and $15 billion. [20] Rather than stretching out adequate programs and force levels, the decision was made for reduction instead. [21] While the former policy would have been amenable to acceleration in an emergency like Korea, the latter policy proved disastrous. As Secretary Lovett explained, "We have never found a situation before in this country where we are fighting a war in Korea with one rate of expenditure; trying to provide initial equipment for three services as rapidly as possible; and at the same time trying to provide a mobilization system for vastly larger services." [22]

Those who today talk of a missile gap and look back on recent ICBM and IRBM appropriations often forget the early history of the programs. For fiscal 1961, total ICBM and IRBM funding requests total $3.424 billion. [23] This marks an increase of about 36 percent over fiscal 1960, 8,200 percent over fiscal 1955, and 51,778 percent over the total budget requests of President Truman over the period for fiscal 1946–53, inclusive. [24]

From fiscal years 1946–49, the Air Force MX–774 ballistic missile research program operated on total funding of $2.3 million. This precursor to the Atlas ICBM was stunted quite quickly when the budget request dwindled from $1.9 million in fiscal 1946 to .1 million in 1949 to nothing for fiscal 1950.

When Brig. Gen. D. N. Yates submitted the requests and justification for Air Force Research and Development in the fiscal 1952 budgets, the statement was included that "during preceding years, accomplishments in this area for the most part have been minimized due to the pressing requirements for funds in other areas or activities." [25] By the next year, General Craigie was able to state, "this pilotless aircraft program has reached the stage where quantities of test vehicles are required to obtain the data and experience necessary for the development of the ultimate full-scale weapon." [26] Many feel that an earlier start during the critical years 1948–50 would have resulted in either a reduction or elimination of the missile gap facing us today.

In a speech on January 12, 1950, Secretary Acheson had said that "so far as the military security of other areas in the Pacific (other than Japan, the Ryukyus, and the Philippines) is concerned, it must be clear that no person can guarantee these areas aaginst attack." [27] Whatever judgment historians give to this policy of the administration, these facts remains. First, no military guarantee had been given the independent nation of South Korea. This speech obviously meant that in the event of an attack, they would first have to meet it themselves and then hope for help from the United States. Second, our forces were withdrawn from Korea by late summer, 1949. Third, North Korean ground forces invaded South Korea over the 38th parallel on the morning of June 25, 1950.

Whether a deterrent force in South Korea would have prevented this or if a strong declaration by Secretary Acheson in early 1950 might have changed the minds of those who pulled the trigger will never be known. But the facts are clear. The assistance rapidly dispatched to bolster the South Korean forces marked the advent of military as well as economic, moral, and technological assistance to free nations of the world. [28] It started controversies over terms like "limited wars" and "political objectives." It caused a rapid mobilization of an understrength and underequipped Army. Many today still feel that military action had become necessary as a price of political mistakes.

General Wedemeyer's report on Korea hints at similar views. He felt that American withdrawal could lead only to a Korea unified under Soviet Communist direction, and feared as far back as 1947 that such a development could only weaken the American strategic position in the Far East. [29] Some felt that the economic reasoning for our agreement to the United Nations recommendation for a general withdrawal of troops from Korea was a result of a "background judgment about the relatively minor importance of Korea when weighed against the values of maintaining a clear U.S. position in the United Nations." [29]

From a military point of view, Donnelly states that "new measures to rebuild had

Footnotes at end of speech.

been practically countered by the administration efforts to balance the budget and strengthen the Nation's economy." [21] Since the Korean war demanded experienced men, and since the haphazard demobilization of 1945 resulted in recall to duty of those who had served in World War II instead of men who had had no duty, morale was not as high as would have been the case with consistent Reserve and training policies. The buildup of combat effective troops to raise our Armed Forces strength from 1,460,000 to 3,250,000 in a year's time could not be accomplished by mere drafting and training of inexperienced youth. Thus, to many the system seemed unfair, to others insufficient, but to all a haphazard rather than planned policy. To Donnelly, "the effects of the lack of an effective postwar Reserve policy and program became very apparent." [22]

During the period from 1947 on, some progress was made in study and evaluation of the Reserve programs and policies. The report of the Gray board on the National Guard, however, was implemented by a joint Federal-State mission responsibility for the National Guard which set the stage for future conflict between areas of jurisdiction as in the Little Rock dispute. Provisions of the Armed Services Reserve Act of 1952 provided seven components and three categories of Reserve forces. By 1954, it was apparent that insufficient motivation existed for transfer to the Standby Reserve from the Ready Reserve.[23] Weaknesses of the Reserve system eventually were somewhat resolved by the Reserve Forces Act of 1955.

As history has recorded, the Korean conflict slowly ground to a close as the Eisenhower administration took over. Instead of adopting rapid demobilization policies, the President began an era of searching analysis of defense issues and attempts to find long-range solutions to what had been solved previously only by temporary and inadequate actions.

DEVELOPMENT OF LONG-RANGE GOALS OF U.S. DEFENSE POLICIES 1953-59

After the Korean armistice, the Eisenhower administration set out after an evaluation of long-range defense goals which could be pursued regardless of peaks and valleys in the cold war, economic trends and other variables. Admittedly, the Truman administration had programed such an attempt, but events like atomic explosions, the Berlin blockade, budgetary requirements and finally the Korean conflict upset the timetable.

By 1951, General Bradley came to the conclusion that "we face a period of tension for a long time, and I would think that the only way to solve that is by some long-range policy, military policy, which would provide adequate defense and security forces." [24] However, it remained for President Eisenhower to bring this long-range planning into being, and for the first time the military services could make plans for consistent buildup of forces, research and development programs, establishment of an effective Reserve system and modernization of equipment on a more valid budgetary basis than merely crisis-to-crisis requests.[25]

Over the 7-year span of the Eisenhower administration, events have transpired to indicate that the U.S. defense policy has been channeled into a consistent pattern of objectives and emphases. If we look at the overall picture, we find that these objectives can be classified quite well into five categories, which include:

1. A long-range buildup of forces, based on a capability to defeat aggressors over an extended period of time rather than on critical danger dates. As President Eisenhower said in April 1953, "This policy of ours will not be tied to any magic, critical year • • • but will be based on the sounder theory that a very real danger not only exists this year but may continue to exist for years to come; that our strength • • • must now be made stronger, not by inefficient stops and starts, but by steady, continuous improvement." [26]

2. A flexible and selective posture of deterrent strength. This would include not only the maintenance of strong capabilities for massive retaliation, but also the highly trained and mobile forces equipped with both nuclear and conventional weapons as the situation demands to deal with local emergencies in order to stop their expansion into a general war.

3. The United States must be able to wage war effectively. While we must be able to engage our forces, especially in limited situations, the fact that future wars will differ from those in the past in that deadly blows will be delivered at the outset will make actual warfare a function of both deterrence and continental defense.

4. Establishment of continental defense and warning systems to make the effective destruction of the U.S. retaliatory potential an objective the enemy cannot hope to achieve by surprise.

5. Goals of defense must be coupled with the overall goals of plans for economic expansion. Certainly this is a twofold goal, on the one hand keeping the economy strong and expanding and, on the other, to refrain from letting our military effort interfere unduly with economic expansion.

These consistent courses of action in military circles should lead America to attainment of the national objectives voiced by General Bradley in 1949, when the then-Chairman of the Joint Chiefs of Staff enumerated them as consisting of:

1. The national desire is for peace and security without sacrifice of individual rights or national severeignty, but not peace at any price.

2. We want the maintenance of our political way of life and our form of government; we do not require other nations to have either.

3. We wish to maintain and raise the American standard of living.

4. We seek peace and security for the entire world.

5. We will work for an effective world organization, based on the United Nations.

6. We hope ultimately for the elimination of warfare as a means for the resolution of international dispute.[27]

The long-range nature of our goals pointed out the fallacy of what President Eisenhower called inefficient and expensive starts and stops. On April 23, 1953, he stated that "for anybody on the defensive position to base his defense on his ability to predict what the exact date of attack would be was crazy."

In later comment about the current issue of personnel, charts show the more steady figures for size of the Armed Forces since fiscal 1955, as presently compared to the rise and falls of previous administrations. Granted that policies of demobilization and rapid mobilization at the onset of the Korean conflict made long-range personnel and fiscal planning difficult, the fact still remains that a drop from 12 million in military forces to 1¼ million and then back to 3¼ million again within 7 years' time constitutes an unbalanced force at best. A sound economy was not aided by national military expenditures ranging from $43 billion to $11 billion and up again to $50 billion within 7 years' time. If practical, a plan based on moderate long-range goals is a key one if proper planning in related fields is to be possible.

This New Look also spread to our international commitments. Early in 1953, our search for revitalization of rearmament led to the North Atlantic Council approving a long-haul schedule of defense planning in April. Again, this did not reflect a relaxation of effort, but rather a firm, continuous commitment of resources as well as a firm distribution of effort throughout the alliance.

Almost all writers on our present defense stature, critic and apologist alike, agree in substance with the goal of a flexible and selective posture of deterrent strength for both general and limited war situations. Definition of terms and practical use of weapons systems to meet this requirement constitute the reasons for debate and difficulties in expressing exact opinions on our defense posture.

Gen. Maxwell Taylor's celebrated outline of 1956, "A National Military Program," showed as the objectives of the national military program "the maintenance of military strength which is capable of dealing with both general war and aggression under conditions short of general war. The military strength of the United States and her allies must be so constituted as to prevent war if possible, limit war if it occurs, and successfully defeat any aggression that may threaten the national interest." [38]

Brodie's work, "Strategy in the Missile Age," propounds this theory in a different way. "Thus it seems inescapable that the first and most basic principle • • • is • • • a great nation which has foresworn preventive war must devote much of its military energies to cutting down drastically the advantage that the enemy can derive from hitting first by surprise attack. • • • It means above all guaranteeing through various forms of protection the survival of the retaliatory force under attack." [39]

The well-publicized study of the impact of developments in military technology on U.S. strategic and foreign policy, conducted by the Washington Center of Foreign Policy Research of the Johns Hopkins University, emphasized the need for balance in the deterrence by stating that "the overriding objective of such a strategic weapons program should not be that of matching assumed Soviet capabilities in number of ICBM's, but, instead, the early attainment of such an inventory of diverse and relatively secure retaliatory systems that the potential aggressor could not have confidence in his ability to locate and destroy a sufficiently high proportion of them to risk launching a surprise attack." [40]

This flexibility was also expressed by President Eisenhower in his state of the Union message of January 6, 1955, when he warned that "undue reliance on one weapon or preparation for only one kind of warfare simply invites an enemy to resort to another," [41] and also the next year, when the President called for a program emphasizing "an effective, flexible type of power calculated to deter or repulse aggression and to preserve the peace." [42] He later clarified this by saying that we must constantly improve our defense by "substituting power, speed, mobility, flexibility for just men."

In terms of the long-range defense policy of the Eisenhower administration, flexibility means a balanced security, where the United States can choose its time, place and means of warfare. By making security generally attributable to scientific and technological development, by increasing the rate of combat personnel to total strength, and by making the most efficient use possible of weapons and techniques, our concept of flexibility means that within the concept of feasibility our military posture must be relative to the emphasis to be placed on airpower and new weapons, and which will reduce forces in some areas and expand in others, depending on the problems posed by general or local aggression. This is to be preferable over staking preparedness on one type of weapon or one type of situation.

The matter of selectivity of deterrent force is one to which little attention has been paid by critics of the administration defense

Footnotes at end of speech.

policy. When the late Secretary Dulles made his famous speech before the Council of Foreign Relations in New York, January 12, 1953, he stated that "the way to deter aggression is for the free community to be willing and able to respond vigorously at places and with means of its own choosing. * * * The basic decision was to depend primarily upon a great capability to retaliate, instantly, by means and at places of our own choosing." [43]

This was not a particularly new doctrine. General Bradley, in 1949, testified that "lacking such forces in being, our greatest strength lies in the threat of quick retaliation in the event we are attacked." [44] But when Secretary Dulles announced this policy, critics were quick to condemn this policy of so-called "massive retaliation" as one relying completely on nuclear-armed strategic forces, as one deterring the threat of conventional military aggression on the same basis as deterring a direct attack on the United States, and as one diverting from the creation of tactical forces which could give substance to a strategy of local defense.

This criticism continued despite assurances by Secretary Dulles himself, along with Admiral Radford, Senator FLANDERS, Secretary Wilson, Secretary Quarles, and others that what some called "massive retaliation" could be better characterized as "graduated, or selective, deterrence."

Brodie fears the assertion that the thermonuclear bomb can do everything, and finds the key question to be in this case finding sanctions for keeping out of action gigantically, powerfully centered military instincts even though we must keep them standing by in order to similarly hobble the opponent." [45] General Taylor feels that limited war forces must be given equal priority with the size, composition and modernization of the atomic deterrent force." [46] He would place main, rather than sole reliance upon conventional weapons. His National Military Program of Flexible Response would contain "at the outset an unqualified renunciation of reliance on the strategy of massive retaliation," and would have the United States "prepare itself to respond anywhere, any time, with weapons and forces appropriate to the situation."

The Johns Hopkins study claims that "the United States and its allies remain in a dangerous position as long as they must rely primarily on the effectivenes of such a form of deterrence (massive retaliation). * * * The precariousness and dangers of these situations will necessarily increase as growing Soviet strategic power diminishes the credibility of the American interest. Therefore, both the United States and its allies have a vital interest in establishing a more reliable deterrent to limited Sino-Soviet assaults." [47]

It must first of all be said that almost all critics have artificial and differing definitions as to what constitutes "limited" and "general" war. Taylor defines general war as being synonymous with a nuclear exchange between the U.S.S.R. and the United States with limited war covering all other forms of military operations. Brodie felt limited war involves deliberate restraint, avoiding strategic bombing of cities with nuclear weapons. The Johns Hopkins study constantly differentiates between deterrents of attacks on the United States and that of attacks upon our allies.

Whatever the definition, and many would say that any difference was purely a matter of degree, the fact remains that the United States has embarked on a program of great diversity involving collective security, foreign assistance, diplomatic leadership, broadcasting truth behind the Iron Curtain, and the maintenance of a powerful military force adequate to cope with the emergencies ranging from limited, local conflicts to total war.

Peeters states [48] that partisanship has failed to prove that the defense program achieved by the Eisenhower administration within the limits of a balanced budget has jeopardized national security because of too much emphasis on air-atomic power at the expense of conventional armaments.

Yet, the criticisms continue. Senator KENNEDY said on August 14, 1958, that "our past reliance upon massive retaliation has stultified the development of new policy", while Senator JACKSON previously had said on February 1, 1956, "up until now, the Soviets have been put on notice that all-out Red aggression could be answered by our air-atomic strength." All these critics had done was to reveal their ignorance of the meaning of so-called massive retaliation and of our overall defense strategy.

Secretary Dulles sought several times to clarify this point. Before the Senate Foreign Relations Committee, he stated in March, 1954, that "the possession of this capacity does not impose the necessity of using it in every instance of attack. It is not our intention to turn every local war into a general war. * * * It seems to have been assumed that we were committed to instant massive retaliation against any form of aggression. That is very far from the truth." [49]

Admiral Radford asserted the same thing when he told the Committee that "our planning does not subscribe to the theory that the ability to deliver massive atomic retaliation is, by itself, adequate to meet all our security needs. * * * I believe that this Nation could be a prisoner of its own military posture if it had no capability other than one to deliver an atomic attack." [50]

The late Secretary Quarles put it on this basis. "If the decision is made to come at our forces, it must be expected that we will at once bring to bear those weapons that will be most effective militarily in the task of repelling the aggression. * * * This is not a program designed to make a big war out of a little one. It is a program to avoid any kind of war through the strength of our deterrent. * * * It is true that the vast strength of air/atomic power may reduce the number of divisions and combat ships we require. It may also reduce the number of combat wings we require. * * * From now on, potential aggressors must reckon with the air/atomic power which can be brought to bear inevitably in whatever strength, and against whatever targets, may be necessary to make such an attack completely unprofitable to the aggressor." [51]

THE THEORY AND PRACTICE OF LIMITED WAR

Despite the obvious intent of our flexible, selective deterrent policy, critics still ask if we have adequate equipment and personnel to cope with another crisis like Korea or Indochina, and what assurances we have that the use of limited nuclear warfare will not spread into an all-out total war. More detailed data in the next section of this paper on current defense issues should help with these problems.

At any rate, statements and actions of defense officials have emphasized that the United States must and will keep its Armed Forces so organized, equipped, and balanced that it can cope with any emergency, large or small, with the type of weapons and force which the situation calls for.

General Taylor states that "if one regards the force structure of our three services, one finds that nearly all of the Army and of the Marine Corps, much of the Tactical Air Force, some of the Navy's carriers, and large parts of our strategic air and sea lift must be associated with limited war forces and are available in an emergency." [52]

In his testimony before the Senate Subcommittee on Disarmament, Atomic Energy Commissioner T. E. Murray testified on April 12, 1956, that "increasing concentration should be set on the stockpiling of very small weapons. * * * With this diversified nuclear armament, America and her allied military forces of reasonable size would be equipped to handle all the various wartime contingencies that might arise." [53] This limited warfare by nuclear weapons is a possibility for meeting local war threats.

Critics, of course, state that the use of even limited atomic weapons will snowball into the use of thermonuclear bombs. They claim that Suez, Indochina, and Lebanon showed that limited war deterrence was not aided by limited use of nuclear weapons. They will also say that we need more equipment and personnel, more airlift capability, more SAC combat readiness to stop local aggression.

The answer to all this may well rest on the allegations by Peeters that one more division in NATO or one more division in Korea is not the answer. We would not win a ground war in Korea or Europe today because we are not preparing for it. We do want to deter local aggression by what General Ridgeway calls "military power, real and apparent to all concerned," and by application of that power to specific situations as they arise.

We do have such deterrents to local aggression. Besides our general nuclear deterrent, we have tactical atomic weapons. We have over 2 million men, 900 ships, and 35,000 planes which are certainly more than mere byproducts of general war deterrence. In the Lebanon crisis, we moved in with a great determination to do what was needed at that particular time. Our 15,000 soldiers in the area were as overwhelming at that time and place as were millions in the European theatre of World War II. To have committed more planes to an airlift when we had no more airfields or fuel available would have been folly.

Basically, then, our defense policy at present has the determination and ability to deter general war by so-called massive retaliation of all sorts of nuclear weapons of massive destructive capabilities. This "massive retaliation" also has relevance to limited aggression, both in deterrence and in tactical use. In both general and limited war situations, our Armed Forces can cope with any emergency, and will judge on the basis of the situation what action is called for, taking it instantly and successfully.

CONTINENTAL DEFENSE POLICIES

Some will object to the inclusion of a defense goal encompassing continental defense and warning systems. Recent cutbacks in the BOMARC program,[54] and problems created in development of the Nike-Zeus anti-missile-missile system cause doubts that there is a chance of a new weapons generation emerging from development of defensive systems that could nullify progress in the speed and range in the carriers of destructive nuclear weapons.[55]

The Johns Hopkins study cites handicaps of the defense as including the offense's initiative in technological development, in choice of time, place, and method of attack, plus the destructive force of the payload bombers now can carry. Due to the great destructive potential of individual nuclear bombs, an impractically high level of defense effectiveness would be required. The study also concludes that to reduce the impact of the offensive by more than a modest fraction, it becomes more costly than is the price for the offense to take the needed steps to overcome defense measures that have been taken.[56]

However, despite its pessimistic tendencies, the study states that "disastrous consequences could accrue to the side whose op-

Footnotes at end of speech.

ponent first produced a highly effective aircraft and missile defense. * * * The desperate effort to find a defense counter to actual and even potential offensive threats can and must go on." [57]

President Eisenhower, in his budget message of January 17, 1955, announced the creation of a separate air defense command reporting to the Joint Chiefs. Including weapons, aircraft control, and warning networks, the Army antiaircraft and guided-missile battalions, the Navy radar ships and other means of continental defense, this CONAD setup works at constantly detecting, identifying, intercepting, and destroying enemy threats by air. The more practical aspects of this policy will be discussed later. But, as General Partridge pointed out in 1956, "the mere existence of an air defense system in this country forces the enemy to adopt many measures which he would otherwise be able to avoid."

General Taylor's theories for a national military program include reliance upon "a continental defense system, including both active and passive measures, strong enough to prevent an enemy from delivering a crippling blow to the continental United States." [58]

Brodie places emphasis on the defense of our deterrent force, whether by active defense consisting of shooting at enemy planes or missiles or by passive defenses involving hiding, shielding, or dispersing the targets. "Known ability to defend our retaliatory force," states Brodie, "constitutes the only unilateral attainable situation that provides potentially a perfect defense of our homeland. A compromise inability or unreadiness to defend our retaliatory force tempts him (our opopnent) to an aggression he might not otherwise contemplate." [59]

So, although admittedly prospects for an effective missile defense are not too promising, the effort must go on. At the time of the Battle of Britain, a 10 percent attrition on attacking bombers was rare indeed. More recently, however, estimates of the probable effectiveness of surface-to-air and air-to-air missiles range around 50 percent. The theoretical possibility thus envisions a defense which could mitigate the increase in weapons destructiveness and the extended geographic scale of the strategic battle.

Wilcox states that it does not appear possible to create a 100-percent effective antigravity screen or other defense system, especially when man now has the means to "kill every living thing on the earth at a level of biological organization higher than that of insects and plants." [60] However, others, knowing that it is difficult to rule out any possibility over the technological horizons, state that present research may yet turn up an antimissile beam or some other similar defense. [61]

Other aspects of the continental defense system include our comprehensive radar early warning system, which has been commonly misunderstood as to goals. Many criticize this drive for 15 or 30 minutes' warnings of comming attacks as of little solace to those killed and displaced by subsequent attacks. However, the early warning system is but one of several means to insure that the effective destruction of the U.S. retaliatory potential is a strategic objective that the enemy cannot hope to achieve by surprise.

Thus the primary purpose of our air defense is not to shoot down bombers and missiles or evacuate cities, but to deter aggression. Antimissile missiles, early warning systems, and other defensive devices are all mere functions of that goal. The recent developments in radar technology permitting earlier detection of ballistic missiles and faster aircraft are important steps in our continuing efforts to deter attacks. Thus the potential loss to the United States in the event of nuclear bombing is so vast that any measures which tend to deter such an attack are not too steep a price to pay.

ECONOMIC ISSUES OF DEFENSE POLICIES

We must guard not only against the Soviet threat in a military way, but we must also have an America which develops with determination its productive power. As Representative GERALD FORD stated at Mount Pleasant, Mich., "I submit that America can and must face up to the hard fact that if our free society is to be preserved, we as a nation can afford neither the luxury of inadequate defense nor an unsound economy stemming from habitual unbalanced Federal budgets. * * * This Nation must reject the philosophy that our only choice in order to prevent military surrender to the Russians is to spend ourselves into an economic and political defeat." [62]

Many critics whose theory involves merely the spending of more money overlook the total Soviet threat in their concentration on defense posture. In countless ways, the Communist demonstrate that military force is but one of the means that they expect to use to take over the world. Director Allen W. Dulles of the Central Intelligence Agency, stated that "while we must be ever mindful of the Soviet emphasis on the military applications of science and technology in order to anticipate any attempts at a breakthrough which would change the balance of military power, it is most probable that the fateful battles of the cold war will, in the foreseeable future, be found and fought in the economic and subversive arenas."

Despite sharp criticisms of restricted expenditures for defense in his RAND study, Dr. Brodie states that "if the criticism is intended to imply that there is too much concern with dollars in the apportionment of resources, and often it seems to have that character, then it is nonsense. The absence of a deep and constant concern with dollars in military claims between weapons systems would argue the grossest kind of incompetence. It (holding the line on defense budgets) has indeed helped in making some choices, especially where inter-service and political issues were not greatly involved. In a imperfect world, that could be much to be grateful for." [63]

When it was first developed, the first-generation Atlas showed an initial cost of $35 million per missile. To get a picture of that price, if 100 workers, each making $5,000 a year, where to turn over every cent of their earnings for the next 70 years, their total wages would buy 1 Atlas. One submarine, loaded with 16 Polaris missiles, costs over $110 million. The B–52 costs $8 million as compared to a cost of just over $1½ million for the heavy bomber used at the end of World War II. The cost of modern weaponry, of course, is no excuse for not developing a strong retaliatory force, but it is a cause for keeping alert to the damages that could result from extravagance.

The constant criticism that the Eisenhower administration is sacrificing strength for economy and that we were trying to achieve national security in the large, economy size is an inconsistent argument without regard for the overall goals of American defense policy. The Secretary of Defense, the Chairman of the Joint Chiefs of Staff, and the Chief and Secretaries of the services have been in support of the President's budgets since 1953; in fact, have in some instances complained that we were overstructured. One might want more of the total spent for one item, but by and large the support given by Taylor, Ridgway, Radford, Carney, Twining, Burke, White, and civilian Secretaries have agreed with the policies of Secretaries Wilson, McElroy, and Gates as to the overall adequacy of the budget for carrying out their assigned missions.

Even if they had not, any attack on so-called economy in defense must contend with the fact that appropriation figures are established by Congress, and over all but 4 of the past 28 years the Democratic Party has been in control of Congress. An attempt in 1959, for example, was made to establish a floor of size for the Army at 900,000, and was defeated by a 43-131 division vote. Congressman WEAVER stated that "for nearly $39 billion we are not buying total, impenetrable defense. If we could spend $200 billion or even 10 times that amount, we would not buy a total defense this year. There are too many, too rapid changes in the scientific and technical knowledge at our command and at the command of a potential enemy." [64]

Since the administration has requested the new obligational authority it has deemed necessary in view of a well-established program of procurement and expenditures (leaving, incidentally, unexpended funds from one fiscal year to the next to make available funds far in excess of appropriations) and since Congress has by and large approved these appropriations with a very small fluctuation, [65] and since it will be argued in the next section of this paper that not to make cuts in certain items would have led to intolerable waste, Peeters assumes that "a stronger defense is not necessarily a more expensive defense" and "it is true that the American economy could support greater defense expenditures, but would the few billion dollars that it could thus support make so much difference?" [66]

Donnelly, in "U.S. Defense Policies Since World War II," summarizes the goals of present defense problems and issues (1957) as including "the economy of the United States is to be kept strong and expanding, readily able to convert in support of a war effort." [67] Basically, national security and solvency are indispensable requirements for keeping America strong. Secretary Thomas Gates agreed in 1960 that defense spending through at least 1964 should be in the general area of $41 billion "because I feel that we are in a continuous struggle with those people that may last for the rest of my lifetime. This is going to be the kind of spending that is going to be required to have an adequate defense. Actually, the present level of defense spending is a high one. It is about $5½ billion higher than what it was in 1955, in fact, it's only about $2½ billion under the Korean war peak." [68] When asked by Chairman MAHON if he thought that for the time being we need not be unduly concerned about whether or not we can keep the ceiling constant and level while the price of everything is going up, the Secretary answered, "That is correct." [69]

It is evident that the United States must have not only the military but also the economic strength to induce the Soviets to refrain from all forms of aggression. On May 24, 1957, Khrushchev stated that "we do not intend to blow up the capitalist world with bombs. If we catch up with the United States in per capita production of meat, butter, and milk we will have hit the pillar of capitalism with the most powerful torpedo yet." [70] Thus inflationary pressures resulting from defense spending for spending's sake could cripple our economic and military strength alike, for us and for future generations.

SUMMARY

We have reviewed in this paper the theoretical, long-range goals of the United States defense policy since the advent of the Eisenhower administration. There seems to be little disagreement on those broadly stated goals. Secretary Gates summed it up by stating that "the two principal objectives of our defense program continue

Footnotes at end of speech.

to be: First, to deter the outbreak of general war by maintaining and improving our present capability to retaliate with devastating effectiveness in case of a major attack upon us or our allies; and, second, to maintain, together with our allies, a capability to apply to local situations the degree of force necessary to deter local wars, or to win or contain them promptly if they do break out." [71] This emphasis on deterrence is a logical one, primarily concerned not with the fighting and winning of a war but with the discouragement of Soviet aggression, be it generalized or localized.

Critics of the administration policy have generally failed to assume the need for or advantages of these goals of long-range defense policy. Without understanding at least their basic nature, it is foolish to base an argument on issues like 25,000 men or 6 missile squadrons. An understanding of these goals and their practical application to present defense issues, to be presented in the next paper, can and should make subsequent controversy on the means by which they can be pursued under present and forseeable circumstances of considerably less sharpness and duration.

An awareness of the place that continental defense, personnel needs, and specific issues such as the so-called missile gap, manned bombers, and other play in the current picture must be the next step in this series of papers. If we bear in mind their place as functions of deterrence to the outbreak of general war and maintenance of capability to apply the proper degree of force necessary to deter local wars, they will fall in a much more orderly pattern. Critics must not lose sight of that orientation, nor can they fail to heed the warning of Senator DENNIS CHAVEZ, chairman of the Senate Defense Appropriations Subcommittee, when he stated that "second only to our need for security is the necessity for keeping our economy strong, for this is the mainspring of the Nation. We know that the Communists believe that our form of government will destroy itself through economic collapse. Excessive spending by the Government, that breeder of rapid inflation, could contribute to such a condition." [72]

CURRENT ISSUES OF U.S. DEFENSE POLICIES

Since 1953, several critics of the Eisenhower defense policies have kept up a fairly steady barrage against various principles of our defense posture.

One classification of criticisms, chiefly instituted against budgetary restrictions, fails to stress positive values, but instead constantly criticizes subordinating a $40 billion defense budget to principles of fiscal responsibility. They offer no suggestions as to the priorities a $45 or $50 billion budget would entail. Rather, they feel that money expended somehow will automatically be channeled to the proper function of the military forces, and will somehow inspire improvement.

More constructive criticisms have come from those who on the one hand have pressed for increases in our retaliatory atomic capabilities, especially in the way of the so-called missile gap, and on the other have bemoaned our lack of conventional armaments and modernization for limited wars. It is a tribute to most of these that not too many take both means of attacking our defenses. However, it is to the administration's credit when one group can ridicule the overkill capacity of our nuclear retaliatory force and extol preparations for limited war while another group searches for an overwhelming nuclear deterrent that will close the missile gap.

Each year the critics seek to convince Congress that billions should be added for Army and Marine personnel, more and faster manned bombers, speedier modernization and airlift capability for limited wars, faster development and hardening of ICBM's, stronger continental defense systems, concentration on disarmament proposals and better Department of Defense organization. Many of these specific issues will be briefly explored in this paper.

However, the best overall reply to these criticisms is to look at the results of congressional deliberations on the defense budget. Under the present system, overall review and coordination on the service recommendations take place at the Defense Department level before Presidential recommendations. Months of review through hearings before the Defense Appropriations Subcommittees of each House result in a budget markup which is approved before the respective Appropriations Committees, the full House and finally the Senate. A conference committee compromises any differences in the bill as approved in the two Houses, and, after final passage, the bill is enacted after Presidential approval.

With all this analysis and these built-in safeguards, and on the basis of expert testimony year after year of over 200 witnesses annually, Congress has cut $3.5 billion from the Presidential recommendations for fiscal years 1955–60, inclusive.[73] It seems that regardless of disputes over "how the pie is cut," Congress seems satisfied with the cost of the entire pastry despite the complaints of individual Members and outside critics.

PERSONNEL

In our stabilized years of 1948–50, our Armed Forces averaged around 1½ million in personnel, following the peak year of 1945 (12 million) and preceding Korean strength of 3¼ million. Programed for fiscal 1961 is a military personnel of some 2½ million. This marks an increase of 67 percent over the stabilized personnel of the Truman years, and, as we will see, marks an even greater increase due to improvements in the quality of the U.S. personnel due to recent legislation and its factors. Fringe benefits, proficiency pay, and the added legislative improvements have increased the cost of personnel even though they have eliminated the need for excess numbers.[74]

However, attempts are annually made to up personnel figures, especially in the Army and Marine categories. In the hearings for fiscal 1961, we find a typical statement of this philosophy in Representative FLOOD'S remarks on Marine Corps personnel. "I do not want you to have any idea that the Congress of the United States is going to abandon the Marines on this 175,000, because this is not so. We are going to keep at this until you go back to the strength that the Congress and the people think you should be." [75]

These critics cite the low cost of proposed increases—about $50 million to up the Marines from 175,000 to 200,000, and $70 million for an Army increase from 870,000 to 900,000. This is an obvious fallacy, since if proof of a need for such an increase were offered, then the amount of money would not be a serious factor. Congressional sentiment on this point has most recently indicated that such a move has not been justified.

However, the personnel of our Armed Forces is the result, for the first time in our history, of a studied evaluation of supporting the amount and kind of forces necessary in peacetime so as not to jeopardize the Nation's security. Admiral Radford described the plan as "attempting to explore overall manpower ceilings in the various services which could produce major combatant forces, and examined them to see whether they would be adequate. We did not limit—in fact, we encouraged each individual service to do better as far as units were concerned if they could within their manpower ceiling. • • • Under that policy the personnel limitations for the next 4- or 5-year period would be somewhere between 2,800,000 and 3 million.[76]

Contemporary examples of this policy of increasing combat strength of fighting units without raising personnel requirements include the fiscal 1961 addition of two Marine battalion landing teams and two Hawk missile battalions, along with rearrangements that General Lemnitzer described as adding two Army battle groups and European equivalents of two battle groups for fiscal 1961, also without increasing Army size.

Chief reasons for this improvement without increased size have been the fringe benefits and other improvements granted by major personnel legislation since 1955. At a cost of $5.5 billion, estimated through fiscal 1960,[77] legislation such as the Career Incentive Act of 1955, Survivors' Benefit Act of 1956, Military Pay Act of 1958, and seven other public laws has increased improvements far beyond the original hopes of Congress.

Let us take the Army, for an example. Even before the Eisenhower administration some felt that post-Korean demobilization would take the greatest toll on the Army. As of June 30, 1951, the Army strength was 1,531,774. Ten years later its size is planned to be 870,000—a cut which to the eye appears to be one of 43 percent. But is it in actuality?

Improvements in mental standards, health, effectiveness and behavior have made the Army more battle-ready than ever before in its history. The removal of Nike-Ajax batteries to the Army National Guard will relieve about 7,400 Active Army personnel for other duties.[78]. The noneffective ratio is now at an all-time low, and the health of the Army is as good as it ever has been.[79] In fact, the noneffective ratio (excused from duty per 1,000 men strength) has lowered from 21.8 in calendar year 1949 to 11.8 in calendar year 1959—a drop of some 8,700 in an 870,000-man army.

Disciplinary problems have dropped, showing a reduction of 9,000 in the Department of Defense from fiscal 1957 to fiscal 1959. This not only has saved the Army in fiscal year 1960 $816,063 as compared to the 1956 expense for apprehension of deserters, absentees, and escaped prisoners, but has led to the reduction of 85 percent in prison population since 1955 and the closing of 4 disciplinary barracks and 15 Army stockades since 1957.[80] Courts-martials have affected 33,000 less in fiscal 1959 as compared to 2 years earlier.[81]

It is of interest to note that Army reenlistment rates increased 7.5 percent from fiscal 1957 to fiscal 1958 (24.8 to 32.8 percent). During the same period, Marine Corps reenlistments jumped 10.7 percent. This not only led to the retention of more trained personnel [82] but also resulted in the earmarking of fewer Army personnel for the purpose of getting others in battle-ready condition. General Lemnitzer testified that "we are getting better people—more experienced people, who are staying in the service. Therefore, less effort is required for training and more effort is available out on the line." [83]

Enactment of Public Law 85–564, authorizing increases in induction standards, has resulted in substantial reductions of the percentage of new intakes from mental group IV, the lowest acceptable mental group, in all services. In the Army, for example, the percentage of Army inductee accessions in this mental group went from 39.5 to 30.8, a decline of 22 percent in 1 fiscal year.[84]

Some have felt that adding up all the "bodies" saved by Army personnel improvements would more than make up for the 30,000 extra men requested by those critics emphasizing the need for more Army forces. At any rate, the expenditure of over $5.5 billion in 6 years to improve the quality of Defense Department personnel is impressive

Footnotes at end of speech.

when compared to the issue of 30,000 Army troops and 25,000 Marines.

Secretary Gates summed up this point by concluding that "recruitment capability has improved * * * first-term reenlistment rates have generally increased * * * the enlisted force has become more experienced * * * mental quality is definitely higher in all services * * * and there has been a gratifying reduction in disciplinary rates." [85]

Russian troop cuts required Khrushchev to explain to the Supreme Soviet that "the proposed reduction will in no way reduce the firepower of our armed forces and, this is the main thing, after all. * * * This enables us to reduce our armed forces without harming the country's defense capacity." This policy, followed by the United States since 1953, has made us stronger and not weaker.

Critics of personnel policies of the administration forget that the largest army in the world today could not win a war, even if one could be won or lost, without deterrent strength. They forget the changing basis of war, making large military force a waste. Examples of this include Congressman KOWALSKI's disclosure of large numbers of enlisted men performing personal services to generals and lesser officers, and the fact that one man today can fire a machinegun with the firepower that took 1,400 men to duplicate in flintlock days.[86] Personnel cuts do not necessarily amount to combat personnel cuts—under the Eisenhower administration personnel policies have led to stronger, combat-ready military forces.

THE MISSILE GAP

The idea, fancied or otherwise, that Russia is several years ahead of the United States in the production of missiles has led to the defense controversy of our time—the missile gap. In the early months of 1959 and 1960, disclosures by defense officials, Congressmen, and civilian experts that from 1961 through early 1963 the Soviet lead in ICBM's would range up to a 3-to-1 ratio caused a stir replacing the manned bomber controversy as a headline topic.

Joseph Alsop, of the New York Herald Tribune, penned a 6-part series on the missile gap in February 1960, stating, among other things, that "the Eisenhower administration is literally playing a gigantic game of Russian roulette with the national future" and "if these first estimates (American intelligence estimates prepared at the time of the first sputnik) happened to be correct, the Kremlin may already have enough ICBM's to wipe out our nuclear deterrent." Walter Lippmann called the philosophy behind the 1961 Eisenhower budget "deadly, and it will reduce this country to a second-class power."

Secret testimony on January 29, 1960, by CIA Director Allan Dulles credited Soviet missiles with greater accuracy than estimated by Secretary Gates a week before, according to Senator HENRY JACKSON, of Washington.[87] He stated that "nothing in the briefing warranted taking the risks I think Gates is taking in the missile field." A week or so later, the situation had proceeded to the point where Senator SYMINGTON told the Preparedness Senate Committee that if the administration did not admit the official intelligence estimates shows the future missile gap to look worse than it did in last year's estimate, he would give the true percentage figures to the public.

Even General Taylor, who had a year before testified to the excess of our retaliatory massive deterrent, published a book confessing that he had reluctantly come to accept the "reality and significance of the so-called missile gap. * * * Somehow it must be made clear to our citizens that the Nation will face a serious crisis beginning in about 1961. For a period of years thereafter the balance of military strength will tip dangerously in favor of the Communist bloc unless we take drastic action now." [88]

Experts have fixed the greatest danger as occurring in 1962 or possibly 1963. Gen. Bernard Schriever, commander of the Air Force Ballistic Missile Division, said the Soviets could achieve the capability of launching relatively large numbers of missiles in salvo by this date.[89] James Shepley finds that the Soviets are assumed to be capable of 500 ICBM's by 1932 compared with a programed force of some 200 U.S. ICBM's by mid-1963.[90] Alsop, more pessimistically, estimates force levels as 30 vs. 100 missiles in 1960; 70 vs. 500 in 1961; 130 vs. 1,000 in 1962 and 1,500 in 1963. He feels this gap will exist until it closes by mass production of solid-fuel ICBM's in 1965–66.[91]

Former Secretary of Defense Neil McElroy was quoted as saying in 1959 that, "If the Russians build all the ICBM's they can and if the United States produces the number it now plans, the USSR will maintain a 3-to-1 lead through the early 1960's." [92]

After questioning by the Defense Appropriations Subcommittee in preparation for the fiscal 1961 budget, Secretary Gates submitted a statement to the effect that "on the basis of our current intelligence * * * we do not believe that the Soviet superiority in ICBM's will be as great as that previously estimated." [93]

The picture is thus one of an acknowledged missile gap, with ratios running anywhere from slightly in favor of the Soviet Union to the 12-to-1 extreme reached by Alsop. The probable Soviet lead in numbers of ICBM's during the early and middle 1960's which may neutralize the U.S. strategic deterrent seems to some the greatest danger to its security that America has ever found.

Before the numbers game leads the reader to panic, may I state parenthetically that there are certain characteristics which must be asserted about this missile gap before proceeding further. This gap is not due to the policies of the present administration, and is narrowing, even though the gap is, in a sense, deliberate. It is based on our intentions and the Soviet Union's capabilities. Russia and the United States, due to certain capabilities, cannot be compared in a sense, anyway. Finally, ICBM's are but one of a total picture which shows the United States far ahead in total deterrent and general military strength in 1960, as it will be in 1962, 1965, and for years to come.

The fact that Russian capabilities rather than intentions are taken account of by the missile gap theorists is a critical distinction. Four years ago it was estimated that the Soviet Union could have by 1959 600 to 700 long-range jet bombers in operational units. As we now know, they did not divert the entire energy and scientific capability needed for this and instead built only a fraction of that number. This is why Secretary McElroy last year was careful to define the missile gap as being the difference between the number of ICBM's the United States actually plans to produce and the estimated number that the Soviet Union could produce.[94]

Thus, if the missile gap is supposed to be 300 to 1,000 (a good educated guess) by 1963, there is no reason to assume that the United States could not build more than 300 by that time if it so desired. For example, a new Pentagon order in March 1960 sped up long-range missiles by increasing the number of Atlas long-range missiles on launching pads during calendar 1962 to 12 missiles on each of 6 bases, rather than only 9 on each. This could be done again.[95]

Also, there is no reason to assume that the Soviet Union would reach its potential in ICBM's any more than it had in manned bombers. Secretary McElroy stated that "past experience has demonstrated that the Soviet Union does not always do what the estimates say it could do. * * * It (the missile gap) is not intended to mean that the Soviet Union will actually produce the numbers of missiles that have been estimated." [96]

A glance at the history of the missile program shows why we are still at work catching up with the Russians. IRBM funding, of course, did not start until shortly after the beginning of the Eisenhower administration, with a $4.4 million request for fiscal 1956. Meanwhile, ICBM funding, limited to $6.6 million total budget requests from World War II through fiscal 1953, jumped to a request of $13.9 million in fiscal 1954 through a $2.47 billion original request for fiscal 1961. Total requests in the Eisenhower administration totaled $7.061 billion, or over 1,000 times the rate of expenditure under 8 years of a Democratice administration.[97]

An example of the 1945-type thinking is revealed by the statement of Dr. Vannevar Bush, wartime Director of the Office of Scientific Research and Development, who said that a 3,000-mile rocket was impossible and would be for many years. "The people have been talking about a 3,000-mile, high-angle rocket, shot from one continent to another, carrying an atomic bomb, and so directed as to be a precise weapon which would land exactly on a given target, such as a city. I say, technically, I don't think anybody in the world knows how to do such a thing. * * * I wish the American people would leave it out of their thinking."

Fifteen years later Lieutenant General Schriever was able to tell the following story: "In February, 1954, Dr. John von Neumann told the American Air Force that an operational ICBM could be achieved by this country in from 6 to 9 years, provided that an all-out development effort was initiated immediately. On September 1, 1959, the Defense Department announced to the American people that the Atlas ICBM had become operational. This was just a little over 5 years from the time that the accelerated ICBM program had gotten underway." Atlas had a range of over 7,000 miles (as of May 20, 1960, over 9,000) as compared to a 5,500 range set by the Von Neumann committee, while their hopes for a 5-mile accuracy goal has been by far exceeded by shots within 2 miles of the target.[98]

In his history of the ballistic missile program, Representative ARENDS states that today these programs involve the "expenditure of 10 times as much each day as was spent in all of fiscal year 1952." [99] After showing how skepticism as to the practicability of long-range ballistic missiles held efforts down to low-support studies, ARENDS concludes that "it is hardly remarkable that as of 1960, 15 years after World War II, American long-range rocketry is in some respects matched or surpassed by the Soviets. What is remarkable is how rapidly the ICBM and IRBM programs of the United States have advanced in less than 6 years.[1]

Even the Committee on Science and Astronautics of the U.S. House of Representatives, in summing up their study of progress of the Atlas and Polaris missiles, concluded that "the fact is that both projects are progressing at a highly satisfactory rate and that there is no doubt in either the Air Force or the Navy that their respective missiles will be operational on or about their scheduled dates" and that "both the Air Force and the Navy have achieved an outstanding record in the planning, organization and management of their respective research and development missile programs.[3]

Once missiles prove out, the Administration has been quick to expand and speed up successful programs. In March and April of 1960, the Defense Department added $90 million to the Atlas program, $27 million to long-range Minuteman appropriations, and $153 million to the Polaris IRBM pro-

Footnotes at end of speech.

gram; all for the fiscal 1961 budget. For that matter, President Eisenhower, contrary to the notions of his critics, added almost half a billion dollars to the Air Force submission for missile procurement for fiscal 1961, from $2.610 billion to $3.024 billion in his budget estimate.

Clearly, Administration policy has been to rectify past mistakes and errors of judgment in previous estimates, upgrading where the probability exists of benefits accruing for our deterrent program. Our missile program is now at a more than adequate level. General Lemnitzer testified that "there was general agreement on the overall ICBM, or Polaris-type program—retaliatory missile program, let us put it that way," when questioned by Congressman Ford as to the opinion of the Joint Chiefs on the adequacy of the ICBM program for fiscal 1961.[3]

In answer to "numbers critics," General Thomas White said on January 31, 1960, that though the Russians may be ahead in missiles, in the whole defense picture "I don't think we're behind at all. * * * The U.S. missile program and our defense program is a properly balanced one, in my opinion, and will continue to give us the deterrent capability we desire."[4]

The same day, Secretary of Defense Thomas Gates, while admitting that Russia will have slightly more missiles until we start catching up in 1962, said "we believe we are in a first rate, first position compared with Russia. We are expanding our missile program * * * putting missiles in our bombing force and bringing into operation Polaris submarines which we believe will offset any so-called missile gap, at least from the point of view of the validity of our deterrent."[5]

Therefore, because of the difference in the needs of Russia and the United States, and because of our concentration on a balanced deterrent force, a numbers game is mere nonsense and, in a sense, our failure to pour money and men into indiscriminate crash programs for missiles is not only due to the unfeasibility and waste of such a program, but is also a measured decision.

In answer to questioning of Representative MAHON, who asked, "is it not correct to say that the so-called ICBM gap has been more or less deliberate in view of the many circumstances in the defense picture?" General White replied, "I think that is correct, everything considered." Mr. MAHON continued, "Would it have been better if we had gone crashing through and been able to match missile for missile in the intercontinental ballistic missile field?" General White replied, "I do not believe that with our lead in really good manned aircraft that it need have been closed. I do not regret that we have not done it.[6]

Why? For one reason, Russia has much more need to build ICBM's than the United States.[7] Since they are by nature most liable to commit a surprise attack, a missile is a more useful weapon for them, but merely one of several weapons systems in our deterrent posture. Russia does not have the advantage of a circling ring of bases from which to launch IRBM's, nor Polaris submarines to lob missiles from underwater onto enemy shores; thus must concentrate on longer-range missiles. The lack of balanced forces and deficiencies in aircraft carriers, manned bombers and amphibious forces has further made Russia a one-weapons-system nation, and spurred them to concentrate on missile research, development and production.

Despite the claims of the missile gap critics, several of our military leaders feel that we have developed an overkill in retaliatory forces. On page 330 of volume I of the House Defense Appropriations hearings for fiscal 1960, General Taylor testified that "when I add together all those vehicles capable of delivering the atomic retaliatory attack, in my judgment the aggregate is excessive to the requirements." This despite his recent conclusion that "there indeed is such a gap which * * * has a most significant bearing on military security."[8] General Pate, Admiral Burke and General Twining agreed in many ways with his fiscal year 1960 opinions in their testimony.

The ultimate answer to the missile gap critics is that you can play the numbers game in many ways and come out with almost any ratio you choose. Do you count the Polaris or not? Do you include the air-breathing intercontinental missile, the Snark? Do you use the capabilities of the Soviet ICBM force, or their actual intentions? Do you include factors like hardening, early warning, mobility and accuracy? Nothing detracts from the fact that any missile gap ratio is a guess based on the assumptions of the guessor.

Even with an agreed ratio, the missile gap, closing though it may be, is a false index of the relative power of two nations with widely divergent needs and backgrounds. We include the ICBM as only one element in an overall military capability which takes advantage of control of the seas, regional alliances throughout the free world, superior bombing forces and other strong points. Thus we limit our first-generation ICBM production and concentrate on the Minuteman and other missiles of the future.

Basically, then, our strength is superior to that of the Soviet Union, changing the critic's quizzing to the more logical question of whether Russia can ever catch up with us in overall deterrent capability.

MODERNIZATION

One of the key issues of modern defense is the problem of modernization, especially in view of personnel problems of today. The Eisenhower administration has consistently planned for modern weapons systems, strategy and transportation devices to greatly increase the combat strength of fighting units.

The Department of Defense has done much to accelerate research and development on a scale which would meet the Soviet challenge in the modern arms race. An Assistant Secretary of Defense was provided for research and development under the reorganization plan of 1953 while a 1956 proposal to provide research and development assistant secretaries for each of the services failed to win congressional approval. We find that in fiscal 1955 only $3.4 billion was spent for overall Department of Defense support of research, development, test, and evaluation work as compared to a request of $5.2 billion in the 1957 budget. This request was over twice the estimated annual expenditure for research and development by private industry. Much use has been made of university and private research organizations on a constant contract basis in pushing this enviable record forward.[9]

ARMY

In the past 6 years much has been accomplished toward the adaptation of nuclear weapons to tactical use, along with development of new conventional weapons, as well. The older "square" division of infantry organization, more suitable for the time of trench warfare, has been converted to pentomic divisions, with five combat groups, organized around five rifle companies. Thus a change has been made in the interest of mobility of movement, especially by air, resulting in a reflection of Army adaptation of tactical doctrines to the nuclear age.

As the Army has become more modernized, its combat-effective ratio has increased greatly. After the Korean conflict, the Army had a total of 567,000 combat troops as compared to 966,000 others, a ratio of 1:1.7. By the end of fiscal 1956, this ratio had been reduced to 1:1.1, almost parity.[9a] This ratio between combat and support forces, almost an exactly balanced force has led to cuts in the noncombat forces and more effective use of Army personnel, even though plans for fiscal 1961 only approached a 1:1.4 ratio.

One of the big issues of defense today is the claim by some Army spokesmen that modernization has been held up by the lack of available funds. In 1960, the Army presented a shopping list of equipment that would be bought to expedite the modernization of the Army if additional funds were made available. Included were battlegroup assault weapons and ammunition, combat vehicles, artillery; air mobility, missiles and rockets (Pershing, Honest John, Little John, Hawk, Redeye, and Davy Crockett), communications and electronic equipment and tactical vehicles. The total cost of the shopping list for 1 year in added funds would be, by the Army estimate, $928 million.[10]

Actually, a sound program has been developed which provides significant quantities of equipment in all of these fields, and which is based on an overall view of modern forces which takes into account needs of the Army, Navy, Marine Corps, and Air Force alike. In this orderly improvement of Army capabilities, both conventional and nuclear Army procurement has been raised to $1.5 billion in recommendations for fiscal 1961, as compared to just over $1 billion 2 years before. It is significant that in the Army ordnance and vehicle procurement activity (the bulk of ground force modernization) the 1961 level is over 300 percent of the 1959 figure. In the research and development account, the gateway to future modernization, almost three-quarters of a $1 billion plus Army R. & D. budget for fiscal 1961 is devoted to support of all problems facing the maintenance of a modern Army.

In looking at what this money is already buying for the Army, we find first of all that missiles have been accented. First deliveries will take place in 1961 of the Davy Crockett (man-carried, nuclear capable rocket for the use of frontline troops), Little John Rocket (lightweight and air transportable) and Sergeant missile (larger and longer-range). Initial procurement of the Redeye is provided for in the fiscal 1961 budget, with that portable missile earmarked for the defense of forces in the field against low-flying aircraft. Finally, new deliveries in the coming year will increase inventory of the Hawk surface-to-air missile, providing field forces with a mobile defense against aircraft and air-breathing missiles.

Small arms modernization has been accelerated to the point where the Army will receive some 180,000 new M–14 NATO-standard 7.12 millimeter rifles and 15,000 7.62 millimeter machine guns in 1961, with the budget also allowing for procurement of another 120,000 rifles and 12,000 machine guns. Acquisition of surveillance drones, modern helicopters, and the Mohawk turboprop observation aircraft will allow for greater battlefield surveillance, while procurement of the lightweight M–113 armored personnel carrier, two types of improved helicopters, and the Caribou transport aircraft, along with 21,500 trucks, tractors and jeeps, will enhance greatly tactical mobility.

A few years back, constant criticism was heard of the World War II vintage tanks and artillery still in use by the Army. During fiscal 1961 alone, 720 new M–60 tanks armed with 105 millimeter high velocity guns and equipped with a longer range diesel engine will be delivered, while the new budget provides for a continuation of this procurement along with first procurement purchasing of a new family of self-propelled artillery pieces.

In addition to this, action by the House of Representatives for fiscal 1961 added some

Footnotes at end of speech.

$207 million to the Army modernization program, which will allow the Army to procure additional quantities of the new M–14 rifle together with ammunition for the rifle and the new 7.62 millimeter machine gun, 600 additional armored personnel carriers, 300 additional battle tanks with supporting ammunition and fire control equipment, additional artillery pieces with necessary supporting equipment and ammunition, over 6,000 additional Davy Crockett weapon systems and 13,000 additional 115 millimeter chemical rockets and multiple launchers." [11]

NAVY

The complexity of Navy modernization was best expressed by Admiral Burke, who stated that "we are going from props to jets, from oil burners to nuclear reactors, from subsonic to supersonic, from TNT to nuclear weapons, from conventional shells to missiles, from atmosphere to space." [12]

Specific examples of Navy modernization include the commissioning of the Nautilus in 1955—bringing a new age of ship propulsion. Since then nuclear power has been used whenever combat advantages justify the additional cost, as in the use of nuclear aircraft carriers. Cruisers and submarines have been equipped with the Regulus I, a surface-to-surface weapon, and more recent improvements of that missile.

The 1960 operational status of the *Polaris* submarine means that our vessels can carry, submerged in the ocean depths, 16 missiles, each capable of destroying a good-sized city. It is relatively invulnerable to ICBM attack and thus forms a great part of our retaliatory capability. While original proposals were geared to progressive expansion of our Polaris force at a minimum rate of 3 per year, recent modifications by the President and by the Department of Defense have led to an expanded Polaris program, completely financing 14 submarines and partially financing 7, and thus providing for a 21-submarine program which will add 336 Polaris missiles to the strategic forces of the United States.

In propulsive power, the Albacore-type submarine with a hull designed for minimum underwater resistance has meant that its speed and maneuverability under water is greater than anything that we have had before. When combined with nuclear-propulsion power, a new field has been opened up for naval vessels to operate under water. Present emphasis in the Navy is on antisubmarine warfare. Secretary Thomas told the Senate Armed Services Committee in 1956 that "this problem receives our highest, our best, and our constant attention." [13] The House took this problem most seriously as well, adding $321 million to the defense budget for fiscal 1961 for ASW in financing three nuclear attack submarines, two destroyer escort vessels, and financing further high priority research efforts in this field.

It is fairly evident that House action in adding some one-half billion dollars to the Navy modernization and development program for fiscal 1961 takes note of the importance of seapower and control of the seas during any future general or limited war. The $293 million saved by their deletion of an aircraft carrier which had been requested may still be reversed by Senate action, and most of those who view the Polaris and carrier as complementary units feel that both are needed even in times of nuclear wars.

AIR FORCE

While the Army has increased battlefield mobility and capability, the Air Force has achieved a similarly spectacular change and adjustment in the art of warfare. "In adaptation of jet power to produce higher speeds and altitudes, development of air refueling to make two-way intercontinental operations feasible, and greatly improved weapons systems in the field of strategic air warfare, modernization of the Air Force has been especially significant." [14]

In 1953, our strategic retaliatory forces consisted of propeller-driven B–36's and some medium-range B–47's. Today the B–36's have been replaced by B–52 jets, and supersonic B–58's are augmenting our B–47 striking power. Since the feasibility of lightweight nuclear warheads became evident in early 1954, thousands of smaller land and carrier-based aircraft also acquired a nuclear capability.

Our long-range bombers are supported by a fleet of refueling tanker aircraft, and are being equipped with Hound Dog air-to-surface missiles which can be launched hundreds of miles from their targets. When the Sidewinder comes into operation, this distance can be approximately doubled. Thus planes can disorganize defenses from a distance, come in with safety, and perform their missions still carrying a payload several times greater than an Atlas missile.

Research and development continue on the B–70 prototype program. Problems of large airframes and propulsion systems at Mach 3 (three times the speed of sound) are now being explored with future consideration of this plane as a weapons system, though many doubt its advantage over the B–58 against the ground defenses of 1965, 1967, or 1968, when varied estimates have been made as to the operational date of such a system. By 1965, as well, four systems of ICBM's will be operational, thus raising the issue of weapons systems competition and duplication.

Air Force modernization also looks to the future. Besides expansion of forces equipped with the Atlas, Titan and eventually the Minuteman ICBM, a progressive buildup to three wings is planned for forces equipped with the B–58 supersonic bomber. Our mix of Matador-Mace missile squadrons will go completely to the Mace missile by 1962, completing the operational setup of four squadrons. It should be noted that the Mace missile by far exceeds the total explosive power expended against all Axis military targets in Europe during World War II.

Thus we see that today an intensive program is underway to expand and improve all elements presently giving us superiority over the Russians, while progressing through the research stage on new projects to continue this. In research and development as in procurement, the most modern and effective techniques and equipment possible are being provided for our Armed Forces here and abroad.

U.S. CONTINENTAL DEFENSE

Obviously, the first line of U.S. continental defense is the deterrence of war through a strong retaliatory force capable of discouraging aggression. An aggressor seeking to destroy the United States would first need to insure that we could not retaliate wih force great enough to cripple his own warmaking potential. Through our primary goals of defense policies, we seek to assure a strong deterrent which will make continental defense an unneeded luxury.

However, for several reasons, the United States finds it necessary to develop a strong continental defense system, both now and in the future. For one thing, the usual assumption is that we will never be an intentional aggressor, making it necessary to provide the means by which our defense can soften blows to the point where we could develop and deliver a devastating counter-attack. Also, the fact is that the first nation that develops a highly effective defense against aircraft and missile attacks would thus have the ability to threaten war without fear of major retaliation.

This may be an impossibility, due to the initiative possessed by the offensive in both technological development and choice of the time, place and method of attack. At any rate, many now feel that there is a possibility of a weapons system to deal with ICBM's, even though these experts doubt mastery of such a system. Certainly the potential loss to the United States through a missile attack is so great that any measures to try to alleviate the damage from such an attack are worthwhile. General Partridge, the commander in chief of CONAD, stated in 1956 that, if air defenses were strong enough, losses to an enemy trying to get through would act as a deterrent other than mere fear of retaliation. It must be borne in mind, however, that he was speaking primarily about manned bombers and defenses against them, though many feel our greatest threat is currently still from this source. [15]

While the search for antigravity screens, antimissile beams, and antimissile missiles goes on in the field of research and development, the United States has also tried to combine the elements of continental defense under one master plan. Establishment of the CONAD (Continental Air Defense Command) has led to a vast complex of radar warning nets stretching across the northern edge of the continent and extending down across the Atlantic and Pacific approaches. One BMEWS (ballistic missile early warning system) station will be in operation during calendar 1960 and another next year. Giving us warning of ballistic missiles on their way toward us will permit us to launch a retaliatory strike. Long-range radars will be able to detect an enemy ICBM at about the midpoint of its trajectory. The MIDAS early warning system, under accelerated development, would be able to detect enemy ICBM's at "blast-off" time, thus giving us 30 minutes warning instead of 15, enabling a very large part of our bomber and missile forces to be on the way with counterstrike force. The evaluation and coordination of information secured from various aspects of our continental defense system by SAGE (semiautomatic ground environment) has [16] increased the capability of our air defense system by a factor of something like 5 or 10.

If a manned aircraft attack should come, nuclear-capable surface-to-air missiles, such as the Nike-Hercules and Bomarc, as well as all-weather supersonic interceptors armed with air-to-air missiles (some with atomic warheads) all stand ready to repel the attack. In the case of missiles, of course, the problem has been accented. In efforts to develop an effective ICBM defense, development work has been underway for some time on the Nike-Zeus system, as well as on the Bomarc B and advanced Defender project, which tries to explore detection, warning, tracking, discrimination, and destruction of missiles on a new basis.

Some time ago, the Army established an aggressive antimissile program, [17] under their responsibility for point defense as contrasted with the Air Force area defense concept. Through fiscal 1961, over $1 billion has been provided for our most advanced effort for an effective antimissile defense. As of now, many problems remain. A range of only 75 nautical miles is provided, thus creating the need for Nike-Zesus installations in great numbers. Prospects of the Nike-Zeus, to some, look brightest as far as spot defense of a relatively few vital targets from a relatively primitive missile attack. [18]

Since Nike-Zeus relies on the same general concepts of active terminal defenses as does the Nike-Hercules, skepticism has been aroused as to its effectiveness against swarms of warheads approaching targets at speeds of 250 miles per minute along with confusing and disrupting devices. [19] Though the Army requested $1.5 billion for Nike-Zeus for fiscal 1961, it was cut to research and development money of $302 million by the Secretary of

Footnotes at end of speech.

Defense on the recommendations of the Joint Chiefs, a difference of over $1.2 billion.[20] To go into production at this time was thought impossible by these experts along with the Appropriations Subcommittee and, for that matter, the House of Representatives.

O. M. Gale, Special Assistant to the Secretary of Defense, stated in a letter of April 19, 1960, that "we still don't know whether this system is really going to work, and if it does work, whether it will work well enough to justify the investment of the $15 billion or more that would be required. It seems prudent to withhold our decision until our problems are licked."

However, as stated previously, we must continue to try to find a defensive counter to actual and potential offensive threats, as "desperate and disastrous consequences could accrue to the side whose opponent first produced a highly effective aircraft and missile defense."[21]

Besides early warning systems and supplementary 15- and 30-minute alerts, and over and above the need for active defense against bombers and missiles alike, the administration has concentrated to date on so-called passive defenses such as hardening and dispersal of our retaliatory weapons and civil defense policies to more or less harden our population in an organized fashion in underground shelters.

We plan to expand forces equipped with Atlas missiles to a total of 13 squadrons by 1963. All but the first of these squadrons will be hardened in underground sites and dispersed. In 1961, forces equipped with the Titan ICBM will become operational, with that force built up to 14 squadrons sometime in 1963, all in hardened bases. When "in-silo" launched capabilities and storable fuels are added to the Titan, we will be even better prepared to meet the threat of a sudden enemy ICBM attack.

Recent administration action included planning for 12 missiles on launchers at each of the last 6 Atlas squadrons rather than the previously planned 9. One reason why this is important is the subsequent raising of the number of attacking missiles required for the destruction of our retaliatory force. Murphy estimated in April 1959, that if the Soviets attained an ICBM of high reliability (less than 2 miles accuracy) and a 2-megaton warhead by 1962, at least 13 such missiles would have to be launched at a hardened ICBM site to provide a 90-percent probability of its destruction; or a salvo of 1,500 missiles to destroy the then-programed U.S. force of 110 Titan hardened and dispersed missiles. With a missile accuracy of only 3 miles by 1962, the total number required to take out the Titan force would increase to 6,000.[22] Recent expansion of planned Atlas and Titan squadrons would raise that number to a figure even farther from the scope of reality.

The administration has been careful to disperse and harden Atlas and Titan squadrons rather than merely to try to match numbers with the Soviet. A large number of cumbersome first-generation ICBM's, especially if deployed in fixed, unprotected positions above ground, is hardly the answer to the problem, and would expose the missile to easy destruction by enemy ICBM's.

Thus we will concentrate on second-generation, solid-fuel ICBM's like the Minuteman, which will be moved around the United States on railroad cars, and which will be capable of survival even when deployed in fixed, but well-dispersed and hardened, underground sites. Starting in 1963, forces equipped with the Minuteman ICBM's will become operational, and some hint that it may be much sooner than this.

Footnotes at end of speech.

Our mix of continental defense components were further implemented by action of the House Defense Appropriations Subcommittee this year. Funds were provided in the bill for both the ballistic missile early warning system, to detect and track missiles once they are well on the way to targets; and for the Midas early warning system to provide almost instantaneous warning through a satellite project to detect mass missile launching. The committee provided extra funds for the Midas, Samos, and Discoverer space projects. On May 24, 1960, a Midas test satellite was orbited and drew attention as a "spy satellite" in light of the then-recent U–2 spy plane incident.

The committee provided an increase in airborne alert funds, not for the purpose of instituting such an alert, but for "the procurement, storage, and distribution of the extra engines, spare part stocks and supplies that would be necessary to sustain the accelerated rate of aircraft operation should it become necessary."[23]

Re-evaluation of the air defense program by the Air Force and Department of Defense in February 1960, resulted in a voluntary reduction of $381.1 million in funds for the Bomarc-B program. Further reductions were instituted by the committee, which were applied in the amount of $215 million to fighter planes as replacements for Bomarc missiles. Combined with continued research on the Bomarc and Nike-Zeus, the procurement of an additional two squadrons of F–106 fighter aircraft, fully equipped and ready for operation, establishes a much more desirable move "from the standpoint of an overall defense posture."[24] Added to this, of course, are the consistent efforts being made by the OCDM and other groups to increase awareness and adequacy of civil defense operations.

Johns Hopkins' report concludes that "a high degree of national security is likely to remain an objective unattainable by military means during the next decade."[25] However, we will continue to emphasize research toward this end, and meanwhile will depend on our ability to deter an enemy from using his strategic weapons, destroying them before they can be used, and protecting our retaliatory power by the dispersal, multiplication, and mobilization of our weapons systems.

REORGANIZATION OF THE DEPARTMENT OF DEFENSE

It was definite at the outset of the Eisenhower administration that something would be done about the poor organizational setup of the Defense Establishment. The National Security Act of 1947 had added the will of Congress toward a degree of unification, but had resulted in a unique compromise of a federated agency coordinating separate executive departments. Amendments in 1949 at least converted our National Military Establishment into an executive department and gave the Secretary of Defense more control over the departments and more assistance through an Under Secretary and Comptroller.

Conflicts over the roles and missions of the Armed Forces continued even after the Key West and Newport agreements. Extent of naval air operations, size of the Marine Corps, delivery of the atomic bomb, controversies between advocates of the B–36 and of the supercarrier, and subsequent questions over obvious duplications in the fields of antiaircraft guided missiles and the IRBM led to disputes which exploded far beyond the Pentagon.

A memorandum by the Secretary of Defense on November 26, 1956, angered some but resolved many of the interservice disputes. Based on previous statements of missions and on 9 years of operating experience under the National Security Act of 1947, it clarified and interpreted roles and missions to a much higher degree.

In air defense, for example, the Army was assigned responsibility for point defense (with appropriate missiles such as the Nike-Zeus and Talos) while the Air Force was made responsible for area defense (including the Bomarc system). Operational employment of the IRBM was left to the Navy and Air Force for sea and land systems, respectively, which served to end the duplication of Jupiter and Thor development up to that time, and paved the way for successful work on the Polaris project. Finally, the directive differentiated between the battlefield air missions of the Army (observation, liaison, combat transportation, etc.) and the airlift, tactical reconnaissance, and combat air support responsibilities of the Air Force.[26] These decisions eliminated many duplications and pointed the way ahead for more sure development in the future.

Controversies, however, continued over such matters as tactical air support, the adequacy of the airlift for Army ground forces, antimissile missiles, control of IRBM's, and carrier versus land-based aviation, much of it caused by elements that resulted from the failure of many to accept the new order. This served to bring into clearer, sharper focus the need for new legislation spelling out details of a more effective, reorganized Department of Defense.

Launching of the Soviet sputnik served to bring matters to a head, as did recommendations of the Senate Preparedness Subcommittee on January 27, 1958, which called for reorganization to prevent duplications; complex, unrealistic civilian controls; and interservice rivalry against the public interest.[27]

On April 3, the President offered Congress a plan for defense reorganization that would unify strategic planning, form our fighting forces into unified commands, streamline military command channels, give the Joint Chiefs professional military assistance, and expand control by the Secretary of Defense over research and development. Among the specific recommendations made by President Eisenhower included several Executive actions as well as legislation to remove obstacles to the full unity of our commands, remove limits on the size of the Joint Staff, remove the restriction on voting by the Chairman of the Joint Chiefs, remove any statutory authority vesting responsibility for military operations in officials other than the Secretary of Defense, eliminate provisions for separate administration of the military departments and reduce the Assistant Secretaries in number from nine to seven.[28]

It is interesting to note that the President's legislative request included mostly negative things, while his Executive orders were aimed at strengthening and broadening in a positive way. His specific legislation was introduced as H.R. 11958 and S. 3649, while H.R. 11001, on the other hand, expressed the views of Chairman Vinson and two other members of the House Armed Services Committee. Differences between proposals concentrated around the powers to be given to the Secretary of Defense, the separate entities of the military departments, and the type of military staff to be furnished the Secretary of Defense.[29] To some, the issue devolved into a fundamental checks-and-balances problem. The resulting legislation was a compromise, but a forward-moving one.

The President got much of what he had requested, but Congress gave in most reluctantly on points hinting at transfer of constitutional authority of the legislative branch, or at weakening of the ties of the separate services. The Secretary of Defense was strengthened in many ways: for example, the services did not have to be separately administered but had to be separately organized. However, Congress did not re-

peal section 202(a)(6) of the National Security Act of 1947 which permitted any Service Secretary or Chief of Staff to present to Congress any suggested recommendation—an avenue, incidentally, which General Taylor never chose to use, despite its availability.

Provisions of the Department of Defense Reorganization Act of 1958[20] plus the directive issued by Secretary McElroy on December 31, 1958, put into effect several changes coordinating and tightening our defense establishment. In hearings held on the defense budget in each House during the early months of 1960, Secretary Gates, General Twining, and other top Defense Department officials expressed cautious satisfaction over early experiences with the new organization, and announced no requests for changes at that time, preferring to let the new law and directives operate for more than a year before offering new suggestions. This is in sharp contrast to the suggestions of some who would change the new establishment before the new ideas were given adequate testing.

One result of the 1958 reorganization was a greater accent on research and development work, with the establishment of the office of the Director of Defense Research and Engineering as the principal advisor to the Secretary of Defense. The Joint Chiefs of Staff were given a staff similar in organization to that of the unified commanders instead of the old system of committees, groups, and working teams. Thus the cumbersome command system has been channeled into a direction which would leave the JCS to deal with matters of command and would leave support and administration to the military departments. Formation of ARPA (Advanced Research Projects Agency) and creation of a Director of Guided Missiles showed the emphasis on space and the attempts to eliminate previous duplication on missile and rocket projects.

As is usual with such orders and laws, some were convinced that the change had gone too far, and many felt that there still remained too much rivalry and too little coordination. In retrospect, it seems that the resulting changes were most beneficial and marked a true legislative process compromise wherein executive and legislative differences resulted in functional effects. Donnelly states that the result was to "amend the original Key West-Newport agreements to bring them into consonance with the latest concepts and laws for organizing and insuring our national defense."[21] This major change is over and above the usual improvements in defense financing, procurement policies, fiscal policies, and national stockpiling, which have gone on through the entire Administration.

Criticisms continued, however. General Taylor has particularly suggested changes in his "Uncertain Trumpet," despite his favorably worded testimony on the Defense Reorganization Act of 1958.[22] However, all his suggestions would interpose more persons and committees between levels of present administration ,or would change the defense organization which has not as yet been given an adequate test.

Secretary Gates has already put into practice several improvements in organization by gradual implementation, though in office less than a year. Other suggestions, less earth shaking than General Taylor's but perhaps sounder in practical effect, have been offered. Most experts recognize the need for a sort of review board to choose ultimate priorities and budgetary guidelines on a level separated from control by the administration, the Bureau of the Budget, or congressional pressures. However, to place such a board in the chain of command, as would Taylor, merely would lead to more confusion and disorganization, as well as the probability of added duplication of authority and responsibility.

Speaking before the Electronics Industries Association "Defense Market Planning Seminar" in Washington, D.C., ranking minority member of the Defense Appropriations Subcommittee, Representative GERALD R. FORD, Jr., suggested, among other things, "the establishment, by legislation if necessary, of an independent and continuing National Defense Planning Group, which would encompass or have within it knowledgeable representatives from industry, from the executive, and military branches of the Government, and the legislative."[23] Others have suggested that such a group could be part of the staffing of the Joint Chiefs. At any rate, thoughts such as this and such as the ideas of Secretary Gates that he take more responsibility in screening industry claims in the choice of products for procurement and in meeting with the Joint Chiefs on knotty subjects and problems, are positive steps in the process of evolution of Defense Department organization to the point we are all striving to reach.

With the legislative and executive mandates we have had since 1953 for this purpose, and with the suggestions now being offered for change within these basic frameworks, we may be sure that Defense Department organization will continue to keep up with the times, balancing unification with service identification, and service rivalry in its healthy aspects as against duplication and overlapping on the other.

U.S. MILITARY CAPABILITIES—1960 AND BEYOND

In summarizing American defense posture and in comparing it with Soviet capabilities now and in the future, it seems that the basic orientation depends upon what book your interests dictate or on what authority you study. The reader has the choice among those who criticize our defense policies today and see a rosy picture from 1964 on; those who downgrade both our capabilities and our potentialities; and those who feel our defense is adequate as a deterrent to war today and that it will be in the measurable future.

A reason for this difference in both direction and shading of thinking about defense might lie in the fact that for unclassified details on U.S.-Soviet comparisons today the student must roam far and wide. Even classified estimates rarely attempt predictions beyond the next 4 or 5 years.[24] Perhaps the best method of comparison would be to sketch the present capability of American and Soviet forces in both general and specific terms, and then to detail as much as possible new systems now undergoing research and development in our military planning.

ARMY

The Soviet Army today is composed of roughly 2½ million men, organized into about 175 line divisions. On January 13, 1960, Premier Khrushchev announced that Russia would cut its conventional armed force one-third as a result of their buildup in nuclear rocket striking force. "Khrushchev set present strength of the Soviet armed forces at 3,623,000 men and said they could be slashed by 1,200,000 because of what he called Russia's growing rocket superiority."[25]

Though the Soviet divisions (tank, mechanized, and rifle) range in size from 12,500 to 15,000 men, not all are maintained at full strength. Some estimates credit the Soviet with 60 percent combat-ready divisions, implying that combat would require substantial personnel augmentation in 40 percent of these divisions.

Committee testimony showed that as of November 1, 1958, Russia had 175 divisions and the Soviet bloc 217, for a total of 392. Their 7,800,000 men compare to our 6 million free world and Allied strength. Some committee members were puzzled as to how we could be within 2 million of Soviet strength with about half as many divisions, but the smaller size of the Russian division coupled with the number of skeleton Soviet divisions were mentioned as explanations.[26]

Further information leads us to believe that Soviet ground forces have been completely modernized since the end of World War II. Army sources claim that the Soviet Army has on hand "modern material to equip its 175 line divisions and to support them in combat. * * * including that required to fight either nuclear or conventional wars anywhere on the Eurasian or Middle East landmass. In quality they about equal our modern equipment—they lag behind us in some items, have drawn even on some, and surpass us in others.[27] General Twining, in evaluating the fighting strength and attack superiority of the Soviet, assured the committee that Russia had a sufficient force to launch an attack and maintain it."[28]

Soviet ground troops are supplied with a group of 7.62 mm. small arms, the identical caliber of weapons with which we now equip our own ground forces. Besides 50-ton-heavy tanks with 122 mm. guns, tactical amphibious vehicles include 15½ ton light tanks with 76 mm. guns, while the T–54 medium tank uses the 100 mm. gun. Of the surface-to-surface rockets and missiles, the Soviets have at least 4, ranging from the "Honest John" type rocket with a 15-mile range to tactical missiles with a range of over 300 miles.[29]

There are some problems the Russians must meet in nonmilitary fields. Drinking water barrels, dishes being washed by hand, men detached to process cabbage, and military men carrying firewood for stoves in their barracks all do little to conserve scarce manpower.[30]

Revisions have been made to possible return to the territorial system of military organization which existed in the Soviet Union prior to 1939. This would mean that the majority of ground personnel would become part-time soldiers—similar to our Reserve or National Guard. This, together with the proposed reduction in armed forces, shows graphically the personnel problems resulting from requirements for farm labor, problems of low worker productivity and the losses in male population due to the staggering toll of death during World War II and the subsequent drop in the birth rate.[41]

As compared to this, our Army needs are substantially different from those of the Soviet. We do not need to patrol our borders with unfriendly nations, nor maintain control of restless satellites. All our ground forces are ready to respond to limited or general war demands.

Our Army and Marine forces of 1,045,000 are equipped with modern, mobile nuclear-capable missiles in addition to a complete arsenal of conventional weapons. A good portion of these forces are deployed in advance positions around the Communist bloc, and are backed up by ready forces in the continental United States, and by Reserve forces ranked at their highest level of readiness in peacetime history. Support by 3 air wings of the Marine Corps, 33 wings of the Tactical Air Command of the Air Force, and by the carrier-based aircraft of the Navy is of higher quality than the Soviet Union, which has no all-weather, supersonic fighter-bomber such as our F–105.

Through our alliances with other nations of the free world, we have access to some 250 bases, and additional forces sufficient to set the free world strength at 5 million men, air forces of 30,000 planes and sea control of 2,200 combat vessels. Most estimates give

Footnotes at end of speech.

credit to the contribution of our allies as being far more significant than that of the Communist satellite armies.

At the end of 1961, our Army will have 14 divisions and 25 other major units including 9 battle groups, 5 armored cavalry regiments and 5 missile commands, one battle group and one missile command more than planned for the end of 1960. By the end of fiscal year 1961, there will be about 500 additional helicopter and 109 more fixed wing aircraft in the active inventory as compared to June 30, 1959.[42]

Committee action coupled with administration requests led to "a substantial increase over the 1960 level in Army aircraft procurement of such modern aircraft as the Mohawk (turboprop observation), Caribou (transport), Iroquois (utility helicopter) and Chinook (helicopter). The bill will also provide for a versatile range of missile and rocket weapons including the solid fuel longer range Pershing; the shorter range Little John, Honest John, Sergeant and LaCrosse; air defense missiles such as the Nike-Hercules, the Hawk and the Redeye; and the Davy Crockett—a man-carried nuclear weapons system. Finally, the recommended funds will provide for significant quantities of such modern equipment as the M–60 tank, M–113 armored personnel carrier, a new family of self-propelled howitzers and the 7.62 mm NATO-standard family of small arms." [43]

Additions of $207.6 million to the Army modernization will have an effect traced in the last section of this paper. Recent maneuvers at Fort Benning with these weapons illustrated the importance and magnitude of those weapons which will be procured with this sum over and above procurement contained in the specific recommendations of the President for fiscal 1961.

The new tactical missiles and rockets compare well with Soviet procurement to date. The Pershing range of 700 miles more than doubles the range of the most powerful Soviet army tactical missile, while the Davy Crockett can be fired in the field by one or two men with a range of 5,500–8,800 yards and a nuclear warhead. Shoulder-fired bazooka-type rocket weapons like the Redeye weigh but 20 pounds but meet Army requirements for use by combat trops against low-flying aircraft. The 1,275-pound Hawk surface-to-air missile has a range of 22 miles and is slated for oversea deployment by the Army and Marine Corps and is to be supplied to our allies.

Development of future systems like the Lobber, Missile A, and Shillelagh continue as well. The latter, intended for vehicle-mounted use against armor, troops, fortifications, etc., will be a surface-to-surface close support guided missile of great promise. Also ahead are decisions to add two Army surface-to-surface and three and one-half Army surface-to-air missile battalions to our oversea deployment, with conversion of seven other battalions from conventional to rocket missile capability.

In summarizing the relative ground forces of the United States and the Soviet Union today, Secretary Gates stated that "the Soviet Union clearly outnumbers the United States, but a comparison of the ground forces of the Sino-Soviet bloc with those of the free world allies, including the United States, is more favorable. It is not necessary to match the ground forces of the opponent on a unit-by-unit basis. Our Army and Marine Corps make substantial contributions to our deterrent strength. The Army furnishes an important part of the shield forces in Europe and Korea which, with U.S. air and naval units in such oversea areas, provide ready evidence of our willingness to contribute our fair share of forces to the common defense and our continued faith in the policy of collective security." [44]

NAVY

There is no doubt whatever that the United States is far superior to the Soviet Union in terms of global naval power. For one example, the U.S.S.R. has no aircraft carriers and they are apparently building none. For the United States, four new Forrestal-class carriers have already been commissioned, three more are under construction, including the first nuclear-powered carrier, and another is still a possibility in the current budgetary process, depending on Senate action. We have a 24-hour carrier task force in both the Mediterranean and in the Far East, backed up by additional carriers in the Atlantic and Pacific fleets. This is equivalent to the advantage Russia would have if they could deploy a carrier task force off California and in the Caribbean. As it is, our carrier task force is a means of maintaining our military presence in critical areas of the world far from our own shores, while the Soviet surface fleet is more of a defense power without the capability of operation at long distances from home bases.[45]

In nuclear power, the Soviets are estimated to be in the process of achieving the first operational capability with nuclear-powered submarines, while we have 32 nuclear-powered submarines either in commission or under construction. While the Soviet icebreaker, the Lenin, is their first nuclear-powered surface ship, it is in shakedown status at a time when the U.S. mix includes the *Savannah*, a merchant ship, along with a nuclear-powered aircraft carrier, guided missile frigate, and guided missile cruiser, all under various degrees of construction.

Basically, the Soviet Navy is the second largest in the world, having undertaken a program of naval expansion since World War II to build up to 25 cruisers, 140 destroyers, 400–500 submarines, and an air arm of some 3,500 land-based aircraft. Surface ships are losing their importance in Soviet theory, with no carriers and a halt in the building of cruisers, though some suspect a changeover to nuclear cruiser building. Recently Khrushchev forecast that "in the navy" the submarine fleet is assuming great importance and surface ships can no longer play the role they played in the past.

Since the free world has more than 95 percent of world shipping, these differing requirements led the Soviets to build 400–500 submarines as compared to our approximate number of 120. This "sub gap" has caused us to step up efforts in antisubmarine warfare. One-half the Soviet submarines, it might be added, are incapable of operating in distant areas, while the others are challenged by our Navy, with wartime experience and skill in antisubmarine warfare operations as well as including ASW capabilities in the equipment of almost every naval vessel. Four permanent naval task groups now provide training for destroyers, ASW carriers and hunter-killer submarines. A year ago, U.S. intelligence informed Congress that Russia has slowed down their submarine production, thus leading to the feeling that they would construct new and improved types of submarines (missile and/or nuclear propulsion.[46])

Congress provided for fiscal 1961 the financing of three nuclear attack submarines (one more than the original budget request), two destroyer escort vessels, and finance for high priority efforts in research of antisubmarine warfare to the tune of $321 million additional funding. Inasmuch as numbers of submarines marks the only gap in American naval superiority today, the Navy is giving top priority to antisubmarine warfare. This is in marked contrast to the Soviet Union, which has no ASW carriers, no hunter-killer forces and only limited numbers of the specialized aircraft needed to detect and attack submarines.

Introduction of several new items of ASW will take place in the American military inventory in fiscal 1961. These will include ASROC, a rocket-assisted torpedo and depth bomb; new sonar equipment; the HSS–2, a new all-weather search helicopter; the S2F–3, a carrier-based ASW aircraft, and Dash, a drone ASW helicopter, all of which should be operational by mid-1961.

Perhaps the biggest advantage in the near future our Navy will have is the Polaris submarine missile force. The marriage of the atomic submarine with the Polaris fleet ballistic missile promises to give us one of the greatest deterrent weapon systems yet devised, according to the House Appropriations Subcommittee on Defense,[47] which also characterized the atomic submarine with its performance capabilities together with advancements in armaments as "the most formidable naval warship yet devised." [48]

Budget adjustments proposed by the Secretary of Defense on April 6, 1960, led to approval of a Polaris submarine program of 21, with 5 fully funded in fiscal year 1961 and 7 partially financed. This program, added to the 9 already funded, will result in an addition of 336 Polaris missiles to the strategic forces of the United States as already stated. While the Committee recognized the capability for massive destruction of the Polaris to be less than the ICBM's and admitted that it is a costly weapons system ($241 million extra for full funding rather than partial funding of two submarines) and that it has not been fully tested as yet, the report called the Polaris weapons system "because of its almost complete invulnerability to enemy ICBM attack and its other capabilities, of great importance to the nation's deterrence in the ICBM era." [49]

Two Polaris submarines will be operational by the end of calendar 1960, and thus it will be possible to more accurately assess their performance. Since Secretary Gates testified that "if the Polaris proves out sooner than expected, a reconsideration of the program would be undertaken," [50] good performance in the operational submarine will no doubt lead to further expansion of the program.

For the near future, the active fleet will be maintained at a level of 817 ships, of which 382 will be warships. In 1961, the Navy will receive from construction 29 new ships representing more tonnage than was received in any 1 year since World War II. Two Forrestal-type aircraft carriers, the first nuclear-powered carrier, 9 nuclear submarines and 7 guided missile frigates are included. Heavier and more powerful modern naval aircraft are being introduced into the force. Meanwhile, Congress provided funds for fiscal 1961 to institute a ship-building program of 31 new ships; to continue the fleet rehabilitation program for 14 more World War II destroyers; and to procure advanced aircraft such as the A3J (supersonic), F8U–2N and F–4H.

Significant missile procurement will continue. Included will be fleet air defense missiles like the Talos, Terrier and Tartar, plus additional quantities of the air-to-air missiles Sparrow and Sidewinder. As examples of our lead over Soviet naval forces, the Terrier is a good example—a solid-propellent surface-to-air missile, it can be launched from a cruiser and has a range of 10 miles, with an advanced version with greater range in production. The Sidewinder is now operational and has been supplied to several allied air forces, and features a range of up to 11,000 feet at 50,000 foot elevation, along with accurate infrared heat-seeking guidance. Development of the Eagle long-range (100 mile plus) air-to-air missile will some day mean a new departure since it could be launched from long, slow patrol type aircraft. The Corvus will serve as an air-to-surface stand-off missile of su-

Footnotes at end of speech.

personic speed and range of over 100 miles, while the Astor, Subroc and Asroc will fire at submarines from other submarines or surface ships.

As a summary statement on U.S. naval forces today, we turn to Admiral Russell, Vice-Chief of the Navy, who said that "the United States has the strength to maintain control of the seas today. This strength embraces a versatile and diversified capability for limited and general war on the one hand, while on the other it permits a selective demonstration of strength in the cold war as may be required in support of our national policies. Naval forces, due to their mobility at sea, might comprise the major residual capability following an all-out nuclear exchange." [51]

AIR FORCE

Other than the "missile gap" commented on in the last section, Soviet aviation itself includes but 20,000 modern aircraft plus about the same number of obsolete planes in reserve. The tactical command contains about one-half of the total air strength, continuing the traditional emphasis on the importance of ground combat.

However, there has been a recent emphasis on long-range aviation capability in the Soviet Union. From a copy of our B–29, the Soviets have increased their posture in this field to the point where their strategic manned bomber force is second only to our own. Both their Badger (medium jet bomber) and Bison (heavy jet bomber) are capable of delivering nuclear weapons.

The Badger has a maximum speed of about 600 miles per hour, and an unrefueled combat range of 1,500 miles, while the Bison, of about the same speed, has a range of about 2,700 miles. The use of bombers as tankers to develop refueling capabilities has cut into the number of bombers available for long-range bombing missions.[52]

At one time, General Twining reported to the House Appropriations Subcommittee that by 1959 Russia could have 600–700 long-range bombers. Reduced estimates of Soviet bomber forces by January 1959, were explained as either meaning that Russia had experienced technical difficulties in the operation of these planes or that the drop was a matter of policy in concentration on other weapons such as missiles.[53] Thus the Bison, with a general performance somewhat similar to our B–52 but with a somewhat shorter range, has been downgraded in Soviet intentions as contrasted with capabilities.

In contrast to this picture, the United States has four to five times as many intercontinental jet bombers and somewhat more medium jet bombers, supported by a large fleet of refueling tanker aircraft. The U.S. long-range bombers are being equipped with Hound-Dog air-to-surface missiles which can be launched up to 500 miles away from the target. This force is manned by experienced crews, capable of delivering night or day with pinpoint accuracy bombs whose individual explosive power is greater than all bombs dropped by all bombers, enemy and Allied, during the entire course of World War II.

We are continuing to improve the tried and proved manned bombers. The budget for fiscal 1961 includes funds for B–58 supersonic medium bombers, B–52 H heavy bombers with the new turbofan engines, and the associated KC–135 jet tanker. Hound Dog missiles and Quail decoy missiles are provided in the budget to be carried by the B–52s, improving greatly the penetration capabilities of our manned bomber force.

Funds are available to continue development work on the B–70, designed to fly at 3 times speed of sound. Two prototypes of this advanced bomber will be available for flight testing, so that the Air Force will be in a position to determine the future course of its development. Many have felt that the $5.5 billion program scheduled for the bomber to be operational by 1965 was optimistic both in terms of cost and time period, especially in view of its duplication of 4 strategic ICBM systems and its questionable advantages over the B–58. Meanwhile, the B–58 supersonic bomber program is progressively being built up to three wings. Protected by the capabilities of airborne alert, ute 15-minute BMEWS and research on the MIDAS 30-minute system, a SAC manned bomber program will continue to form a major part of our deterrent strength.

A brief summary of our future ICBM capabilities shows the Atlas as now operational, with additional missiles becoming operational within the next several months. The Titan will be operational in 1961, with the Minuteman scheduled to be operational on or before June, 1963. The Atlas will be built up to 13 squadrons and the Titan to 14 by 1963, with all but the first few Atlas squadrons hardened. The Minuteman, of course, promises mobility rather than hardening alone, and progressive expansion of this solid-propellant missile will go on after 1963.

Though the program for the Air Force in fiscal 1961 shows a reduction of 2 wings because of the phase-out of aging B–47 medium bombers, the House subcommittee feels that "total retaliatory capability will continue to grow despite this reduction as B–58 medium bombers and additional B–52s with their Hound Dog and Quail missiles are delivered.[54]

Delivery of the nuclear-capable F–105 attack aircraft and more tactical missiles, plus procurement of 760 aircraft, an increase of 200 over the quantity purchased in 1960, insures an improved aircraft program for 1961. Included are additional quantities of the improved B–52 H heavy bomber, the B–58 medium bomber, the KC–135 jet tanker, all already mentioned, plus the supersonic F–105 fighter-bomber, the supersonic, all-weather F–106 interceptor and the C–130 and C–135 type transports.

Among the missiles still in development, the Skybolt would double the range presently achieved by the Hound Dog, hurling at hypersonic speed 1,000 miles to its target from B–52s and B–58s. The Longbow has now supplemented the Crossbow as a development antiradar missile, designed to home on enemy sites as defense measures for incoming U.S. bombers. Slam (supersonic low-altitude missile) will have a range of over 6,000 miles under a nuclear ramjet power system now being developed.

Air Force comparisons were best summed up by Secretary Gates, who stated that "manned bombers are still the primary means of delivering heavy nuclear weapons in the volume and with the accuracy needed to strike a decisive blow. In this category, the United States far excels the U.S.S.R. We have several times more intercontinental jet bombers and more medium jet bombers. We enjoy a marked qualitative advantage and can claim credit for the most experienced bomber crews in the world. We are well ahead of the U.S.S.R. in air-to-air refueling capabilities, air-to-surface missile development, and other important air warfare techniques.[55]

RESEARCH AND DEVELOPMENT

Our overall research and development program includes over $200 million a year for projects assigned to the Advanced Research Projects Agency (ARPA). Among ARPA projects are included ballistic missile defense, which takes up approximately half the appropriation for fiscal year 1961; solid propellent chemistry; materials research; communications satellites; navigation satellites and tracking.

All services have some space development occurring at a rapid pace, attempting to do things in space that will permit the services to better do their respective jobs on land, on the sea and in the air. The Navy, for example, is taking over the transit space system from ARPA, as the Army takes over Notus and the Air Force Midas, Samos and Discoverer. This is in line with the theory that more interest and enthusiasm will occur where projects are placed in the service that has a substantial interest.

Some of the more amazing accomplishments planned for the future include for one the Navy Typhon, which will be effective against submarine-launched ballistic missiles, tracking down and shooting these missiles when they are coming out of the sea. As Representative FLOOD said, it was like "knocking down one bullet with another bullet." [56]

The Army has design-tested an armored vest with a ballistic collar to decrease neck wounds—it is expected to reduce wounds in this vital area by 11 percent based on Korean war experience figures.

Meanwhile, the Air Force will test next winter an ice-jet snow and ice removal vehicle which would not only melt the ice and snow on runways, but actually evaporate the resulting water.

In the area of CBR warfare (chemical, biological and radiological) appropriations have been raised from $35 million in fiscal 1959 to $57 million in fiscal 1961. In hearings on the fiscal year 1961 budget, Dr. William Summerson, Deputy Commander for Scientific Activities, Research and Development Command, stated that "with this budget we expect to have in the time from 1963 to 1965 a program to give us for defense the following items: an improved alarm for the rapid warning against chemical agents; vaccines for defense against these biological warfare agents where vaccines are known to be satisfactory at the present time; and we expect to have adequate nerve gas treatment." [57]

In summarizing our research, development, test and evaluation at present, Dr. H. F. York, Director of Defense Research and Engineering, said, "I believe that the R.D.T. & E. program presently underway and planned for fiscal year 1961 by the Department of Defense is in proper balance with the other important defense programs and that it is adequate to support our national military objectives." [58]

SUMMARY

Former Assistant Secretary of Defense W. J. McNeil used to graphically illustrate the differences in our economy with Russia by suggesting that we imagine swapping our economy with that of the Soviet Union. At present, this would entail our abandoning three-fifths of our present steel capacity. We would have to destroy two out of every three hydroelectric plants and get along on about one-tenth our present amount of natural gas. We would rip up about 14 of every 15 miles of paved highway and 2 out of very 3 miles of railroad tracks. We'd sink eight out of every nine ocean-going ships, scrap 19 out of every 20 cars and trucks, and shrink our civilian air force to a fraction of its present size. In reducing our standard of living to one-fourth of what we presently enjoy, we would destroy 40 million television sets, 9 out of every 10 telephones and 7 out of every 10 homes.

Even if the goals of the Soviet 7-year plan are attained in total, a remarkable achievement, Soviet economic capacity in 1965 would still be significantly below that of the United States today. Their crude steel capacity by that year would reach 90 million tons—our pre-Korean level. Even conceding the Soviet Union a 6 percent growth rate in gross national product to our 4.4 percent, the gross national product gap would grow to $345 billion (630–285), a rate of over 2 to 1 and an absolute gap of over $90 billion in excess than the difference today. In

Footnotes at end of speech.

light of the close relationship between economic policy and military posture, the Soviet Union must give great weight to the problem of alternative uses of limited resources in military as in economic progress.

Perhaps the best military summary would be a similar exchange of military capabilities with the Soviet Union:

In ICBM production, we would have an operational ICBM, but so would the enemy. If we went ahead with first-generation ICBM's, we would have more in a few years, only to be faced with successful enemy development of second-generation ICBM's and submarine missiles, flexible and reliable. These would be moving into the enemy arsenal while we still sought to achieve mathematical first-generation ICBM supremacy.

As previously recounted, our jet bomber force would be faced with a nuclear force four to five times as large. Our continent, virtually defenseless, would be faced with enemy bomber forces operating from bases in Bermuda, Hawaii, Alaska, Venezuela, and Newfoundland. We would have nothing comparable to the power of thousands of fighter aircraft, bombers, tactical missiles, pilotless aircraft, and IRBM's at dozens of bases scattered through nearby Canada, Mexico, and the Caribbean Islands.

Remember that in air defense we would have a few ground-to-air missiles clustered around our metropolitan centers and elsewhere would have only antiaircraft guns. The enemy would have a worldwide system of radar warnings, a powerful all-weather fleet of jet interceptors, substantial ground-to-air missile based and promising developments in antimissile missiles.

On the ground, lest we forget, we would face one-fourth million nuclear-armed enemy troops in Mexico and Canada and these would be allied with large and powerful forces of other nations in our own hemisphere. Our large ground troop array would be required to maintain internal security, to defend our borders and to maintain our domination of a restless satellite empire.

On the sea, enemy naval forces would be cruising a few hundred miles off our coast, with aircraft carriers capable of launching nuclear bombers, and Polaris submarines, soon to join the fleet, ready with 16 missiles each. We would have nothing comparable.

Finally, let us not overlook collective security. With our tinderbox of satellite nations subdued by military dictatorship, we would face enemy allies of freemen banded together in collective organizations and treaties ringing us with 250 strategically located bases for planes and nuclear missiles in addition to ground forces.

As President Eisenhower outlined the force some would be willing to swap. "This is a force not unduly dependent upon any one weapon or any one service, not subject to elimination by sudden attack, buttressed by an industrial system unmatched on earth, and unhesitatingly supported by a vigorous people determined to remain free. Strategically, it is far better situated than any force that could be brought to bear against us."[89]

Task Force Report: American Strategy and Strength

EXTENSION OF REMARKS
OF

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. CHAMBERLAIN. Mr. Speaker, as part of the "Task Force Studies on American Strategy and Strength," I place in the Appendix of the CONGRESSIONAL RECORD, study paper No. 8: "The Requirements of Deterrence," by Prof. Paul Peeters, Iona College:

THE REQUIREMENTS OF DETERRENCE

(By Paul Peeters, Iona College)

1. National strategy is not developed in a vacuum. It has to fulfill many tasks. It is subject to variable conditions, and its success depends on an environment which is economic, political as well as ethical.

The complexity of the challenge now facing the United States is best understood when stated in dialectical terms: the dialectic of peace and power, of collective security and leadership, of economic and military strength.

Partisan criticism follows a dialectic of its own. It appeals to idealism when national policy ought to be realistic (nuclear testing). It advocates political realism when a question of principle is involved (Berlin). It opposes unilateral action by the United States when this country must act alone (Taiwan). It calls for decisive leadership when the situation facing us demands evasion (Suez).

The purpose of this paper is to redefine some of the fundamentals of successful deterrence while distinguishing the proper dialectic of national policy from the fatal dialectic of partisanship.[1]

I. PRINCIPLES

2. The Communist threat is presently centered in the growing military power of the Soviet Union. As an ideology, communism is failing. It cannot make decisive advances without using force. If it were not identified with Soviet power, communism would soon lose control over what it has conquered, and slowly cease to be itself. To maintain our military posture is, therefore, the first task of national policy, not only because our survival is at stake, but because peace is the true antidote to communism.[2]

In our partisan debates, we have denounced this interpretation as a naive description of Soviet objectives. We have said that communism in essence was not a military problem, but a great social movement. We have pressed the United States to launch "the greatest political offensive in history," to get out in the marketplace of ideas, to compete for the minds of men, and to tackle the "real" problems of poverty, sickness, and illiteracy. When the time came to resist to Communist probing, however, we made frantic pleas for an all-out military build-up. The balance of power had supposedly shifted to the Communists. We were not ready. The hour was late, and the agenda of the things we had failed to do was long. A war was going to break out. The Communists were not bluffing, but we found ourselves in the straitjacket of past policies, at the brink of war, and alone.

National policy considers Communist power as the core of a many-headed threat. Dialectical partisanship, on one day, denounces national policy as narrowly militaristic. On the next day, it speaks as if we only faced a military threat.

3. The U.S.S.R. has specific strategic assets and specific needs. So does the United States.

By developing our own assets, we can do much to strip the Soviets of their assets and increase their needs. One of the tasks of national policy is to prevent the Soviet Union from doing the same to us. One of the pitfalls of partisan debates is to measure our assets in terms of Soviet needs, and to evaluate our needs in terms of Soviet assets.

4. We do not think in terms of national defense alone, but rather in terms of the total defense needs and capabilities of the entire free world.

Dialectical partisanship seeks to thrust upon us the full responsibility of defending allied countries, but it denies us the right to draw from their capabilities. These countries may refuse to support us, but we are forbidden to do anything alone.

5. Our present strategy is a strategy of total deterrence and graduated retaliation. It is based upon our massive retaliatory power and complementary forces that we must be able to maintain indefinitely for global as well as for limited war.

So defined, national policy leaves no room for partisan controversy. First proclaimed by Secretary Dulles on January 12, 1954, this complex strategy has been consistently enforced by the Eisenhower administration ever since. It has been completely successful. The fact that it survived revolutionary technological changes is a further proof of its fundamental validity.[3]

6. The world is now approaching a condition generally called "nuclear stalemate." The interpretation of this term is of paramount importance.

In our partisan debates, we have often alluded to the administration's "Maginot line" mentality, its reliance upon strategic weapons, and we have denied that there was any balance of terror in existence. Yet we have also claimed that war was now impossible. Neither the United States nor the Soviet Union could initiate an attack, no matter how provoking the other side would become. The balance of terror thus existed, after all, and it amounted to signing a nonaggression treaty with Russia, and the only alternative was coexistence.

This again is a dialectical inversion of what national policy truly is. The thought that war is impossible can be a counsel of despair. As President Eisenhower said, on September 30, 1953, there is a tragedy "greater than winning a war," and this "would be losing it." We must be ready to defend if need be by life itself, the values and interests for which we stand. Any willingness to abandon our values would only give to the Communists the hope of achieving their goals without war.

National policy also holds that military superiority is a notion that has lost much of its meaning in the atomic age. Since we occupy a defensive position, however, and we want to deter the aggressor, this depreciation of military power benefits us.

Finally, the administration never said that the very existence of nuclear weapons created a reliable balance of terror. A nuclear stalemate is not a static condition. It is in our power to develop a strategy and the

Footnotes at end of speech.

means to implement it that would give us global superiority over Russia in spite of a numerical inferiority in some sectors.

7. The adequacy of our military posture is under constant review. The opposition has legitimately disclaimed major responsibility for defense planning, and the administration has never claimed having discovered any magic formula for achieving perfect security—a formula that would never have to be adjusted to changing circumstances.[4]

No fundamental change in our present strategy has proved to be necessary yet. Even if we did not have the will nor the means to implement it at this time, our defense policy would still be valid and necessary. Doubts concerning the adequacy of our military means have induced many to believe that long agreed national strategy had suddenly become controversial or even that it had been discarded. Such assertions are simply not founded.[5]

II. THE DETERRENT

8. "Any orderly balance sheet of military strength must be in two parts," President Eisenhower said on January 9, 1958. "The first is the position as of today. The second is the position in the period ahead."

A. Forces in being

9. Deterrence is achieved, at any given time, only by existing forces. Weapons still in development are no deterrent. Conversely, if weapons in being are adequate, deterrence has been achieved, and we can act accordingly.

This simple point had to be made because it is so often inverted in partisan debates. We often speak as if deterrence today had to be achieved with weapons we did not yet have—the weapons of tomorrow—and as if we had to rely, for future deterrence, on today's weapons—which we know to be already obsolescent.[6]

10. "What you want is enough, a thing that is adequate," President Eisenhower said on February 3, 1960. "A deterrent has no added power once it has become completely adequate." But what is adequate power to deter the Communists from general war? This question must be answered dialectically.

11. "Major aggression is unlikely unless the aggressor has the advantage of surprise and can hope to strike a blow that will be devastating because it is unexpected" (J. F. Dulles, Nov. 10, 1955).

National policy must emphasize the feasibility of a surprise attack upon us, and so undertake whatever measures are necessary to protect the country against it. Now surprise attack is feasible because of the nature of modern weapons and because of the relatively small number of targets to destroy by the enemy in order to cripple our retaliatory capacity. Dialectical partisanship asserts, in contradistinction, that there is no evidence that Soviet planning is based upon a surprise attack against the United States. In other words, we would be preparing ourselves for an attack that would never come.

In order to achieve deterrence, national policy also proclaims the unfeasibility of surprise. A surprise attack is unfeasible because of the countermeasures we take, such as intelligence, warning, dispersal, and hardening; because of our mixed deterrent concept, and also because the enemy can have no advance certitude that our retaliatory potential will be effectively wiped out. For in order to be successful such an attack must strike all targets at the same moment. It must destroy most of our retaliatory capabilities. A surprise effect measured in terms of minutes must be achieved. Unless these three conditions are actually met, a surprise attack is suicidal.

Dialectical criticism of national policy holds that a Soviet surprise attack is feasible. Striking at a time and with tactics of its own choosing, the U.S.S.R. would quickly recover from the damage inflicted by a small, uncoordinated American force, operating in a postattack environment against a fully altered enemy and evacuated Russian population centers.[7]

12. "Wars have a way of coming about in circumstances that have not been fully foreseen by humans," President Eisenhower said on August 27, 1958. He added that he did not see any reason for saying that "we necessarily have to take the first blow." Consequently, we are not basing our requirements on just bombing the Soviet Union for retaliation purposes. A valid deterrent thus includes the capability of attacking the enemy's military power before he has the possibility to bring complete destruction upon us.[8]

The critics have disassociated themselves from the suggestion that we must contemplate striking first. Having so ruled out the possibility of any preemptive action from our part, they have exaggerated both the destructive power of our strategic forces—for they assumed that these forces would be exclusively used for retaliation purposes—and the relative weaknesses of our retaliatory capacities—since they assumed a postattack environment.

The validity of national policy on this point is not open to question. The application of counterforce will be necessary in situations where the national survival is at stake in order to blunt the forthcoming attack upon us. The secondary aim of a preemptive action will be to paralyze Soviet postretaliatory operations. We are not going to prevent war unless we have the capability to initiate a war and the power necessary to engage the enemy.

It is not in the national interest, however, to make the distinction between retaliation and counterforce any clearer than necessary to deter a potential aggressor.

13. "No responsible person would contend that our present defenses are inadequate to our needs," Senator L. JOHNSON said on February 23, 1960. "The real issue," he added, "is whether the course we are following will continue to build our defenses at the needed rate. In other words, in the foreseeable future, will we have enough power to meet the anticipated power of a potential enemy? This is of vital importance, because today defense requires a leadtime of a number of years. The decisions we make today will set the limits of our power for some time to come."

B. The foreseeable future

14. The progress accomplished in stabilizing military planning and procurement during the two Eisenhower administrations contrasts strikingly with the chaotic decade that preceded his tenure of office. The principles that guide our present policy for the long-range outlook cannot be reasserted too strongly.

15. Mr. Robert Sprague has testified on February 24, 1960, that "the idea that an increase in spending for survival will bankrupt us is, to put a plain word on it, silly." The question—as he saw it—"is whether we are willing to use a small fraction of our increased wealth for the defense of our way of life." We would rather be safe than sorry. If we increase our defenses and if they are not needed, all we lose is money.

The emotional simplicity of this argument is apt to deceive. No matter how much we spend, we will not have absolute security. In addition, the critics are satisfied with simply begging the question. They assume that increased spending is needed for survival; that the administration has claimed that such an increase would bankrupt us; that the American people would not consent to it if it were proved that it is needed—the very points that the critics had to prove.

The truth of the matter is far from simple. The long-range outlook is for an endless series of attempts on both parts to achieve a certain military balance at one's advantage, and to unbalance any balance temporarily achieved by the other side, with overall costs and danger projecting upward. Continuous technological advances and the inflexibility of military procurement mix up with budgetary limitations that cannot be removed just by brave talk and wishful thinking. As Secretary of the Navy, R. B. Anderson said on March 9, 1954, we must choose between "too little and too late and too much and too soon."

In that connection, it is well to remember that we ought to be able to move quickly into any breakthrough in good and reliable weapons that we can get; that we often have to reserve judgment as to what we might want to do about weapons still in development, and yet have the capability to decide at a later date, to procure them. This is being done by the administration. Funds are being requested by the Department of Defense to exploit promising developments and to expand or accelerate programs, such as Polaris, when progress achieved proves this wise. Finally, the administration has repeatedly stressed that it would not hesitate to depart from its long-range programs in an emergency and to take any necessary measure.

16. To give to the world at large the impression of a country that does not know what it wants is the one thing that we cannot afford. "We want to keep adequate forces and we want to keep as strong in our hearts and our heads as we do in our military," Mr. Eisenhower said on March 11, 1959, "and then carry forward our policies." It would be foolish indeed to be pushed off the plans we made "time and again by something suddenly described as a crisis. What we have to do is to stand steady * * *, to be alert, to watch what we are doing, and to make certain that we know how and where we would have to produce action, if action became necessary."

17. The administration has tried to achieve what George Washington called "a respectable military posture." Our defense policies should not induce the enemy to overestimate his own needs. Such a prolification of weapons would only increase the dimensions of our own task. The position of relative superiority that we should attempt to maintain should be measured and rational. One of the greatest merits of our present strategy is that it allows us to reconcile the principle of relative superiority with a nonprovocative defense effort.

As long as our deterrent remains adequate, the U.S.S.R. would do well to act in conformity with the basic law of a nuclear stalemate instead of wasting its resources on first generation ICBM's. It has no reason to engage into crash programs, but should rather tailor its own defense effort to the size and nature of our forces. And for the same reason, we should consider what the Russians actually do as closely as what they are supposedly capable of doing.

18. It remains, however, that we have now entered into a period of transition. When we have hardened and mobile missiles and a mixed deterrent, we will find ourselves in a condition that will be much more stable than the one in which we are today. As General Power pointed out, we will then reach a point where even surprise attack would not substantially minimize the risk of retaliation.

The point is that we will soon have the possibility to build up a relatively invincible deterrent. The issue is whether we should do so as rapidly as we know how and without stretchout. There is no question of whether it should be done—and it will be done.

Footnotes at end of speech.

19. A potential aggressor primarily needs counterforce capabilities, and we need a deterrent which is indestructible. If our deterrent cannot be destroyed, the enemy is not in a position to calculate that aggression is a paying proposition.

The size and composition of our deterrent is mainly determined by its counterforce function. If we possess a mixed, flexible, and numerically adequate deterrent, the enemy would be forced to develop a retaliatory deterrent.

If counterforce on either side is neutralized by retaliation on the other side, the notion of deterrence would undergo a qualitative change. Together with large land armies, attack submarines, and air defenses, the ICBM would be relegated to a role of passive deterrence. This weapon might be well suited for the initiation of a strike, but it can hardly be fired on the basis of warning. Before retaliating, a country that feels threatened must make sure that it is attacked. An important advantage would then accrue to the country that could engage in active deterrence.

Active deterrence refers to weapon systems that can be deployed without automatically unleashing general war, and it also refers to diversified deterrence: Manned aircraft armed with ballistic missiles, aircraft carriers, missile submarines, reliable alliances, nuclear stockpiles in allied countries, and national deterrents.

Obviously, the United States is in a much better position than the Soviet Union to develop active deterrence.[9]

20. The United States enjoys, at present, a global strategic superiority over the Soviet Union. But we can assume, for argument's sake, a Russian numerical superiority in strategic missiles. SAC's ability to penetrate Russian territory does not need to be proved any longer. Recent events have served to illustrate that the nuclear balance is more stable than generally believed in the sense that it cannot be upset by any single advance or temporary superiority, even in a weapon as critical as the ICBM.

If it were to materialize, the missile gap would not be a deterrent gap. Under the cover of adequate deterrence, we can develop our own programs without engaging into wasteful emergency measures or investing heavily in interim weapons. This only applies, of course, to weapon systems that are known to be of limited or temporary value; and we should keep in mind that we are dealing with one of the most unstable empires in history.[10]

21. If followed, the principles now guiding national policy will enable us to maintain our deterrent posture in the foreseeable future. "If you will take the things that the Soviets could probably do 3 or 4 years from now, and then we sit like we are now and do nothing, well, that's a different story. Now, as we go ahead, they will go ahead," President Eisenhower said on February 3, 1960. "Three years from now, if we are working as hard as we do now, we are going to be in the same relative position." [11]

III. COMPLEMENTARY FORCES

22. From 1953 to 1956, the Eisenhower defense program, achieved within the limits of sound budgetary practices, has been criticized on the ground that national security had been placed in jeopardy because too much emphasis had been put on air-atomic power. Advocating a conventional strategy, the critics demanded more Army divisions, more airlift, more of everything.

The controversy then shifted to the B–52 program. The critics suddenly became the apologists of a supermassive retaliation concept. They demanded an overwhelmingly superior deterrent.

A year later, the B–52 was described as a major blunder in view of Soviet concentration on the ICBM. The Russians had supposedly led us to believe that they were building a great long-range bomber force, and we had fallen for it.

The grave inconsistency of such an approach was disgused by accusing the administration of having placed economy ahead of security. The limits set by budgeteers had caused reductions in conventional forces as well as the inadequacy of our retaliatory forces.

Taken as a whole, the partisan argument is fraudulent. The adequacy of our conventional forces is a problem that must be treated in context, but separately. As we shall see presently, the critics have taken it out of context by failing to discern that local defenses and conventional forces were complementary to the deterrent; and they have refused to discuss the problem on its own merits by failing to distinguish it from the problem of deterrence.

23. The conventionalist argument generally proceeds in two parts. It is first said that "massive retaliation is a two-way street." The deterrent cannot be used. In case of war, we will have to fall back on conventional forces which are said to be utterly inadequate as compared to Russian forces. The critics secondly refer to ever-renewed cuts in military personnel, to the aging of the fleet, to the obsolescence of MATS planes, and so forth.

24. This obviously relates to the hypothesis of total war. Now if a general war started with a massive surprise attack and counterattack, neither the United States nor Russia would possess the ability to move large amounts of personnel and materials; nor would they be in a position to engage at once in large-scale operations. In that first phase of a general war, a fraction only of our conventional forces—airlift, for instance—would directly support our retaliatory actions; the balance would be used for operations that can be called, at best, holding actions.

Our present defense program recognizes the criticality of the initial period of a conflict. It is tailored to assure the full combat capability of the primary forces at any given time.[12]

Would the enemy ever start a full-scale conventional action, daring the United States to use its deterrent? By doing so, he would lose the benefit of surprise and expose himself to a preemptive action. Such an extreme provocation as a direct offensive against us is inconceivable in the atomic age. It means all-out nuclear hostilities.[13]

25. Our inability to relay upon conventional forces for deterrence of general war does not stem from a lack of will or a lack of means, but from the very nature of the problem. The advent of nuclear power has forced us to revise not only the size and composition, but the very character of security. The critics often seem to consider nuclear weapons as conventional weapons of unusually large yield. They still seek to integrate the notion of deterrence into the strategic patterns of the past.

If conventional forces are to be increased considerably, we would need a defense effort that would amount to mobilization. Now, mobilization would not reduce world tensions; it would not diminish the risk of Soviet attack; and it would make sense only if we were able to predict when the attack would come. But, as the President said on April 23, 1953, "for anybody on a defensive position to base his defense on his ability to predict the exact date of attack was crazy."

The opposition was careful enough never to determine the levels of force that should be set up to meet its own criticisms. It was satisfied to pretend that the ideal Army should have 925,000 men instead of 870,000, or to propose an increase in military expenditures of $3 billion "for immediate defense needs." None of the changes ever proposed in this fashion would justify scrapping our present defense plans or shifting to a conventional strategy.

Such gimmicks are all of doubtful honesty, but none is more unworthy of us than the assertion that, if more imagination had been displayed, we would have long found the solution to our problems. The grandiloquent, amateurish call for fresh ideas always leads to the accusation that the arms race and the cold war are the only grand strategy we have.

The fact is that a workable alternative to our present strategy has not yet been formulated and that the critics are most vulnerable on this point. Whatever can be said to rationalize such an abuse of the democratic process, it is unpatriotic and irresponsible to pull national policy to pieces on such a vital point without replacing it by something better.[14] The debate on the adequacy of our complementary forces thus limits itself to the limited war problem.

26. In a typical inversion of national policy, we have spoken derisively, in our partisan debates, of "massive retaliation," and advocated "graduated deterrence." But the notion of graduated deterrence is nonessential. It is in the nature of deterrence to be total or not to be.

Any aggressor must be put on notice that his aggression will be met with appropriate retaliation. If war breaks out, in spite of our efforts to prevent it, deterrence has admittedly failed, but only to a point. For it remains necessary to stop the aggressor effectively, and to prevent the conflict from spreading.

Graduated retaliation means that a variety of responses to military aggression is feasible. It refers to the flexibility of striking power that we possess. We do not have to resort to the most destructive weapons.

The gap that existed between the largest TNT weapon and the tactical nuclear weapon of the smallest yield has been largely eliminated. The small yield of tactical nuclear weapons makes their use in local hostilities more likely. And the continuity that exists between chemical and nuclear firepower allows us to use nuclear escalation. The means of retaliation are thus available. They are credible. They are graduated.

It has been said that anything that has to do with atomic power is too dangerous because the enemy would retaliate in kind; weapons of a larger and larger yield would be used on both sides, and the conflict would eventually graduate into total war. This is another dialectical interpretation of national policy. Partisan criticism believes in escalation in reverse—a crude notion that combines lingering ignorance of nuclear tactics and neurotic self-criticism. For nuclear escalation tends to limit retaliation and it makes it feasible to achieve total deterrence with tactics of limited warfare.[15]

27. Many say that local war is more likely than total war. This truism is relative to the insanity of total war. Under a total deterrence policy, local war is irrational because retaliation is certain and because the aggressor's limited objective does not justify his taking great risks upon himself. If the expected gain is small, the risk is comparatively large.

The perpetuation of a well-planned aggression in cold blood and with considerable means as in Korea seems almost unthinkable today. If it were to break out, however, it would justify some strategic bombing of the enemy and certainly call for the instant use of tactical nuclear weapons. Aggression would then cease to be a paying proposition.

Let us repeat that any discussion concerning our present or future ability to wage limited war must start from the realization that our deterrence policy tends to reduce the scope of any likely limited war. Local situations likely to develop fall into the following categories: (1) War situations in

Footnotes at end of speech.

which the United States cannot intervene (Hungary, Tibet); (ii) civil wars or very limited outbreaks calling for what President Eisenhower has called "police actions" (Lebanon); (iii) preventive deterrent actions which do not actually lead to hostilities (Syria, Quemoy).

Considering the nature and the scope of likely situations, the forces that we possess—both conventional and nuclear—are ample, even if their mobility and general effectiveness could be much improved. And they are supplemented by substantial allied forces.[16]

28. The United States shrunk from employing the atomic bomb in Korea. Our allies apparently opposed its being used during the Dien Bien Phu crisis in 1954. The fact that it can be used, however, must be included in the equation of any potential aggressor. In addition, it is not so certain that past indecision deserves praise. Declarations have been made since that time, which clearly intimate that the United States would make a decisive use of its atomic potential right at the outset of any clear-cut aggression of the Korean type.

In view of the risks involved and the limited gain to expect from local aggression, the Soviet Union would be well-advised to deter its own satellites from committing aggression by refusing to promise to supply them with atomic weapons of sufficient yield and in sufficient numbers. And it is entirely safe to assume that it would never surrender nuclear weapons to its European slaves, nor allow them to fabricate these weapons under national control. It might not be able to impose the same restrictions on Red China. Now, the position of the United States vis-a-vis Red China is exceptionally secure: atomic weapons are well fitted for the type of retaliatory actions as would be needed against Red China. Finally, to threaten atomic retaliation in order to deter local aggression does not impose any obligation upon us to do so in actuality. We must and can decide in the light of circumstances and according to our own interest.

29. We do not have to be 100 percent ready for any kind of military emergency that could possibly arise, particularly those local situations which do not directly threaten our vital interests. As President Eisenhower said on December 15, 1954, he would, as Commander in Chief, "rather improvise and resort to expedient in little wars than he would in big wars. He would rather cast and mold his security arrangements to meet the great threats to the United States, and take the others, as far as he could, in his stride." Most of our forces could be used in limited wars. Any effort to categorize the various elements of our power is, generally speaking, arbitrary.

30. No strategy would be more unpopular in this country than a strategy necessitating the commitment of ground forces. President Eisenhower's defense policy conforms to our idiosyncrasy.

IV. CREDIBILITY

31. The Soviet Union is well-informed of the reality of our military power, and real power is always credible. Therefore, when we ask ourselves the question whether our deterrent policy is credible, we seek a moral alibi. The real question is whether we believe in it, and this is also the only question the Russians ask themselves. In both cases, the question is about ourselves.

The dialectic of partisanship suggests that we cannot threaten the U.S.S.R. with total destruction if, by doing so, we threaten our own existence. Either we do not mean what we say, or we resign ourselves to the folly of nuclear war.

This dilemma is obviously deceitful: It excludes the alternative of successful deterrence which is, to say the least, as valid as bluff and madness. If our threats were not credible, who would be to blame? Is it too much to expect from Americans that they denounce, in the same manner, Russian bluff and bluster? But if Russian threats are not credible, we have achieved deterrence; and if ours were not, we would have to use graver threats still.[17]

32. The balance of terror is often considered as precarious because the risks of upsetting it are catastrophic. Some people have said that our deterrence policy was irrational because of the degree of rationality it required.

If the risks of upsetting it are great, the balance of terror is relatively stable, and not precarious. For the same reason, the rationality expected from a potential aggressor is elemental. If he does not possess the degree of rationality needed for the success of our deterrence policy, he is insane.

There remains, of course, the possibility that he might challenge us in a fit of madness. Any proof of irrationality in Soviet conduct might force us to change certain features of our present defense program, and to gather more strength for an emergency. It would not be a reason to weaken in our determination to deter a potential aggressor.

33. Much of the debate concerning the credibility of deterrence is academic. We must make it clear that, in case of general war, the U.S.S.R. cannot count upon the effect that a wavering public opinion would exercise upon national policy. Our actions would be instant and long under way before the impact of Soviet destruction would be felt.

The decision to intervene in certain limited war situations can prove to be agonizingly difficult, but no less difficult than the decision not to intervene. In both instances, public opinion will exercise no immediate effect on policy-making.

The study of our recent debates conclusively proves that the noxious effects of partisanship on national policy begin to appear long after the country has already been committed to a policy of resistance and, not infrequently, when resistance has already paid off. This was particularly evident during the two Quemoy crises.

34. National policy suffers most at the hands of domestic public opinion in situations where the enemy is just probing. This is the paradox that we create by our divisive controversies. Our deterrence policy seems to be at its worst when its credibility is actually greatest and where its success ought to be complete and painless.

It is safe to assume that the Soviet Union would not advertise any impending strike by grand maneuvers on the cold war front. Conversely, the Byzantine labors of Soviet diplomacy are wasted as soon as we unmask the threat that they intend to communicate.

The dialectic of partisanship tends to take any Communist threat at face value. Something must be done about it, or a thermonuclear disaster would ensue from our failure to act. The administration is accused of waiting, like Mr. Micawber, something good to turn up.[18] At the same time, Soviet motives are scrutinized again and again. The crisis is traced back to some of our blunders. And self-appointed augurs divine, from their prejudiced standpoint, the erratic movements of world opinion.

Any credibility is also denied to national policy. As recent history so clearly demonstrated, the need to deter is taken as the proof that deterrence has failed. "Why did policy go so wrong," the critics ask, "that we have to use threats, land troops, and display such a bellicosity?"

Using the same reasoning process, we would put the blame for broken families on social workers, and claim that the very existence of physicians proves the failure of medicine.

Partisanship finally transforms the reasons why we should be firm into reasons why we should fear. The Government then attempts to counter public pressure. It is inclined to overstate the seriousness of the crisis. The more it does, the more public opinion has an excuse to indulge in hysterics and in self-righteousness. The need to deter and the risk of resistance to Communist probing come to be so exaggerated that a certain gratitude is experienced toward the Communist leaders when, sure enough, they decide to relax the tension, at their own time, by announcing that the attack has been postponed or by acting better than expected. Everyone knows that there was no crisis until they created one. Yet the Communists are given the semblance of a moral initiative in promoting peace, and their recklessness is never penalized. These are the true crowbar and sledgehammer that we always again hand over to the Russians to wreck national policy.

Deterrent threats are most effective, insofar as the potential aggressor is concerned, when they are stated in general rather than in precise terms, with relative bluntness rather than rarefied complications.

This salutary vagueness often serves as an excuse for public opinion to pretend that our warnings are too vague to be credible. Once more, we analyze the effect produced upon ourselves by our own threats. Such an introverted behavior leads to paralysis, and not to action. It does not fit the powerful leader of the free nations.

V. COLLECTIVE SECURITY:

35. The Indochina crisis of 1954 has dramatically illustrated the need and the usefulness of treaty commitments. The declarations that were made at the time by the United States did not meet with a full measure of success because the juridical basis for intervention was lacking.

In absence of a commitment that is legally binding, we must resort to improvisations and expedients. Indecision and the caprices of public opinion combine to ruin the effectiveness of stated policy, and the enemy's diplomatic moves achieve maximum impact both upon our allies and upon ourselves. Once we are committed, we must either back down or stand firm.

The Eisenhower administration has successfully completed the legal arrangements required for global deterrence. It has been accused of "pactomania." Fearing an overcommitment, the critics have compared our treaties to ominous sight drafts that could be presented in payment at any time.[19]

The fear of overcommitting ourselves is not founded. It is the same enemy that we face everywhere; it is, therefore, in our power to devise a global strategy to oppose him in every place at once. But if we shrink from committing our support to defend any free country threatened with Communist aggression, we would simply invite the enemy to attack that country. Finally, none of the treaties we have concluded since 1953 creates a legal obligation for us to send troops. They just make action possible if and where we freely decide to intervene.

36. The various security treaties concluded by the United States for the defense of the Pacific area and of Southeast Asia reproduce the Monroe Doctrine formula. The United States declares that Communist aggression would endanger its own peace and safety, and that it would be met according to the constitutional process.

Mr. Dulles compared these treaties to the fingers of the hand. Each commitment is independent from the others; the United States is thus able to maintain a bilateral relationship with every one of its partners. But the fact that it has given the same commitment to all gives cohesion and unity to the various parts.

Footnotes at end of speech.

It is for that reason that we have decided not to earmark forces for particular areas of the Far East (except Korea), but to develop what Dulles called, on September 15, 1954, "the deterrent of mobile striking power, plus strategically placed reserves." Such forces would be able, he added, to strike at an aggressor "by means and at places of our choosing. The detrerent power we thus create can protect many as effectively as it protects one." If we attempt, however, to be strong everywhere, we would be strong nowhere.

This strategy is peripheral. It insures great flexibility of tactics. It presupposes disengagement.

37. The same complexity, unity and flexibility characterize our commitments in the Middle East. The Eisenhower doctrine is a unilateral declaration of policy which "authorizes the United States to assist economically and militarily nations which want such assistance in order to preserve their independence."

Aimed as it is at Soviet imperialism and military aggression, the doctrine has been denounced as illusory in view of the fact that Soviet aggression in the area seemed unlikely. But if the United States had not aimed at that target, shadowy though it might be, it would have had to foresake the restraining use of its power east of Suez. The fact is that, far from being useless, the resolution was successfully invoked not less than four times in 3 years.

Acting pursuant to the Middle East resolution, the United States concluded special defense arrangements with Turkey and Iran. These two countries acted through Cento, even though the United States was not a party to it. This osmosis effect again proved the usefulness of the doctrine as well as of Cento.

As in the Far East, our strategy is peripheral, and it requires disengaged forces. It is different on a very important point. The two Quemoy crises have shown that, in some instances, maximum deterrence is achieved by insisting upon the feasibility of powerful, albeit, limited, retaliatory actions to which Red China is particularly exposed and for which the type of power we have is well suited. The reverse must be said of the defense of the Middle East. In this case, no deterrence is fully credible unless we refuse, in principle at least, to limit retaliation arbitrarily. The same is true of the European theater.

38. The parties to the North Atlantic Treaty have agreed that "an armed attack against one shall be considered an attack against them all." They also agreed that, if such an attack would occur, each one of them would take "forthwith such action as it deems necessary." The "one for all, and all for one" principle is thus set in opposition with the restrictive character of the commitment; for the parties are not obligated to do more than what they deem necessary. The time has come to resolve this structural antinomy.

Every new crisis produces aspirations for greater allied unity. These are generally short-lived. They cannot stand against the realities of allied policy. The reality of NATO is diversity: the special Anglo-Saxon partnership versus the continental bloc; peripheral positions and the central front; the Bonn-Paris Axis and European integration; the Sword and the Shield; the long overdue renascence of European national pride. An entirely new climate would be created in the Western Alliance if these basic realities were considered as assets to be developed rather than as liabilities to be eliminated as soon as possible.

Allied solidarity is always desirable and constructive, if it is genuine and if it can be achieved without entangling us in hopeless dilemmas. Any unqualified, doctrinaire insistence for increased interdependence and integration would only deprive us of our leadership. Being an association of free nations, NATO must steer a cautious course between the Charybdis of stifling unity and the Scylla of disunity.

This means that the Western Alliance must establish its own rules for mutual independence as well as coordinate the execution of tasks and policies that can be fulfilled best by integrated effort.[20]

39. A national deterrent policy is now pursued, with inadequate means and intermittent determination, by France and the United Kingdom. A separate NATO deterrent has also been proposed We have, in the main, opposed national deterrents with passive resistance.

The advantages of diversified deterrence are manifold, and they are decisive. The idea of a Europe devoid of any deterrent of its own, entirely dependent upon our own deterrent, and fully exposed to Soviet nuclear attack is inconceivable in the long run. Europe must have a capacity for independent action. National deterrents would face the Russian aggressor with the impossible task of destroying everything before doing anything and they would do much to relieve the European nations of their anti-American obsession, and thus lead to greater allied solidarity. This point must be shortly explained.

It is believed that the diffusion of nuclear weapons would greatly increase the danger of accidental war, and that "a stray bullet could blow up the town." This idea is the fetish of our present approach to the problem. Not only have European countries equal reason to fear an accidental war being started by us, and any war that would be started because of our actions would be accidental as far as they are concerned, but we must recall the distinction that H. A. Kissinger has made in his "Nuclear Weapons and Foreign Policy" between the "nuisance" character that nuclear weapons can have in the hands of a foreign country, and the sophisticated apparatus without which they would have no strategic effectiveness. The number of countries that can achieve strategic nuclear power is very limited indeed.

In addition, a national deterrent is a deterrent under national control, but it is not a deterrent that can be used in actuality for a purely national objective. The only decision that a country possessed with a deterrent of its own can make alone is the decision not to use it. Such a decision might be unwise, from the standpoint of our own interest, but it would have no catastrophic consequences. And if it were used against our will, it would be that our will had become so perverse that we would prefer to be Red than dead.

40. The Western Alliance must be disengaged from the nadir of frustrated nationalism. If this were done, the Allies would naturally seek to improve the effectiveness of their defensive shield. We all agree that there should be a force of all the allies in Europe to confront the aggressor with the necessity of raising violence to such a level that nuclear retaliation would become unavoidable.[21] This force should be integrated so as to engage the whole alliance into the conflict. If disengagement makes no sense for the United States, we can say, with stronger reason, that it is inconceivable for any country so directly threatened as France and Germany.

Integration is a shibboleth today because we consider it as the opposite of national sovereignty. It would make more sense to oppose integration to waste, to inefficiency, and to procrastination.

The fact is that integration is most needed in sectors where a sacrifice of national control is the least difficult to consent. Certain defense tasks—such as logistic support and air defense—cannot be fulfilled at all except on an integrated basis, and as far as they are concerned, national sovereignty is a myth. In other areas—research and procurement, for instance—the myth is that a true sacrifice of sovereignty is at stake. And the same can be said of most diplomatic problems confronting the West at present.

VI. CONCLUSION: THE NATIONAL SELF

41. Like individuals, nations tend to develop a complicated rationale of their own self, and they marshal their best talents to draw a picture of themselves. This picture contains attractive as well as ugly features, both of which gratify the national ego.

Self-accusation is one of the commonest tricks we use to fool ourselves. Unjust, unsincere breast beating does not hurt, and it does not help. But a true insight into what we are, would hurt us. It would also liberate the great, the indispensable force of genuine self-love.

Unless this is recognized, a debate on the national self is worse than useless. It would only serve to undermine national confidence still further.

Let us start, then, from the realization that our national character comprises specific qualities and destructive patterns.

Our weaknesses are not better than Prussian militarism or French chauvinism. They are just different.

There is much room, indeed, for intelligent debate and for self-criticism. At no time of our history was it more necessary to stress that an informed public opinion is essential to the conduct of government in a modern, pluralistic society.

All political philosophers have stressed, however, that injustice begins with meddling. There is no validity in the notion that systematic criticism is a sign of democratic validity. It is a sign of the moral decadence of a free country.[22]

As a people, we have a pernicious inclination for abstractions, particularly those abstractions that put obstacles in the way of moral progress.[23]

The great moral issue of the coming election campaign is whether we will continue to hold a pessimistic view of the national self while ignoring our true faults or taking them much too lightly. Are we going to continue to display a naive confidence in Americanism and to deprecate constantly our illusions and complacency, and materialism? Or will we realistically defend the national interest of the United States and love what we truly are.

42. The principle of separation of powers which is so fundamental to our constitutional system can be dangerously misconstrued. If the separation of powers were to give us the right to demolish executive actions while refusing to commit ourselves to national policy, it would destroy our system more effectively than Khrushchev can do it, and Khrushchev knows that well. One of the paradoxes of the present situation is that our enemy—and some of our allies—have well understood the laws that rule our political behavior and that we, in our pride, have decided to ignore them.

There is no alternative, in a democratic country, to a full commitment. This commitment should be actual. It must be given in concrete situations. It is particularly needed when and where a multiplicity of reasons can be invoked for refusing it.

Is it not true, however, that, even in the face of the most vulgar, most extreme provocation, our commitment has the hollow ring of insincerity? We rally—so we think—behind the government. We warn the Russians not to interfere with American politics. We defend the President of the United States against Communist abuse, and immediately proceed to indict Mr. Eisenhower

---

Footnotes at end of speech.

at the bar of opinion. For there is too much at stake, of course, to sweep the whole sorry mess under the rug in the name of national unity. We pretend that our Government has left to the Russian leaders no choice but to act as they did. We instantly call for an investigation of executive actions, in due time or otherwise, as if the national survival depended on the immediate revelation of a great scandal. There is nothing much to reveal, however, and the dust soon settles. The investigation ends at the moment when it should have started. There is no room left for sensationalism, and we can praise for one another for the mature fairness of our investigators.

The time might come when this double talk could have treacherous implications. To paraphrase Mr. Stevenson's much repeated slogan: "We do not succeed in deceiving the enemy, but we cannot succeed better in deceiving ourselves."

43. A nonpartisan, common quality runs through the Truman doctrine, the Marshall plan, the creation of NATO and SEATO, the Formosa resolution and the Eisenhower doctrine.

The actions taken by the Eisenhower administration which have been the most vocally denounced by a concerted opposition are the actions that the American people have most overwhelmingly supported.

The gap that exists at present between the true opinion of the American people and the picture that America projects in the world is the gravest of our domestic problems today. Mass communications have caused a divisive atomization of political consciousiness instead of political wisdom.

44. The dialectic that saps our national strength at home also works against us in our relations with the rest of the world.

We generally take a much too lenient view of the insanity of anti-Americanism. We seek to excuse rioting and hostile behavior toward us in terms of our own faults. We report faithfully reckless accusations levelled against us, as if they were expressed in good faith by responsible people. At the same time, we seem anxious to force some of our ideology upon others, with a capricious pendantry that verges on contempt for their cultural tradition and in a manner that is legitimately resented.

Instead of claiming that we have been the source of the revolutionary concepts of human freedom, we would do well to consider that some of our values are not good, and that the true values from which our national strength is derived are not American values, in the sense that they are common to all humanity.

It is our appointed place in history—and also the greatness of our country—to protect, by our strength and power, the spiritual heritage of mankind. And if we do our duty, we will also be respected.

45. We are now concentrating our energies against a cataclysmic holocaust and confronting a total ideological challenge. We cannot, as a nation, fail to ask ourselves the question: What is the purpose of human existence?

Like totalitarian socities, we would like to find our national purpose in some great role to seize and to pursue "with passion." We cry for "leaders."

The democratic state exists for values higher than itself. It makes a direct appeal to our individual conscience. It is based upon the belief that, if our mind is clear and our will upright, we have the ability to distinguish between honest dissent and self-seeking partisanship, boldness and importance, political courage and personal ambition.

---

[1] Partisanship refers here to a certain type of criticism, and not to the party affiliation of the critic.

[2] As Albert Wohlstetter wrote in the New York Times of June 16, 1960, "we need not sound excessively disdainful about the value of keeping alive. Physical survival is necessary to achieve our other widely shared purposes, even though it is not enough."

[3] Most Americans, including noted specialists, have chosen to overlook the complexity of the Dulles-Eisenhower strategy. In spite of overwhelming evidence to the contrary, they obstinately asserted that the United States had no strategic plan other than knocking down a number of Russian cities in case of war.

One of our favorite techniques of debate consists in pushing national policies into a Procustean bed—making the administration say more and say less than it actually did—and then we proudly announce that such policies have been abandoned and largely forgotten. In 8 years, the critics have proved unable to move away from the pitiful oversimplifications they had fabricated.

[4] See, for instance, J. F. Dulles' article in Foreign Affairs, April 1954.

[5] As H. W. Baldwin wrote in the New York Times of Feb. 14, 1960, "we have not really outgrown the Victorian age of our security. Despite nuclear weapons, jet planes, and missiles we yearn for and half believe in the possibility of a return to the security of yesterday."

In 1954, the Dulles-Eisenhower strategy was described as stillborn. With the advent of tactical nuclear weapons in 1955, the critics declared that the policy had been finally interred. In 1956, some merits were recognized to it, but only for the pre-Bison era. The same was said in later years of the pre-sputnik and the pre-ICBM periods. In spite of its many lives and in the eyes of those who criticized it so relentlessly, the policy was never good.

[6] To give to the American people what he later called a "ballpark feeling," Gen. T. S. Power, SAC's commander in chief, said on Jan. 19, 1960, that "with only 300 ballistic missiles, the Soviets could virtually wipe out our entire nuclear strike capability within a span of 30 minutes." He never meant to say that the Soviet Union had the means to do so. He had said, on the contrary, that "if the Soviets decided to launch a surprise attack on this country today, they would have to rely mainly on their long-range bomber force," a force that was, in his own estimation, inferior to SAC in every respect. If, God forbid, we should ever fall behind Russia militarily, it would be soon enough to adopt what Senator KENNEDY once called the "underdog strategy," then, and not a single day before. But if we are strong, why should we act as if we were weak? Nations seem to have as much difficulty as individuals to live in the present.

[7] As Secretary Gates noted on Jan. 13, 1960, we are dealing here with "a complex situation under changing circumstances." The Soviet Union could have more missiles than we have, but numbers alone are misleading. "Factors that deal with time of warning, relative hardening, dispersal, mobility, and most important, accuracy must also be considered. If you change any factor in this formula you change the result."

[8] To quote from the House Appropriations Committee's recent report on the Defense bill, "this is an element of deterrence which the United States should not deny itself. No other form of deterrence can be fully relied upon."

[9] Active deterrence does not nullify passive deterrence, of course. Assuming a condition of stalemate, critics have often ascribed this active deterrent function to defensive weapons—such as the antimissile missile—and to conventional forces. This problem is partly discussed below. Mobile forces for intervention in local war situations are part of an active deterrent, but conventional forces as such are not. Active deterrence has also been confused with counterforce.

We must also keep in mind that in a general nuclear war, missile forces cannot "destroy their enemy counterpart without destroying the corporate body of the enemy state itself" (Adm. A. A. Burke, Feb. 20, 1959). This also tends to reduce the difference between retaliation and counterforce.

[10] As a matter of fact, the administration's decision to bank on second generation ICBM's has already proved to be right. It is not a matter of speculation any more.

[11] See the statesmanlike speech of Representative MAHON in the CONGRESSIONAL RECORD of May 3, 1960. "If we continue to maintain our bomber strength, our oversea bases and military personnel, and our fighting ships, and if we move forward as planned with our long-range missiles, and if we develop a strong and thoroughly dependable airborne alert, and if we move along with our ICBM detection systems as planned," the Representative said, "I see no reason why there should be a deterrent gap during the next 3 years. I believe we will move forward. Therefore, in summary, I would say there should not be a deterrent gap during the next 3 years."

[12] The administration has never claimed that a general nuclear war would be short and that it would not necessitate the engagement of ground forces. The term "primary forces" is not synonymous, therefore, to strategic forces. It refers to those forces that will be primarily employed during the first, short, and most violent phase of a general nuclear war.

[13] The same remark applies to the various things the Soviets might do to alleviate their military problems before a general war starts, such as the destruction of our Polaris submarines one by one.

[14] The critics may think that they have made a constructive speech when they list a number of things that could be done to strengthen our defenses without explaining how and why these things should be done. This practice is dishonest and also unintelligent. The classic doctrine that all requirements for assured security must be met is long bankrupt. Balanced security obviously involves some calculated risks. And the reasons why we must deliberately forgo some military capabilities are not all budgetary.

[15] This must be understood in the light of the two following paragraphs. I certainly do not mean to say that escalation suffices for achieving total deterrence. It is one of the elements that makes it possible to achieve total deterrence with means of graduated retaliation.

[16] In all fairness to the opposition, we must recognize that there are limitations to the shrinkage process which has affected the effectiveness of our ships, planes, and military personnel. But the urgency of this problem is relative to the fulfillment of essential tasks, and, except for the limited force we need for coping with peripheral aggression (a force which already is in a fine state of readiness), the problem will never have absolute urgency, as the critics seem to claim.

[17] The dilemma of bluff and madness is as fraudulent as the two alternatives of nuclear war and peaceful coexistence (as the Communists understand this term).

[18] As the Berlin crisis proved it, nothing could be done, except to stand on our positions, and nothing would happen, except if we fail to stand firm.

[19] Curiously enough, our treaty commitments were also denounced as parts of a general pattern of policy followed by the administration to lower the level of our military effort.

[20] Some of the administration's critics have long flirted with the idea of disengagement, and they have deprecated the bipo-

larity of East and West. As I tried to explain elsewhere, NATO needs a psychological disengagement of American diplomatic influence in Europe, and a multipolar deterrent. Our role in Europe has many parts, and the problem for us is to keep it fragmented. We hold the sword, but we also provide the core of effective landpower. We are the keeper of Franco-German friendship, and the special friend of England, and so forth. In other words, we should not play one big role, but several partial ones.—Cfr. Malcolm W. Hoag, in "World Politics," April 1960, p. 389: "The current trend is toward both a primarily nuclear shield for NATO and independent strategic retaliatory forces. We might get the worst of all worlds."

[21] As Dean Acheson so truly said in his great speech on the Berlin question in November of last year.

[22] "I want my country to be strong, to be safe, and to have a feeling of confidence among its people so they can go about their business," President Eisenhower said on Feb. 11, 1960. The deep wisdom of the President's political philosophy is anathema to the busy-body democratic man. "Government is the people's business."

[23] For instance: "We believe in Soviet backwardness," so Soviet advances can never be exaggerated enough; "Vital information is withheld from the people and the people have the right to know," so we can always accuse the Government of withholding information; "Pessimism has always been distinctly un-American," so we will always be complacent; "A suspension of criticism would be a disservice to the Nation, however appealing such a moratorium on partisanship can appear as a short cut to national unity," so criticism will always be permissible. And we make these idols untouchable by warning the iconoclast that he does not understand American democracy.

Task Force Report: American Strategy and Strength

EXTENSION OF REMARKS

OF

HON. PERKINS BASS

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. BASS of New Hampshire. Mr. Speaker, as part of the "Task Force Studies on American Strategy and Strength," I place in the Appendix of the CONGRESSIONAL RECORD, study paper No. 9, "Science and Foreign Affairs," by Dr. George B. Kistiakowsky, special assistant to the President for Science and Technology:

SCIENCE AND FOREIGN AFFAIRS

(By George B. Kistiakowsky [1])

The theme of this paper is the impact of science and technology on foreign policy.

The proposition hardly needs to be demonstrated that the advances of science gradually, sometimes suddenly, are altering the relations between nations and peoples. Of course, it is the technology which is the carrier of change, but it is the basic science, the acquisition of knowledge that constitutes the seed from which man makes technology grow.

After World War II, the advances of science made our political isolation from the rest of the world impossible just as they earlier made economic isolation impossible. In military affairs, perhaps, are visible the most dramatic and fast-moving changes, as technological developments took us from TNT to H-bombs, from artillery to bombers to ballistic missiles, from cavalry patrols to early-warning radar, all with the significance of shrinking the world and of increasing the mutual dependence and vulnerability of nations. Public policy, whether domestic or foreign, must recognize this transformation, cope with the problems it generates, and use it as appropriate for the goals of our society.

If, for a moment, this writer may revert to the language of chemist days, humanity but a century ago was in the condition of a steady state reaction, whereas now it is in the midst of a nonsteady branching chain process and science is the chain carrier.

The need to adjust public policy to changing human conditions, of course, isn't new. What is new today is the rapidity with which the developments of science are altering the human conditions, the rapidity with which policy, particularly foreign policy, must adjust to the changes being wrought by the pace of scientific advance. Not only adjust—policy must prepare for, must predict, the impact of scientific discovery, and must also in some sense attempt to guide it.

This paper will discuss several important aspects of the relation between science and world affairs; then we shall mention the present governmental organization for developing public policy in the field of science; and we conclude with some thoughts on science and public policy in the future.

First, however, let us review briefly scientific developments of the last decade.

A DECADE OF PROGRESS

Ten years ago, Dr. James B. Conant, as Chairman of the National Science Board, concluded his foreword to the first annual report of the new-born National Science Foundation with this urgent warning: "Until such time as disarmament becomes a reality, the free nations must be deeply concerned with finding and developing scientific pioneers, for on their efforts we must rely as much for increasing national security in a war-torn decade as for industrial progress in periods of peace."

Clearly audible today is the echo of Conant's warning—"until such time as disarmament becomes a reality." The reality then—and now—was that temporary comrade in arms became an intransigent foe, reaffirming the subservience of the individual to the state, ruthlessly engulfing unwilling neighbors as satellites; threatening the freedom of peace-seeking peoples throughout the world. The science of the United States had no choice but to focus on the needs of national defense, and this it has done well.

History began to record the early years of a quasi-peace we have come to call the cold war. From time to time its temperature climbed to boiling point, and sporadic outbursts of "hot" war flared up in places distant in miles from our shores but, measured in time, now our next-door neighbors—Korea, Suez, Taiwan, Vietnam.

Science found no release from its association with arms and armament, nor did it seek any, so long as its help was needed to safeguard the liberty of the world by ensuring the strength of our defenses.

Unprecedented funds were unloosed that we might maintain our leadership in weaponry. Corporations, big and small, and even universities, entered into contractual relationships with Federal agencies involving very many dollars, to undergird our defenses. Science and its offspring, technology, flourished and prospered as never before in our history. Under the impetus of this massive Federal support, our scientists and engineers contributed vastly to our storehouse of knowledge and its applications.

Working closely with military people on military problems, scientists and engineers supplied the elan for one of the most striking technological developments to emerge from the postwar period—automatic data processing, using the high-speed digital computer. Most of the stimulus behind this development came from the military sources seeking fast methods for processing data on military tactics, logistics, flight simulators for testing and training, or any other end-product which required the speedy reduction of a vast input of data.

Fortunately for our long-term leadership, more basic aspects of science were not forgotten. High-energy, elementary-particle physics is a field in which vast progress has been made since World War II. Similary, radio astronomy has pushed rapidly ahead in the last decade, using advances in electronics born out of military-related work. Molecular biology made spectacular advances and brings us near the understanding of the origins of life.

Creativity budded and bloomed in a brilliant burst of innovation. Despite their essential preoccupation with developing the defensive strength of the Nation, science and scientist demonstrated the great rewards of research irrespective of the environment to which it was applied.

In retrospect, the decade of the fifties may become known best for its identity with two capital letters, "R" and "D."

Until the midperiod of the decade, economists had to guess the amount of research and development performed within the United States. At that point, the National Science Foundation, on the basis of a thorough survey of the 1953 period, pegged the dollar figure for R and D, not at the estimated $2.5 billion, but at more than double that amount—$5.4 billions. Today it has more than doubled again, the Foundation's estimate being on the order of $12 billion.

The late, great Harvard economist, Sumner Slichter, coined a most connotative phrase for research and development—"the industry of discovery." We might also call it "the industry for tomorrow." None need be surprised to learn, therefore, that those industries which have invested most in research and development, the electronics and pharmaceutical companies, have shown the most rapid rate of growth in recent years.

The industry of discovery cannot be confined. It is as profitable for mankind as it is for the corporation. Although science, no less than any other human activity, was engulfed by the political strife of the cold war, it showed a way to demolish political barriers during the 18-months' period of the International Geophysical Year, even though such was neither its mission nor its design. Scientists supported by their Government, sought simply to map man's physical environment, to achieve a scientific understanding of the earth and its cosmic environs. They succeeded magnificently in accomplishing their scientific mission. From investigations of the universe made or initiated between mid-1957 and the end of 1958, a microsecond on the cosmic clock, will emerge a volume of geophysical knowledge greater than any theretofore assembled.

For its scientific value alone, the IGY was impressive. But in a world of tensions, it is almost more encouraging as a kind of a breakthrough of its own, to better international understanding. Sixty-six nations, representing the free and Communist world, participated in this exploration of the unknown. They marshaled 30,000 scientists and technicians to work together as a team, although separated across the distance between the poles. With but few exceptions, they shared the knowledge they uncovered.

Similarly in the Antarctic, an area for years dominated by rivalries for territorial

[1] Special assistant to the President (Science and Technology). This paper was originally prepared as an address before the American Physical Society and the American Association of Physics Teachers. Ideas and material from other addresses have been incorporated.

claims and rights, the cooperative efforts of scientists of many countries served as a pattern of international cooperation accepted as valuable by their political leaders. Work started during the International Geophysical Year, including the exchange of scientific personnel, the sharing of facilities and results, and the efforts to plan cooperative schedules and arrangements, is now more than ever developing a broader spirit of cooperation among the scientists of these countries and, perforce, drawing in the political interests as well. The United States is deeply engaged with its scientific personnel in cooperative efforts and is receiving the same type of help from other countries.

Attesting to the value and importance of these scientific efforts led by the United States, the interested nations have recently drafted and signed a treaty for Antarctica which opens all areas freely for scientific research to all nations of the world, places claims for individual territory in abeyance for the duration of the treaty, and assures all that Antarctica shall not become a place for military operations or military rivalries. Were it not for the scientific effort in this area during, and following, the International Geophysical Year, the pattern for cooperative arrangements in Antarctica would never have been established, nor would there have been the impetus for drafting a treaty.

However substantial were the cooperative aspects of the International Geophysical Year, the period was characterized as well by a heightening of international competition in science and technology. The International Geophysical Year literally thrust us into the space age. Our country can justly be proud for first announcing space satellite plans to assist the International Geophysical Year program. However, the sputnik launch provided the thrust, without doubt. Perhaps though, the emphasis should be on the spectacle of immaturity we made of ourselves over this engineering accomplishment. Today, most of us feel a bit shamefaced about our sputnik-provoked anxiety, particularly when we realize that only the one most recent Soviet satellite remains in orbit that is transmitting information, while several of our own still riding through the reaches of space continue to send back most of the scientific information they were designed to uncover. Even the humblest of these, Vanguard I, continues to remit valuable scientific data. Tiros I proved to be much less of a tyro with a camera than we had thought. The quality of its photographs permits identification of individual hurricanes and other centers of disturbance as well as study of the gross features of cloud cover. The amount of useful information transmitted will contribute to a deeper understanding of the earth's atmosphere for the benefit of all mankind.

Let no nation count the United States out of competition in any contest for superiority in science and technology. Though the frontiers of science are endless, the competitive spirit of frontiersmen is a legacy of the American tradition. By compelling the United States to keep its guard up, our antagonists may yet be hoist on their own petard. The competition in armaments into which we have been unwillingly thrust has served as a driving stimulus to scientific creativity. Because we are fortified with a credo which insists on the primacy of the individual, and are not perverted by the drive for aggrandizement of state, our science seeks to serve, rather than master, mankind.

NEW PROBLEMS OF PUBLIC POLICY

Let us explore now some aspects of the relation of science to foreign affairs that are unique to our age (at least their importance is unique) and that provide us with our greatest immediate opportunities, and some of our major problems. These include:

1. The unparalleled and in many ways unexpected political importance to a nation of having the appearance of world scientific leadership (the word "appearance" is used advisedly).

2. The effect international scientific activities have, and can have, on the relations between states.

3. The importance of the technical component of some prospective arms control measures.

4. The relation of science to technical aid for less-developed countries.

Each of these is worth careful consideration, for they are not always understood, and yet must be understood if the Government and the scientific community are to fulfill the obligations and opportunities ahead of us in these areas.

THE IMPORTANCE OF WORLD SCIENTIFIC LEADERSHIP

First, consider that matter of scientific leadership and its political impact. Scientific and technological progress has acquired status as the symbol of strength because of its obvious relation to military power, as well as of productivity and the good life. This is in evidence within our borders and everywhere beyond. The striving to emulate American scientific and technological progress has become an ambitious and urgent goal for countless millions of people, including, one might note, the Soviet Union.

But unfortunately it is the technological spectaculars which tend to be used by the public at large and, often, the press, as the sole measure of scientific as well as technological prowess, and thus, of military power as well. Achievements in outer space activities are as we have already noted, the prime example of this. Perhaps a few further observations about our space and missile program in this light are in order.

As has been emphasized by Dr. Herbert York, an intercontinental ballistic missile capability is not necessarily dependent on huge rocket booster vehicles capable of sending multiton payloads into space. To the general public, both in this country and certainly abroad, this is not well understood. The Soviet Union, of course, has not been lax in attempting to confuse the issue.

Our development of long range rockets began late because our military planning was founded on air-breathing engines. To move ahead as rapidly as possible in ballistic missiles, we chose to make our missiles as compact as possible to deliver warheads of adequate yield. We could do this with an ICBM with a thrust only one-half that of Soviet ICBM's because of our advanced nuclear weapons technology.

In this we have been successful; first the IRBM's and now the Atlas missile are perfected and are operational. But, the planning and preoccupation with smaller missiles, adequate to do the military job required, led to rocket vehicles with inadequate thrust to send spectacular payloads into space. We did not begin work on large rocket boosters until it was too late to match past Russian performance in outer space. But, it is important to remember that the extra-large rockets are not required for our long-range missiles; hence, our deficiency in outer space payload capability does not indicate an inferior military capability.

We must also recall the important fact already alluded to, that our scientific achievements in space have easily matched those of the Soviet Union. This is generally recognized by the world's scientific community. In addition, we are now making rapid progress toward practical applications of "near outer space" for the benefit of all nations and people.

This is not to suggest that we accept a secondary role in future outer space activities requiring large rocket boosters. We cannot ignore the very real political implications of various spectacular accomplishments in outer space that have come to have symbolic meaning to the world at large. We are indeed moving ahead rapidly to develop boosters for space exploration missions requiring very large payloads and are vigorously pursuing the man-in-space program. But we must accept the technical reality that despite a vigorous national effort to develop such boosters, there are limits on how quickly the gap can be closed and these limits are largely set by technological factors.

In the meanwhile there are for us major opportunities to carry out sound and exciting programs in space science and technology that will redound to our national benefit in terms of enhanced prestige and welfare. For example, the development of meteorological satellites could prove to be of great benefit to all nations and could substantially contribute to our scientific and technological stature throughout the world.

To repeat: We cannot accept a secondary role in future outer space exploration. But true leadership must be seen in the context of far broader efforts. We must be constantly aware that our strength lies in excellence spread over a wide scientific and technological base.

It is a feature of an authoritarian form of society that its government can concentrate efforts in narrow fields. If the total strength of such a society is substantial, as is that of the Soviet Union, then what one might term temporary technological superiority can be achieved by it in selected directions. So long as this superiority is temporary; so long as it does not permit a vital military advantage; and so long as it is not across a broad front, there is no need for alarm, but we must increase our efforts to cancel out imbalances that arise and are significant. On the other hand, we must not permit ourselves to be stampeded into overemphasizing one area at the expense of others. We must constantly bear in mind the sound military doctrine not to accept battle on the field of the enemy's choosing. Rather, we must continue to move across the entire broad front of scientific and technological advance. Thus, as a nation, we will remain a world leader.

EFFECT OF SCIENCE ON RELATIONS BETWEEN NATIONS

Let us turn to the second aspect of the relation of science and foreign affairs, the significance of international scientific activities to the relations between nations. Here is perhaps the most important of the roles science and scientists can play in today's embittered and divided world—not a new role in the sense that international activities of science are part of the lifeblood of science; but new in its potential impact on political relations.

Science today is one of the few common languages of mankind; it can provide a basis for understanding and communication of ideas between people that is independent of political boundaries and of ideologies. Over time, these personal relationships, established with Soviet scientists who form a major portion of Russia's intellectual elite, can provide a bridge between our cultures and perhaps bring about a gradual erosion of the militant aspects of Communist ideology.

Science also provides a sometimes unique opportunity for cooperative endeavors that can contribute in a major way to the reduction of tension between nations and, more positively, to close relations between the United States and other countries. All this, of course, in addition to offering a way for cooperative attack on problems of interest to all nations.

This has been recognized many times before. Many activities of the Government and private scientific bodies further these goals. Normal international scientific union activity, the IGY, the exchange agreement

between the National Academies of Sciences of the United States and U.S.S.R., the very recent McCone-Emelyanov agreement, the U.N. Atoms for Peace Conferences, and many, many others. However, the question must be asked whether we are doing enough in this area, and particularly whether the Government is sufficiently active in terms of projects of its own, in support for nongovernmental activities, and in creation and preservation of the necessary conditions for effective international scientific activity.

What are some of the issues that face the Government in this area?

The most obvious is how to balance the resources for international scientific projects against domestic scientific needs. Should the Federal Government be doing more itself internationally, or should it support private efforts only? In either case, can you justify international support when there are good scientific projects lacking sufficient support within the country?

A good illustration of this problem is presented by the scientific program in the Antarctic, mentioned before. The Government had to face the question of setting the level of Antarctic activity in the knowledge that the funds for that program would detract in some measure from the support of deserving programs within the United States. There are few guidelines for the appropriate scientific level of activity in Antarctica, just as there are few guidelines for the appropriate level of activity in specific scientific fields.

In fact, the problem of the Antarctica is not dissimilar from that of outer space (except for the rather wistful observation that we now have a treaty reserving the Antarctic for scientific research). Political considerations are important in setting this program level also. These considerations relate to the stature and scope of our effort relative to that of other countries, particularly the U.S.S.R., and, in the case of Antarctica, the relation of research to possible territorial claims. And so, the Antarctic program is set as an orderly, sound scientific effort, but with political awareness that there are other attributes to the scope and excellence of the U.S. effort there.

The appropriate means for carrying out international activities comes up time and again. Can it be handled through the scientific community in the way that ICSU planned and organized the IGY? What is the appropriate role for the U.N., UNESCO, for NATO? Should it be a government-to-government project because of the resources required? And if so, are bilateral or multilateral arrangements to be preferred?

A recent example may be illustrative, referring to space science once again. When establishing the U.N. Outer Space Committee, the suggestion was made that the Committee should be responsible for conducting outer space research itself, or at least planning research on an international scale. Notwithstanding our strong desire for international cooperation in space, this was thought to be clearly inappropriate. Because of the large resources required to provide boosters for space exploration, it was considered necessary to keep the final decisions regarding space flights in the Government's hands. On the other hand, international scientific planning and cooperation was clearly desirable at the scientist level, without the complex governmental machinery of the U.N. that would inevitably have to face political issues. Therefore, the U.N. Committee will be concerned with the mutual exchange and distribution of information, the study of legal problems of outer space, the conference on outer space exploration, and the general encouragement of space science. NASA will make formal agreements with foreign governments for scientific cooperation, but both the U.N. and NASA will look to the Committee on Space Research of ICSU for the scientific cooperation and planning to bring about effective international scientific collaboration.

The issue of bilateral versus multilateral agreements is of major interest at the present time, in view of the recent United States-U.S.S.R. agreement in peaceful uses of atomic energy. Notwithstanding the very real gains we may achieve through increased contacts with the Soviet Union, we must avoid any series of moves that would create a United States-U.S.S.R. scientific axis. Thus, it was carefully stated in the agreement with the U.S.S.R. that any joint projects would be carried out under the aegis of the International Atomic Energy Agency where all member countries could participate. Clearly, what may be now the finest high-energy physics facility in the world—CERN—should be included in activities under the agreement.

A receptive climate for international scientific activities requires Government action too, or in some cases, lack of Government action (in a positive sense). Science must not be sacrificed to political expediency, or ignored for political expediency, because to do so would be like cancelling one's life insurance on account of temporary financial straits. We must be ever-certain that science is adequately represented in those areas where policy will impinge on science, so that considerations of science will be included in policy formulation. International scientific activity, for example, has moved historically without regard for political boundaries and this is one of its great strengths. This traditional nature of science must not be neglected or forgotten, as it all too often is, in the application of restrictions to be placed on the free movement of individuals among nations. Nothing will erode our basic traditions and our scientific leadership, and our influence, more quickly than a willingness to sacrifice basic long-term beliefs for short-term political consideration.

In the same vein, the needs of science must be adequately represented in international as well as domestic-policy formulation. Radio-astronomy recently almost came to an untimely end, simply through negotiation of an international treaty on frequency allocations without adequate recognition of the needs of this young science for listening windows. Through the good offices of the National Academy of Sciences, it was possible to bring scientists and the appropriate Government officials together in time to establish a U.S. position for the Geneva ITU conference compatible with the needs of the radio-astronomers.

International scientific activities thus carry with them many problems for Government, but their benefits far exceed those problems. To achieve the benefits, however, requires that we be alert to the opportunities and that we be prepared to make some of the necessary policy decisions and commitments of resources.

SCIENTIFIC ASPECTS OF ARMS CONTROL

A third new element in the relation of science to foreign policy is the importance of the technical components of prospective arms control measures.

The negotiations on nuclear test cessation have shown the importance of scientific and technological factors for the formulation of national policy in this area. These factors had to be evaluated by ad hoc groups that found a dearth of experimental data on which to base their conclusions. A similar ad hoc approach had to be employed regarding certain phases of the conference on the problem of reducing dangers of surprise attack. The fact that scientific advice and evaluation were used in both these attempts to reduce military tensions is, in itself, important. It is a sign of the changing attitude and the growing awareness on the part of policymakers that technical considerations and knowledge are essential for the formulation of sound concepts for arms limitation measures—just as they are in formulating development plans for military hardware.

The success of future negotiations to relieve tensions by arms limitation agreements will depend in some measure on the understanding of the capabilities of proposed multilateral monitoring systems and on the understanding of inherent limitations of any monitoring system in a world of rapidly advancing technology. The limitations of technical analysis need also to be fully understood. There is no doubt, for instance, that the reliability of monitoring systems is largely a technical question. But the adequacy of such systems, from the point of view of national security, is not. It is a politico-military one. And we must realize that political issues or disagreements cannot be resolved by technical agreement on facts; the political questions of national interest remain. It is well that these issues be understood by the public as they are being understood by the policymakers. Especially we, as scientists, must understand that we can contribute but one of several inputs that are essential for the formulation of sound national policy.

SCIENCE AND U.S. TECHNICAL AID

The relation of science to technical aid for less-developed countries is the fourth, and last, of our list of new relations of science and foreign policy.

The foreign aid programs supported by the United States are powered by a matrix of motivations made up of altruism, a belief that it is to our best interest to strengthen independent nations, and a desire to contain menacing philosophies. Motivation notwithstanding, it is evident that any program, any experiment, will fall short of success unless it is soundly conceived, soundly planned, and soundly executed.

In helping to achieve a sound aid program, we, as scientists, must not think in terms of developing only the more advanced scientific capability of other nations, which is often a reflection of our own standards and comfortable abundance. We must try to strike a balance between basic needs and sophisticated development.

This requires an appreciation of how science and engineering develop within a nation. The history of science in many lands has not been written beyond the prologue. We must, for instance, be aware of the long-term relation between primary and secondary school education and advance research institutions.

We do little good to provide only for esoteric research facilities when a nation lacks roads, general practitioners, and machine operators. Of course, we do a disservice also when we ignore the advanced educational institutions that set a nation's standards, provide its teachers, offer a future for gifted citizens, and bring prestige to a nation or a region.

An important report was recently prepared by the National Academy of Sciences' National Research Council for the International Cooperation Administration, entitled "Recommendations for Strengthening Science and Technology in Selected Areas South of the Sahara." This report is an outline of how assistance of a technological type should be designed to be properly utilized. It is an intelligent and realistic attempt to strike the necessary balance between the basic needs and sophisticated wants, within a framework of limited resources from within and without an area. It is also an attempt, a very successful one, to show how a scientific approach can be used in the early planning stages of aid programs.

The reading of the report will have a sobering and disturbing, if not a frightening effect, on thinking individuals. It treats with selected areas of sub-Sahara Africa, a land mass equal to that of the United States and with a population one-half that of our Nation—and this is only part of all of sub-Sahara Africa. It is an area which, within our lifetimes, will be transformed into a multiplicity of independent nations which, collectively, will greatly influence world affairs. What is particularly disturbing about this study are the revelations of extreme shortages that still exist in this region; the nearly complete lack of public health measures and medical service; of communications and transportation; of the means for earning an income; of even the most elementary educational facilities.

Clearly, these embryonic nations need educated people in large numbers to provide not only civil servants, but an understanding electorate to carry them along the path to democracy. But how can the needs for higher education, for doctors of medicine for education, for doctors of medicine, for engineers, for political scientists, for so many other specialists be properly balanced against the needs to provide even the most primitive health measures, to provide teachers for the many millions of illiterates, and to train artisans and skilled laborers without whom the standard of living cannot rise? Against these multiple desperate needs, indigenous efforts, our aid and the aid of others, appear so utterly inadequate that one becomes fearful lest decades will pass before the level of education and the standard of living will rise enough to make democracy viable.

The question then comes to mind, will the awakening of latent desires permit democracy the time—that is so inherent in its evolutionary nature—or will this region fall prey to the legerdemain appeal of the revolutionary authoritarianism, especially Communist ideology?

For a research scientist this report will have a sobering influence: It will impress upon him that he is a luxury that can, and must, be afforded by an advanced Nation like ours. But in Africa, south of the Sahara, a nurse, an elementary schoolteacher, a technician, these are the luxuries.

Science impinges on aid to technologically more advanced nations also. Various Government departments have for many years supported research overseas. By and large, these programs have been well run. Such programs raise some serious issues for consideration, however, for outside support of science in a given country affects the relationships between that government and its citizens and universities. Some programs, even those in support of basic research, are welcomed by many foreign scientists, and yet cause affront to others. We must therefore, consider the effects of such programs on all who are concerned, and especially on the natural growth of the scientific communities in the recipient countries.

Does such support, for instance, actually retard the development of a healthy relation between science and government in other countries? What commitments for continuity of support are we making once foreign scientists have become dependent on U.S. support, commitments from which it may be impossible to withdraw or which may cause hardship should withdrawal be necessary? What is the effect of our support on the pattern of research in a given country? And is the manner in which our support is given in this area, best calculated to further good relations between the scientific communities of other countries and the United States?

We are not the only ones who are aware of these problems. In its most recent annual report, the United Kingdom's Advisory Council on Scientific Policy, addressing itself to just these questions, had this to say about U.S. research support:

"Whilst we warmly welcome this substantial financial support for research in this country, we recognize that research grants, and particularly specific contracts, of this magnitude (one and a quarter million pounds annually) must have a considerable influence on the general pattern of research undertaken. We, therefore, consider it desirable that the various bodies concerned with the financing of research in our universities and other institutions should be aware both of the extent and the purpose of these numerous U.S. research grants and contracts. We are glad to be able to record that the U.S. authorities have fully appreciated the position and have shown themselves ready to cooperate with us."

Of course, there are no general answers to most of the specific questions raised, for they vary with the country concerned and with the manner in which our support is given in each country. But these questions need to be asked—and answered—before support is provided. These programs cannot be operated independently of foreign policy considerations.

GOVERNMENT ORGANIZATION FOR PUBLIC POLICY IN SCIENCE

It is worthwhile to review some of the measures Government has taken in order to bring these problems into focus, and thus to help bring about corrective action. These steps were taken for a wide variety of reasons, of course, not merely to serve the requirements of foreign policy.

In two speeches during November 1957, President Eisenhower emphasized the need for strengthening science education and bringing our overall scientific and technological effort to peak performance levels.

In the first of these speeches, in which he called for an all-out effort to mobilize the best resources of science and scientists in support of the national security and welfare, the President announced the creation of the office which it is now my privilege to hold. He also reconstituted on the White House level the Science Advisory Committee. Later, in his 1958 state-of-the-Union message, President Eisenhower stated: "In both education and research, redoubled exertions will be necessary on the part of all Americans if we are to rise to the demands of our times."

The office of Special Assistant to the President for Science and Technology did not exist before November 1957. Nor had there been, except for the wartime National Defense Research Committee, a science advisory committee directly responsible to the President. The NDRC had large operating responsibilities. The present committee and the special assistant do not. Their function is advisory, making scientific advice and analysis available wherever they are needed in the formulation of national policy. The committee also endeavors to insure that science and technology contribute their maximum to the welfare of the United States by seeking ways—

To enhance the excellence of U.S. science, both basic and applied, and to add to our effort, relatively, in basic research.

To extend the recognition of science as a creative activity that augments man's dignity and understanding and affords him intellectual adventure of the highest order.

To recognize that outstanding accomplishments in science appeal deeply to the hopes and aspirations of men everywhere, and contribute to the prestige and good will of nations.

To demonstrate that the democratic environment of the free world is the best environment for achievement in science.

To improve the ways in which our Government uses and supports science and technology.

To apply technology more effectively to improve our national security, to strengthen our economy, to enhance the health and welfare of our citizens and other peoples.

To promote international understanding and good will.

These are broad and ambitious objectives. Even small progress in each area would be a significant achievement.

The organization that works toward these goals comprises the 18-man committee proper, numerous panels involving members as well as consultants, the special assistant, and his small full-time staff of technical aides. The committee's members are representative of those fields of science and technology especially important to the Government. The membership rotates, most of the new appointments being on a 4-year basis. This practice brings to the committee fresh points of view and representation from different fields of science and technology. To discharge its responsibilities, the committee has established panels, some on an ad hoc, others on a continuing basis. First Dr. Killian, and then this writer was elected to the chairmanship of the committee, which knits the whole organization together.

The panel structure has consistently been a distinctive feature of the committee's work. It has made possible intensive studies on problems that could not have undertaken by the committee because of its limited membership. At the present time, over 100 scientists and engineers are associated with the committee and my office in part-time capacities, thus providing a wide range of expert advice. Committee and panel members are selected not only because of their expert knowledge and achievement, but also because they possess something which might be called wisdom in a broader sense. Partnership in this organization means work and, therefore, some sacrifice of personal careers. it is willingly undertaken in the spirit of national service. The magnitude of personal involvement is indicated by the fact that more than 500 man-days of work were needed recently for the study of certain problems in the classified area and the preparation of one short summary report.

A major concern of the committee is how to bring the young generation of scientists and engineers into panels and other types of advisory services to the Government. We need to explore every way of making their services, skills, and fresh ideas available without handicapping their professional developments, or curtailing their contributions to science.

The special assistant, as a member of the President's staff, is invited to attend meetings of the National Security Council and of the Cabinet, and—when appropriate—to present the views and findings of the Science Advisory Committee. He is also a member of, or attends the meetings of, special Cabinet-level interdepartmental committees, such as the Radiation Council. He is the Chairman of the new Federal Council on Science and Technology, consisting of representatives, at the policymaking level, of 10 departments and agencies.

Some of the panels of the Science Advisory Committee deal with unclassified fields of interest to the Federal Government and a few of their activities have led to reports and statements which were published under the imprint of the White House. The titles indicate the broad scope of these activities: "Introduction to Outer Space," "Scientific Information," "Strengthening American Science," "The Argus Experiment," "High Energy Accelerator Physics," "Education for the Age of Science," and "Food Additives."

Other panels' activities result in detailed recommendations to various agencies of the executive branch of the Government, which are not suitable for public dissemination, such as the work of several panels dealing with classified matters pertaining to the national security.

The creation of the Office of the Special Assistant and of the Science Advisory Committee is, however, but a small part of the actions which the President and Congress have taken recently to strengthen American science and technology and to make the Government process more responsive to a world of rapidly changing technology. These actions include:

Expansion of the National Science Foundation program and a threefold increase in its appropriations for support of basic research and education in the sciences.

Enactment of the Department of Defense Reorganization Act, reflecting the impact of modern weapons technology and systems engineering on the Military Establishment.

Establishment of the Office of the Director of Research and Engineering and the Advanced Research Projects Agency in the Office of the Secretary of Defense.

Assignment of engineers and scientists at policymaking levels in the offices of the Secretaries of the three services.

Establishment of the National Aeronautics and Space Administration to provide a civilian space-science and exploration agency.

Reactivation of the Office of Science Adviser to the Secretary of State, and the appointment once again of science attachés to overseas posts.

Establishment of the Federal Council for Science and Technology as a means of bringing together for common planning policy-level representatives of agencies having major scientific programs.

Enactment of the National Defense Education Act, designed to aid education generally, with specific provision for strengthening science education.

In the Congress, the House of Representatives established a standing Committee on Science and Astronautics. The Senate, also, has created a new standing Committee on Astronautics and Space Science. A number of important actions have been taken by the Congress, and by the executive branch, to improve the status of scientific personnel in the service of the Government.

In addition to these national efforts, there have been important advances in international cooperation which have been mentioned already.

SCIENCE AND PUBLIC POLICY IN THE FUTURE

We have attempted to outline some of the ways science can contribute to foreign policy, the effect of policy considerations on science, and some of the governmental machinery which has been built up to assist policy formulation. But to integrate the scientific with the political, economic, military and other factors that make up foreign policy operations, requires above all, competent people who understand the relationship of science to these other factors.

If we appreciate our responsibilities, we, as scientists, may well have an important role to play in the future in the policy-making process. It will be a different role than the one to which we have become accustomed. It will demand a new breed of public servant, although the appropriate name for him is not immediately clear. The term "political scientist" has been preempted for a very different use than this. None of us would want to be called scientific politicians, and few indeed would dare to lay claim to scientific statesmen. But there is a significance here that is far more important than finding the right name. The role demands that this new breed of citizen-scientist be continually aware that the scientific community must accept its appropriate share of the responsibility for the intelligent and successful resolution of the challenges facing the world.

Another kind of individual must be recruited, too: an individual with training in science in addition to the usual disciplines of the foreign service. The general presumption is that science is so specialized that the only way to provide scientific inputs to policy formulation is to obtain advice from practicing scientists on an ad hoc basis as needed. But as valuable as such advice is, it does not fill today's requirements for a continuing and intimate involvement in the policymaking process of competent people who also understand science and its significance to policy, and who could therefore work effectively with the practicing scientists supplying the specialized ad hoc studies.

Perhaps science and engineering graduates should be attracted for regular careers in the Foreign Service and in our other oversea programs. We must also provide a better scientific background for nonscientists in the international affairs field. This, perhaps, is the most important measure of all. Essential to these efforts is the development of an academic field of teaching and research in the interrelationship of science and foreign affairs, to be able to educate properly and to understand better the underlying significance and opportunities of this relationship.

These are not easy tasks, nor ones that can be accomplished overnight. Unlike toasters, automobiles, and television sets, we cannot push a button to mass-produce diplomats in striped pants and laboratory coats.

In discussing international relations, the American historian, Julius Pratts, states: "Neither the tools of diplomacy nor the tools of force can be suddenly improvised for use in crises. They must be kept in a state of readiness for use. The success of a nation's foreign policy will depend, in part, upon the efficiency and the readiness of the instruments with which the policy is pursued." We, as scientists, must do all we can to help keep the tools of our diplomacy and the tools of our force in efficient readiness.

We have entered a new era, a scientific revolution, as C. P. Snow terms it, in which science and technology are transforming our way of life and the relations between nations. We cannot stand aside and simply watch this process, regardless of where it takes us; we must and we can use science and technology to achieve the humanistic goals of our free society.

Task Force Report: American Strategy and Strength

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. HOSMER. Mr. Speaker, as part of the "Task Force Studies on American Strategy and Strength," I place in the Appendix of the CONGRESSIONAL RECORD, study papers Nos. 10 and 11, "A History of Ballistic Missiles," by Congressman LESLIE C. ARENDS, member of the House Armed Services Committee; and "The Cost of National Security," by Prof. Arthur E. Burns, George Washington University.

A HISTORY OF BALLISTIC MISSILES

(By LESLIE C. ARENDS, Congressman from Illinois)

Major military weapons never spring forth full bloom overnight. The first operational B-17 took a decade to develop. The B-29 and B-52 are likewise the outgrowth of years of effort.

Similarly with modern rocketry. Though it began in America 17 years ago, rocket development turned seriously to long-range ballistic missiles only 7 years ago.

Not until fiscal year 1953 were expenditures in any one year on long-range ballistic missile programs even as much as a million dollars. Since then, these programs have advanced with impressive speed. Today, they involve the expenditure of 10 times as much each day as was spent in all of fiscal year 1952.

In the early postwar years, military studies slowly advanced American ballistic missile knowledge. Propulsion, guidance, heating and weight problems appeared very difficult. Their solution obviously was costly. Yet, the level of effort remained low and sporadic.

Moreover, critical data controlling warhead weights were unknown. Until 1953, the operational feasibility of long-range ballistic missiles seemed far distant to those in authority. As a result, these programs were deemed unworthy of major effort. To be sure, one such program, the forerunner to Atlas, was started as long as 14 years ago, in 1946, but it died 3 years later in the 1949 defense cutbacks. The program was revived in 1951, but even then only as a component development effort.

From World War II to 1953, due partly to this skepticism as to the practicality of long-range range ballistic missiles and due also to emphasis on strategic bombers, our missile effort, such as it was, went mainly into air defense missiles such as Nike-Ajax, Terrier I, and Falcon. Some short-range ballistic missiles and some relatively slow nonballistic aerodynamic type long-range missiles did receive some support. Long-range ballistic missile efforts, however, were held down to low support studies.

Viewed in retrospect, therefore, it is hardly remarkable that as of 1960, 15 years after World War II, American long-range rocketry is in some particular respects matched or surpassed by the Soviets. That result was foreordained by years of low-priority attention and lack of funds while the Soviets evidently were advancing their rocketry full blast.

What is remarkable is how rapidly the intercontinental ballistic missile (ICBM) and intermediate range ballistic missile (IRBM) programs of the United States have advanced in less than 6 years. The speed of this advance in so short a period augurs well for the Nation's security. It is convincing testimony to the competence of our scientists and engineers.

It is the purpose of this paper to outline the history of ballistic missile development during the past two decades.

THE WORLD WAR II PERIOD

The year 1942 marks the beginning of our World War II rocket program. The work was principally on solid propellants, which burn like cigarettes within the rockets. It was carried forward, with military support, by the Office of Scientific Research and Development. From it evolved our World War II artillery rockets, air-to-surface rockets, rocket boosters for airplanes, other special rocket motors, and our first serious efforts to propel rockets with liquid fuels. During the summer of 1945, this work produced the Army WAC Corporal, a rocket fueled by nitric acid and aniline.

When World War II ended, the Allied Nations placed scientific teams in Germany to analyze that nation's technical accomplishments in rockets and missiles. A number of the best German scientists and engineers were induced to go to Russia and to the United States. The United States, however, pressed this effort less aggressively than the Soviets.

In the latter part of 1946, the Russians identified other scientists and technicians associated with German missile programs. Hundreds of them were removed to Russia. German research facilities and production plants were stripped of machinery, instruments, blueprints and missiles or missile components. These, too, were shipped to Russia. Thus, the Russians were able to exploit German missile technology. The indoctrination of Soviet scientists and technicians was thereby facilitated, and they acquired faster the know-how to bring uncompleted German ideas to practical realization.

The advantage the Soviets achieved due to their early decision to develop and extend this German missile technology is evident.

THE EARLY POSTWAR YEARS

The years immediately following World War II constitute a period of halting, low-level efforts on long-range ballistic missiles. In 1946, several potentially useful programs had been started. While some of these programs contributed advances during the 1946–50 period, the level of effort and results was meager by today's standards.

For instance, in 1946, the Army arranged to rebuild the German V–2's. In the so-called bumper program, the V–2 was converted into a first-stage booster rocket. It carried a second rocket, the WAC Corporal, which, in turn, carried scientific instruments to high altitudes. Maximum speeds attained during these later tests was about 5,200 miles per hour; maximum altitude was about 250 miles. These represented significant improvement over the standard V–2 performance (3,600 miles an hour and 100 miles maximum altitude).

The year 1946 marked also the Air Force's first attempt on the ICBM. The program, known as the MX–774 at Convair, was intended to advance long-range rocket techniques. It turned out, however, to be rather short-lived when the defense slashes of 1947 terminated this program. For the next several years Convair used corporate funds to carry on MX–774 weapons studies, but at low financial levels.

In 1946 the Air Force also established the Snark and Navaho programs. These were long-range, airplane-type guided missiles, not the ballistic type. However, from the liquid propellant rocket booster to be used with Navaho grew the high thrust liquid propellant engines for today's major missiles, such as Atlas, Thor, and Jupiter.

Also, in the late 1940's the Navy developed the first version of its Viking, a high altitude scientific research rocket.

THE KOREAN WAR PERIOD

During the Korean war, missile development at length began in earnest. Even in this period, however, progress was slow as most official attention was devoted to the immediate problem of Korea.

In the design of long-range ballistic missiles, weight is critical. Generally speaking, it takes about 200 pounds of launching weight to place 1 pound of warhead on a target several thousand miles away. Because the first atomic warheads weighed 9,000 pounds, clearly a major reduction was required in nuclear warhead weight for missile use. Ever since the end of World War II, the Atomic Energy Commission had been working on atomic weapon improvement which resulted in lighter and higher yield nuclear warheads. However, during this entire period the significance of warhead improvement was not applied to the problem of long-range ballistic missiles. For this and other reasons, long-range ballistic missile development languished. During this slack period in the United States, the Soviets appear to have gone full speed ahead with their own long-range ballistic missile programs.

Missile feasibility studies, started in 1949 by the Rand Corp., were completed in the fall of 1950. These studies confirmed the military worth of long-range ballistic missiles.

In October 1950, as one result of the Korean crisis, Mr. K. T. Keller, president of Chrysler Corp., was appointed Defense Department Director of Guided Missiles, with authority to institute a Manhattan-type project for missiles. However, after analysis of the missile programs, Mr. Keller decided against a Manhattan-type project on the grounds that it would take a year to institute such a program. In 1953, Mr. Keller was asked to remain with the new administration, but resigned late that year at his own behest.

In 1950, the development of the Army's Redstone, a 200-mile tactical ballistic missile, was begun. However, not until 1953 was the first Redstone fired, a flight test that was only partially successful. Much of the information obtained from this and subsequent firings was applied later to the Jupiter, when that program was initiated in late 1955.

In January 1951, the decision was made by the Air Force to resume studies of the old MX–774 weapon, redesignated "Atlas." This program, however, was given only a long-term, low-priority objective—that of determining whether a large 5,000-mile ballistic rocket was then technically feasible. Six months later, in June 1951, the Atlas project was formally reactivated.

THE VON NEUMANN COMMITTEE'S RECOMMENDATIONS

On June 16, 1953, Secretary of Defense Charles E. Wilson ordered a review of the guided missile program to identify and eliminate duplication. He stated that "a continuous effort should be made to standardize on one missile for production and use by all military departments, wherever, within the employment limitation of each type of missile, standardization appears to be practicable." As a part of this review, a group of civilian scientists, headed by Dr. John von Neumann, which later came to be known as the Strategic Missiles Evaluation Committee, was requested to review the strategic missile programs.

The Strategic Missiles Evaluation (von Neumann) Committee reported in February 1954 the highly significant possibility of achieving a major technological breakthrough on warhead size, and expressed its conviction that other technical problems associated with the development of ICBM's could be resolved in a period of a few years. The committee also recommended the formation of a special management organization to assure early ICBM availability. As for technical factors, the von Neumann Committee recommended that the ICBM project be completely reoriented to take advantage of the advancing warhead technology, thus permitting relaxation of guidance tolerances and propulsion requirements. The committee also noted the potential desirability of an IRBM.

Nine days later the Assistant Secretary of Air Force (R. & D.) approved the broad reorientation of the program recommended by the committee. The Air Force set up a group to study the von Neumann report and define the organizational realinement required to accelerate the ICBM. From June through August, major management and procedural changes were placed into operation. A streamlined organization under the Air Force Research and Development Command was set up. It was known as the Western Development Division (WDD) and became an autonomous group responsible for directing and coordinating the effort toward primary objectives. Under the command of Brig. Gen. B. A. Schriever, Atlas became WDD's basic mission.

The soundness of the von Neumann group's recommendations was confirmed during the CASTLE tests in the Pacific through the period of March to May 1954, when the feasibility of developing a smaller lightweight, high-yield thermonuclear weapon was proven.

MILITARY REORGANIZATION TO ENCOURAGE MISSILE DEVELOPMENT

Further indications of the potential importance of missiles led to additional changes. In 1955, advisory committees of scientists urged (1) that two ICBM's be developed concurrently in order to assure earliest attainment of success, and (2) that along with the ICBM effort, an IRBM program be initiated to develop a missile of 1,500-mile range.

In November 1955, shortly after the President had assigned highest priority to ICBM research and development, the Secretary of Defense ordered organizational changes in the military departments to handle the ICBM and IRBM programs. At the same time, he approved a program of two 1,500-mile intermediate range missiles. The first, Jupiter, was to be launchable either from land or sea. It was intended that the second, Thor, would be based upon experience already gained in the Atlas program, while Jupiter would be based on experience gained by the Redstone Arsenal team from the V–2 and Redstone missiles. To provide the desired multiple ICBM approach, the Titan project was established in supplementation of the Atlas program.

The Secretaries of Army, Navy, and Air Force at once implemented the new organizational program, with over half a billion dollars of defense funds reserved to carry them out.

The Air Force placed its ICBM and Thor programs under the already established WDD, now renamed the Air Force Ballistic Missile Division.

A joint management committee was established by the Army and Navy for the Jupiter program. The Navy created the Office of Special Projects and assigned to it responsibility for the technical development of the seabased IRBM. As a corrolary to the Jupiter program, which employed a liquid propellant, the Navy also began studies of a solid propellant version to reduce shipboard logistical problems.

Later, land-based IRBM's were assigned to the Air Force and ship-based IRBM's to the Navy, and the Navy withdrew from the Jupiter program.

On January 20, 1956, in order to assure a common interchange of technical information, as well as provide competent guidance for all the programs, the original Von Neumann Committee, now called the Scientific Advisory Committee, was transferred from the Air Force to the Office of the Secretary of Defense. On the same date, this committee presented certain recommendations to assure that the long-range ballistic missile programs would proceed at maximum speed. The office of a Special Assistant for guided missiles to Secretary of Defense was established, first with Dr. Murphree and later Mr. Holaday occupying this key position.

TECHNOLOGICAL PROGRESS ACCELERATES

Meanwhile, in the years immediately following the Korean armistice, the tremendous military potential of ballistic missiles began to advance toward practical realization.

In February 1956, the Army activated the Army Ballistic Missile Agency at Huntsville, Ala., under the direction of Brig. Gen. J. B. Medaris.

In September of that year, the Jupiter C, a multistage test vehicle, was fired. It went 3,300 statute miles, rose to 680 statute miles, and reached a maximum velocity of 13,000 miles per hour. During the same period, Air Force reentry test vehicle flight tests

clearly demonstrated that the reentry problem was solvable.

In October 1956, the Scientific Advisory Committee recommended initiation of a new, smaller, solid-propellant IRBM with improved capability of being launched from a submarine. As a result, the Secretary of Defense approved the development of the Polaris program, including six submarines.

POST-SPUTNIK DEVELOPMENTS

The shock of the Soviet sputnik in October 1957 produced, of course, a major effect on U.S. ballistic missiles development.

The President reaffirmed the highest national priority for both Jupiter and Thor systems, aiming to obtain an IRBM capability at the earliest practicable date and provide for continuance of both missiles until one proved successful. The Army was authorized to produce the Jupiter at a rate of five missiles per month. Four Jupiter 15 missile squadrons were to be established with the operational date of the first squadron to be December 1958. The same target date was set for the first squadron of Thor, with three more 15-missile squadrons scheduled later.

A schedule was approved for four squadrons of Titan in hardened bases. Components of the missile system were delivered and a few of them tested.

Research and development of the Minuteman were begun. Minuteman is to be a solid propellant, three-stage ICBM and will carry a nuclear warhead up to 5,500 nautical miles. It will be guided by a self-contained, all-inertial system.

During 1958, major progress was made on the Thor guidance system, permitting an average impact accuracy better than that originally specified. By the end of 1958, Thor was meeting its production schedule with operational missiles being shipped to England for deployment.

The initial increment of the first Jupiter squadron was also ready for deployment in December.

The President, in November, approved a nine-submarine Polaris program. The initial operational capability date of the first Polaris submarine was advanced to late 1960. Later, it was again advanced to early 1960 with four more following at 3-month intervals.

Meanwhile, flight tests proved the performance of the Atlas guidance system and the integrity of the airframe. Among the successful test flights in the development series, one Atlas was placed in Earth satellite orbit in December 1958. Other flights demonstrated the operational radio-inertial guidance system.

PROGRESS IN 1959

All the major missiles programs moved ahead during 1959. A survey of the field shows this progress.

Atlas: Flights of the operational prototype Atlas which began in April had little initial success and the planned date for achieving a limited operational capability was changed from June to September. Considerable effort was devoted to determining the causes of the malfunctions that resulted in the explosion of four out of five Atlas missiles launched before June 30, and how to correct them. Since June 30, causes of the malfunctions have been corrected and the first launch by the all-military team on September 9 at Vandenberg AFB was successful. A plan to improve the system's survivability and provide a faster reaction time was approved. Beginning with the third squadron, the complexes, each with three missiles and three launch positions, will be about 18 nautical miles apart, and, to shorten missile launching time, all squadrons from the third on will have individual missile launchers. Beginning with the fifth squadron, each missile will be dispersed to a separate firing point.

Titan: Progress to date on the Titan resulted in approval of an increase in the number of squadrons from 4 to 11. Each squadron will have 10 missiles. The first six squadrons will be organized into three complexes, each with three launchers and the missiles will have radio-inertial guidance. The complexes will be about 18 nautical miles apart. In the 7th through the 11th squadrons, the nine launchers will be at least 18 miles apart and guidance will be all-inertial.

Minuteman: Prototype Minuteman missiles were fired from silo launchers, verifying the feasibility of launching Minuteman missiles from underground launchers of the silo type.

Thor: The total planned Thor force was reduced from nine squadrons to four, all deployed in England. In January, it became evident that the construction, installation, checkout and modification effort in England would require more time and personnel than was originally planned. This caused about a 4-month delay in turning over the first squadron to the RAF. In June, RAF–USAF representatives drafted preliminary procedures for declaring the U.S. squadrons "satisfactorily operational" in conformance with a governmental agreement.

Jupiter: The operational version of the ablating nose cone for Jupiter was flown on all missiles fired this year, and has proved to be completely satisfactory. Two operational type nose cones were recovered with all their payloads in perfect condition. One of these carried biomedical experiments in support of National Aeronautics and Space Administration programs. A site for two Jupiter squadrons was selected in southern Italy. Each squadron of 15 missiles will be deployed in five sites, with three missiles at each, all launchers to be more than 11 nautical miles apart.

Polaris: All major objectives of the Polaris program to date have been achieved. The launching system for the first Polaris submarine, the U.S.S. *George Washington*, passed its tests. The launcher for the next submarine class entered development; it will accommodate the 1,200-mile missile as well as the 1,500-mile missile planned for 1962. The sixth submarine will have several improvements, one being a greater operating depth. On July 1, contracts were let for the seventh, eighth, and ninth submarines. The first submarine launched in June, will probably become fully operational in late 1960 and the remainder will follow at 3- or 4-month intervals.

SUMMARY

Today, and for the near future, our deterrent and retaliatory capabilities depend largely on the ability of current Air Force and Navy jet bombers to survive enemy attack on the ground and in the air, and to deliver nuclear weapons. However, with passage of time, potential enemies' ability to destroy jet bombers on the ground and in the air may be improving faster than the jet bombers' ability to survive, thus weakening their deterrent qualities. Therefore, in 1955 we gave highest priorities to our IRBM and ICBM programs.

The Atlas, our first ICBM, started in 1946, canceled in 1949, begun again at low priority in 1951, accelerated in 1954, finally became operational in 1959. This missile is the beginning of the ballistic missile phase of deterrence. We can strike a large portion of the earth with 5,500-mile range Atlas missiles launched from this country. On the other hand, potential enemies have Atlas-type missiles also, and our Atlas missiles are vulnerable to surprise attack by them. Therefore, we are hardening and dispersing our newer Atlas launching sites and developing other ICBM's, Titans, and Minuteman, which will be in even harder sites. Titan was begun in 1955 as a backup in case Atlas failed. Minuteman, a smaller, solid-propellant, 3-stage rocket, was begun in 1958. These newer missiles, widely dispersed, will be capable of launching on shorter notice, so that some of them could be launched before enemy missiles destroy the sites, assuming we got sufficient warning.

The least vulnerable deterrent seems to be our Polaris-launching submarines, because they are hard to find. Polaris, begun in late 1956, will be operational late in 1960 with the availability of the first submarine.

From an expenditure of one-half million dollars in fiscal year 1951, programs for IRBM's and ICBM's will reach almost $3 billion in the current fiscal year. Missile programs in the research stage quickly overtake and obsolete those in production. Therefore, programs are designed so as to meet current needs without stockpiling missiles that will soon be outdated. Furthermore, our skilled research and development manpower is being taxed to the fullest on existing and scheduled missile programs. Both because of the evolutionary stages of missile development and the utilization of technical manpower, it is unfeasible and uneconomical to pour more money and men into "crash programs" that might disrupt the sound and orderly missiles program now intended to give the United States full deterrent power.

Department of Defense—Obligational program for missile systems,[1] fiscal years 1946–60

[Millions of dollars]

	IR/ICBM programs	Other surface-to-surface missile programs	All other missile programs	Grand total, all missile programs
Fiscal year 1946 and prior	(2)	$19	$51	$70
Fiscal year 1947	(2)	20	38	58
Fiscal year 1948	(2)	36	45	81
Fiscal year 1949	(2)	45	53	98
Fiscal year 1950	(2)	65	69	134
Fiscal year 1951	$0.5	185	598	784
Fiscal year 1952	.8	239	818	1,058
Fiscal year 1953	3.0	403	760	1,166
Fiscal year 1954	14.0	336	717	1,067
Fiscal year 1955	161.0	398	911	1,470
Fiscal year 1956	515.0	387	1,368	2,270
Fiscal year 1957	1,365.0	603	2,502	4,470
Fiscal year 1958	2,077.0	639	2,391	5,107
Fiscal year 1959	2,959.0	685	3,269	6,913
Fiscal year 1960	2,952.0	509	3,173	6,634

[1] Program data reflected in this table cover the developmental and capital costs involved in missile programs; i.e., the cost of bringing missile systems to operational status plus the costs of procuring missiles and related equipment for operational purposes. These data include all procurement, construction, and research and development programs directly associated with missile programs. These figures do not include military pay, operation and maintenance costs for operational missile units and sites and include only those shipbuilding and aircraft costs directly associated with providing missile capability.

[2] Excludes $2,300,000 programed in fiscal year 1946–49 for the Air Force MX–774 ballistic missile research program which was a precursor to the Atlas ICBM.

NOTE.—Estimates are subject to minor revision due to program adjustments.

THE COST OF NATIONAL SECURITY

(By Arthur E. Burns, professor of economics, George Washington University)

No amount of money can guarantee this country complete security. This uncomfortable fact is a consequence of the ballistic missile with its nuclear warhead. For whatever comfort it may bring, the Soviet Union faces the same problem. Since offensive-weapon technology has vastly outstripped the defense, security rests on retaliatory power. Specifically it rests on a highly invulnerable, diversified strike force whose capability is known. Such a force costs enormous sums which augment the growing costs of conventional arms. Rapid changes in technology promise only more complex, more destructive, and more costly weapons systems for the future.

This year the United States will spend about $46 billion in its effort to gain some measure of security. Of this the military services will spend about $41 billion, and related security programs the remaining $5 billion. Some 9 percent of the Nation's output of goods and services—the gross national product—will go into these programs. These absorb over half the huge Federal budget. In more manageable terms, national security expenditures will average $255 per man, woman, and child, or nearly $1,100 per family, this year.

Small wonder then that national security is a major item in political discussion, in economic affairs, and in the personal welfare of the people of this country. It is the most complex business of Government today, as well as the most costly. It is also one of the most contentious issues of the day. The contention that swirls around this matter finds expression in such questions: How much should we spend for national security? Are we spending too much, or too little? Are we spending it for the right things? What do we get for these vast outlays? and could we get more for our money?

These questions cannot be answered definitively. Here we are in the realm of judgment, formed in a context of great uncertainty. Uncertainty surrounds the effectiveness or capability of our own new weapons systems, the weapons systems of the enemy, and his intentions. Judgment on these matters is subject to controversy. Political leaders, professional military men, engineers and scientists, the press, and other less qualified witnesses, differ widely among themselves. Whatever the President might recommend for the military budget and whatever the Congress might appropriate, the fact is that no one is wholly satisfied with the result, and some are deeply dissatisfied.

This paper first considers the underlying reason for these differences and then goes on to examine some of the cost-increasing elements in the defense budget picture.

THE BASIS OF CONTROVERSY

National security poses a basic but familiar economic problem: In this uncertain world we have an urgent need for security against aggression; the resources available to meet this need are scarce and have alternative uses. It is the business of the military to use these limited resources to satisfy this need, or want. The sense of security is the product it produces—the capacity to deter aggression or defeat transgression.

The resources required to produce this service or product can also be used to produce the innumerable other goods and services wanted by the public at large—educational and health facilities, TV sets and household appliances, other consumer goods, industrial plant and equipment, and so on. A larger defense budget and therefore more security comes at the expense of other things—unless there is some slack, or idle resources, in the economic system. The real cost of national security, or anything else, is the alternative that must be sacrificed to get it. If we should double our defense budget, some nonsecurity wants would necessarily go by the board. If taxes were raised to finance the increase, taxpayers would spend and save less. If government borrowed the funds, capital for private purposes would shrink. If it were financed by credit creation, inflation would cut the consumption and savings of many. Thus we cannot avoid the necessity of choice and the sacrifice of alternatives.

There is no clear-cut, objective criterion for choosing to commit more or less of our resources to national security. The military capability and the specific intentions of an enemy can only be assessed by the exercise of judgment. Similiary our own military capability or effectiveness is a matter of judgment. Rapidly changing technology on both sides injects great uncertainty in this process of assessing relative capabilities. The economic impact of a defense budget, including the alternatives to be sacrificed, enter into the determination of the size of the defense budget. Internal political considerations and foreign policy objectives play their part in the decision.

By way of contrast, consider the budget problem of a business firm, say General Motors. How large an annual budget should it set up? This depends on what the public "wants" from General Motors, measured by the amount the customers are prepared to spend for its products. Judgment and hunch enter into the calculations to be sure. But as the year unfolds GM adjusts its budget and production schedules to meet the public's wants for its products. Here there is an objective, measurable, and simple criterion to guide the firm, to answer the basic question: How much?

Defense planners have no objective, comprehensive measurement of what we need and what we get when they put together the defense budget. The product produced by the military—national security—cannot be "valued" and the need for it cannot be measured. Hence controversy is endless and inevitable—as it is with practically all governmental programs.

Whatever the size may be, the military budget is finite and therefore limited. Again, choices must be made and alternatives sacrificed. How much should go to the Army, the Navy, the Air Force? One thing is certain: each gets less than it wants. Once the budget pie is sliced in three parts, other choices turn up. The more that goes to SAC the less there is for TAC. Funds spent for Atlas, Titan, and Minuteman cannot purchase B–58's. New tanks compete with self-propelled guns, and both with tactical nuclear weapons. More Polaris submarines may cost the Navy another carrier, or antisubmarine welfare facilities. And so it goes, endlessly. Each choice involves a cost; alternatives are sacrificed.

If the military effectiveness of the alternatives could be measured with reasonable precision, division of the defense budget would be relatively simple. But can the effectiveness of the B–70 in 1966 be measured against the effectiveness of, say, the Polaris submarines, or the Minutemen, that might have been purchased instead? Estimates, of course, are made, but no common unit of measurement is at hand. And none can be devised. Professional military judgment, together with service and political pressures, decides the outcome.

Again by contrast, the allocation of the business budget is relatively simple. The General Motors budget must be allocated among its many divisions for the production of a considerable array of end products. The divisional allocation is based on objective criteria: the estimated cost of each product, its price in the market, the prices of competing products, and consumer and commercial purchases of GM products. The effectiveness of the dollars allocated is measured by the financial return. Budget and production plans are quickly altered to avoid, for example, a surplus of Pontiacs and a shortage of Chevrolets. The military lacks this objective criterion which might signal, say, a shortage of airlift planes and a surplus of fighters, relative to need. Compared with the military budget process, business budgeting is child's play.

This, of course, is familiar enough. The lack of a comprehensive measurement of effectiveness, and the vast international and technological uncertainties, make military planning and budgeting a stupendous task. To be sure it is complicated and made more costly by service rivalries, the weight of tradition, business practices, political pressures, budget limitations, ordinary human frailty, and the sheer size of the whole operation. A brief consideration of these comes later. The basic point right now is this: there are no definitive answers to the questions, How much? and What for?

All budgets, therefore, are inherently controversial. And controversy is fed by the fact that each service, and all professional military leaders, usually get less than they want from the budget. This is inherent in the logic of choice; with scarce resources some needs cannot be filled. Every military budget therefore is "too small." This is not to argue that one budget is as good as another, or that the present defense budget is adequate. The purpose of this paper is not to assess adequacy but to bring out the underlying problem. Another $3 billion, or $5 billion added to the present budget would mitigate, but not eliminate, controversy.

THE BUDGET-MAKING PROCESS

The 1961 military budget illustrates the complexity of the budget-making process. The President requested $39.3 billion of new money for the military services. This request culminated 20 months of work and perhaps tens of thousands of man-years of effort. Each service built up its estimates, piece by piece, based on "what it really wanted," and then on several more probable and smaller amounts. The President, the National Security Council, the Bureau of the Budget, the Department of Defense, and the Joint Chiefs of Staff then began the complex job of fashioning a "balance" among the services and weapons systems and a total amount for submission to Congress. The pressure from the bottom is always upward; restraint comes from the top—the President. The result is a vast compromise, achieved by cutting estimates, readjusting programs, dropping this, stretching out that, and adding something new. For each service this is an exercise in frustration, compounded by interservice rivalry.

Budget consideration by the appropriations committees of the Congress is a searching affair. The Secretary of Defense, the Joint Chiefs, and other senior civilian officials and military men lay out their defense of the budget, together with their qualified doubts, uncertainties, and differences in judgment. This is a serious business in which the informed judgment of committee members plays a crucial role.

House committee action increased the total requested by $121 million, and changed some $4 billion in specific budget items. For example, the Polaris program was increased and a new carrier dropped out; the Bomarc program was drastically scaled down; funds for the airborne alert were increased, as were those for military airlift; Army modernization was accelerated and travel funds reduced; proposed reductions in Reserve forces were restored and procurement funds were cut across the board.

Many considerations enter into these changes. Maintaining the reserves is not without political overtones. Increasing the Polaris program at the expense of carrier

forces is an exercise of military judgment. Across-the-board cuts in travel and procurement were economy measures intended to reduced alleged waste of funds. Each service, and the branches within each service, has its congressional protagonists and this weighs in the final decisions. And each service has earned the justifiable irritation of some Members of Congress which helps fashion the outcome. Over it all, we have here an exercise of judgment by knowledgeable committee members and an expert staff.

The Senate Appropriations Committee takes up the budget where the House left it. Similar considerations shape their work. The summit collapse led the Senate to add $1 billion to the House bill. Among other things it restored funds for the Bomarc program, approved the carrier, provided additional funds for the B–70 development, added more money for the Samos satellite, for Army modernization, and for other programs. Again we have the exercise of informed judgment, with a leavening of political and economic ingredients and service loyalties. In the end, the House and Senate compose their differences, usually with prompting from the executive branch.

Budgetmaking is a tortuous, time-consuming process. The end product is not the creature of the Bureau of the Budget, or the Department of Defense, or even of the President. It is the creature of Congress for only Congress can appropriate funds. But the end product is a joint budget, the joint responsibility of two constitutionally separate branches of Government—something some critics overlook. In a sense, the process moves from one arena to another—within and among the services, in the Bureau of the Budget, and the White House. The main event takes place in the most important area of all, the Congress.

This process is not efficient; it was not designed for efficiency but for the balance of political power. In any event it cannot be efficient in the sense of matching returns or effectiveness against the dollars spent. We have no objective, measurable criterion for doing so. The military budget is a product of professional military judgment, service competition, fiscal limitations, political and economic considerations, the assessment of threat, hard work, imagination, and compromise. As with all budgets—personal, business, and public—more results could be gotten from it. And like all other budgets, it is smaller than its managers would like to have. Its adequacy is attested only by results—its capacity to deter and to win should deterrence fail.

COST ELEMENTS

Before discussing some of the elements which account for large military budgets, a few sobering contrasts are worth noting. In the century before 1935 the average annual cost per man in uniform increased about fourfold. Output per man in industry increased far more than this. In the quarter century since 1935 cost per military man increased another fourfold, while output per man at work did not quite double. These rough estimates take into account price changes; real military costs are accelerating, both in relation to their past behavior and to output per man employed. However, military productivity (destructive potential) is rising faster than military costs; that is to say, military technology has greatly reduced the unit cost of its output. The big bombs are getting cheaper and their delivery systems more costly. We face the bleak fact that over the past 25 years the increase in military outlays and the capacity to destroy has far outpaced the growth in capacity to produce and replace.

High and rising costs of national security stem from many causes—some are remedial; others are not. Some of the excessive or needless costs are internal to the military; they result from its organizations, procedures, and interests. But the main causes of high cost lie elsewhere. These are due to political policy, strategic considerations, technological change, and uncertainty. By no means is this a complete catalog, but it suffices for present purposes.

First, consider the internal elements that tend to inflate cost needlessly. These come under the general rubric "waste". Committees of Congress, the Bureau of the Budget, the Hoover Commission, the Comptroller General, groups within the Department of Defense and the separate services have probed deeply into the "business" end of the service programs, personnel practices (e.g., flight pay), travel, and the cost of service amenities. On all counts the investigations point to instances of excessive cost. This is particularly true of the business operations: the systems for computing supply requirements, contracting, the cataloging and storing of items, distributing these items, and disposing of surplus. The main criticism is lack of integrated, businesslike operations, with consequent waste of funds.

These operations are sizable. Currently the Department of Defense purchases about $24 billion a year in weapons and supplies. This takes nearly .7 million procurement actions. The personal property inventory of the Department is valued at $118 billion, made up of 3.4 million items, and stored in nearly 600 million square feet of space throughout this country and in foreign depots. Nearly $27 billion of this inventory is surplus. Under present plans some $10 billion of surplus is to be disposed of yearly, at a yield of about 2 percent of acquisition cost.

Examples of waste and inefficiency in the handling of this business are legion. A recent estimate places the annual excess cost at $2 to $3 billion a year. The estimate is probably exaggerated; but, whatever the figure is, it could build up the military effectiveness of the services. This answers an earlier question: Could we get more security from present appropriations?

Defense is the Government's biggest business. Yet DOD has still to take a practical, businesslike first step toward increased efficiency; namely, to establish requirements on a comprehensive, coordinated basis. The remaining phases of the supply cycle are only partly coordinated. Under the prodding of Congress the services are moving toward more efficient supply management operations for items common to two or more of the services, such as single department procurement, cross-servicing of assets, single manager plans, uniform cataloging and standardization. The results are encouraging but not impressive. DOD in time will face the choice: to coordinate the present service supply programs more effectively, or to accept an integrated supply system in the hands of a single agency.

The first choice is difficult, the second is unacceptable to the services. This is so for a number of reasons: service rivalries, different procedures and ways of doing things, organizational interests that clamor for protection, the weight of tradition and inertia. As impediments to efficiency, these elements gradually give way, partly from outside pressures and partly from pressures generated within the services. But progress is slow; the do-it-yourself attitude is deeply embedded in each service. There is a basic and traditional urge for self-sufficiency, for the linking of control with responsibility. Each service is responsible for its mission; it wants a control commensurate with this responsibility. This is understandable and may be worth some added cost, but not the present excess cost. Far better results can be achieved by persistent, practical efforts at comprehensive coordination of the supply function and the overhaul of procedures.

Another aspect of cost internal to the military services receives much attention—the costs of rivalry and duplication in research and development. The Navy is said on occasion to obtain from Aviation Weekly information withheld from it the week before by the Air Force. The same source avers it works both ways. With the enormous emphasis on scientific research and development, and with rapid changes in technology, much is at stake in terms of service prestige and roles. Some duplication and therefore loss of scientific talent undoubtedly occurs in these service programs.

But there is another side to this coin that critics rarely notice. Rivalry in trade, in the military, within the professions, in love, and in the arts produces innovation, drive, and stirs the imagination. Rivalry has its costs, and its advantages—on balance perhaps a net advantage over time.

The maintenance of standby facilities and stores is another practice which frequently evokes complaints of waste. Heavy stores are frequently the result of inefficient supply management, but the need for readiness is the underlying cause. At times the Navy may charter private tankers and lay up some of its own tanker fleet, or contract work out to private shipyards while its own yards are idle. Commercial planes may be called upon to do work that could be done by service planes. At times contracts are let to aircraft companies for planes of low priority. In the short run practices of this type cost substantial sums and at the time appear needless. But commercial fleets, sea and air, are auxiliaries; war production facilities are essential in case of emergency. But for these facilities the military would need to build its own. Probably in the long run the standby arrangement with its annual subsidy saves money.

The military is by no means the only source of its excess costs. Some are imposed upon it. Identical bids from suppliers, the loading of costs under negotiated contracts are among the sharp business practices that inflate costs. Legislation requires the payment of prevailing (i.e., the highest) wage, and limits the purchase of cheaper foreign goods, thus adding to total cost. Political influences have their effect, for example, when a DOD-recommended reduction in Reserves is opposed by Congress, or the closing of an airbase or other installation is resisted. Some procurement programs are prolonged to avoid political trouble. Restraint on the one side and a practical realism on the other limit these costs. Often such propitiation merely shifts the geographical incidence of the outlay without increasing the total materially.

Budget ceilings in the face of rising production costs, and the burgeoning of new weapons systems, add to excessive costs of national security. Ironically, the effort to save money by the imposition of budget ceilings may actually cost money. Fixed budgets are squeezed from below as labor and material costs rise, as more complex equipment is introduced, and as new weapons systems vie for the limited funds. In the face of this squeeze some new programs are stretched out; by the time they reach the production stage the weapons may be obsolescent. Short run effectiveness is sacrificed on the one hand while costs of obsolescence rise in the other. Or the squeeze may work another way. Airlift planes may be sacrificed, ship repairs may be slighted, and Army modernization may be slowed up while the new glamor items are vigorously pushed. Some of these may be in the developmental stage with uncertain prospects of success. Imbalances thus develop at the cost of military effectiveness.

This problem will grow as time goes on. Research and development spawns ever more costly new weapons systems. Meanwhile existing equipment and weapons, if not displaced, require replacement. Naval ship repair and replacement highlights this prob-

lem. Most of the ships of the Navy, built in World War II, need replacement soon. This need must compete with the new technological developments. The tighter the budget ceiling the greater the cost in terms of effectiveness—replacement is delayed or new programs are stretched out, or cancelled. This again underscores the fact of limited resources, the necessity of choice and the sacrifice of alternatives. As the alternatives continue to grow in relation to available resources, the sacrifices tend to create imbalances. For this reason efficiency in supply management is a growing imperative.

The pace and uncertainty of technological change add heavily to national security costs. This year the research and development budget approximates $6 billion. The uncertainty of such work is evidenced by the fact that some $4 billion of R. and D. contracts have been canceled in recent years. In other cases the new item in production faces obsolescence—much of the hardware ages almost overnight. In some cases the services have stayed too long with a dubious development. The costs of change and uncertainty are heavy and will doubtless grow.

In retrospect many of these costs seem needless. But the advantage of hindsight is not present when the decision to commit resources is made. We have here the familiar distinction between ex post and ex ante costs. The ex post costs are those incurred; they can be compared with whatever results they bring. If the results are poor, the costs are excessive. The ex ante costs are those projected into the future to produce an expected result. The expected result justifies the decision to spend; as the result materializes the cost, now ex post, may or may not be justified. If not, criticism falls upon the military planners, and often unfairly, for in this field rapid scientific changes, and uncertainty loosen the link between expectation and realization.

Strategic considerations and defense policy likewise make national security a costly affair. Our policy is moving rapidly toward the creation of a highly invulnerable mixed attack force. Soon there will be four different ICBM weapons systems in operational status. Diversifying the attack force and giving it mobility increases the problems of a potential enemy and reduces his chance of knocking retaliatory power out with the first strike. That is to say diversification lessens vulnerability and thereby provides a formidable second-strike capability. Since invulnerable retaliatory capability is the presumed goal it assumes forces large enough to withstand the first strike. Hardened ICBM bases, mobile ICBM's, a Polaris submarine fleet at sea, a sizable airborne alert, and possibly airborne ballistic missile capability fit this specification. The cost of achieving this is enormous.

But such capability is designed to deter general war. Mobile forces to deter, or handle, local war and to be ready in cold war situations add other elements to the mixed attack force, add greatly to costs. Furthermore, oversea support to allies expands the U.S. deterrent capability through geographical dispersion. This increases cost.

Conceivably retaliatory capability on both sides might be achieved in such degree that neither side could be reasonably certain of success. Such a stability, or equilibrium of force, might level off the growth in arms expenditures. But this is by no means certain. New developments in delivery systems, or in detection and defense, could upset an equilibrium; in any case such developments themselves are costly.

And finally it should be noted that national security is not only a matter of building a highly invulnerable mixed attack force. The threat is not limited to armed aggression. Nonviolent forms of aggression are widely practiced and may grow in severity. The costs of countering these forms of aggression must be charged to national security.

SOME CONCLUSIONS

The range of choice in allocating the national security budget is widening inexorably with the rapid pace of technological change in offensive weapons and in means of defense.

The choice among alternatives is an extraordinarily difficult matter owing to the lack of an objective, comprehensive measurement of effectiveness. With a quiescent military technology this problem is more manageable than it is when, as at present, technological change and uncertainty are the rule.

Choosing among alternatives involves a real cost, which is the effectiveness of the alternatives sacrificed. The basic objective in military planning is to minimize these real costs. In practice, there is no objective and general measurement of them. Tests and evaluations provide a range of partial measurements to guide the exercise of judgment.

However, it might be said that inefficiency is an alternative with zero effectiveness. Any reduction here is a net gain to military effectiveness, or alternatively a net saving to the taxpayers. When the military absorbed only 1 percent of the gross national product annually, the cost of inefficiency was not so pressing a matter as it is at present with an absorption rate of almost 10 percent.

Two general principles to guide the selection of alternative weapons systems may be stated. The first is to choose that mix or combination which maximizes invulnerability. The second is to choose that combination which maximizes the capability of handling the varied situations described as a general war, or a limited war, or an aggravated cold war. This calls for a varied mix with heavy emphasis on weapons systems having at least a dual capability. The general acceptance of these principles in national security budgeting would probably add considerably to present levels of expenditure.

Task Force Report: American Strategy and Strength

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, June 20, 1960

Mr. CURTIS of Missouri. Mr. Speaker, as part of the "Task Force Studies on American Strategy and Strength," I place in the Appendix of the CONGRESSIONAL RECORD, study paper No. 12: "The Economics of National Defense in a Free Economy," by Guy Waterman, task force staff:

THE ECONOMICS OF NATIONAL DEFENSE IN A FREE ECONOMY

(By Guy Waterman, task force staff)

1. INTERRELATIONSHIP OF MILITARY POLICY AND ECONOMIC POLICY

To be complete, the overall design of a nation's policies for achieving national security must include economic policy, as well as military, diplomatic, and other policies. The fundamental interrelationship between military and diplomatic policy is widely recognized. More often we fail to recognize, or fail to act on the basis of, the equally significant interrelationship between military and economic policy.

In the world in which the United States has assumed leadership today, a strong national defense is imperative. Without adequate military preparedness, our leadership position would be lost. Furthermore, as the possibilities of space exploration become actualities, the requirements of our international position extend to the space race as well as more purely military matters.

The United States' position in the world today carries with it another imperative: A strong national economy. A vigorous, adaptive, expanding economic system is itself a key element in a strong international posture. A healthy growing economy makes it possible to meet the challenges of economic and trade competition. It also forms the base which makes it possible to carry a strong military defense program. A nation which lacks economic strength cannot be militarily strong for any period of time. As former Air Secretary W. Stuart Symington stated in 1950: "The Nation can be defeated by economic disaster as well as military disaster." [1]

Military power and economic strength are mutually reinforcing. They are complementary, not competing goals. They are fundamentally interrelated. This point was expressed well by the Republican Committee on Program and Progress (the so-called Percy committee) in the following words:

"We must realize that national security and the maintenance of a stable economy are not antithetical ideas. Indeed, should we be successful in providing defense on the military front and, at the same time, allow our economic system to collapse, we would thereby be sustaining defeat by communism." [2]

Our policy in the economic sphere, however, has broader purposes than just that of serving and enhancing military strength. We seek a strong economy because of other benefits it brings, such as material progress in the form of rising real incomes. Beyond economic strength, we also seek to advance the goal of economic freedom. Freedom is the highest value which we, as the relatively new leader of western civilization, are now called upon to protect and enhance. We seek to survive for a purpose—the maintenance of a civilization which exhalts the dignity of the individual, his freedom, and his opportunity.

The growing importance of economic policy

Strong national defense, a strong economy, and an underlying dedication to the maintenance and spread of economic freedom—these have always been among our important goals. The context in which we pursue these goals, however, has changed radically since the end of World War II. The main difference in the new international situation which we face today is the long-range, almost open ended, nature of the challenge.

In World War II, we confronted an all-out, unlimited war. We mobilized our national war capability to something like the maximum. The conflict lasted a finite period of time and then was over. Having won the war, we converted back to a peacetime economy.

But the peacetime to which we were restored began to be shaken, as the fall of Czechoslovakia, the Berlin blockade, and other events began to show. In 1950, the Korean crisis presented us with a different problem. Again we mobilized for a specific conflict which lasted a finite period of time. However, war was not unlimited; nor did we mobilize our full strength; nor, on the conclusion of the fighting, did we reconvert to a wholly peacetime economy.

What we have settled down to since the cessation of open hostilities in Korea is something new to this country. We are not at war; yet we face a threat to our national security which is perhaps more dan-

Footnotes at end of speech.

gerous than any past wars. We know that we must maintain a strong military posture; yet we know that we may have to hold our military strength for decades perhaps—and may never have to use it. We also know that the challenge we face is not confined to military power, but is being hurled at us from every side—political, economic, and even psychological.

George A. Lincoln has described the security program which this new situation calls for as "a sustained high plateau of preparedness," [3] as distinguished from "full mobilization" (e.g., World War II) and "limited (or partial) mobilization" (e.g., Korea). Lincoln quotes a vivid statement of the problem by Bernard Baruch in a speech before the Industrial College of the Armed Forces on June 28, 1949:

"Both as a nation and as individuals we grew up accustomed to regard war and peace as distinctly separate states, like night and day. Today we live in an around-the-clock emergency, a twilight of neither war nor peace. Reared to think of war as a brief emergency to be rallied to temporarily, we find ourselves confronted by a continuous threat of war, which requires something Americans have habitually lacked—a see-through constancy in action between peace and war." [4]

This new and different situation—"between peace and war"—requires that economic policy play a more important part in our national thinking. In a situation of full mobilization, economic problems were enormous, but there was no difficulty in deciding exactly what our broad economic policy objective was: it was simply, and almost exclusively, the support of an all-out military effort to win the war. Furthermore, our concern for economic freedoms was modified by a willingness to sacrifice certain values during the war with the clear understanding that the sacrifices were temporary. The phrase, "the duration," was commonly used; it expressed the concept of a temporary emergency after which the economic policies of a peaceful world would be restored.

In our new situation, however, economic policy is more complex and more central to the problem. If we are not to enter full-scale mobilization, then we must make certain decisions as to how much of our economic capability we will devote to military defenses. If we are to maintain adequate military defenses over a long time period, we must pay attention to the effects of alternative defense budgets on economic growth and efficiency, since growth and efficiency will make possible better defense later. If this sustained time period is one of rapid technological change, we must make difficult decisions on the allocation of defense effort between weapons now feasible and the development of new ones. Furthermore, if the challenge during this period extends to far more than military strength, economic strength becomes an end in itself as well as a support for military policy.

Finally, the new situation raises troublesome issues with respect to our larger goal of maintaining and enhancing economic freedoms. We may be willing to regard certain freedoms as expendable during a conflict which has a perceptible beginning and an end. But in an "open-ended" conflict, how much are we willing to give up?

2. PAYING OR MORE DEFENSE

Recently there have been several significant proposals for increasing defense spending by usually unspecified but substantial amounts. If such proposals are being considered, it is important to examine the question of how a large increase would be financed.

In addressing ourselves to this question, we are not passing judgment on the need for such an increase. For purposes of this discussion, we will simply assume hypothetically that an increase is to be made. We will look only at the choices which must be made on how to finance this increase in defense spending.

A number of ways of financing higher defense spending may be dismissed before we turn to the basic question of what choices must be made if we are to reallocate resources in the direction of a large defense effort.

Financing defense via inflation

We should mention, first, the alternative of financing a defense spending increase via a deficit. A deficit does not, of course, increase the country's total resources; it merely shifts the burden. Oversimplifying a bit, this alternative would amount to paying for more defense via inflation.[5] The price level generally would rise and the cost of the increased defense spending would be diffused throughout the economy, with the usual undesirable effects associated with inflation.

This way of financing a greater defense load is not seriously advanced as a responsible policy alternative. While the catchphrase is sometimes expressed that, "national security is more important than a balanced budget," [6] it is generally conceded in serious discussion that if an increase in defense spending is necessary, it ought to be financed in some way other than a deficit. In principle, at least no political figure would favor a planned deficit except as a tool of fiscal policy in time of economic slack. The only danger would be that deficit financing of increased defense spending might result out of an unwillingness to face up to the problem of revenue. However, in this discussion we will assume that some method of financing other than inflation would be desired.[7]

It is to be hoped, therefore, that we may dismiss inflation as a legitimate way of financing higher defense spending.

"Painless" sources of higher defense spending

Several more quasi-serious proposals for ways to finance a higher defense budget should be mentioned, since they are advanced prominently from time to time. Four such proposals might be mentioned:

1. To finance more defense by cutting the "fat" out of the defense budget.

2. To finance more defense by cutting the "fat" out of other parts of the budget, especially the multibillion dollar farm program.

3. To finance more defense by raising more Federal revenues via closing certain tax loopholes.

4. To finance more defense by raising more Federal revenues via a more rapid expansion of the economy than has recently occurred.

These proposals all have two important points in common.

First, they are each based on an important "grain of truth." That is, each of the four suggestions could command almost universal approval if properly restated—yet, is usually so distorted as to invite grossly misleading conclusions.

Second, each of these proposals holds out the hope of a costless increase in defense, financed by means which are virtually painless, at least to the average taxpayer. That is, when closely examined, each turns out to be a more or less sophisticated promise of something for nothing.

(1) Cutting the "Fat" Out of the Defense Budget

One leading advocate of more defense has been reported as saying that present Defense Department procedures are wasting $10 billion. According to one headline, this advocate, a candidate for the Presidency, pledges: "More Defense for Less Money." [8]

The idea of increasing effective defense spending simply by making the Defense Department more efficient is an appealing one. There is ample evidence that the Defense Establishment is not a model of efficiency. Bureaucratic rivalries and interservice jealousies undoubtedly generate inefficiencies. Horrible examples of waste have been repeatedly dredged up. Beyond that, many studies, notably those of the two Hoover Commissions, have outlined specific and, from many standpoints, practical plans for eliminating wasteful and costly practices.

There is, therefore, far more than a "grain of truth" to the suggestion that a serious effort should be made to tackle the problem of efficiency. The urgency of adequate military power over the years ahead gives added emphasis to the value of eliminating defense "fat," a point to which we shall advert again, later in this paper.

It is fallacious, however, to jump from this point, on which there would be little disagreement in principle, to the conclusion that we can now up our military spending plans by X billion dollars, and pay for it by cutting "fat" by the same amount. Yet this is often implied.

It is always appropriate to cut "fat" out of the defense budget. It is always difficult, too. In fact, while optimism may be a virtue, there has never been much dramatic evidence of progress in eliminating waste, progress of the kind which might suddenly free up two or three billion dollars without damaging the effectiveness of existing defense programs. If elimination of waste proved difficult for a commander in chief as experienced as an Eisenhower, and a corporation executive with the credentials of a Wilson, it would appear doubtful that anyone else would produce a magic key for unlocking a problem on which everyone would like to see progress but on which the best efforts have produced only meager results thus far.

At any rate, the important point is the separability of the twin goals of more defense and greater efficiency in defense spending at whatever level. Why gear efficiency only to a need for greater defense? If we can improve efficiency, we should do so not only if we want to strengthen our power, and not only if we want to retain roughly our present strength. The goal of greater efficiency would still be important even if the remote possibility of limited disarmament materialized.

It is, therefore, somewhat irrelevant to promise to finance a specific increase in military power out of unspecified efficiency programs.

(2) Cutting the "fat" out of nondefense budgets

Many of the same considerations apply to a variant of the above argument. This variant promises to finance higher defense spending, by cuts in unnecessary nondefense portions of the budget.

A frequent tack here is to point to the multi-billion-dollar Agriculture Department budget. It is fairly easy to secure agreement that the dollars spent on the farm program are not solving the farm problem, are of little benefit to the farmers who most need income, and should be drastically pruned. It is tempting, therefore, to propose that we reduce farm subsidies by X billion dollars and apply the savings to an increase in defense outlays.

Other frequent targets are veterans' benefits, the burden of interest payments on the public debt, rivers and harbors "pork," questionable stockpile purchases, and subsidies in general.

The point on these matters is similar to that on cutting defense waste. Again there is a considerable grain of truth. Certainly economists would agree almost without dissent that the volume of dollars flow-

---

Footnotes at end of speech.

ing into farm subsidies is only adding to, not solving the farm problem—a conclusion with which the harried low-income farmer would immediately agree.

But just as certainly, no one has produced a simple way out of the predicament. And if practical means are found to reduce unnecessary and undesirable spending on farmers, veterans, bankers, or subsidies of any kind, surely we ought to institute the savings immediately, whether defense needs are rising, constant, or falling at the time.

It is meaningless to say that we should cut farm subsidies by X billions and apply the money to more defense. If we need more defense let us have it now, not when we finally figure out the farm problem. If we find out how to cut X billions off the Agriculture Department budget, let us do it now, and not necessarily shuttle all the money over to the Defense Department (unless we simultaneously radically revise the relative value we attach to military activities).

(3) Closing Tax Loopholes

Another means of financing higher defense spending is to raise more revenue by revision of the tax laws. This proposal envisions closing of what are called loopholes in the tax structure, through which it is estimated several billion dollars of tax revenues go uncollected.

It is vital to distinguish between raising revenue by closing loopholes and raising revenue by a general tax increase. (We shall discuss the latter alternative later in this paper.) The idea behind closing loopholes is that more revenue can be raised without adjusting tax rates generally. Again the hope is held out of financing a considerable increase in defense or other spending without any sacrifices being required (at least not by anyone who can't afford it).

The specific loopholes which are ordinarily introduced for consideration are: (1) The dividend credit and exclusion features; (2) depletion allowances for various minerals, notably oil; (3) lack of withholding procedures on dividends and interest payments; (4) lax policing of expense accounts; (5) loose interpretation of what constitutes a capital gain; (6) preferential provisions in estate and gift taxes; (7) exemption of cooperatives; and (8) inadequate enforcement generally.

The bulk of public discussion of closing loopholes centers around the first two in this list: specifically, the dividend credit and the oil depletion allowance.

There are severe limitations to relying on closing tax "loopholes."

One problem is implied in our repeated use of quotation marks around the word. The two loopholes which are most prominently mentioned are loopholes only to those who oppose these provisions in the code. To those who support these provisions—a majority of the Congress at the time of their adoption, at least—they were fully intended to have a part in the code. Some writers have argued that the term "loophole" ought to apply only to features of the code through which the Government loses income which it intended to tax. Such a loss can occur either because Congress did not write the law carefully enough or because the Treasury Department does not administer the law carefully enough. Under this concept, however, neither the dividend credit nor the oil depletion allowance constitute a loophole.

Semantics aside, however, there is honest disagreement among policymakers and economists as to the value of these two tax provisions. Many would argue that the dividend credit instituted in 1954 is justifiable on grounds of equity, beneficial to economic growth, and basically more of a reform (i.e., good) than a loophole (i.e., bad). The oil depletion allowance would probably command less support from economists, but certainly more from policymakers.[9] In the case of both provisions, economists would generally argue that the effects of repeal would be shifted, in greater or less degree, so that the income distribution effects of repealing these provisions might not be as different from the effects of a general tax rate increase as might popularly be supposed.

What destroys the practical value of these loopholes as a source of financing higher defense outlays is the improbability of Congress acting on them. It is fairly clear that until major tax reform is undertaken—which will not be in 1960—the major provisions cited above (and particularly the oil depletion allowance) are here to stay. This being the case, it appears that no painless source of financing higher defense spending is available from this source.

With respect to some of the minor loopholes listed earlier, there is less disagreement. Generally speaking, better enforcement of the tax laws would indeed yield more revenue. Here the relevance to increased defense spending is no closer, however, than it is in the case of "waste" on the spending side of the budget books. In both cases, more efficient governmental administration is a meritorious end in itself and in no way can be tied directly to higher defense outlays.

Again, however, as in the case of proposals for reducing "fat" in defense or nondefense budgets, we may note an important grain of truth. That the tax code badly needs reform on a major scale is a proposition on which wide agreement can be found. In the interests of equity, of efficiency, and of growth, the day when genuine tax reform can be accomplished ought not to be long postponed. The demands on our economy of a high level of defense activity add to the urgency of this problem, which, however, would exist under any circumstances.[10]

(4) Revenue From Economic Growth

Yet another "painless" source of financing more defense, increasingly advanced in circles somewhat more sophisticated than those from which the above suggestions emanate, is economic growth. The thesis is that as the economy grows, the tax base grows and more revenue becomes available to the Federal Government, even without any change in tax laws.

In a study for the Joint Economic Committee, Henry Rowan stated this thesis concisely:

"Consider a $10 billion increase in the defense budget. If the increase took place over several years, there would be scarcely any problem with inflation from the extra defense outlays. In 3 or 4 years, growth of the economy would bring in extra revenues amounting to $10 billion annually." [11]

The Joint Committee itself, in the concluding report of its "Study of Employment, Growth, and Price Levels," asserted: "Economic growth in itself, therefore, is a major source for financing improvements and expansion in necessary Federal programs without increasing tax rates." [12]

The "grain of truth" in this increasingly popular position is obvious. A vigorously expanding economy can carry a rising load of any category of expenditure with greater ease than a stationary economy. It is also true that with a Federal tax system based largely on progressive income taxes, rising incomes will tend to generate even more rapidly rising Federal tax revenues.

Nevertheless, it is not logical to proceed from these generalizations to the conclusion that the phenomenon of economic growth provides a growing fund of tax revenues available for financing an expanded defense effort or other public programs (or a tax cut for that matter).

The basic difficulty is that a growing country requires higher Government expenditures just as surely as it produces higher revenues. The hope that economic growth will make more revenues available is based on clear recognition of the automatic expansion of the revenue side of the Federal ledger, but tacitly takes as constant the expenditure side. Yet, as a moment's thought will recall, the forces tending to automatic expansion of the expenditure side are probably at least as powerful as those on the revenue side. The reference here is not to political pressures or tendencies to initiate new Government programs—although these too may be very much a part of the picture. The reference here is to the automatic institutional expansion of existing programs. These are increases in expenditure which can be anticipated in the next few years, just as we can anticipate increases in tax revenues.[13]

The Director of the Bureau of the Budget, Maurice H. Stans, has recently alluded to these automatic expenditure increases with growing frequency, calling them "built-in increases in existing programs which are now producing a continuing upcurve in expenditures." Stans estimates that we already face future commitments of $25–$35 billion for the interstate highway system, $8 billion for public works projects already started, $6 billion for public housing, $4.4 billion for shipping subsidies, and a variety of other obligations.[14]

Built-in cost increases are particularly predictable in the defense field. As weapons technology advances, costs rise (entirely apart from the effects of inflation). Defense Comptroller John M. Sprague recently gave these examples of "the increased procurement cost of these new and more complex weapons. The cost of a fighter airplane, for example, has increased by over 30 times since World War II; the cost of a submarine (Polaris), twentyfold. A modern supersonic bomber costs nearly one hundred times its World War II predecessor, the B–17. The Navy's nuclear-powered carrier which is currently under constructon will probably cost eight times as much as the carrier which fought the Battle of Leyte Gulf." [15]

Sprague also pointed out the certainty of rising costs for military personnel:

"More directly, even without a general pay increase, the cost of military personnel goes up about 2 to 3 percent a year. This comes about from a somewhat higher grade structure; increased longevity pay; an increased number of dependents and, therefore, dependents' allowances; the new program of enlisted proficiency pay; and a steady increase in military retired pay." [16]

Dr. Otto Eckstein, then of Harvard University and later staff director for the Joint Economic Committee's Study on Employment, Growth, and Price Levels, in a paper prepared for the Committee on Economic Development (CED), drew some protections of rising public expenditures over the next decade. Eckstein projected rising expenditures from $79 billion in fiscal year 1960 to $97.1 billion in fiscal year 1968 (as a medium assumption), or as high as $105 billion or as low as $87.1 billion.[17] The significance of these projections is that, at present tax rates, most of the increased revenue from economic growth will be eaten up by increased spending under present programs. Under the high projection of spending, about all of the increased revenues will be required.[18] Illustrations of built-in increases in nondefense programs include the Veterans' Administration (pension mostly) from $5,098 million in fiscal year 1958 to $6,375 million in fiscal year 1968; urban renewal and other housing programs from $199 million to $2,040 million; highways from

---

Footnotes at end of speech.

$8,300 million to $13,300 million; Department of Interior programs (reclamation, Indian affairs, national parks, etc.) from $666 million to $1,110 million. In the defense budget, simply continuing present evaluation of security needs, and in the author's words, assuming "continuation of economy policies," the projection runs from $39.1 billion in fiscal year 1958 to $51 billion in fiscal year 1968. Space, AEC, and other defense-related programs also are expected to eat up revenues simply extending the present approach.[18]

Economic growth, therefore, provides no freely available revenue for use in expanding our defense effort. Economic growth produces more revenue, but it also produces more expenditure. We must conclude again that we have failed to uncover a costless source of revenue for higher defense outlays.

The basic question

Reluctantly we come to the conclusion that if we wish to spend more on defense, we are going to have to face the cost. While everyone would like to see elimination of unnecessary spending; while genuine tax reform is desirable on its merits; and while economic growth will strengthen the economic base which supports an adequate defense—while these considerations are all true, we must conclude that none of them offers a free ticket to a costless increase in defense spending.

This fact has been acknowledged by some of those who advocate higher defense spending. There have been several hints that some of the advocates of higher defense spending favor a tax increase to pay for it. However, these indications have always been in most general terms. No major political figure has presented his program for a general tax increase. Nor has anyone indicated which needed nondefense programs should be cut or postponed. But having rejected the possibilities of a something-for-nothing increase in defense outlays, we are forced to analyze specifically what the cost of any substantial increase would be.

3. THE COST OF MORE DEFENSE

The cost of an increase in defense spending may be viewed in one of two ways: Either as more dollars to be spent—in which case, the question becomes: How do we raise the money? or, what do we spend less on in order to spend more on defense? or as more resources to be allocated—in which case, the question becomes: In real terms, what relative shifts must take place in other sectors so that more resources, relatively may be allotted to defense?

If we are going to increase the defense sector, where will the money (or resources) come from?

It is sometimes inferred that an expansion of the defense budget must be financed by foregoing enjoyment of consumer goods, with the implication that this is the only area in which sacrifices must be made. In fact, however, an increase in the defense sector might be expected to be drawn from many different places, including:

1. Consumer expenditures of many kinds, not just luxuries or frills.
2. Savings and investment expenditures.
3. Nondefense Government programs.
4. Lower-priority sections of the defense programs.
5. Defense spending on the part of our allies.

These sources of financing higher defense outlays are discussed in more detail in this section.

(1) Effects on Consumption

When speaking of higher taxes, it is popular to speak as if the tax would cut only into consumption—and indeed, only into less desirable forms of consumption at that. Often, in reply to the rhetorical question, "Can we afford more defense?" the response is that we speed too much on frills now. Our affluent society, it is contended, certainly can afford to forego self-indulgence in luxury consumer goods in the interests of meeting social priorities, including defense. Tailfins and television are especially fair game. Among more sophisticated audiences, advertising budgets are a favorite target. ("Surely the real waste is not in the public sector.")

The implication running through discussions in this vein is that if we are forced to a tax increase, the tax will reduce consumer spending only in areas which don't really matter. The implication is that when consumers' disposable income is reduced, consumers will reduce spending only on goods which have a lower social importance, like tailfins.

To bring out the fallacy of this approach, it is only necessary to make explicit what is usually treated, albeit in polished phrases, by implication and inference. Clearly, if a tax increase reduces disposable personal income by, say, $5 billion, we do not know what industries would be affected. The only things we can be reasonably sure of are that consumption expenditures generally are very likely to fall, and that the decline will probably be felt along a wide range of consumer products. It may be comforting, but it is not realistic to assume that only "frills" would be adversely affected.

(2) Effects on Savings and Investment

We also can suppose that a fall in disposable personal income would probably reduce not only consumer expenditures, but also personal savings to some extent. While the marginal propensity to consume is thought to be lower going down than going up, it would still be positive, barring some exceptional circumstances.[20]

A reduction in personal savings would put downward pressure on private investment. This would tend to have an adverse influence on economic growth, since the volume of private investment is surely a key factor, if not the main determinant of the rate of economic growth. (Certainly the same amount of dollars spent through private investment would be quite likely to have greater growth effects than the same amount spent on national defense.) If we see economic growth as essential for long-range defense needs, as well as for the economic aspects of the international challenge, then we would want to recognize that a tax increase would probably have some downward effect on growth.[21]

If the flow of personal savings were reduced because of a tax increase, the capital markets might become slightly more difficult for State and municipal governments to secure credit from. In this way, a Federal tax increase could reduce State and local revenues (bond issues) in absolute as well as relative terms. Because the effect is indirect, however, it would probably be small.

(3) Effects on Nondefense Public Programs

As we have seen, it would be unrealistic to suppose that an increase in defense spending would come solely out of certain categories of consumption (those of a low social priority). It is more realistic to expect that a tax increase would come out of consumption expenditures of a variety of types, and further that some of the increase would be likely to come out of savings and investment, with downward effects on growth.

We may go further, however, and raise the question of whether an increase in defense spending should logically be financed entirely by means of a tax increase.

Put in terms of resource allocation, the question is: Should a greater relative defense effort be taken entirely from the private sector? Or should part of it come from the public (nondefense) sector?

In dollars and cents, if we have to raise the defense budget by $5 billion, why raise taxes by the full $5 billion? Why not take $1 or $2 billion (or more) from other sections of the Federal Budget?

It is rather important to distinguish between this point and the suggestion, discussed earlier, that we can finance defense increases by eliminating waste or unnecessary Government spending. The inference in that suggestion is that no one will be hurt by such cuts, that the wasteful spending has little or no value anyway. As pointed out before, wasteful or unnecessary spending should be cut anyway, whether we want to increase defense spending, hold it constant—or even reduce the defense budget, too. If a practical way can be found to save money by eliminating military duplication and interservice rivalry, or by substantially reducing agriculture payments, or by cutting the interest burden of the debt—if practical ways can be found to make such cuts, surely they should be instituted immediately, independent of decisions on the adequacy of the present defense program.

The point we turn to now involves not wasteful spending which should be cut anyway, but rather Government spending which is not wasteful, which we do value, and which would not be reduced were it not for the hypothetical decision to raise defense spending. Logically an increase in defense spending should be financed by drawing resources from all other sectors, not just private sectors. This implies some reduction in the nondefense public sector.

The newsletter, Economic Intelligence, commenting on the heightened interest in defense and space following sputnik, brought this point into perspective well, as follows:

"Since there seems to be no obvious reason why the relationships previously existing between the social valuations of expenditures in the private and nondefense public sectors should have been radically changed by sputnik, it would seem that the brunt of increased defense should be borne by both of the other two sectors." [22]

In specific terms, this could mean that a decision to expand the Defense Department's budget, or NASA's, should be associated with other decisions involving, let us say, a slowdown in highway construction or suspension of new public housing units or reduction in the agricultural support price for some commodity.

(4) Effects on Defense Budget

To press this point further, if we want to increase defense spending in certain types of weapons, we not only want to reduce private and nondefense public sectors; logically we should also examine other phases of the defense sector. If the value of modern weapons systems has increased in our minds, then presumably the value of some other phases of the defense structure has relatively declined.

(5) Effects on Allies

If ours is a mutual defense, presumably a decision that more defense spending is needed would be a decision agreed to not only by our own people, but by our allies as well. That being the case, the expansion of defense spending would logically be shared by us and them.

Conclusion

This discussion has attempted to point out the impact which an increase in defense outlays might be expected to have. We have attempted to point out that a shift in resources in the direction of a greater relative defense effort would imply relative shifts away from all, not just some, of these sectors:

1. Private consumption.
2. Private investment.

Footnotes at end of speech.

3. Nondefense public spending.
4. Low priority defense items.

Consideration of possible increases in defense spending ought to be undertaken with a full awareness of the implications for private living standards, economic growth, and the progress of public programs other than defense.

4. COMPARISON OF WORLD WAR II AND THE KOREAN WAR
